Pacific Naval Bases

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following chapter of a report compiled by me on a trip made to the South Pacific for the Naval Affairs Committee:

Recently I had the most thrilling experience for which any man could hope. It was my privilege, as a member of the Naval Affairs Committee, to tour the Pacific naval bases, and with the blessing of the good Lord, and through the skill and guidance of our great Air Force, to return safely home.

My distinguished colleague, the chairman of the subcommittee, Mr. HEFFERNAN, of New York, will no doubt give the Naval Affairs Committee and the House a more detailed report of our experience and impressions.

As members of the Naval Affairs Committee, we were naturally primarily interested in our naval installations, and as we were guests of the Navy we were escorted by naval experts and were given every opportunity to see our Navy in action. But I will speak to you today not about our Navy but about G. I. Joe—Johnny Doughboy—the men of our Army who, with the sailors and marines, have done such a magnificent job wherever our men are called upon to give battle to the enemy. I am extremely grateful to the chairman of the House Naval Affairs Committee for having included me in this inspection trip, even though it was on short notice.

I have been a newspaperman for many years. Naturally this background helped me to see and to observe things, especially those that would ordinarily escape the attention of the so-called average "visiting fireman." I am not now attempting to pose as an expert on war strategy or even try to comment on matters of a military or naval nature. But, having been in public life these many years, first as a newspaperman, then as a member of the Chicago City Council, and now as a Member of this honorable body, I feel that I know human nature, or, in plain English, understand Johnny Doughboy from Main Street back home, the average American boy from the average American home, and I want to tell you my impressions of him and of his leaders.

We left the United States at the beginning of December. We returned in time for Christmas. In 3 weeks we had spanned 25,000 miles, flying from Washington to San Francisco; San Francisco to Pearl Harbor; Pearl Harbor to Kwajalein; Kwajalein to Saipan (where we saw stop-and-go signs just like in Chicago, constructed by our Army engineers); Saipan to Guam; Guam to Manus; Manus to Sydney; Sydney to Canberra; Canberra to New Caledonia; New Caledonia to Samoa; Samoa to Palmyra; Palmyra to Pearl Harbor; Pearl Harbor to San Francisco; and thence back to Washington. Twenty-five thousand miles in 3 weeks. Thanks to American wings.

It is only natural that we as Members of the House of Representatives were concerned with our own constituents who are working and fighting thousands of miles from home. Now I can much better understand the title of Bob Hope's book, I Never Left Home, because wherever I went I met boys from Chicago, from my great State of Illinois, and from my own district, and my own neighborhood. Every little hamlet, nearly every house in America is represented in each part of this global war. You can imagine how thrilled I was when in Sydney, Australia, I was greeted by a sailor who lives only a few blocks away from my home; or when I met Lt. Harry Posner, survivor of the ill-fated *McCawley*, wearer of the Purple Heart, now serving at a South Pacific base; or when I met two boys from just around the corner on an airplane carrier; or when in Pearl Harbor at the Army Hospital, "Spike" McAdams, a wounded Chicagoan, said "Hello, Bill. It's so good to see you"; or the pride which I experienced to see my old friend of newspaper days in Chicago, Col. Julius Klein, standing by the runway of an airfield cut from hills and jungle while early morning tropical sun promised sweltering heat for the day, as he waved good-bye to me after a visit with him that was both enjoyable and instructive. I was happy to see those boys and I wish I could describe to you the joy I had when in Chicago on Christmas Day I telephoned their loved ones and those of the others of the armed forces whom I met, giving them the greeting from Bill, Mike, Abe, or John from Saipan, Kwajalein, Guam, or New Caledonia.

At Pearl Harbor we had the privilege of being guests of those two great leaders of our armed forces, Admiral Nimitz, commander in chief of the Pacific Ocean areas, and Lieutenant General Richardson, commander of all Army forces in that ocean area of fabulous distances. And from Pearl Harbor we jumped from island to island, meeting our fighting men of the land, sea, and air.

Here is something to think about, gentlemen. Many of these boys asked me these startling questions, which we at home should prepare to answer. "Is it true that back home they think the war is over?" "Do they realize that we have not met the bulk of the Japanese Army?" "Is it true that people back home who have been working in the war industries are now looking for peacetime jobs for security?" The thoughts which inspired these questions from the boys were emphasized by admirals and generals who know that they have just begun to fight, and who urge us to tell the people of the United States that the war in the Pacific is just beginning. I have come back to Washington with some entirely different answers to those questions than I had before. And I think that they are the answers which our Army and Navy leaders, and boys they lead, would make to their questions. Yes, G. I. Joe wants the war over as quickly as possible, but he feels that without 100-percent home support the fight will be long. He is confident that when the full force of the Japanese Army is met that he and his comrades will be superior to it, if given proper backing. He wants security, too, but he knows that he may have to make the supreme sacrifice to secure it for the Nation. His thoughts are not of partisan politics. He is not Republican or Democrat; not union or antiunion; not C. I. O. or A. F. of L. He is an American and he may belong to any or none of the groups mentioned, but he wants his rights protected so that when he comes home he can return to his choice or make his choice anew.

I realize that my long-distance trip (but in short time) does not qualify me to write an "inside Pacific diary," but the boys to whom I spoke from one end of the Pacific to the other can and when the sons of America come home to tell their stories, you will marvel at their accomplishments. I wish I could go into details.

I was particularly impressed with the South Pacific Base Command, or, as it is called in abbreviated military language, "SoPacBaCom," commanded by one of America's most distinguished soldiers, Maj. Gen. Frederick Gilbreath. Not long ago American soldiers at this base on foreign soil were living in a very strange land, many thousands of miles away from home, under primitive conditions with no outlet for proper relaxation as they were accustomed to at home.

I refer now to Army supply bases in the South Pacific, the supply bases from which the vital war materials were being sent to the front, the bases where great combat convoys were formed to stop and push back the Japanese enemy. Much has been written about the morale problem in the South Pacific. Yes, there was a morale problem, and I say, yes, "Johnny Doughboy" of the supply installations was bored and lonesome. If he had been in a fox hole or in the fighting

zone his morale would have been high. But, back in the supply lines, driving trucks day and night, loading ships day and night, assembling equipment and armament day and night, without hearing a shot fired, and then after a hard day's work going to a tent in some semijungle bivouac, day in and day out, week in and week out, month in and month out, yes, year in and year out, would get on anybody's nerves. Some of our boys have experienced this work for nearly 3 years.

I am proud and happy to report to you that in the South Pacific Base Command the commanding general, Major General Gilbreath, is aware of the sacred trust that the American people have put in him and other great generals and has demonstrated it by doing a real job not only as the chief of the supply lines but also by personally caring for the welfare of the enlisted men. Nowhere have I found more enthusiasm for a big brass hat than I found by talking to some of these soldiers when they discussed the improvements and facilities brought to them by the general. As one described him, "He spreads the welfare around. He is tough but square."

I had the pleasure of meeting Admiral Newton and General Gilbreath at their headquarters. I was given every opportunity to see what I wanted to see and to talk freely to anyone, and believe me, I did a lot of listening. And if the phrase, "Tell it to your Congressman" ever was more justified I don't know where or when. The boys pointed with pride to the modern P. X. (post exchange), their soda fountain, their open movie area, the various special-service programs, and the educational and religious facilities. I had expected to get a lot of kicks and complaints, for boys from Chicago never hesitate to speak freely. And since my colleagues will tell you more about our men of the Navy, I am glad to pay this justly deserved tribute to the Army which at this very same moment is carrying the brunt of the battle in the Philippines, which will some day invade Japan proper, and which has been supplied from these important joint Army and Navy bases in the Pacific of which I speak.

While waiting at an Army airport for my plane to take me back home, I read directives describing the job which had been met and completed by the South Pacific Base Command in the months just passed. In those were quoted a few of the remarks by General Gilbreath to the officers and men of his headquarters shortly after he took command several months ago:

"This command is a team and must work as a team. All work should be done well. It is easier to do a good piece of work than it is to do a mediocre one. We live only to do things. In so doing, our work can either improve or deteriorate; it cannot stand still. It will improve.

"Rehabilitating men who are coming into this area from zones of actual combat is a duty of this command. These men must be given every chance to recuperate from their strenuous activities, recover themselves physically and mentally. Opportunity for recreation and relaxation must be offered. This function will increase in importance.

"It is common knowledge that much has been happening in the Pacific, and more will happen in coming months More and more important operations will be launched. While the war moves to the west this command assumes another and different but important job. The duties will increase, though the nature of these duties may be altered. Our leaders know where they are going and have known since the first day they entered the war.

"Combat troops must be supplied the materials they need. Food, ammunition, clothing, gasoline, oil, and a thousand and one other items must be procured far in advance, shipped halfway around the globe, stored in depots, reconsigned, and reshipped when needed. Records, reports, supply levels must be maintained. Thousands of men are required to keep the implements of war available. We are now supplying hundreds of thousands of men and the number will become greater in coming months.

"An extensive training program for the combat troops in this area must be maintained—a job which will become more and more important in the coming months. Training facilities, aids, areas, centers, and firing ranges must be the very best that it is possible to furnish. This area is ideal for certain types of training such as amphibious beached assaults, knocking out jungle pill boxes, malarial training, and many more.

"We are charged with the defense of this area. While it is true that actual operations have moved forward, there remains the job of maintaining a sound defense. There are still enemy troops in the area. Attack is always a possibility, even though it may seem remote. We must be prepared for any emergency."

The American soldier in the South Pacific when Major General Gilbreath took over was immediately educated as to his responsibilities. In a few words, his mission was described as follows:

"We are daily and hourly performing functions which affect the defeat of Japan. To show the meaning of this statement let's take first the overall picture. The problem presented is one of getting together sufficient land and naval forces to strike at Japanese occupied lands, and to defeat the Japanese Fleet and Army. 'We are going to Tokyo * * *,' said the President. Getting these forces together is dependent upon many factors as we all know. Having the men alone is not enough. We must be able to supply these men with every single thing they need; we must be able to provide them with medical service, with training, and we must be able to transport them. Recently we have attacked and landed on many islands, and former Japanese occupied territories in the Pacific; Saipan, Tinian, Guam, Peleliu, Leyte, to name a few. These actions took a lot of planning and a lot of work. They have brought us thousands of miles closer to Tokyo. What about the effect of all of this on Sopacbacom?

"The approximate total area to these new holdings (exclusive of Leyte) is about 700 square miles. Compared to about 16,743 square miles in Sopacbacom (New Caledonia, New Hebrides, Guadalcanal) this indeed is little land on which to stage and train thousands of troops, to build large hospitals, to build up huge stock piles of ammunition, gasoline, and other equipment and supplies. And even if these newly occupied lands could take the work of Sopacbacom at the present time, we probably wouldn't want to put everything up there in one basket. Therefore, for these and other reasons, Sopacbacom is still a tremendously vital area for our offensive against the Japanese."

The Sopacbacom team is performing a mission which is vitally keyed with our strategy against the enemy.

The job described to the soldier as his mission in the South Pacific a few months ago now nears completion, and the commander may be justly proud of the achievements of his command.

I can now understand the telegram sent by Lt. Gen. Robert C. Richardson, who has a gigantic job as Army commander of the entire Pacific Ocean area, to General MacArthur, which reads as follows:

"It is with pride that this command joins Americans throughout the world in extending to you and the Army and Navy forces under your command sincere congratulations on your return to the Philippines.

"We are confident that your success will continue until the islands are once again under your command.

"I have been requested particularly by the South Pacific Base Command to convey the admiration of their officers and men in your great military achievements. The highest traditions of the United States Army are exemplified by the Sixth Army, the Tenth Corps, and the Twenty-fourth Corps.

"All of us are especially proud that our Twenty-fourth Corps has been given this opportunity to fight with you."

General MacArthur replied as follows:

"The splendid efficiency of your Twenty-fourth Corps reflects the careful training it has received under your able command. The corps has performed most gallantly."

The long months spent in building up supplies, in training troops, had then proven their worth.

So much for the past of the South Pacific and the job its officers and men have done in starting from the smallest of beginnings, far removed from Tokyo and moving island to island with troops and supplies, until now they are daily over the rooftops of Tokyo. What is the present and the future job of the South Pacific Base Command?

First, it will continue to do the job it has been doing, diminishing in scope as the contest moves westward and more advanced supply bases are opened.

Second, it will advance trained men closer to the scene of operations, where their arrival will be felt shortly thereafter by the Tokyo high command.

Third, it will advance supplies stored for local South Pacific operations to theaters and battlefields now written in the glorious pages of American history and to places now known to but few, but on some not-distant tomorrow destined to rank equal with the scenes of former fields of hallowed military memory.

Fourth, the South Pacific Base Command has begun the tremendous job of reclaiming American dollars which were originally invested in building facilities for your boys. Installations are being discontinued and the buildings and other usable materials which cannot be moved forward are being turned into salvage. Salvage drives, as intense as have ever been carried on at home, are now in progress in jungles and along coral beaches so that these materials may be returned to the States to become new weapons of war or readied for conversion to civilian enterprise. The materials of war bought by your bonds are either moving forward to continue the fight or they are going home, as the soldiers dream of doing some day, to take part in the building of a future America.

Fifth, hospitals are being developed and expertly staffed, so that the back areas are held as possible havens of rest and recuperation for the sick and wounded.

Sixth, the education of the soldier for peace has begun. This is not an education for the development of peace. Our South Pacific soldier now realizes that against the forces which he meets today his education for the achievement of peace was learning to shoot and to march and to fight to the end from jungle island to jungle island. But he is now being taught other things for the day when he will win final peace. He is learning what problems he will face at home after the war, how he can meet them, what aids Congress had provided for his future security, the G. I. bill of rights, and, above all, his responsibilities as an American citizen when he takes off his uniform and sets aside his gun for the last time.

I was particularly interested in how our three services, the Army, Navy, and Marine Corps, and the Allied troops work together. And, of course, I was particularly proud to see that our citizen soldiers, our National Guard, and Reserve Corps, have contributed so immensely to the successful prosecution of this greatest of all our wars. I met many Illinois National Guard soldiers. The Thirty-third Infantry Division, Illinois National

Guard, is now in New Guinea, but many of its officers are spread all over the world.

General Gilbreath pointed with pride to one of his assistants, a National Guard officer, one of Chicago's outstanding citizens, well known to you in Washington and also in the Middle West for his writings, Col. Julius Klein, who commands a large Quartermaster Group in the Pacific and was also the port commander there. He was recently promoted to the rank of full colonel by General Richardson upon the recommendation of General Gilbreath. In his complete uniform, Colonel Klein would wear decoration of service and accomplishment of World War No. 1 as well as World War No. 2 but today except for the silver eagle on the collar of his open khaki shirt, he looks and acts like the brother of G. I. Joe. I was glad to see him and I asked him whether he had a message for the people back home. He answered me, "Are you interviewing, now, an old interviewer, or are you asking me as my Congressman?" I asked him why and his answer was, "I am a soldier and as such at this time I cannot write or talk politics even off the record. I wish I could. But you can tell them back home that the boys overseas are doing a great job. They are doing all they can to get this war over with to help the Japanese realize their dream to join their ancestors because our boys want to be home and become ancestors themselves. But they must find a sane and sound America that will carry out the pledge given not only to servicemen and to the people of the world, security and peace. And don't let Congress again think of scrapping our Navy and cutting down our Army to a token force. Time and American industry alone helped us to erase this mistake which we made after World War No. 1."

Colonel Klein described to me the reactions of the fighting soldier. One story he told me I shall never forget. Weeks before Christmas he was with a combat outfit about to move into action. None of those he was with knew where they would be on Christmas Day, or that they would be alive to celebrate it. The night before they moved off, they lit their area by scores of Christmas candles and there in the semijungle they sang the carols which at Christmas time would reecho through the homes they loved. Men like that cannot be defeated by any enemy.

My colleagues, today I want to take my hat off to one of the most important branches in the service, one of the most gigantic undertakings of our time, and that is the supply services, the Army bases in the Pacific. And while the members of the Naval Affairs Committee are justly singing the praises of our Navy, I feel much better in having told you something about what Johnny Doughboy is doing back in the supply bases in the South Pacific, keeping the supplies flowing and getting ready himself to jump on the Jap's throat.

We are all proud of Nimitz and Halsey in the Pacific. We are all thrilled by MacArthur, and we have all reason to be very proud of leaders like General Richardson and General Gilbreath. I know now why Gen. George C. Marshall is the greatest Chief of Staff our Nation has ever produced, because he has picked the right men.

And let me conclude my remarks by telling you briefly what is on the mind of these soldiers in the South Pacific under General Gilbreath. I asked the general what G. I. Joe needs most, and here is his answer: "1. Rotation. 2. Mail from home. 3. Fresh eggs and fresh milk. That's not much to ask for."

Military necessity will naturally rule the rotation policy, but we back home must and will do all we can to make life a little easier for our boys in the service overseas.

I am glad I made this trip. Spanning the Pacific world and three times covering distances like 2,500 miles in one hop made me realize how futile isolationism really is. But it also made me realize what a great age we are living in and the wonders and the miracles of our industry which some day again will be turned back to be the industry of peace and progress because Johnny Doughboy is fighting on foreign soil to keep the war away from America and to keep for America our own way of life. We shall never be able to repay the debt for the sacrifices made by the flower of America's youth.

I hope it will be possible for each and every Member of this House to visit the war zones. It will help us all in time to come, to assure a better future for our great country.

While I was in the South Pacific, Chaplain Lawrence E. Lynch, of Brooklyn, an Army chaplain, said the following about G. I. Joe.

"Within the ranks of our young soldiers of today are our leaders of tomorrow; each boy is an important personage to us, someone very important, he is an American and represents great things. He is a future pillar of America. He is important enough to fight for America and he deserves all the care and help which he can get now. He brought his religion into the Army with him and I am sure that he will leave the Army stronger in the beliefs of his faith."

And so I say, "Yes, Father Lynch is right." Our boys and girls in uniform are assurance for a greater and better America. After this most interesting trip of my life I can tell you, my colleagues, my constituents, and the people of America that we have every reason to be proud of our sons and daughters in the service and that the flower of America's youth is in trusted hands.

Some day in the future, great writers, great composers, great artists will appear whose dramatic skill may bring home eloquently to the American people the drama of the South Pacific. While history is being made we can but watch and hope that the America of the future will cherish the gains which Johnny Doughboy's sacrifices have won.

Development of Rural Electrification Engineering

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a speech of Mr. Guy W. Thaxton, Chief, Design and Construction Division, Rural Electrification Administration, delivered at the third annual meeting of National Rural Electrification Cooperative Association, San Antonio, Tex., January 16, 1945.

The address follows:

Rural electrification is not new. A program for Government activity in this field was advocated before the Congress about 1910. Rural electrification did not materialize on a large scale, however, until the Rural Electrification Administration was established by Executive order of the President in May 1935.

So-called rural electrification in the earlier days consisted largely of building short extensions to existing urban lines to serve those areas where a moderately high density could be obtained. In 1928, at the time of my first efforts to electrify Rural America, line costs were high and it was found that the consumer density which it was possible to secure by further extension of urban system lines had dropped to that point where it was necessary for the utility companies either to charge very high rates for service in rural areas, to ask for large contributions from prospective users, or to reduce line cost, if futher profitable extensions were to be made.

Operating engineers were actively engaged in studying this problem in order to lower the cost of rural line construction. But in 1932, one of the large holding companies published, for distribution to its subsidiaries, a report on rural line construction practice and cost which indicated that very little genuine progress had been made. It showed that practically all of the operating companies were still using hard-drawn copper conductor and were attaining average spans from 200 to 300 feet. Expensive cross arm construction was still being used on primary lines. No standard system voltage had yet been adopted.

Ordinarily, the private-utility company would build short extensions to serve new rural customers as the demand arose, if each such addition was deemed feasible when considered as an economic problem independent of other customers to be served in the area. This piecemeal construction did not lend itself to low cost and did not offer much possibility of a decrease in cost and because there was little line building being undertaken and specifications varied so widely, manufacturers were unable to achieve mass production.

For many years electric-utility companies and the manufacturers have had standards committees. Each individual power company had evolved a set of standards to fit the conditions encountered in its operating area. Also, each manufacturer had evolved standards which could be met by his equipment and which suited the needs of his customers. Standardization of minimum specification, by the National Electrical Manufacturers Association and A. I. E. E., did not result in the interchangeability of parts of the various manufacturers. The actual line designs and arrangement of the various items of line construction were almost as numerous as the companies in the field.

Prior to the beginning of our present rural electrification program electric transmission and distribution lines were built almost exclusively by crews of the electric service companies or by forces supplied by engineering or management companies affiliated with the service companies. Only a small percentage of the work was done by independent private contractors.

The coming of the R. E. A. program changed this situation. Many contractors of all types began competing for the business of building rural lines. This competitive spirit challenged the ingenuity of construction men, and new and faster methods of construction were developed. Construction took on the appearance of the factory assembly line, with crews repeating the same operation time after time. The crews, performing one operation, were followed by other crews performing the next operation.

The possibilities of the mass-production method of construction led to the need for mass-production methods of engineering. To this, it is felt, we of the R. E. A. have contributed a great deal.

Studies and standardization take time. Therefore while standardization studies were being made by R. E. A., lines had to be built. The types of construction on the early R. E. A.-financed projects were almost as varied as that which had gone on before. The legend on the assembly unit drawings for one of our first projects states "For long span construction—not to be used on spans longer than 250 feet."

At the beginning of the R. E. A. standardization program, studies were made of all types of existing distribution systems. We finally standardized on a type which was not

new. It had been used for many years and was then being used extensively. That we have built it with mass-production methods in previously unheard of quantities constitutes our contribution to the art.

We collected most of the economies which had been proved in practice. For example, we used a grounded neutral which eliminated one cut-out and one lightning arrester per transformer, and produced a saving of $25 to $35 per mile. Furthermore, as the National Electrical Safety Code allows a clearance to ground of 3 feet less for the grounded neutral than for the hot wire, we adopted single phase vertical construction, thus saving the cost of the cross arm and braces. We were able to settle upon the design of 5 main types of assemblies for each type of line: single phase, two phase and three phase. Therefore, the majority of our lines are built with but 15 types of pole-top assemblies. The reduction in the types and kinds of hardware required is remarkable. Our standard list today carries only 66 different types of equipment, where hundreds would be used without standardization.

R. E. A. standards are temporary standards—but they represent today's best practice. Continuous studies are being made of proposed changes and improvements. Standards must not become stagnant. They must be continually improved. Tomorrow, probably, we will hit on something just a little better. Everyone connected with the engineering activities of the R. E. A. is constantly on the alert for new ideas. You have contributed many of these. However, before any proposed change is adopted, it is given a very thorough examination. The first question asked is: "Is it better than our present standard? If it is, will it require our borrowers to carry additional items of material in stock? If this is necessary, is it then worth while?"

Although there has been a steady effort toward improvement, all lines designed and constructed in accordance with our approved designs and specifications have repeatedly demonstrated their ability to withstand ice and wind storms that would have wrecked old style lines.

Average line costs have been reduced by standardization of materials, specifications, and methods from $1,500 to $2,000 per mile, which were common before R. E. A. to less than $700 per mile. One system consisting of more than 2,000 miles of lines was built for slightly less than $500 per mile average, including all overheads.

These two factors, mass-production line engineering and mass-production line construction, have resulted in construction records which 10 years ago would have been called impossible. Contracts have been executed requiring the building of as much as 10 miles per day. At the peak of construction, R. E. A. borrowers were building and energizing an average of approximately 600 miles per day.

In 1 year 125,000 miles of distribution line were completed and energized, bringing service to 281,000 more rural homes and establishments. This required an investment of approximately $100,000,000, which included generation and transmission in cases where satisfactory arrangements for the purchase of power could not be made. Now, there are more than 800 systems operated by R. E. A. borrowers, totaling more than 405,000 miles and serving nearly 1,250,000 farms and other rural establishments.

The R. E. A. program has stimulated mass manufacturing of specific items, with resultant reduction in the cost per unit. The reduction in cost has induced others to use the same equipment. Standardization became more readily available to all. We have adopted private utility ideas. Others have adopted our standards. This is as it should be. The more widely the same equipment is used, the lower the cost becomes and the more everyone benefits, including the seller.

The problem of providing sectionalizing and protection for the circuits in R. E. A. systems was encountered early in the program. Therefore, it might be well to point out the development of the single phase pole-mounted automatic circuit recloser. In the early days of the R. E. A. program only one manufacturer was making such a device and it did not lend itself too readily to the solution of our problems. A great many of them were, however, installed on an experimental basis. That manufacturer, at our urging, greatly improved his product and more recently several other manufacturers have entered this field with the result that we are now getting very much better reclosers while having to pay $40 to $50 less. Since those earlier days too we have encouraged manufacturers to produce reclosers with a type of time delay mechanism which can be adjusted in the field. While they have not brought out such equipment, we are still urging its development.

It should be pointed out that in guiding the initial design of our borrowers' system, we have made provision to take care of all the members plus half of the prospects. We were accused of being optimistic. The truth is there are many, many miles of line where there are no prospects, all of them having long since taken service.

Perhaps the variations in the size of existing R. E. A.-financed systems might be interesting. There is right here in Texas one such with 3,000 miles of lines in operation. Several of our borrowers are operating systems with as many as 2,000 miles. The average R. E. A.-financed system is slightly under 500 miles of line. On the other hand, there are today several systems with as little as 100 miles. The eventual completion of these systems on an area coverage basis will in nearly every case bring them up to the average size.

The R. E. A. systems have constituted a vast laboratory for research and observation. As an example, much has been learned concerning the different types of grounding. It has been demonstrated clearly that increased emphasis on better grounding results both in greater reliability in service and lower energy losses. As a result, the multigrounded neutral Y-connected system which we adopted is now being widely used throughout the industry. Furthermore, we have found that because such a large proportion of the current which ordinarily would be thought of as flowing in the neutral wire actually returns to the source through the ground by way of the many ground connections, it has been possible for us to adopt the policy of using for a neutral conductor a wire smaller than the phase wires with very satisfactory results and a consequent saving in first cost.

This so-called laboratory has enabled us to work out with the communications companies the coordination of their systems with R. E. A.-financed systems on a basis which has been mutually satisfactory. The great volume of R. E. A. experience has afforded, and will in the future afford, the means of obtaining accurate data and factors very valuable to design engineers with reference to fundamental assumptions, upon which such designs must be predicated.

Results from this laboratory so far obtained show convincingly that rural electric distribution systems cannot be designed with the aid of only the mathematical formulas used in designing urban circuits, but that the design engineer must use in addition sound engineering judgment and resourcefulness.

In the year ending June 30, 1944, a total of approximately 1,988,000,000 kilowatt-hours were used by more than 800 operating systems. Of this total the privately owned power companies supplied 829,000,000 kilowatt-hours, public-owned companies supplied 940,000,000 kilowatt-hours, and 219,000,000 was supplied by cooperatively owned generating plants which were financed by R. E. A. In some instances it has been found that suitable power sources were not available. In these few cases we have financed the construction of generating plants which consist of steam, Diesel, and hydro plants. The needs for wholesale power have been met in the past without large-scale construction of these plants and systems. However, the future needs for power may surpass the most optimistic estimates and more generating plants may have to be constructed to meet these needs.

What the future holds for rural electrification by us will be determined by a number of factors. Some of the factors are, or will be, within your control or the control of the employees of the Rural Electrification Administration, and others will be determined by the Congress. Possibly one of the greatest influences will be the improvements in equipment offered by the sciences and the possible development of revolutionary means of transmitting power. Not only will developments in the field of electrical engineering affect rural electrification, but also will the developments in the other fields of science.

With reference to the influence which R. E. A. employees will nave on rural electrification, it is recognized that our engineers must at all times keep professionally young and modern in their thinking. By doing so, they will not only make use of all improvements offered in the industry but also will stimulate thought looking toward the development of new devices and methods. As manufacturers bring out new equipment adaptable to the needs and suitable for rural use, the engineers of R. E. A. will stand ready to approve the incorporation of such items into the systems.

The manufacturers of equipment have cooperated splendidly with R. E. A. engineers in their efforts to bring out new or improved devices which would aid in taking reliable electrical service into the thinly settled areas. They have made a valuable contribution no rural America and to the Nation as a whole. There is yet much for them to do, however.

Development of the Nation's generating resources will be an important factor in rural electrification. As more low-cost electricity is generated, the people of the Nation can enjoy its benefits. As it is distributed to serve industrial loads and municipalities, it must be made available to rural communities. One thing is certain; it will be done.

If it is necessary to build transmission lines to get power into a rural area, this will be done. If the building of generating plants in rural areas proves to be the most economical solution, that will be done.

Now all of the foregoing brings me to the most important part of my talk. Everything which has gone before in our work has been either experimental or developmental to prove that our experimental results are right. Today, on the basis of what we have learned, together with the knowledge of the ultimate rural electrification program, we are in a position to engineer systems so that all rural people can get dependable electric service.

Back in the early days of the R. E. A. program I pointed out that our program was loosely named. We are concerned not only with rural electrification but with area electrification, area coverage. I have always had a feeling that whatever agency vent into an area to render service to farmers and rural establishments, had imposed upon it the duty and responsibility to provide service to every user within that area who could benefit economically from such service. Don't you agree that this concept is fundamentally sound and that our engineering ought to be based upon it?

Piecemeal construction without consideration of the direction, extent, and time of extensions to make up the ultimate system, runs up cost. It results in less efficiency

than area coverage. It makes the engineer go back and redesign rebuilt transmission lines and substations.

I hope that the time will come when adjacent cooperatives with the aid of their engineers will get together and draw a line on a map to delineate the area into which each system will expand. The line will not be determined by political boundaries, nor trade areas, nor any other artificial device. It will be determined by the scientific application of the principles of sound engineering economics. Everything on one side of the line will be more efficiently served by one co-op, everything on the other side by the other co-op.

All of our standardization, all of our development work, all of our experience in the past adds up to getting the best engineering and the best construction at the lowest over-all cost consistent with the requirement that good, dependable service be rendered to your members. The selection of areas of coverage, the determination of the distance to be covered from a substation and many other factors have an important bearing on our progress toward that goal. Unless somebody does draw such a line as I have mentioned we are not going to attain area coverage and we are not going to attain the lowest possible cost of satisfactory service.

When your engineers plan to provide electric service for everyone within the area to be served by your cooperative you get better engineering and lower-cost construction and greater assurance of continuity of service. And right here please let me call your attention to the fact that continuity of service must be given the same consideration as voltage regulation. The types of loads which you are serving make continuous service essential. I think that you ought to give your engineer a much greater voice in your plans than has been the custom. If you really want area coverage—and can there be any doubt of it?—then you will turn over a map of your area and say to your engineer, "Design the best system to get dependable electric service to everybody who lives here." In the past you have told him, "We want a line down this road, this road and that one." There's a great difference. You bought a coat, a vest, and a pair of pants; you didn't buy a suit.

On the other hand, as engineers we know how to get the rest of this job done. We have pioneered in a new field; yes—we made our few mistakes before we arrived at the answers. But we've got the answers now, and they are the right answers. We know it. You have told us of your willingness to undertake a most ambitious expansion program. I give you my assurance that so far as the engineering profession is concerned, that program is completely possible. The job can be done.

It is inevitable that the controlling factors in the common effort to modernize the farms and rural communities will synchronize. To watch them mesh, to have a part in applying the results, is a challenge to all engineers and, I am sure, to you and to all others who are genuinely interested in electrifying rural America.

Resignation of Bowles Demanded

REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. MILLER of Nebraska. Mr. Speaker, it is my humble opinion that the Congress should demand that the President immediately remove Chester Bowles as the head of the Office of Price Administration. His attempts in trying to regulate the prices of some 8,000,000 different products is a dismal failure. The thousands of pages of directives which his office has issued has caused a sharp reduction in the supplies of food and other materials so desperately needed by the world.

He has failed to follow the considered judgment and advice of its advisory councils for industry.

Had it followed the advice, we would not now be witnessing such a grave shortage of food. Mr. Bowles is an advertising man—knows nothing about production. As an advertiser, he has done a fairly good job of selling O. P. A. to Congress and the country. The practical results, however, is the thing that counts. In results, he has been a failure. Yesterday, he was blaming the Army for the shortage of food—saying they had taken a large quantity. The Army claims they do not have enough and do not have a surplus of food on hand.

The O. P. A. has produced the present prices in foods:

First. By issuing hundreds of thousands of directives and orders which have confused producers, processors, and distributors. This has reduced the volume of food and materials going to the consumers.

Second. By proceeding on the recommendations of so-called experts who, in most cases, have not had practical experience, rather than by taking the advice of patriotic American men and women engaged in the production, processing, and distribution of all goods.

Third. By being more concerned lest individual businesses make a large profit in the operation than by placing the emphasis on achieving maximum production as a means of keeping down prices.

Mr. Bowles is not satisfied with the shortages he has produced in food—he even wants to regulate prices in barber and beauty shops. His philosophy has been that of regulating everything and everybody from their hair tonic to their shoestrings.

Mr. Bowles should be removed by the President and a practical man put in his place. The O. P. A. needs more than an advertising man at its head. If it is to be continued, he should be an experienced individual in the production of food.

The Nation's Meat Supply

REMARKS

OF

HON. EDWARD J. GARDNER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. GARDNER. Mr. Speaker, the question of our meat supply, the over-all profit of the meat-packing industry, and the available supply of meat in the hands of the consumer, are now occupying the attention of our country and of these legislative bodies. A new series of regulations governing the production of fresh meats and the killing of fresh meats and the sale of fresh meats is now in contemplation, and the indications are that we are to have again a regulation which will centralize the killing in the hands of the big packers.

Every meat order, from Meat Restriction Order No. 1 down to the present time, has been so worded and so interpreted as to give the big packers the advantage in killing the largest number of pounds of the available meat. These orders have been directed to the proposition of eliminating all independent slaughterhouses which have heretofore operated under local health-inspection regulations.

In the years prior to rationing, the city of Hamilton, Ohio, used to receive an average of 15 carloads of fresh meat per week from the Chicago packers, Swift, Armour, and Wilson. Some of these packers had cold-storage facilities for storing their meat in the city of Hamilton. Since rationing, the city receives only 1 to 2 cars per week, and these cars are partially loaded with cold cuts and processed loaves rather than fresh meats.

At the same time, the local slaughtering house is restricted in the amount of meat that it can kill, to a point considerably below the number of heads of cattle and hogs which it killed during the period before rationing.

The statistics on meat supplies furnished by the Office of Price Administration in March 1945 show that in the years 1935 to 1939 the average number of pounds of total meat supply was 17,100,000,000 pounds, of which 96 percent went to civilian uses and 4 percent to the Government. In the year 1944 the total meat supply was 25,900,000,000 pounds, of which 76 percent went to civilians, and under regulations from the Food Division of the O. P. A. the distribution of this civilian supply was in the hands of the big packers of the larger cities who refused to ship it to those whom they served in prerationing days. At the same time they were urging Mr. Madigan of the Food Division of the O. P. A. to curtail the amount of meat which was available for the local slaughterhouses. Mr. Madigan, who was formerly an employee of Armour Packing Co., has allowed the American Meat Institute to dominate all regulations up to this time. It is essential that the new regulation permit the slaughter of fresh meats by local slaughterhouses which are properly inspected under local health ordinances, so that there will be a fair distribution of the available civilian supplies.

The American Meat Institute is an organization controlled by the large packers through multiple memberships, and its policies do not reflect the opinion or desires of small slaughterhouses.

The O. P. A. Food Division has conspired with the Defense Supplies Corporation to avoid paying the subsidies that are required on meat production,

and with the curtailment of the poundage which small slaughterhouses are allowed to kill, it is the slaughterhouse which is operating at a loss while the large packing house is permitted to expand its earnings to two and a half times what they were from 1936 through 1939 after taxes. The Defense Supplies Corporation, at the request of O. P. A., refused to pay a subsidy to the slaughterhouse located at Hamilton, Ohio, and sent three examiners in to determine that the Defense Supplies Corporation order was correct. After this examination, we asked the Defense Supplies Corporation to advise us the dates, invoice numbers, and names of buyers to whom processed meat was sold. The Defense Supplies Corporation in turn advised us that they had not required their examiners to make that notation, but that if we would employ an accountant and send him to the Cleveland office for special instructions and then have him return to Hamilton to make the examination—all at the expense of the small slaughterhouse—they would then consider his right to this subsidy.

Here was a Government agency, employing three accountants to inspect the records of a citizen of the United States, making a decision based upon such inspection and not being able to support that decision with any tangible evidence, and finally requiring the taxpayer, at his own expense, to make the type of examination which the Government should have made originally with the three men who were sent to Hamilton.

Administrative abuses are not the result of lack of finances in the agencies required to enforce the provision of the law, but they are strictly administrative abuses resulting from inefficiency and in some cases conspiracy to avoid carrying out the provisions of the law and regulation.

Unless the new meat regulations are so drawn up as to prohibit the possibility of these inequities of administration, then this Congress should enact by statute regulations that will eliminate these abuses.

G. I. Joe at Peace Table

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a short series of very interesting and important articles by my gallant, able, and distinguished friend, Maj. George J. Feldman, of the United States Army Air Forces:

[From the Boston Traveler]

G. I. JOE AT PEACE TABLE

(By Maj. George J. Feldman, U. S. Army Air Forces)

The men who are winning the war must share in winning the peace. G. I. Joe who is spilling his blood to bring us victory in battle must be granted a place at the peace table if that victory is to prove lasting.

Only he, plodding through the jungles of Guadalcanal or the hedgerows of Normandy, driving the Luftwaffe from the sky and the Japanese fleet from the seas, knows what the real cost of the next war will be if we do not now finish it for all time.

Only he can measure his sacrifices and his suffering as the price which he has paid for guarding his children and his children's children against renewed sacrifices and suffering in the years to come.

It is only he who can appraise the terms of the peace against that single overriding imperative and who can be trusted to subordinate all lesser values to the one goal that it must never happen again.

Too often in the past have the victories won by the men who gave their blood been betrayed and distorted by the peacemakers to whom war was just a fascinating game played with pins on a map. I do not mean to suggest that the peacemakers of the past were men of ill will or men unmindful of the true interests of their own nations. For the most part they were sincere and capable in their professions; well trained in the business of diplomacy.

They played their roles well as they had been taught them, with due regard for all the traditional proprieties and protocol. But no matter how high their motives or how great their skill, they had not come from the battlefields, and could not know or had forgotten what the battle means.

They decided the stakes of war without appreciating the price which had been paid for their right to decide those stakes. That full price is known only to those who have been in battle and who are fresh from battle, for man's memory is mercifully short and the reality of war is soon forgotten, most quickly by those whose suffering has been most intense.

A quarter of a century ago we fought and won a war that was to end all wars and that would reach this goal by making the world safe for democracy. It was easy to scoff at those words in the disillusioned years after 1918; to pervert them with gay jests as the world plunged to a new catastrophe.

But that scoffing and those jests came after the armistice and not before it. The truth could not be denied while the battle was still raging; last of all by those who fought.

They realized instinctively that the world no more than this Nation could exist half slave and half free and that a new enslavement would lead inevitably to a new conflict.

This truth was clearest to those who fought in the battle, yet the making of the peace that was to enshrine that truth was entrusted to men who had never seen their comrades die or felt the bite of shrapnel.

The pact of Versailles and the defeat of that treaty in our Senate were the almost inevitable results of failing to give a voice in its making to the men who had made it possible.

The leader of the Allied forces in World War No. 1 saw this clearly before the ink was yet dried on the treaties. On November 19, 1921, Marshal Foch, addressing an audience in New York, had this to say:

"It is to be noted and remembered that the Allies did not have one representative of the field forces at that peace table where the decisions were made for turning the Allied victory to the best advantage. The men who on the land, on the sea, and in the air had fallen by millions to achieve that victory had not one comrade at that table to speak for that honorable company whose greater suffering and sacrifice, in all justice, deserved that recognition.

"The armed forces are the nation in arms, and as such are entitled to representation in any international conference whose business is to adjust the results of their victory by the international agreement of the victors.

"Moreover, among men who have served together upon the battlefield there is always a certain spirit of comradeship and conciliation whether they belong to the forces of the same or of different nations. Surely, such men, who have known and solved the problems of the battlefield successfully, would be useful in the international conversion from war to peace and in the maintenance of that peace which will, beyond doubt, depend upon the character of the post-war international settlement."

Today, even before the guns are stilled, the seeds of a new and greater conflict are being sowed. Already those who have stayed at home are busy scattering the seeds of suspicion and disunity among those who are fighting side by side as one great team.

We are being told that we have been hoodwinked into war by the British and that we must be alert to see that they do not steal the fruits of victory.

We are being warned that we must prepare now for a life-and-death struggle with Russia.

We are being urged to crawl under our shell once more and to fight only those who would dare to lift it from us.

These echoes of Goebbels are growing louder with every passing week, spread ever wider by those who think in terms of personal rancor or political advantage, and who do not and cannot conceive through their own hard experience what the cost of war really is. These are not the words of our fighting men or of the fighting men of our allies.

Even if we can hope that our diplomats will this time shun the blunders of Versailles, the need will remain for recognizing G. I. Joe and his fighting comrades in arms at the peace table.

The process of diplomatic negotiation has always been shrouded in secrecy and mystery, some of it perhaps necessary, but much of it merely reflecting the bonds of tradition. The peoples of each nation can only guess what is occurring behind the scenes, and their suspicions that they have been sold out are readily fanned by the blind or by the unscrupulous.

Give the soldiers who have fought the war a place at the peace table and a share in its give and take, and these suspicions will automatically be allayed. The peace that results will truly be, and be hailed as, a people's peace rather than a diplomat's peace.

So much for the reasons for dealing G. I. Joe a hand. I know that many questions will immediately arise, even from those who quickly argue in principle. Is G. I. Joe qualified to sit in; can he hold his own in a game for which he has not been specially trained? How can the best men be selected; where shall they sit, and to what role shall we assign them? Is the whole project capable of being realized in workable, practical terms?

As regards the qualifications of our fighters, the answer is in the emphatic affirmative.

Acting under general instructions from headquarters, I have had the privilege of conducting discussion groups among the enlisted men and officers of my outfit at a fighter base in England. Naturally, they differed greatly in their capacity, their backgrounds, and their perception of issues.

But there were many among them who showed not only a keen awareness of their stake in the peace that is to be written, but a real grasp of the issues that will be involved in that peace.

There were many who had had excellent training in the specialized fields with which the peace will be concerned, in business, in economics, in law, and in history.

Surely within the 11,000,000 men in our armed forces we are not lacking in those who by education, intelligence, and training are fully capable of coping with the problems that must be settled at the peace table and can contribute importantly to their solution.

As an example of their awareness of the problems, let me quote from just one letter from G. I. Joe—in this case Sgt. Joseph Lash, in Guadalcanal—writing to Yank, who said:

"The United States must accept a responsible part in building a system of international security and promoting measures to insure peaceful arbitration of disputes: (a) An Anglo-Soviet-China-United States alliance and nonaggression pact as a nucleus of world security in which the vanquished nations will ultimately take their places; (b) a United Nations servicemen's entente to facilitate post-war collaboration and understanding; (c) retention of 1 year's military service for all persons 18 years old to keep America strong; (d) internationalization of the world's airways by making reciprocal arrangements for use of the world's airports under international control."

On some kinds of problems, moreover, G. I. Joe is from the outset, far more qualified to speak than any civilian can be.

As an example, there is the problem of the occupation of Germany and Japan. How will that be handled? How will the occupying troops be selected, and how long shall they stay?

By the time the diplomats assemble around the peace table there will already be many troops who have participated in the actual task of occupation, and who will know its meaning as no layman can.

Surely, the viewpoint of those who have had this experience must be given great weight in the decisions of the conference.

I have spoken so far of our own men, but it is equally important to include their comrades at arms. What is true of our Army and Navy is true in equal measure of those of our allies. They too include many who can couple their special training and aptitudes with their intimate and unique knowledge of the meaning of war and the need for its prevention.

I have spoken so far of our own men, but it is equally important to include their comrades at arms. What is true of our Army and Navy is true in equal measure of those of our allies.

They, too, include many who can couple their special training and aptitudes with their intimate and unique knowledge of the meaning of war and the need for its prevention.

Granting that the right men are available, how shall we go about their selection? Admittedly, this problem will be difficult, but it is in no sense insuperable.

The Army itself has developed a very efficient procedure for selecting its best qualified personnel for officer candidates. Obviously, we must guard against the choice of a purely hand-picked contingent.

The soldiers themselves should be given as much of a voice as possible in the selection of their own representatives.

One possible suggestion may be for the men in each battalion (or its counterpart in other services) to select the person they deem best qualified to represent them; these in turn could meet and choose from their own number those whom they wish to entrust with the responsibility of speaking for them.

Alternative plans may suggest themselves, but in any event the problem is one which can be licked with a modicum of the ingenuity which our armed forces have applied so successfully to far more difficult matters.

Above all, however, the representatives ultimately chosen must truly represent the fighting men and not the higher echelons. Preferably, the representatives should be chosen from the enlisted men themselves; in any event, it may be well to lay down in advance the rule that no one be chosen above the rank of captain in the Army or lieutenant in the Navy.

Having chosen our men, what role shall we assign them—with how much responsibility can we entrust them?

Again, the problem is one which will require careful consideration. I have thought a good deal about this matter; and while I have no final solution to offer, the following suggestions may offer at least a starting point:

Peace negotiations are by their very nature exceedingly complex. The final decisions are necessarily, under our Constitution and under the forms of governments of all our allies, the inescapable responsibility of the Chief Executive.

The President cannot—nor would he wish to—yield to the burden of this ultimate duty, nor can the responsibility of the Senate for review and approval of the decisions reached be shifted or diluted.

In practice, however, the terms of peace and the framework of future world organization cannot be decided alone and unaided by the President and the British Prime Minister, by Marshal Stalin and Generalissimo Chiang Kai-shek and the chiefs of the other United Nations.

Treaties have never been so made. It is true, as I have already said, that our leaders will have to make the final decisions and that they will have to lay down the broad lines of policy which must guide their respective delegations.

In practice, however, the details will have to be worked out, as always, by a series of many groups or committees, each working on specific phases of the problem; on boundaries and banking and reparations, on trade and terms of occupation and on the details of international cooperation.

Each of these groups is normally composed of civilian experts in their respective fields. It is the work of these groups or committees which gives living flesh and blood to the frameworks laid down by the chief executives and it is in terms of this living flesh and blood that the peace will have real meaning and content.

We must permit G. I. Joe to participate in the work of these committees, to sit with the civilian representatives of his nation and with his comrades at arms and civilian representatives of the other United Nations, and work with them in the development of the world of the future.

The little that he may lack in specialized knowledge or experience can be soon made up and will be far more than compensated from the start by his knowledge of what war means and his burning awareness of the goals for which he has been fighting.

Naturally, he, as well as his civilian colleagues, must accept the broad decisions of his commander in chief, but he will not be accepting them blindly.

Nor is it inconceivable that the mere fact that G. I. Joe will know what these decisions are should affect the thinking of those who make them.

In interpreting them and in giving them the life of detailed expression he will bring to the counsel table a fresh viewpoint unwarped by the shackles of tradition, and permeated by a clear view of his goal.

He may make mistakes in judgment, no less than the civilian diplomat, but the mistakes will err on the side of vision and not of pettiness.

Once such a peace has been written it will gain public acceptance never before accorded to any peace conceived in tradition and midwifed by protocol.

Against such a peace there could be leveled no accusation of undercover diplomacy or of the bartering of national interest. A peace so conceived and brought forth would by its nature be acclaimed and approved by the populace of each nation.

No subtle campaign of misrepresentation could bar its passage by Congress, nor its wholehearted support by all its signatories in the years to come.

Moreover, it would be a peace made by youth, for our soldiers are young. It would be their peace and they would support it and make it real as they assume their inevitable roles of leadership in the political life of the future.

Let me emphasize again that the detailed proposals which I have outlined must be regarded merely as suggestions. They can undoubtedly be improved upon in many respects.

On the basic principle, however, there should be no compromise.

The old ways have failed in the past and must fail again. The new way must succeed because it is inherently right.

Those who spilled their blood to bring victory must be given a chance to make sure this time that their victory will not again be lost.

Protest of the Council of the American Priests of Polish Descent of the Archdiocese of Detroit

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter which I have received today, dated March 19, 1945:

MARCH 19, 1945.

The Honorable GEORGE G. SADOWSKI,
Washington, D. C.

HONORABLE AND DEAR MR. SADOWSKI: We, the American clergy of Polish extraction of the Archdiocese of Detroit, and 300,000 souls entrusted to our spiritual care and guidance, view with misgivings and alarm the decisions of the Big Three conference. We feel that the unfair, unjust, and ungrateful treatment of Poland and other small nations as Lithuania, Estonia, and Latvia by the Crimean Conference, violating not only the principles of the Atlantic Charter, but ethical principles, for the sake of power politics and political expedinecy, was a betrayal of our hopes and expectations so confidently placed in the hands of our leaders.

Time and again glowing tributes we hoped to have been sincere were paid our loyal ally, Poland, by the President, when he said "that Poland was the inspiration of nations"; by Winston Churchill when he said, "That in the fateful days of 1940 when in no uncertain terms Poland contributed immeasurably to save Great Britain." Now by the decisions of the Crimean Conference we learn that the men who were the inspiration of nations and saviors—the heroes of Narvik, of the African campaign, of the Mediterranean invasions, and of western Europe—are to be compensated for their deeds of valor and untold sacrifices by dismemberment, loss of their land and 12,000,000 of their compatriots, and by the interference in the internal affairs of their government. It is inconceivable to punish an ally for his contributions to victory. History never recorded such a case.

We most vehemently protest the further appeasement of our Russian ally, and the condoning of outrages perpetrated by the Big Three. These would only serve the

purposes of a new aggression and the sowing of the seeds of a new war. May we urge you not to be a partner in this crime. May we solicit your aid to uphold and to live up to the American traditions by keeping untarnished the historical records of a nation that was never a party to injustices committed to weaker nations.

May the protests of Thomas Jefferson and Woodrow Wilson in similar circumstances re-echo again. We place the fate of Poland in your able hands and your reasoned judgment.

Rt. Rev. Msgr. ADALBERT ZADALA,
President.
Rev. VINCENT V. BORKOWICZ,
Vice President.
Rev. FRANCIS J. ZDRODOWSKI,
Secretary.

Broadcasting of Tomorrow

EXTENSION OF REMARKS
OF
HON. BURTON K. WHEELER
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, March 22 (legislative day of Friday, March 16), 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Broadcasting of Tomorrow," delivered by Paul A. Porter, Chairman of the Federal Communications Commission, at a meeting of the National Association of Broadcasters held at the Statler Hotel in Washington, D. C., on March 12, 1945.

I am informed by the Public Printer that it will cost $208 to print the address in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I first want to assure both broadcasters and their guests that I am completely aware of the obvious fact that sudden appointment to important public office does not of itself contribute to the wisdom of the appointee. To the contrary, some of you no doubt believe—and I have had some expression of that point of view—that the acceptance of this particular job at this particular time, far from constituting any evidence of infallability or competent judgment, is proof positive of the exact opposite. Three months' tenure would incline me to support that view, and I am assured, day by day, that the worst is yet to come.

These preliminary observations are made solely for the purpose of seeking to avoid creating the impression that I think I know the answers. I haven't yet caught up with the questions. One thing I wish to emphasize: In spite of some pretty general doubts as to the sanity of anyone assuming these duties, I have attempted to bring to the job a sense of public responsibility, a deep feeling as to the importance and scope of the problems ahead, and some understanding of the life and habits of broadcasters.

I am appreciative of the many expressions of confidence and good will that I have received from broadcasters. I hope to deserve your continuing confidence and, further, I hope relationships between the Commission and the industry always will be based upon the solid ground of mutual understanding that will permit the Commission to discharge its functions competently and honestly and the industry to perform its important public responsibilities in an atmosphere free from suspicion or mistrust, either on the part of the regulatory agency or on the part of those affected by its rules and policies.

I do not want to give the impression that I am predicting an era of tranquillity or the dawn of a new age of sweetness and light. There just aren't enough frequencies to go around for that—or maybe in the not too distant future there will be too many frequences. What I am trying to say is that the Commission and its members should feel free as public officials to express frankly and openly their views and opinions upon problems of mutual concern without being subject to the charge of attempting to preach, reform, or to abolish the American system of broadcasting. There are a number of problems, of which we are all conscious, that can only be met rationally by free and open discussion and for my part I propose to do just that when I conceive it to be my responsibility to express an opinion or to advocate some policy, although it is my aim to do as little talking as possible. Tonight seems an appropriate occasion to talk candidly about a few of the problems we face together.

Again, in all humility, I emphasize that my views, insofar as they may have matured upon the questions I propose to discuss, are worth listening to only because I happen to occupy this position at a time when the communications industry is on the threshold of such vast and significant developments.

I have tried and will continue to strive, insofar as my own responsibilities are concerned, to maintain an open mind, to decide questions or policies, insofar as I can influence them, only after accumulating all the facts I can absorb and to act on specific matters only in concert with my colleagues on the Commission whose public responsibilities are identical to mine.

I have never thought there was any back door to this Commission. But if there ever was I want to assert that as far as I am concerned that door is locked and the key

thrown away. The front door is wide open to all who have business before the agency and your views and advice are solicited and welcomed in assisting us in the discharge of our duties.

I consented tonight to talk about Broadcasting of Tomorrow. The topic is not a limited one even if I felt competent to discuss it. It involves prophecy of the sort that I would not like to undertake. It's dangerous business as well. There is the stern voice of experience to prove just how far wrong can be those who essay to stake out the future. For example, not too many years ago, as time is measured, one oracle spoke thus about the future of broadcasting:

"It is inconceivable that we should allow so great a possibility for service, for news, for entertainment, for education, and for vital commercial purposes to be drowned in advertising chatter."

These were not the words of an irresponsible crackpot or reckless reformer. This was an utterance of Herbert Hoover at the first radio conference in 1922. Two years later at the conference in 1924, the distinguished Secretary of Commerce and future President had another try at predicting the future of this dynamic industry when he said:

"I believe that the quickest way to kill broadcasting would be to use it for direct advertising."

Please don't misunderstand me. The only point I am trying to make is that prophecy is really a dangerous undertaking. But Mr. Hoover, as is well known, is a very persistent individual. Again in 1925 he made a final fling at this pastime of prophecy when he said:

"Advertising in the intrusive sense will dull the interest of the listener and will thus defeat the industry. Furthermore it can bring disaster to the very purpose of advertising if it creates resentment to the advertiser."

And this particular prophecy was made, you understand, before the days of the singing commercial.

Now, I hope I do not subject myself to the charge that I have made an attack on advertising, free enterprise, or private initiative, because I have quoted Herbert Hoover. His early forecasts on the future pattern of broadcasting as he saw it 20 years ago have not come to pass.

Today, however, many influential broadcasters have expressed to me deep concern over what they themselves describe as an alarming trend toward "excessive commercialism." They see, as do many of us who have studied the great progress of this industry, developments which unless checked may lead to real difficulty in the future. I have been told, as I am sure many of you have, that somehow there must be a determination as to whether broadcasting is simply going to operate as an advertising and entertainment media or whether it will continue to perform in increasing measure public service functions in addition. I want broadcasters themselves to provide the answer to that question. The cloud on the horizon is bigger than a man's hand and I know that responsible broadcasters see it and are concerned about it.

Naturally you are asking yourselves the question as to what extent the Commission may propose to inject itself into this particular field. I wish I could tell you the answer to that one but I can't because I don't know. I am familiar with all the arguments about the Government keeping its rude, bureaucratic hands off of anything that smacks of program control and I am in agreement with most of those arguments. I am likewise conscious of the limitations imposed by Congress in the statute with respect to matters involving censorship and am fully aware of the dangers of any Government agency, legislative or administrative, toying with standards of program content.

But under present circumstances one of the issues involved has taken a different form and it has been laid right on the Commission's door step. Briefly the facts are these: An applicant seeks a construction permit for a new station and in his application makes the usual representations as to the type of service he proposes. These representations include specific pledges that time will be made available for civic, educational, agricultural, and other public-service programs. The station is constructed and begins operations. Subsequently the licensee asks for a 3-year renewal and the record clearly shows that he has not fulfilled the promises made to the Commission when he received the original grant. The Commission in the past has, for a variety of reasons, including limitations of staff, automatically renewed these licenses even in cases where there is a vast disparity between promises and performance.

We have under consideration at the present time, however, a procedure whereby promises will be compared with performances. I think the industry is entitled to know of our concern in this matter and should be informed that there is pending before the Commission staff proposals which are designed to strengthen renewal procedures and give the Commission a more definite picture of the station's over-all operation when licenses come up for renewal.

I have no present views as to what further steps should be taken when it appears from the record in a specific case that an applicant has completely disregarded the representations upon which he obtained his original grant. Obviously no one would advocate that the representations made in the original application constitute a rigid blueprint for the future. Experience will dictate new and superior methods of performing public service. But in cases where commercial opportunities cause a complete abandonment of other services which he has agreed to perform a different question is raised. I am not charging that broadcasting generally has tossed public service out the window. We all know that is not true. What I am saying is that there seems to be a growing body of responsible opinion that believes that the public functions of broadcasting are becoming submerged by commercialism.

Under these conditions, I submit to you that in a case such as I have described, the Commission is confronted with a real problem. Are we of the Commission to assume that the statutory standard of public interest becomes a mere negative presumption and that so long as the licensee violates none of the specific prohibition against obscenity, lotteries, and the like, the regulatory authority is not to inquire further into the licensee's general performance? I do not believe Congress so intended—or at least some individual Members of the present Congress are looking to the Commission for some clarification of policy in this respect.

We all recognize the important part played by broadcasting in the war program. None should seek to detract from vast contributions which have been made by the networks and a great majority of the individual stations. Perhaps I have become sensitive to what seems to be an increasingly critical atmosphere because I have only recently become exposed to it. Believing as I do in the great potentials of this industry, it is my personal view that broadcasting can never be content to become merely adequate. It can and must continue to seek new and more engaging methods to win and maintain public approval. And in evaluating public approval, it seems to me, the tastes and interests of minorities must be taken into account. Above all, it seems to me that it does no good to merely resent criticism. The nature of broadcasting is such that most listeners feel a proprietary interest in its operations and, I recognize, too, that it is often true that the sins of a few are charged against the industry as a whole. But the obvious course is to seek to remove the cause of justifiable criticism.

It is my personal position, as I have indicated, that it is far better for broadcasters themselves to take whatever actions may be necessary to eliminate the causes of general public dissatisfaction. I would view with great reluctance attempts to legislate more detailed standards in the field of the public service obligations of broadcasting. I have grave doubts not only as to the propriety but as to the practicability of spelling out by mathematical formula or some other device the general methods which broadcasters should follow in discharging their public service functions.

The question of freedom of broadcasting is involved and those of us who feel deeply about this subject want broadcasting to remain free because it deserves to and not simply because it may under our system be entitled to claim some kind of immunity from enforced standards of conduct.

What I have said lacks specificity. And I have been general on purpose. But I think responsible broadcasters are aware of the nature of the problems to which I have alluded. I have attempted to call attention to considerations which I know are of concern to you, to increasing segments of public opinion, to the Congress and the Commission. I have no suggestions as to any general remedy for the problem. I think the answer rests primarily with the broadcasting industry and it is my hope that there will be honest public discussion on the basic questions of policies and procedures and that action will follow which will make it apparent to all that broadcasting can and will perform those functions which Congress intended it to perform and which its licenses require of it.

I do not believe that there is a broadcaster in the sound of my voice who does not agree with me that if public clamor against certain practices continues, there is a very real danger that the solutions which might be proposed would be more severe than the realities of the situation require. Broadcasting of the past has been a great and growing force in America; broadcasting of today is making notable contributions to public welfare; broadcasting of tomorrow—my formal subject this evening—will be what you as individual broadcasters make it.

There are a few other problems which I would like to mention that lie down the road not too distant. The Commission will soon be required to consider definite licensing policies with respect to television, FM and other new services. Certain contours of these policies have already been developed, with particular emphasis on avoidance of monopoly or centralization of control or whatever term you may wish to apply. With these principles I am in complete accord and I think you are, too.

There is one basic conception I would like to emphasize. Broadcasting has come of age. I think you gentlemen as leaders of the industry know that it can stand on its own feet now and need not rely upon heavy aggregations of outside capital for future development. Those of you now in this field, plus independent newcomers who propose to bring to broadcasting their skills and talents rather than merely their accumulated funds, can I think carry broadcasting to the new heights which the engineers and technicians have mapped out.

To be more specific, sound public policy would, in my judgment, oppose large sums of Wall Street money or any other funds coming into broadcasting as a purely speculative venture. A new empire of the ether—the spectrum space for FM and television—is about to open up. The way applicants are lining up at the barrier waiting to go is somewhat reminiscent of the Oklahoma Territory at noon April 12, 1889. I do not

know when the signal gun will be fired. It will be soon, I hope. But for the proper development of this valuable new empire, I think we want to exclude the speculators, the high-pressure promoters and others who are looking merely for a quick turnover. A sound licensing policy will welcome the true homesteader and should offer grants only to those who want to take up permanent residence in this new empire, cultivate it and improve it and generally operate it in the public interest. And as far as I am concerned, I am looking to broadcasters—the proven pioneers—as the ones who will take the lead in the great developments that lie ahead. And I conceive it to be the duty of the Commission to provide every encouragement to that end.

The reasons of public policy against purely speculative raids on broadcasting from any source are clear. Congress when it wrote the Communications Act of 1934, was concerned with diversification of control over a great new instrument for molding the thoughts and habits of the Nation. Congress didn't want control in the hands of any Federal agency, and it didn't want control concentrated in the hands of any private monopoly. So it wrote antimonopoly provisions throughout the act and those provisions are still in force and effect. You are familiar with the present requirements as to multiple ownership of FM and television stations, and are aware of the past efforts of the Commission to create competitive conditions in a field limited by physical facts of allocation. This protection against monopoly, it seems to me, while primarily for the benefit of the public, also protects the independent broadcast station operators who compose the chief membership of this association and who have contributed so much to the development of standard broadcasting as we know it today. There is a corresponding responsibility, accordingly, on the present broadcasters, to move forward with the advance of the art and to bring to the public the fullest possible service on the new bands which will soon be opened up for FM, television, facsimile, and the other new services.

I don't mean to suggest, of course, that existing broadcasters are to be protected against all newcomers in FM, television, or other new fields, and I don't think broadcasters want any such protection. The proposal of the FM broadcasters that the FM band we widened to 80 or 100 channels and that educational broadcasting be provided for is a clear indication that the basic philosophy of the free competitive field in broadcasting is not only the policy of Congress and of the Commission, but of forward-looking broadcasters as well.

The basic principles of diversification of control and individual-licensee responsibility are now so well understood and widely accepted that we have the opportunity to build FM and television soundly from the beginning if we have the wisdom to profit by experience.

In the early days of standard broadcasting, these principles were not as well understood; and so various concentrations of control arose which, as you know, have been eliminated only with some difficulty. Unscrambling that situation has been, and is, no easy matter, as the industry, the Commission, the Congress, and the Supreme Court know.

Fortunately, both for the Commission and for the industry, we have, today, a Congress which is perhaps better informed with respect to broadcasting than its predecessors were. A long succession of hearings, first on the White resolution and then on the Sanders bill and then on the Wheeler-White bill and then the select committee to investigate the F. C. C., interspersed with annual hearings before the House and Senate Appropriations Committees, and the perennial Petrillo hearings—these sessions have certainly made the Congress expert in the problems which we face together. It is accordingly not too much to hope that, during the critical period of planning which lies ahead, the industry, the Commission and the Congress can each, in its own sphere, work toward a sound broadcasting structure for the future.

I mentioned how much harder it is to undo the mistakes of the past than to build right from the beginning. An example is the hearings which the Commission has announced on the clear channels for May of this year. The need for this hearing can be clearly stated. According to the best data currently available to the Commission, approximately 38.5 percent of the area of the continental United States lies outside the daytime service area of any standard broadcast station; in this area live more than 10,000,000 people who are thus without daytime radio service. At night nearly 57 percent of the area of the country lies outside the primary service area of any standard broadcast station; and hence the 21,000,000 people residing in these regions must rely on a relatively inferior secondary service. This is an intolerable situation for a country with our great resources and technical capacity. The condition is particularly aggravated when you consider that the millions who have no service or only inferior service are precisely those isolated rural families which of necessity must rely the most on radio for their contact with the outside world. I want to emphasize that the decision to reopen the clear-channel issues, with special attention to the congressional mandate to insure a Nation-wide radio service was a unanimous decision. I know of no one in the Commission who does not recognize the need for a reappraisal of this problem.

If we were starting from the beginning in standard broadcasting, as we are in television, for example, the Commission's engineers and the industry engineers could sit down and draw a master plan of allocation which would theoreticaly meet the service reqirements of the entire country, both rural and urban. But, of course, we all recognize the difference between starting de novo and doing the best we can within the limits set by the existing situation. Just because an engineer's chart might show that wider coverage could be obtained by moving a clear-channel station located on the coast to an inland site does not mean that, all things considered, public interest would require such a shift. But I hope we will have the opportunity to look at many possibilities, and I want to assure you that the Commission is determined to consider all relevant factors—social, economic, day and night coverage, rural and urban coverage, considerations of an equitable distribution of facilities, and the like—before it reaches even tentative conclusions.

What I am asking is full and complete cooperation of all interested elements in building a record from which sound conclusions can be drawn. The allocation hearings just closed were a magnificent example of the way in which industry and Government can pull together in reaching an agreement at least on the facts upon which conclusions must be based. There were, of course, some exceptions in the allocations hearings—a few problems too tough to achieve agreement even on the facts. But in reviewing the spectrum from 10 kilocycles to 30,000,000 kilocycles the amount of agreement reached is astonishing—thanks principally to industry cooperation in building the record. N. B. C. and C. B. S. both applauded the television allocation, for example. So the day of miracles is not past. I am hopeful that similar cooperative efforts will characterize the clear-channel hearings, and from the way we are started I think that will be the case.

I want to say to you further and with all earnestness that the Commission faces the clear channel problem with no advance conclusions or commitments. So far as I know, we are completely open-minded. We want first of all to determine what the Nation-wide service picture really is. The latest survey on that subject is already 7 years old and was challenged as inadequate when it was made. We want a picture of what is technically possible from an engineering point of view. And we want all the other facts in addition to engineering data which bear upon the subject. With such a record, it should be possible for the Commission to reach conclusions which would bring service to the underserved millions without doing violence to the American system of broadcasting or the legitimate interests of any particular broadcaster.

The clear-channel group of broadcasters, the 4 networks and all other interested parties who have something to contribute can be of genuine help by coming in with really constructive proposals for improving the present situation. Such proposals might involve the relocating of some facilities, changes in power upward or downward, duplicate operation on clear channels, changes in antenna design or any other proposals directed toward the objective of obtaining a really Nation-wide service. It is my belief that we'll come out with a much sounder solution if we have constructive proposals from the industry to consider, rather than having a record filled with attempts to explain why so many of the channels which were cleared with such great difficulty in the late 1920's are now rendering their primary service to the residents of fully served urban centers.

I've been asked why there was no FM issue written into our clear-channel order. The answer, in part at least, is that it's still too early to determine the effect of FM on AM broadcasting. In the highly unlikely event that FM supplants AM altogether in the next few years, the problem solves itself. No one, of course, seriously believes that's what will happen—certainly not the people who have been buying standard broadcast stations lately. In the somewhat more likely event that after a period of years enough city broadcasters have established themselves so firmly in FM that they just don't seek renewal of their standard broadcast licenses, it may be possible to solve the clear-channel problem by creating some more clear channels in the holes that are thus left open. But even that solution is conjectural and lies in the indefinite future. It's little comfort to the underserved millions today to tell them that some day FM may solve all the problems of standard broadcasting. That's why we're opening the clear-channel problem now, and leaving the effect of FM on clear channels for the future. I need not remind this group that, under the legislation which Congress enacted in 1927 and reenacted in 1934, a radio channel is public domain, not private property. Congress could hardly have stated that fact more explicitly when it provided—and I quote the congressional language—for "the use of channels, but not the ownership thereof, by persons for limited periods of time, under licenses granted by Federal authority, and no such license shall be construed to create any right beyond the terms, conditions, and periods of the license." The Commission, in setting the terms and conditions, must under the law seek to establish a satisfactory service for the entire country, and that is our basic aim in the clear-channel hearing.

In conclusion, I have a final point. The opportunity presented by presence of Members of Congress is too tempting to refrain from a little lobbying. I want to lobby quite frankly and openly for a bigger and better F. C. C. appropriation. And I am optimistic enough to hope that the broadcasting industry, which is alleged to have had some experience in this activity, might offer some assistance. Because I think I can prove to you that it is to our mutual advantage that

the regulatory and licensing facilities of the Commission be expanded and improved.

I hasten to point out to the gentlemen of Congress that I have read section 201 of title 18 of the United States Code which makes it a penal offense to use appropriations to pay for personal services to influence Members of Congress to favor or oppose legislation, and I have a legal opinion that since I am doing this on N. A. B. time and at their expense the statute does not apply.

My purposes in seeking a larger appropriation for regular activities—not just a slightly larger but a much larger appropriation—do not arise from the pride of a bureaucrat who wants a bigger staff or more luxurious assistance, but stems from an honest conviction that the better the job the Commission does the better not only the public but the industries which the Commission regulates will be served. Let's take a few examples.

The Commission urgently needs more personel to process broadcasting applications. On the very day the War Production Board gives the green light for civilian station construction the Commission will be beseiged for prompt action on some 500 applications for new FM stations (more than 350 of which are now on file), almost 100 television applications now on file and many more to come in these and other services. We estimate that when manpower and materials become available our licensing work will be increased at least ten-fold over the rate that prevailed before the war.

Even if procedures are drastically revised and every effort made to simplify and streamline, the administrative burden of discharging our statutory functions in determining the legal, technical, financial, and other qualifications of applicants will be enormously increased.

Many of you broadcasters have applications pending and there are many others in the industry who have been waiting for a termination of the war in order to improve existing facilities or build new stations. Considerable sums have been invested in preliminary engineering and legal work, money has been expended on sites, and other preparatory and development expenses have been incurred. After months of waiting and planning you and other broadcasters will want and expect and deserve prompt service from the Commission.

Frankly, you are not going to get it unless the Commission has the opportunity to expand its facilities and personnel to give this service. All of you are familiar with the amount of work necessary to bring even an uncontested application to final decision. This is not the place to debate whether all the procedures in effect are essential but I think there will be agreement at least upon the necessity of the Commission making an adequate review of the proposals it receives. Then consider the 350 FM and 100 television applications, with many more to come when the green light flashes. Then I will ask you to make a mental estimate of the number of engineers we now have on hand to process them. The Non-Standard Broadcast Section of our Engineering Department is responsible for processing these applications. But, in addition to television and FM, this section also has responsibility for international broadcasting, facsimile, studio-transmitter link, and some miscellaneous categories. And the section which has all these duties is composed at present of precisely 3 engineers.

We are reviewing our work-load, present and anticipated, with a view of asking Congress for a supplemental appropriation in order that those who have post-war plans about communications, including broadcasting, will not be held up by the Commission. Our goal in broadcast matters is to give the industry and the public a 30-day speed of service on all applications which can be granted without a hearing and a 90-day speed of service where a hearing is necessary. If we achieve this goal, the development of post-war broadcasting will be expedited, employment opportunities created for returning veterans and others and when final victory over our enemies is achieved we should be ready to move forward without undue delay.

It is a source of embarrassment to those of us at the Commission to have to explain to Members of Congress and applicants why the matters in which they are interested have been pending for months without action. Frankly, we all have gotten a little weary of having to apologize. We are now going to estimate our work as accurately as we can and submit a plan to the Budget Bureau and Congress which will be designed to achieve the goals we have set for ourselves. And I have every confidence that Congress will view our requirements sympathetically.

Speed of service is only one aspect of the problem in which broadcasters should be interested. There is also the question of quality of service. FM, for example, is being widely advertised to the public as an interference-free service. It is also being urged as the final solution to all the alleged ills of broadcasting, all the way from the need for more free speech to the question of what to do about clear channels. I hope it fulfills all these expectations and I believe it has a real chance to do it. But the achieving of these or any other ends will depend in good measure upon soundness of the Commission's FM rules, its standards of good engineering practice, and the proper application of these technical rules and standards in particular cases. The standard broadcast band today is an eloquent example of how badly such problems were handled 20 years ago. An effort must be made to get the technical rules and standards as near right as possible the first time rather than to try to unscramble the omelet at some future date.

Accordingly, as soon as the allocations are out of the way, the Commission's technical staff will get into the job of developing the soundest possible technical rules and standards to match. Of course, we want to do the best job possible. That means more engineers—and the best engineers to be had. It means also a strengthening of the legal and accounting departments.

When we submit revised estimates for these important purposes we may try to get a little more money for research. I am not talking about the kind of research that is performed in the great laboratories of this industry. But rather a sufficient staff of competent experts to coordinate the results of private research wherever it is important for the industry as a whole and applicable to the functions of the regulatory agency. Those of you who sat through the allocations hearings know how frequently an important issue turned upon the answer to a particular question—and nobody knew the answer. As Major Armstrong put it at one point, the Commission was in a position of having to predict or guess what was going to happen at the height of the next 11-year sunspot cycle. There were many other examples where intelligent research would have been vastly superior to argument in answering difficult questions.

In the Technical Information Division of the Commission, where research of this general character is centered, we find again only three engineers.

There are other important fields of nontechnical research that could be explored. Questions of social and economic policy are too often based upon the predilections of the individual rather than upon facts. (My earlier remarks this evening may be cited by some as an evidence of that conclusion.) But back in 1938, Senator WHEELER introduced a bill to establish a Director of Research within the Commission and so I take no credit for the idea. However, I am of the firm opinion that every dollar spent upon the proper kind of research in communications will be returned many times in terms of better service to the public, a more informed attitude by the regulatory authority and perhaps result in a more stable foundation for the industries involved.

Finally, an increase appropriation is only one phase of getting us ready to do our job properly and promptly finding the right men to fill the jobs is another. Today, of course, all the money in the world wouldn't get the engineering talent we need. Radio engineers are largely in the armed forces or engaged in vital war communications work. But as these men are released the Commission will want and need the services of some of them. I am hopeful, indeed, that the Commission at the proper time can sit down with the Army Signal Corps and the Office of Naval Communications and work out an arrangement whereby our employment needs will be geared into their demobilization policies. In that way a qualified veteran could walk into the Commission the day he was discharged from the armed forces and find a desk ready and his work laid out.

Time does not permit discussion or exploration of other problems which lie ahead. I can only say that we have our work cut out for us. In addition to winding up the frequency allocations above 25,000 kilocycles and bringing out a proposed allocation below 25,000 kilocycles, and devising rules and standards of good engineering practice for the new services involved, we also have the clear channel hearing in prospect. Moreover there is the complex question of international communications and the proposals for a consolidation or merger of these carriers. If that completed the agenda for the immediate figure, it would be enough. But there's the question of what to do about international broadcasting when O. W. I. is no longer in the field and we must consider that. Added to that is the question of what new communications legislation should be recommended to Congress. And, of course meantime, we must help prepare for the Inter-American Radio Conference at Rio de Janeiro in June and perhaps a world telecommunications conference thereafter. And always right ahead of us are the hundreds—and perhaps thousands—of broadcast applications staring us in the eye demanding attention when the freeze is thawed.

It looks like a busy spring ahead.

Forty-five Days 'Til Frisco

EXTENSION OF REMARKS

OF

HON. CHARLES M. LaFOLLETTE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. LAFOLLETTE. Mr. Speaker, I doubt if there is any single person in the United States who has worked more wholeheartedly and diligently on behalf of intelligent international cooperation than the Reverend E. A. Conway, S. J., of the social-action department of the National Catholic Welfare Conference, Washington, D. C.

Those of us who have been privileged to know Father Conway and to have worked with him in a small way have the highest admiration and respect for him as a man and as a forthright worker for the cause of international cooperation.

I am very pleased, therefore, under leave to extend my remarks to include a

radio broadcast made by him in Indianapolis, Ind., on March 11, 1945, under the auspices of the Indiana Committee for Victory:

Only 45 days remain before the world-shaping conference of the 44 United Nations at San Francisco on April 25.

Mr. Henry F. Grady, president of the San Francisco Chamber of Commerce and one-time assistant secretary of state, said recently that the conference "may well prove to be the most significant conclave in the history of the human race."

I know it is customary to take chamber of commerce statements with a liberal sprinkling of salt, but in this case I am inclined to agree with Mr. Grady.

I am reminded, in this connection, of a letter which John Adams wrote to his wife on the 3d day of July 1776. Said John Adams to Mrs. Adams, "Yesterday, the greatest question was decided which ever was debated in America; and a greater perhaps never was, nor will be, decided among men. A resolution was passed without one dissenting colony that these United Colonies are, and of right ought to be, free and independent states."

At San Francisco, as a matter of fact, a greater question will be decided among men. The meeting in the Golden Gate city will be far more important than that other meeting which so impressed John Adams. In 1776 men formed 13 free and independent States; and that, and I say it proudly, was a mighty achievement. But in 1945 men have it in their power to form one world. Philadelphia gave birth to a new nation; San Francisco may bring forth a new world order.

Make no mistake about it, my dear friends, the parley that is going to take place in San Francisco will set the pattern of the world for generations to come. Out of these San Francisco sessions will come an organized world or an anarchic world—one world or the end of the world as we know it. Out of them will come lasting peace or eventually another war.

How can we explain the American public's continuing apathy toward the San Francisco Conference? May it not be the result of the ordinary citizen's humble underestimation of his own power and his lack of knowledge of how to make his influence felt—of how he can play his part in that vague but powerful thing known as public opinion?

I was happy to learn on my arrival in Indianapolis that you are taking steps here in Indiana to remedy that situation. I take the liberty of congratulating you citizens of Indiana and especially the Indiana Committee for Victory, because your Governor is the first, as far as I know, to have designated a special foreign-policy week (week of March 25) in which to develop public interest in the problem of organizing the peace.

Public opinion can make itself felt at the San Francisco Conference. I am quite sure it has already played its part in other conferences, I think it is unquestionable that public opinion influenced the compromises of the Yalta Conference. I think it is safe to say that the decision of the Big Three to act conjointly henceforth was undoubtedly influenced by widespread opposition to "unilateralism" both here and in Britain. The right of free elections in the liberated lands and the compromise on the question of the unlimited veto were also, I believe, at least partially the result of insistent public pressure.

But, unfortunately, on other questions public pressure has thus far been too little because the "pressers" have been too few. There has been no ground swell of opinion, no deep rumbling from within the Nation to tell our national authorities that at San Francisco we are determined that they shall develop what the Yalta communiqué said in such a fine phrase: "A new world order under law."

Speaking as a churchman, I venture to say that no group in the Nation has done more than the organized religious groups to develop public understanding of these problems. The official Catholic, Protestant, and Jewish agencies have issued formal statements or commentaries on the tentative Dumbarton Oaks proposals for a world security organization.

First came the now famous Bishops' Statement on International Order, issued by 103 Catholic bishops on November 16, 1944. Two months later, on January 17 of this year, the Synagogue Council of America, representing orthodox, conservative, and reformed Jews, published its official judgment. Next day the Federal Council of Churches adopted a resolution in the name of organized Protestantism proposing nine measures designed to bring the Dumbarton Oaks plan "into closer conformity with Christian ideals."

In view of the fact that these three groups agreed over a year ago on the essentials of the ideal world organization, as expressed in the trifaith "pattern for peace," it is not surprising that their criticisms of the concrete proposals of Dumbarton Oaks are substantially the same.

A comparative study of the recent commentaries on the Dumbarton proposals would seem to indicate that the three religious groups agree that the Dumbarton proposals are a constructive step toward world cooperation. But it is likewise evident that they want the San Francisco Conference to make many improvements in the present preliminary draft.

I suggest on the basis of the official statements the following nine improvements as a program which Catholics, Protestants, and Jews can support together:

1. Preamble: A preamble acknowledging that States are subject, no less than individuals, to the sovereignty of God and to the moral law which comes from God. (It might go on to reaffirm the principles of the Atlantic Charter, as the Federal council suggested and as the Chinese delegation had already proposed. But it seems to me that the preamble should dig down to the solid rock of the moral law and commit the signatory states to the acknowledgment that they are subject to a law that "takes priority over their individual wills.")

2. Commission on international law: A body of experts should be organized at once to proceed with the development and codification of international law.

3. Commission on human rights: A similar commission should be set up at once, under the social and economic council, to draw up an international bill of human rights, to be subscribed to by all the members of the proposed organization.

4. Commission on non-self-governing peoples: A third commission or council should be added, to act in an advisory and consultative capacity for the advancement of dependent peoples, and to supervise the administration of existing mandated territories and dependent territories taken from enemy states.

5. Commission on minorities: A commission should be set up to safeguard the rights of racial, religious, and cultural minorities, including groups uprooted by war or oppression.

6. Disarmament: The draft should provide more specific guaranties that drastic limitation of national armaments will be inaugurated as soon as collective security measures have proved successful.

7. Rights of small nations: More specific guaranties should be given that the economic and political independence of the smaller members of the organization will be safeguarded, and an adequate share given them in the policy making of the new organization.

8. Revision of treaties: More specific provision should be incorporated in the draft for the future revision of territorial and other settlements made during the "transition period," and for the revision of any treaties which may be adjudged to be unjust.

9. Voting procedure: The Yalta compromise on the veto remains a compromise. It should not be continued indefinitely. We should urge that provision be made in the draft for the review of the question after a definite period of time.

I suggest these nine points for improvement as a program for immediate action by Catholics, Protestants, and Jews together. These points have the merit, I believe, of being specific. Neither the State Department officials nor our San Francisco delegates are aided by vaguely phrased demands that morality be injected into the final charter They are quite justified in asking, it seems to me, "Just what do you want us to change?"

To which I hope all of us, Catholics, Jews, and Protestants, will reply, "We want nine improvements. We want this preamble. We want these four commissions. We want more specific commitments on these three points. And we want provision for eventual review of the veto power given the Big Five."

We have 45 days to agree on a common program and to make our demands known to our delegation.

What will come of San Francisco, no one yet knows. The weight of the world will rest on the delegates of these 44 nations. The words which Churchill addressed to the Royal Air Force might well be paraphrased and applied to them and to their governmental chiefs, "Never have so many depended for so much upon so few." But a little depends upon you, too. Upon you depends whether our delegates go to San Francisco assured that you want an international organization but likewise convinced that you want these nine improvements. They will be if enough people write and tell them so.

But remember—only 45 days—only 45 working days until Frisco.

Polish People Fear Lublin Committee—Polish-Russian Unity, Friendship, and Good Will Being Destroyed

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the London Dziennik Polski, March 21, dealing with conditions in Poland under the Lublin authorities since the Crimea Conference:

We receive reports from Poland and from neutral countries from time to time. Though meager and fragmentary, these reports deal with facts and not of sporadic ones resulting from some individual abuse of power. The Lublin people, after announcing the Crimea decision, predicted, left and right, semiofficially and whisperingly, that now, on the eve of the reconstruction of their government, their politics could be changed. They say they will prove to world opinion that they are able to govern democratically. However, everything ended with whispered propaganda.

After the Crimean decisions not even the smallest changes can be seen on Polish soil. Arrests and mass deportation of Poles toward the east continue. This affects particularly those Polish territories which are east of the

Curzon line. On March 3, 1945, during 1 day only, 1,000 Poles were sent from Lwow to an unknown destination. At the same time thousands were being deported to provinces. Among the deported, 20 percent were women, and the age of the deported varied from 14 to 70. Conditions in which Poles are being imprisoned and deported are simply ghastly and full of cruelty. Hence, many cases of death. In Russia these deportees are presented as Germans or as German collaborators.

The cruel aim lies therein, to cause inimical feeling amongst the Russian population against those unfortunate people. All neutral citizens, who are returning from Poland, repeat the desperate appeals of the Polish mission of the Polish community, for help, for causing arrests and deportations to cease, and if that be impossible, then at least, for softening of police authorities' methods. The appeal, "Do not allow us to be destroyed" sounds from all sides of tortured Poland. East of the Curzon line compulsory calls into the army and forcible moving of the population continues. Cases of ordinary plundering are very frequent. A third food quota has been forced onto the peasants. And all that is happening after the Yalta Conference.

Announcing this news, we have no intention to doubt with the facts the good-will of Stalin, who also at Yalta repeated many times that he wanted to see a strong and free Poland, but we must question, in the light of those facts, the good-will of the Soviet police authorities who are acting in Poland, as well as that of their agents—men from Lublin.

The Polish Nation, organized by its traditional political parties, headed by the secret committee of ministers in Poland and armed by their home army, upheld a positive attitude toward Russia. They contributed to the victories of the Red Army, where and how they could, paying with the highest price—with their blood. Only recently—a few days ago—Moscow stressed with unusual objectivity, the almost unheard-of efficiency and good-will of the Polish railway workers who, not waiting for their pay or for the "Lublin authorities," took into their own hands the initiative of fighting the Germans. With lightning speed they earnestly restored communications on the rear of the Red Army which was biting into German defense positions on the Oder. The Red Army advanced further in their victorious march and behind them police authorities and their Lublin agents began to arrive. Hope dwindled. It is exactly those people from Lublin and their authorizers who destroy confidence in the good-will of the Russian authorities and destroy sympathy toward Russia which could have well increased.

The Dumbarton Oaks Plan

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, March 23 (legislative day of Friday, March 16), 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article relating to the Dumbarton Oak plan by Dorothy Thompson, which was published in the Washington Evening Star of March 19, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE RECORD

(By Dorothy Thompson)

Lord Beveridge, of the famous Beveridge plan, is by nature optimistic and by years old and wise. A few weeks ago he expressed lack of optimism about the Dumbarton Oaks plan and stated that he feared this form of world organization and voting system might lead us instead into the next war.

Lord Beveridge is not alone in his hesitations. There is also Comdr. Harold Stassen. But there has been little candid discussion of the proposals raising the critical questions. Our intellectual leaders—historians, publicists, international lawyers—seem afraid to "rock the boat" and are under pressure to accept the plan in its present form lest there "should be no world peace." Enduring peace is civilization's most imperative need, and since the Dumbarton Oaks proposals have become associated in every mind with this hope, to criticize them is seemingly to betray peace.

Yet the scheme, as filled out at Yalta, calls for sober reflection, retrospectively and prospectively.

Once before three powers, after a series of meetings between the heads of states, presented to their peoples, delirious with joy, a plan for "peace for our times." Its thesis was that if the three great European powers of that day could agree "never to go to war against each other"—and they did—peace could be maintained indefinitely.

But this peace also rested on the assumption that whereas great powers should submit to no strictures, smaller states should be subject to compulsions if their policies seemed to threaten the peace of the powers. That concept inevitably involves the readiness of the weak to renounce force in behalf of those who will not themselves renounce it.

Thus the powers delivered up Austria to one of their number "to avoid war." Thus the powers—avoiding "unilateral decisions"—brought united pressure to dismember the Czechoslovak state "in the interests of world peace." The Runciman commission had the task of actually putting Czechoslovakia in the role of aggressor should she refuse to accept the decision of the big three.

The big-three agreement—the peace of Munich—which ended in the extinction of the Czechoslovak Republic, though there is still a Czech Government in Prague, did not preclude other alliances, as Dumbarton Oaks does not. Britain and France made an alliance with Poland against aggressors. Germany also had a long-standing nonagression treaty with the same state.

The Munich peace foundered on the unwillingness of Poland to sacrifice herself for the peace of the powers, and the refusal of two of them, Britain and France, to coerce her.

Germany, having concluded a nonaggression pact with Russia and, assuming that the peace of Munich would continue through a unilateral decision, or be restored after a fait accompli, moved into Poland on a "mere punitive expedition," whereupon the alliances, after some horrified hesitation, went into play.

It will be argued that none of the present great powers has the aggressive intentions of Hitler Germany. But prudent men do not draw contracts even with their best friends on the assumption of no possibility of default. And there is nothing, as far as I can see, in the Dumbarton Oaks plan, as such, to prevent a repetition of this bitter experience.

The great powers are to be above all law and subject to no compulsions. Therefore the force that is to be used to prevent aggression, can only be used to coerce small states that might threaten the peace of the powers. If the great powers should agree on measures to be taken against smaller states these would be helpless, but if any one of the powers should seek to extend its influence over a small state, by force or the threat of force, or by interventions hitherto unpermissible under international law, nothing could stop that power that would not at the same time dissolve the world organization.

What is, in fact, proposed is not a world order of law, but an organizational instrument for continuing great-power agreements. In our own times we have seen where this can lead. It is the prelude to the present war.

Address by Hon. Robert A. Taft, of Ohio, at Testimonial Dinner for Dr. Abba Hillel Silver

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, March 23 (legislative day of Friday, March 16), 1945

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at a testimonial dinner honoring Dr. Abba Hillel Silver, March 25, 1945, at the Hotel Commodore, New York.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I consider it a great honor to be invited to speak at this testimonial dinner to Dr. Abba Hillel Silver. I welcome the opportunity to express my highest admiration for the manner in which he has conducted a most difficult cause, and for the unswerving adherence he has displayed for the principles in which he believes. My interest in a Palestine State was brought about by Dr. Silver's clear presentation of the facts and the ideals which make it an attainable goal to be vigorously sought. It is principally due to Dr. Silver's earnest methods that one public man after another, that one party after another, have come to support and advocate publicly the establishment of a Palestine Commonwealth.

I believe my proper function here is to lay before you in a brief statement the actual facts relating to the Palestine Commonwealth since February 1, 1944, when Senator WAGNER and I introduced Senate Resolution 247. After reciting the Balfour Declaration and the 1922 resolution of Congress, our resolution proposed that the United States shall use its good offices and take appropriate measures to the end that the doors of Palestine shall be opened for free entry of Jews into that country, and that there shall be full opportunity for colonization so that the Jewish people may ultimately reconstruct Palestine as a free and democratic commonwealth.

I don't here need to review the history which gave rise to that resolution, beginning with the Balfour Declaration of November 2, 1917, in which the British Government committed itself to the establishment in Palestine of a national home for the Jewish people. That declaration was carried into the Palestine mandate by which that country was turned over to the British Government, already committed to the Zionist principle. It was carried into the treaty which we made

with the British Government regarding mandated territory. It was reaffirmed by the Congress of the United States by resolution on June 30, 1922. After the World War Jewish immigration into Palestine continued and a great deal of money and effort were expended in building up the economic life of this small homeland.

During this period the British showed no great sympathy with their own Balfour Declaration and worked out a complete separation from Palestine of the territory of Trans-Jordania, which always had been a part of Palestine. Then came the shock of the white paper of 1937 essentially repudiating the Balfour Declaration, placing a limit on Jewish immigration and making future independence impossible. It is significant that the League of Nations, which granted the mandate refused to sanction this repudiation. It is significant that our Government has refused to recognize it It is significant that Mr. Churchill himself stated on May 22, 1939, that it "is a plain breach of a solemn obligation." But the British are still in Palestine. Immigration is still greatly restricted. The British Government officially has never repudiated the white paper of 1937.

Now we have come to one of the great periods of national reorganization in the history of the world. It will not be easy for many years, if ever, to reverse arrangements which are made in connection with the approaching peace settlement. Dr. Silver and his friends realized that the issue cannot any longer be bypassed or postponed. Unless the principle is adopted now by the great powers and incorporated in the peace settlement, there will be no Jewish national home and no Jewish commonwealth. We cannot long support the Arab position and the Jewish position at the same time. This Government must take a public and definite position now, and urge now upon the British Government the performance of its obligations; or our position on the question will become of no importance.

When our resolution was introduced, and at all times since then, it has had the overwhelming personal support of the Members of the Senate Committee on Foreign Relations. It was immediately met, however, by the opposition of the Secretary of War and the Chief of Staff, undoubtedly with the knowledge and assent of the President and the Secretary of State. The Secretary of War stated that even the holding of public hearings on the resolution "had grave implications which would seriously interfere with the progress of the war." While dubious of the facts, the committee had no choice except to accept the military judgment of our military leaders. But the committee was astonished a few days later to have the President issue a statement that "full justice will be done to those who ask a Jewish national home, for which our Government and the American people have always had the deepest sympathy." Surely if the holding of public hearings by the Senate would have so stirred up Arab public opinion as to endanger our armies, the issuance of this statement by our President, with his tremendous prestige, would have had even more effect. But there is no evidence that there was the slightest interference with our armies then fighting in Italy.

The matter remained quiet until the Republican National Convention in June 1944 called for the opening of Palestine to unrestricted Jewish immigration and land ownership, so that Palestine might be constituted as a free and democratic commonwealth. The platform said, "We condemn the failure of the President to insist that the mandatory of Palestine carry out the provisions of the Balfour Declaration and of the mandate while he pretends to support them."

Thereupon the Democratic platform in July endorsed the opening of Palestine to unrestricted Jewish immigration and colonization and such a policy as to result in the establishment there of a free and democratic Jewish commonwealth.

On October 12 Governor Dewey endorsed the Republican plank. On October 15 the President endorsed the Democratic plank and stated that "Efforts will be made to find ways and means of effectuating this policy as soon as practicable."

Immediately after the election Senator WAGNER and I therefore pressed for immediate consideration of our resolution. At Dr. Silver's suggestion, I had obtained a letter from the Secretary of War stating that the military considerations which led to his previous action in opposing the passage of the resolution were not as strong a factor as they had been, that in his judgment political considerations now outweighed the military, and that the issue should be determined upon the political rather than the military basis.

We were greatly astonished, therefore, when the Secretary of State appeared before the committee and opposed the passage of the resolution, apparently under the President's direction. This was all in secret. The committee insisted on proceeding to report the resolution unless the Secretary of State was willing to state publicly his opinion. This he finally did on December 11, 1944, after consultation with the President, giving his opinion that passage of the resolution at the present time would be unwise from the standpoint of the general international situation. Even then the resolution was only shelved by a vote of 12 to 8. Yet only last week the President again endorsed the Democratic platform and stated that he would seek to bring about its earliest realization.

Why on earth, then, should the President object to a Senate resolution urging him to use his good offices and take appropriate measures to the end that this policy may be carried out. What is the position of the administration on this question? It says one thing and does another. It is suggested that the President wishes a free hand to persuade the Arabs and the British into this policy without arousing them by a congressional resolution. Why would his hand not be strengthened by such a resolution? I am told that protests from the Arabs have naively suggested that they realize the exigencies of an American election and that they do not take seriously promises made in a campaign, but a resolution passed at this time would alarm them. This is hardly a complimentary attitude toward American statesmanship.

I think we are entitled to doubt that the President has taken any steps to carry out the promise of the campaign. We have not been told what was said in the conversation with Ibn Saud, but the President stated that he learned more in 5 minutes conversation with Ibn Saud about the Moslem problem and the Jewish problem than he could have learned in the exchange of 2 or 3 dozen letters. But did he tell Ibn Saud as he told Dr. Wise last week that he and the United States favored the establishment of a free and democratic Jewish commonwealth in Palestine? I doubt it. Whether he did or not, apparently he did not obtain any concession, for he is quoted as saying last week that he would continue to seek to bring about the earliest realization of Zionism.

I cannot overemphasize the vital nature of the present moment and the necessity of the United States Government taking an unequivocal position with the British and the Arabs. What is the reason for our failure to do so? Fundamentally it seems to be the fear of arousing Arab opposition. If that fear is to prevail today, why will it not prevail indefinitely? The Arab position is bound to grow stronger, and their success today will increase their future opposition. If the question is not settled now, it never will be settled. For today our armies are at the height of their power and in a short time Germany will be prostrate.

Can it be that we are afraid to press the issue because of our desire to obtain Arab oil? If the desire for oil is to prevail over the interests of the Jewish people in Palestine, I see no reason why it should not prevail indefinitely, for oil will become a more and more scarce commodity and the importance of the oil fields in Arabia will apparently increase. If the Palestine problem is settled right, why can't we hope for as much oil from Arabia as if it is settled wrong?

Can it be that we are afraid of antagonizing the British Government? It seems to me that we are in a better position to persuade the British Government today than perhaps we will ever be in the future. Furthermore, we are told reliably that Prime Minister Churchill, who has always supported the Jewish position, and a tremendous party in England, perhaps a majority of the people, that does the same, would welcome strong representations from this Government. I do not believe we can longer blame our failure to act on the British.

I am prepared to reintroduce the resolution at any time that your leaders think it is advisable. I can only repeat that unless our Government takes a different position talking to foreign nations before the peace treaty is signed than it has up to this time the chance for the establishment of a Palestine commonwealth will disappear forever. I have heretofore stated the reasons why I believe the establishment of that commonwealth is the best solution of the Jewish question in Europe. I see no interference with the development of Arab nationality throughout the great territory which they control without restriction. I see no other practical solution of the terrible Jewish problem in eastern Europe. I see no other method of keeping our promises to the Jews throughout the world.

Throughout this long contest Dr. Silver has stood firm for prompt action by our Government. He has not been diverted by personal considerations or party considerations. He has courteously but persistently presented the fundamental principles of the Palestine situation to every branch of the Government, to the authorities of the political parties, and to the public. He has not quibbled about words, but he has refused to compromise on principle. It has been a pleasure to be associated with him and to testify to his unswerving loyalty to the interests of the people of the United States. For if this problem is left unsolved, out of our failure to solve it may easily grow the Third World War, which it is our first national interest to prevent.

Resolution of the General Court of Massachusetts

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted by the General Court of Massachusetts regarding the wildlife sanctuary in Essex County, which have my strong approval:

Resolutions requesting the Federal Migratory Bird Conservation Commission and the Select Committee on Conservation of Wildlife Reserves, of the United States House of Representatives, to restrain any further action by the United States Fish and Wildlife Service in the Parker River and Monomoy Point refuges until the completion of an investigation thereof by a joint committee of the general court

Whereas the committee on conservation of the General Court of Massachusetts has been directed, under an order adopted by both branches of said general court on January 29, in the current year, to conduct a special investigation of the acquisition of lands in the Commonwealth by the Federal Government for the purpose of national wildlife refuges; and

Whereas said committee has held numerous public hearings in the process of carrying out said order; and

Whereas sworn testimony given in such hearings by many landowners and farm owners in such wildlife-refuge areas indicates that subterfuge, misrepresentation, and threats were made in acquiring portions of said land; and

Whereas a bill repealing the State law which enabled the United States Department of the Interior to acquire lands for wildlife-refuge purposes was filed in the general court in September 1944 because of alleged bad faith on the part of the agents of the United States Fish and Wildlife Service; and

Whereas the said committee has reason to believe, at this time, that the filing of this bill caused the United States Fish and Wildlife Service to accelerate their plans for the Parker River refuge and hasten a meeting on December 13, 1944, with the Federal Migratory Bird Conservation Commission for permission to acquire this area so that the declaration of taking could be filed in the United States District Court for the District of Massachusetts on December 30, 1944, just prior to January 1945, when the General court convened and could consider this bill; and

Whereas according to the testimony of the United States Fish and Wildlife Service Director, Ira N. Gabrielson, before said committee on March 5, 1945, approximately 6,800 acres, representing nearly 70 percent of all land acquired by the Federal Government in the Parker River refuge area, was seized by condemnation proceedings in said district court on December 30, 1944, without any advance notice to the land owners involved that their lands were being taken; and

Whereas said committee has reason to doubt that the acquisition of lands for the Parker River and Monomoy Point refuges are duly authorized by law; and

Whereas further testimony now being taken by said committee from reputable and authoritative sources tends to indicate reasonable doubt as to the suitability of the Parker River refuge and of the Monomoy Point area for the purposes for which they have been acquired; therefore be it

Resolved, That the Federal Migratory Bird Conservation Commission, together with the Select Committee on Conservation of Wildlife Resources of the United States House of Representatives, are respectfully requested to restrain immediately any further action or proceedings of any nature by the United States Fish and Wildlife Service, its agents or representatives, on the Parker River and Monomoy Point refuges until the completion of the investigation by said committee; and be it further

Resolved, That a copy of these resolutions, together with a copy of the order adopted by the General Court on January 29, 1945, be sent to each member of the Federal Migratory Bird Conservation Commission and each member of the Select Committee on Conservation of Wildlife Resources of the United States House of Representatives, and to each Member of the Congress from this Commonwealth.

In house of representatives, adopted March 13, 1945.

LAWRENCE R. GROVE,
Clerk.

In senate, adopted in concurrence March 14, 1945:

IRVING N. HAYDEN,
Clerk.

A true copy. Attest:

F. W. COOK,
Secretary of the Commonwealth.

Academic Freedom

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, March 23 (legislative day of Friday, March 16), 1945

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Academic Freedom," from yesterday's edition of PM.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ACADEMIC FREEDOM

We congratulate Dr. Homer P. Rainey, deposed president of the University of Texas, for declining to prove again that academic freedom has been suppressed at that institution.

Rainey has just turned down the offer of the Dallas Times-Herald to give $5,000 to the Red Cross (or any charity he named) to prove this suppression by "specific and indisputable facts." We agree with Rainey that this already has been proved "specifically and indisputably" in three ways by:

Rainey's 16-point protest against the regents' administration of the university which preceded his firing last fall.

The Senate investigation which followed.

The conclusions of the American Association of University Professors—highest academic tribunal in the country.

If the Dallas Times-Herald wanted to get the facts, all it had to do was turn loose some reporters really to report the story that remained just barely beneath the surface for several years and burst forth flamboyantly in the Senate investigation.

That's what the Austin American did. Edited by an alumnus, Gordon Fulcher, and having many loyal ex-students on its staff, this paper found plenty of proof in the finest job of Rainey coverage in the State of Texas.

That's what PM did, in 4 days and a few nights, listening out in Texas, which proved to our satisfaction "specifically and indisputably" that academic freedom had been kicked all over the campus.

A few fearless editors of small independent papers in Texas also were able to prove it.

And repeatedly correspondents for the powerful papers of the big Texas cities—papers too involved in the same interests of philosophy of the anti-Rainey forces—confided to me their deep shame that a Texas paper could not delve into this story.

In making the Times-Herald offer, the publisher, Tom M. Gootch, challenged Rainey:

"If the students have not been curtailed in their freedom in the search for truth, how can it be proved that academic freedom has been squelched?"

If the Times-Herald is so concerned about the students' quest for the truth, why didn't the paper get up and yell for it when the students, almost to a man, marched to the capitol under a banner proclaiming: "Academic Freedom Is Dead?"

The Times-Herald, in its offer, contends it has no connection with Senator W. LEE O'DANIEL, the Texas regulars, or the powerful oil, utility, banking, and motion picture interests which Rainey charges were out to get him. What then was holding the Times-Herald back in supporting Rainey when he needed its support so sorely?

It seems to us that the only thing the Dallas publisher can do, if his offer is in as good faith as he insists, is to follow Rainey's suggestion and turn his offer about. Let the regents answer.

"If there is still any doubt in your mind," suggests Rainey, "call upon the regents to show indisputable proof that they have not violated the principles of academic freedom and the principles of good university administration."

Let the regents prove they were primarily concerned in protecting students' search for truth when they fired three economics professors for "impolite behavior" when they tried to correct misstatements of fact at a smear-labor meeting and protested to a Dallas paper because they were denied the floor.

Let them explain why they banned John Dos Passos' trilogy, U. S. A., from a contemporary English reading list.

Let them defend their refusal to grant funds for the long-wanted School of Social Work and eight social sciences projects in a row, blocking Rainey's program for the university's development.

Let them make their prize offer to Regent Orville Bullington, who said before the Senate investigating committee:

"We have heard too much about the university motto: 'Ye shall know the truth shall set you free.' Let us hear more about the motto on the State seal: 'Discipline is the foundation of the State.'"

And to Regent J. Frank Strickland, who licked his lips over the smutty vulgate of U. S. A. and who wanted all professors to submit to a "patriotism test."

Let the regents prove there was no secret meeting in Houston in the spring of 1940, as was testified under oath, to plan the purge of education in Texas.

Let them disprove the charge of "interlocking directorates" that brought this purge about.

Let them prove they did not attempt to gag Rainey, forbidding him to "make so many speeches—particularly to religious groups."

Ask the regents finally if the students' freedom to seek the truth extends to the truth when spoken by a New Deal Democrat.

Let the regents take the rap for a while. They still have their jobs.

EVELYN SEELY,
For the Editors of PM.

The Brotherhood of Man

EXTENSION OF REMARKS
OF
HON. BURTON K. WHEELER
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, March 23 (legislative day of Friday, March 16), 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to insert in the

Appendix of the RECORD a radio talk by Rev. H. R. Ricketts of February 18, 1945.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

I sought my soul,
But my soul I could not see;
I sought my God,
But my God eluded me;
I sought my brother
And I found all three.
—(*Author unknown.*)

Read I John iv: 7–21, "If any one says 'I love God' and hates his brother, he is a liar."

These words spoken by the writer of the Epistle of John are very interesting. Let us see if they are in harmony with the teachings of Jesus:

In Matthew 25: 45, in giving us the mark of the saved, Jesus says: "Inasmuch as ye did it to the least of these my brethren, ye have done it unto me."

In Matthew 23 He condemns the Scribes and Pharisees not because they did not go to church, say their prayers, read their Bible, pay their tithe—they did those things—he condemned them because they omitted the weightier matters of the Law: Judgment, Mercy, and Faith.

He was once asked; who is my neighbor? His answer was the parable of the Good Samaritan.

In Matthew 5: 23–24 Jesus says: "When you are presenting your gifts at the altar, if you remember that your brother has any grievance against you, leave the gift there before the altar and go and make up with your brother, then come back and present your gift."

We might go on, but this glance at the teachings of Jesus indicates that our text is in perfect harmony with His Teachings. "If a man say he love God and hate his brother he is a liar."

We are living in a world fraught with danger. That danger is not some foreign army but our own selfish hate. Our whole civilization is being sacrificed on the altar of greed. We hate our neighbor. We have imperialism as our political philosophy and monopoly as our economic goal. Man is but a commodity in our markets and a very cheap one at that. His blood is made to run like water that we may maintain our imperialistic power and hold our monopoly on world trade. We do it with great religious fervor. We degrade man, destroy the world, for selfish purposes.

In the Book of Judges is the story of the crossing of the Jordan. Each person who passed had to pronounce the word "shibboleth." Those who were foreign could not pronounce the word. Today we stand at the ford which crosses into a new day. If we ever get across the ford we have a password to learn. It is a short word, but one very difficult to pronounce, without a foreign accent. The little word is the first person plural of the personal pronoun, "we," "our." We say, "our Father," but we speak it with an accent. We really mean our group, our Nation, our class, our race, our interest, ourselves. Because of our failure to pronounce this word we are forbidden entrance to the promised land of peace.

We have builded our walls of racial and class distinctions. We live in our own room of national interest. We rob people of lesser breeds and then wonder why the world is in such conflict.

Once Mr. Whistler, the artist, sold one of his best productions to the city of Paris. A friend of Mr. Whistler's criticized the picture, telling him that the picture did not fit the room. Whistler responded, "My friend, aren't you beginning at the wrong end? You can't make that picture fit this room. You'll have to make the room fit the picture."

There was another great Master who gave His masterpiece to the world. That masterpiece was the fatherhood of God and the brotherhood of man. He painted that masterpiece with his lifeblood. Today we criticize it. We say it is not practical, that it is impossible because it does not fit into our narrow-walled political-economic room. In order to maintain our room we have marred that picture almost beyond recognition. In our present peace discussions we are more interested in maintaining our low-ceilinged room than in preserving the eternal revelation of God. Why not tear out some of our old partitions, lift our ceilings, and build a room large enough for the brotherhood of man? He that sayeth he loves God and hates his brother is a liar.

Labor Is Entitled to Fair Play

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. McDONOUGH. Mr. Speaker, I have always believed that adequate wages for labor in this Nation is a social and economic problem, not a political issue. And consequently labor should not depend upon nor adhere itself to either of the major political parties because by so doing it may create an injustice and raise political animosity toward its membership. It should remain strictly nonpartisan.

The well-being of the social and economic life of this Nation depends on labor receiving adequate wages to properly clothe, feed, shelter, and educate their families. When this fails the economic and social life of the Nation is adversely affected. Most of our lower standards of education and lack of social and cultural development can be traced to low wages.

Labor is entitled to the same independence and security as those who employ labor.

It is the duty of Congress to see that this balance is maintained.

Mr. William Green, president of the American Federation of Labor, stated labor's position in connection with the rising cost of living in an editorial recently in the American Federationist, official magazine of the American Federation of Labor, as follows:

UNION RESPONSIBILITY

When our Nation went to war, representatives speaking for unions affiliated with the American Federation of Labor gave their solemn pledge not to strike while the conflict was on. To keep that pledge labor has done everything humanly possible, even though collective bargaining was suspended and our wages frozen.

The Stabilization Act, which tied wages to the cost of living, has served to make more obvious wage inequities within plants and between similar kinds of work in communities. In the interests of morale, many of these inequities have been corrected. The result has been a leveling up, with pioneering groups given no chance to raise new standards, as has been the procedure under the evolutionary methods of collective bargaining. The consequences have been most serious. Wages no longer even approximate a fair share of the returns from joint work, nor have wage earners kept their former place in sharing social progress.

While workers are eager to return to collective bargaining, they realize they still have a responsibility to help control inflation. Possibilities of inflation will become increasingly serious as reconversion begins, so that all wartime controls cannot be lifted at once.

In this period, as unions resume their responsibility, there will be need for wise leadership as well as discipline within union memberships. In this period labor must again determine its own plans and policies and resume the responsibilities of free unions.

Upon the wisdom of our decision will depend our success and continued freedom. We should not let ourselves become the tools of any political party or adjuncts of the Government.

WM. GREEN.

This is a fair and impartial appraisal of the situation that now exists. It seems to me that it is the responsibility of Congress to give it serious consideration.

A Home for the Peace Capital of the World

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. LEA. Mr. Speaker, it is the hope of the peace-loving nations of the world that the efforts now being made to establish a world-wide organization for the maintenance of peace will succeed. If an effective organization for that purpose can be established, it will mark one of the greatest steps in human progress.

The functioning of such an organization will require a central location for its activities. The best possible location should be selected. It has been suggested that there is probably no better place in the world for carrying on such activities with congenial surroundings than in the San Francisco area on the west coast.

When it becomes necessary to make a detailed selection of a suitable site for the exercise of the great responsibilities of this organization, no better location could be secured than in or near the forests of redwood trees conveniently located to the San Francisco Bay area. The main part of the Redwood Forest Belt is in my congressional district on the north coast of California, extending from San Francisco to the Oregon line. These trees are among the most inspiring of all the trees in the world. Their lofty height, their great solemn red columns and great age would form a setting worthy of the peace capital of the world.

At a recent session of the State Legislature of California, a resolution, introduced by Senators Slater, Collier, Shelley, Gordon, Biggar, Quinn, and Keating was unanimously adopted inviting and urging a selection of this area as a per-

manent seat of government that may be established by this world peace organization.

Mr. George G. Hoberg, president of the Redwood Empire Association, which is a civic organization covering practically the whole redwood empire of northern California, extends its gracious invitation of that organization through the President to the peace conference at San Francisco.

In accordance with the consent granted by the House, I include in the RECORD an able editorial on this subject by Herbert J. Waters, which recently appeared in the Press Democrat, Santa Rosa, Calif., my home city:

OUR REDWOODS—PEACE CAPITAL OF WORLD

From behind the grim, dark clouds of war, the bright rays of the world's hopes for permanent peace are beginning to emerge. Each day brings us closer to the fateful day of military victory, and closer, as well, to the grave responsibilities of turning that victory into a just and lasting peace for the future well-being of all people.

Soon, statesmen of all the United Nations will gather in San Francisco to commence molding the structure of that permanent world peace.

Out of that conference will come the framework for an organization of peace-loving nations pledged to work shoulder to shoulder throughout the years to come for the maintenance of world peace.

But the great San Francisco United Nations Conference, no matter how significant and historic its decisions may be, can be only a start toward the vast objective ahead. To reach our goal of a workable and lasting peace, designated representatives of each participating nation must continue planning, thinking, and working together for the good of all concerned.

For that reason there must soon emerge a new world capital—a United Nations center for the permanent location of research and administrative staffs of any world council that may be evolved.

We believe that world peace capital should be in California.

With the strategic location of our State in relation to Europe, Asia, and both North and South America already recognized in the choice of San Francisco for the United Nations peace-designing conference, we believe delegations from all nations should go one step further and choose northern California as the permanent headquarters for the United Nations.

We believe, further, that no more appropriate location could be selected for a permanent world-peace capital than in one of the great redwood groves of our world-famous redwood empire, possibly even stately Armstrong Grove State Park in Sonoma County.

Few things left in this war-torn world symbolize eternal security as vividly as the centuries-old towering redwoods, giant trees that have stood guardian over this part of California since the real Prince of Peace was born in a manger in Bethlehem.

Inspiring by their very permanence a peace to last for all time, we believe the redwoods could become a great symbol of security to all the United Nations.

What, fo. example, could be more appropriate and attract more world-wide respect than a world-peace capital surrounded by a great grove of nature's towering redwood monuments, a grove containing a giant redwood tree dedicated to and named for each of the participating United Nations?

We present our proposal for the sincere and immediate consideration of all northern California, and urge that every effort be extended to put forward the plan at the forthcoming United Nations Conference in San Francisco.

The Sacrifice of LaGuardia's Night Club Operators and Habitues

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. COLMER. Mr. Speaker, practically ever since the beginning of this war some of us have been complaining that the war on the home front has been more or less of a pink-tea party. We have repeatedly stated that the only real sacrifice being made so far as America is concerned in this war is that suffered by the men wearing the uniform and the resultant bereavement of their loved ones.

For months we have been debating an adequate manpower bill, which now appears to be hopelessly tied up in conference by the Senate. But along came the Little Flower, the mighty mayor of the city of New York, and issued an edict defying and challenging the United States Government. It was this mighty man who called our attention to the outstanding sacrifice being made by the night club operators and the playboys and girls of the great city of New York in the fact that no more liquor could be served after the hour of midnight. He extended the hour and defied the Government.

Our attention has just been called to the reaction of the men on the fighting fronts—the "playboys" of the fox holes, the trenches, the air, and the sea—who play for keeps, whose lives are the stakes. The following article from Midpacifican, the armed forces newspaper in the Pacific Ocean areas, reflects their disgust. The article was written prior to the defiance of the Government by the little mayor of New York. What the reaction of America's fighting men to that defiance is now is a matter for your own conjecture. The article follows:

G. I.'s SHED TEAR FOR PLAYBOYS WOUNDED BY STATESIDE CURFEW

The mainland's midnight curfew, initiated to conserve vital fuel and electric power, has seriously cut into night life there and has already given birth to speakeasies throughout the Nation.

Being a few thousand miles from the scene of action, we're forced to rely on eyewitness accounts, but from all sources come tales of how playboys and playgirls are bravely facing war's encroachment on their private lives.

For instance, a New York Daily News dispatch says that post-midnight speaks are flourishing, with prices ranging from a dollar a drink to $20 for a bottle of Scotch, thereby announcing to the world that war or no war, fuel or no fuel, they're courageously carrying on.

SCENE OF STARK MISERY

Going into greater detail, Army News Service has wired a touching tongue-in-the-cheek description of the tragic consequences of the new midnight curfew for night club habitues. To an observer 6,000 miles away it would seem that New York's Scotch-and-soda belt has seldom witnessed a scene of such stark misery.

The story relates the sad plight of guys and gals who had been arising at 6 p. m. to entertain in or frequent night spots which formerly sold liquor until 4 a. m. We'll now let A. N. S. paint the scene, with appropriate background music:

"It was the first night of the curfew. The scene was Reuben's, yawning-hour hang-out of the Broadway mob in recent 'old days' of 4 a. m. closings. The time was 12:30 a. m.

"IMAGINE SLEEPING AT 1 A. M.

"Sherman Billingsley, proprietor of the Stork Club, walked in. After a quarter of a century of going to bed at dawn or later it was too soon to try to get to bed at 1 or 2 a. m. Why, a guy might get the bends jumping into a new routine like that without adequate conditioning.

"Billy Rose arrived with Leon Henderson. 'If I went home, now, the servants would think I was a burglar,' said the bantam owner of the Diamond Horseshoe.

"Damon Runyon, famed chronicler of Broadway characters, sat in the center of a group of fellows who looked dejectedly defeated at the prospect of going to bed at such an unnaturally early hour. Monte Proser, owner of the Copacabana, only major curfew casualty to date, looked even more pessimistic than usual."

AN UNHEARD-OF HOUR

There were dozens of celebrities, twice as many beautiful showgirls, pretty little chorus girls, press agents, head waiters, a few gamblers, song writers, at least one racketeer, and a dozen Broadway reporters, all a bit confused, even a little dazed at the prospect of going home at such an unheard-of-hour.

"At 3: 30 a. m. the crowd was almost gone. Arnold Reuben put on his hat and coat, looked bewilderedly about his abandoned premises, shrugged his shoulders, and headed for home.

"It feels like the middle of the day," he said.

At this point we doubt if there is a dry eye among our readers.

Elsewhere other voices were raised in less subtle protest. William Hopkins, president of the Philadelphia cafe men, said, "No one can tell me when to close—not even the President."

EARL DOESN'T LIKE IT

And out in Hollywood, Earl Carroll, who runs a super de luxe night club restaurant, added, "I don't like any part of the whole thing."

Newspaper columnists, too, had their innings. Like Lee Mortimer, of the New York Daily Mirror, who wrote, "The town will be loaded with speak-easies. After 2 weeks the curfew won't make any difference, for New Yorkers will find places to go."

Meaning, we surmise, that fun's fun and having a good time is their way of forgetting the war. It's a technique that might prove equally effective in fox holes, except that it might lose some lives and the war.

Paul Martin, writing in the World-Telegram, all but gave War Mobilization Director James F. Byrnes 24 hours to get out of town, saying: "I'm going to find myself a good, comfortable speak-easy, just like everyone else. The late crowds are not going to go home."

THESE POOR, SUFFERING FOLK

If there was ever a group deserving a serviceman's sympathy, it's these poor, suffering characters whose lives have suddenly been uprooted, who have been forced to make one of the most drastic readjustments of the decade. When contrasted with the carefree, unrestricted life of the average overseas G. I., it sort of tugs at your heartstrings.

The whole picture presents, purely and simply, one of the most effective tear jerkers of our time.

It's the type of light, entertaining material that reads well on Pacific beachheads, where

the boring prospect of having to hit a feather bed at 1 a. m. is never a problem, where there is plenty of night life. Jap flares, mortar fragments, HE shells, infiltrating Nips, midnight bathing parties in water-filled fox holes.

SHOR TAKES HIS STAND

It's simply peachy stuff to send to Manila, China, and Europe's eastern and western fronts. Guys in those spots are bound to experience a feeling of intense pity, knowing what some folks back home are enduring.

Among the small voices raised in rebuttal to the Big Stem's general feeling of they-can't-do-this-to-us was that of Toots Shor, whose restaurant is a rendezvous for stage, screen, sports, and radio stars.

"Anyone who can't get drunk by midnight ain't tryin'," said Toots.

Yours in deep sympathy,

HARRY.

The Curfew Order

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein a resolution passed by the House of Representatives of South Carolina dated March 22, 1945:

Resolution urging the observance by all citizens and sections of South Carolina of the midnight closing or curfew promulgated by War Mobilizer James F. Byrnes and pledging the backing and support of this State to War Mobilizer Byrnes in his efforts to further the successful prosecution of the war

Whereas War Mobilizer James F. Byrnes has called upon the Nation to observe the midnight closing or curfew of certain businesses and establishments, which closing or curfew is regarded by him as necessary and appropriate for the successful prosecution of the war; and

Whereas all sections of the Nation immediately took steps to cooperate in the war effort by the observance of said midnight closing or curfew; and

Whereas it was sought thereby to conserve the Nation's power and fuel resources, to minimize absenteeism in war work, to reduce the strain on overloaded transportation facilities, and to give to the men and women of our fighting forces concrete evidence that our people are wholeheartedly supporting them and are prepared to make any sacrifice which we may be called upon to make to hasten the day of final victory; and

Whereas we feel that, compared to the sacrifices being made by our men and women hourly on the battlefields of the world, the observance of the midnight closing or curfew is little enough to ask of the American people, and that all citizens and sections of the Nation should readily respond to the Nation's call: be it

Resolved by the house of representatives, That we call upon every citizen and section of the State of South Carolina to respond wholeheartedly and without reservation to the request of War Mobilizer, James F. Byrnes, for the midnight closing or curfew and we commend him for his action in calling upon the people to make this contribution to the war effort, and pledge him the loyalty and support of the State of South Carolina in this, and all other matters, in which he asks for the aid of the American people; be it further

Resolved, That the clerk of the house forthwith transmit copies of this resolution to the Senators and Congressmen from South Carolina.

JAMES E. HUNTER, Jr.,
Clerk of the House.

A Secretary for Aviation

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. BENDER. Mr. Speaker, the need for establishing a new Cabinet post, to be headed by a Secretary of Aviation, is more pronounced today than ever before. Foreign governments under the leadership of their ministries devoted exclusively to air transport already are laying plans for the promotion of post-war air flight on a vast scale.

Our own country with the largest fleet of planes suitable for commercial flight has been unable to arrive at definite and long-range conclusions in this sphere because we have no individual specifically responsible for determining our policies in the field of aviation.

It is worth while to point out that the man who headed up our delegation to the recent Chicago Aviation Conference, Mr. Adolf Berle, Jr., is now in a post entirely removed from the whole aviation question. It does our country no good to take the lead in formulating plans for the development of aviation or to produce the world's finest planes unless we are to pursue those plans and use those planes in accordance with a clearly stated and intelligible policy.

If the very individuals who one day devote themselves to the formulating of those plans are removed to a diplomatic post the next day, we shall be unable to maintain the leadership in air transport which our present position merits. A Cabinet officer, sitting at the head of a Department of Aviation and charged with the responsibility of developing and executing a post-war aviation program which would use our tremendous new aircraft industry to its fullest advantage, both commercially in time of peace and militarily in the event of war, would furnish the entire Nation with reasonable hope that our vast potential strength in the air would be well and wisely used. We are the only nation among the leading powers which has refused to recognize the importance of air transport by the creation of an agency dedicated to this alone. We have divided air authority among a whole group of other departments. Unless we act promptly to meet this need, we may find ourselves in the position of being outdistanced by other nations with fewer resources but greater resourcefulness.

I have repeatedly urged the creation of such a Cabinet position and the establishing of a Department of Aviation. In my judgment, such a Department should be functioning actively before the end of the war and should be recognized as a vital factor in the post-war plans of our Government.

This proposal should be a must in our immediate legislative program.

Cracking Down on the Wasters

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial from the Honolulu Star-Bulletin, February 27, 1945, endorsing the order issued by War Mobilizer James F. Byrnes closing night clubs and bars at midnight.

CRACKING DOWN ON THE WASTERS

War Mobilizer James F. Byrnes and the War Manpower Commission together have cracked down on the Nation's night spots.

Twelve midnight was the national curfew hour, effective at midnight Monday.

No liquor may be served after that hour. Gambling and juke-box playing are "out."

This is a drastic order. But it is needed. Millions in the United States are wasting time and money while American boys die in deserts, on lonely, battered islands, in jungles, in the valleys of Germany, and on the torn terrain of Iwo Jima.

The Nation's manpower is far from completely mobilized and working. Millions of man-hours are being lost, in war plants and in other industries and occupations, by sheer dissipation. Loafing has become a scandal in many war centers.

This new order is not directed particularly at labor, though labor must obey it.

It is directed also at the fat and affluent proprietors of bars and taverns and roadhouses; the smooth slickers who run night clubs; the hordes of men and women who haunt the places where other men and women spend money foolishly, and who by one means or another, pick up easy livings off the drippings.

It is directed at all the careless, money-tossing wastrels who patronize the night-spots and the "hotspots" and make merry with booze and women and song and jest while elsewhere far better Americans are dying of wounds and disease and thirst and starvation.

In Hawaii there has been a night curfew ever since the war broke out.

It used to be at dusk, then at 8 p. m., and now for some time it has been at 10 p. m., so we do not need the midnight-closing order here.

But the lesson of what's happened suddenly to mainland nightspots should not be lost: As the rigors and sacrifices of war bite down, our Government is getting "tough" on wasters of time and dissipators of energy.

And something like the Byrnes order could happen here.

Congress Is Air-Minded—The Flying Seventy-Ninth

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. ENGLE of California. Mr. Speaker, Congress is air-minded. We have organized a Congressional Flying Club of which our colleague, Congressman RANDOLPH, of West Virginia, is president, Members of the House, their employees, and employees of the House are entitled to membership and the splendid opportunities to fly afforded by the club. This progressive activity has brought favorable comment upon the Congress and under leave to extend my remarks in the RECORD I wish to include an editorial from the New York Herald Tribune of March 30, 1945:

"THE FLYING SEVENTY-NINTH"

The important recognition which was given the oncoming of a post-war air age by the organization in Washington last summer of a Congressional Flying Club, gains in value this week by the news that the club has now 91 members, and that Secretary of Commerce Wallace, who has lately declared his intention of learning to fly, may be made an associate member at an early date. Representative JENNINGS RANDOLPH, of West Virginia, is the club's flying president, and several other members are ex-pilots of the First World War. Mr. RANDOLPH has announced that "Congressmen should know how to fly in order to pass intelligent laws on aviation"—a statement which is, we believe, the truest of talk.

In 1910, according to the Bureau of Motor Vehicles, there were but 62,655 automobiles registered in New York State. In 1941 there were almost 3,000,000. From such figures it is easy to foresee the number of privately owned planes which could exist in our already air-plotted 48 States if the development of Everyman's plane should parallel even in a moderate degree the growth of the automobile age. The peacetime returns of thousands of pilots to their home towns will stimulate by influence and example both private and commercial flying. A future Congress is likely to have many more law-making ex-pilots than now are Members of what Mr. RANDOLPH calls "the flying Seventy-ninth." Out of such practical knowledge of skyway modes and problems our wide-spaced country cannot fail to gain in legislation of experience and foresight. Certainly it requires no crystal ball at Washington or elsewhere to predict a people's future in aviation—a future which may well require more than past, desk-grounded wings of Congressional thought to plan for and control.

I was pleased also to note Mr. Speaker, that a page of this House and a member of the Congressional Flying Club recently received his solo pilot's license and wish to include in my remarks the following Associated Press release relating thereto and to the activities of the club:

HOUSE PAGE GETS PILOT'S LICENSE AFTER 11 HOURS

A House page has received his pilot's license after 11 hours of flying, it was revealed yesterday. He is 16-year-old Neal Phillips of Elberton, Ga.

The revelation came in connection with the expanded activity of the Congressional Flying Club, composed of 97 Capitol persons who are either licensed or student pilots.

The idea started with the lawmakers, spread to their staffs, and one outsider was formally taken into membership this week. Secretary of Commerce Henry Wallace was approved, got into a plane and took his first 45-minute lesson.

Three World War pilots, now Members of the House, are in the club. They are LEROY JOHNSON of California, MCKENZIE of Louisiana and VORYS of Ohio.

Food Inquiry

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of March 23, 1945:

FOOD INQUIRY

A broad inquiry into food production and distribution has been authorized by the Senate and proposed in the House. These inquiries appear to have been prompted by the fears of an impending food shortage. But it is important to keep in mind that civilian per capita consumption in 1944 was at an all-time peak. The Survey of Current Business noted recently:

"Civilian per capita consumption of food in 1944 was 9 percent above the 1935–39 average. Moreover, the wartime increases have been accompanied by a general improvement in the nutritive content of the national average diet and apparently by some reduction in the disparity among the diets of various segments of the population."

It seems clear that the anticipated moderate reduction from this record supply will not cause any serious difficulties. Except for products like meats, sugar, butter, and cheese, it seems probable that per capita consumption in 1945, although somewhat lower than last year, will still be in excess of that in the pre-war period. Thus, for example, the Department of Agriculture estimates that in 1945 civilians will have 420 pounds of fluid milk and cream per capita, as compared with only 340 pounds before the war; 358 eggs, as compared with 298; 24 pounds of poultry, as compared with 21; 142 pounds of fresh fruits, as compared with 138; 45 pounds of corn products, as compared with 39; 16 pounds of coffee, as compared with 14.

With many important foods unrationed—grains, eggs, poultry, milk, fresh fruits, and vegetables—it is unrealistic to talk as though we were faced with a food famine. That shortages will prevail seems evident, but these shortages will reflect the expansion in demand which has accompanied the large wartime increase in incomes. For some products an uneven geographic distribution of available supplies will accentuate these shortages. This situation has been particularly evident for meats in recent months. We will not have all we would like to have, but we certainly will have enough to give us an adequate diet. When conditions are contrasted with those in other countries such as England, the relative plenty prevailing here becomes even more evident.

Much misleading information and many ill-informed rumors have been circulated concerning the food situation. In some quarters, for example, it is maintained that civilians are being deprived of large amounts of food because of lend-lease shipments. A clear statement of the factors affecting the available supplies and how they are distributed will be very helpful. It is doubtful that the committee can do much to increase our food supply; it probably can do a great deal to dispel many of the rumors.

Some of the questions to which answers should be sought include the following: How have wartime regulations affected the supplies of particular products? To what extent, if at all, have the armed forces accumulated excessive stores of food products? Has there been any substantial spoilage of such items? To what extent have supplies been restricted because of inadequate transportation facilities? To what extent is the black market diverting supplies from legitimate uses? Have the available civilian supplies been distributed equitably? If they have not, to what extent has this been attributable to inadequacies in the rationing system?

These are a few of the questions which could be profitably examined by this committee. The proposed investigation would probably be more fruitful if it were conducted by a joint congressional committee rather than by separate and competing committees in each House of Congress.

The Late Honorable James V. Heidinger

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. ALLEN of Illinois. Mr. Speaker, this membership is truly saddened by the passing of our colleague and friend, Judge Heidinger, who so ably represented the twenty-fourth district, Illinois.

Born in humble circumstances, by industry he carved out enviable success in material things; by close application to his chosen profession, the law, he gained the deserved confidence of his people as a practicing attorney and as a judge of the court.

But these attainments, commendable as they were, are not those which are today uppermost in our minds; rather we remember his handclasp of genuine friendship which evidenced his kindly nature and his deep faith in men. This feeling was innate in him. He believed in every instinct that a kind act was brighter than gold and more enduring than the stars. He truly believed that in the cross and crown of life and death, we are nearer to God as we draw closer to our fellow man.

There is a realm into which we, his colleagues, may not intrude and that is the sacred circle of a family sorrow, but I feel I express the hope of all of us who knew him well and loved him, that those in his family circle may be visited by the God of Consolation with the comfort that garrisons the soul against the devastating effect of sorrow, and that they may come to realize that in his passing he typified the most sacred meaning of the soul in a life of devotion to country, friends, and those he loved.

Pertinent Present-Day Problems

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. MASON. Mr. Speaker, under leave to extend my own remarks in the RECORD, I present for the consideration of my colleagues a series of short discussions of present-day problems taken from my weekly letters to the newspapers of my district. They were prepared in the first place for the benefit of my people back home:

SHOULD WE CHANGE NOW?

Senator MURRAY's jobs-for-all bill is based upon the false assumption that every person has an inherent right to a useful and remunerative job. This assumption is the product of theorists that claim the Government owes everyone a living. However, neither our Constitution nor our laws guarantee a living to anyone. They simply express political and legal equality and suggest that no one should be excluded from work or discriminated against "on account of race, color, sex, or creed." The leaders of the C. I. O. claim they believe in the doctrine that every person has an inherent right to a job. Yet, with the approval and aid of the Federal Government, the leaders of the C. I. O. repudiate that doctrine when they prevent a man from working unless and until he accepts the compulsion of union membership and hands over union fees and union dues. Harley L. Lutz says, "The Murray bill rests upon the assumption that a small select group in government has the superior wisdom and foresight to make all necessary decisions for the rest of the people." This is the theory that underlies communism in Russia, nazi-ism in Germany, and fascism in Italy. It is exactly the opposite to the democratic theory of government under which we have thrived for 1½ centuries. Do we want to change now?

INTERESTING AND TRUE

The Soviet Constitution contains the following clause: "Citizens of the U. S. S. R. are guaranteed the right of employment and payment for their work in accordance with its quantity and quality." In this clause we have the origin of Wallace's Full Employment Bill of 1945.

THE BRETTON WOODS MONETARY CONFERENCE

On February 12 President Roosevelt sent a message to the Congress asking for immediate passage of legislation to implement the agreements arrived at by the representatives of 44 nations at the Bretton Woods Monetary Conference held last July. Briefly, these agreements covered the establishment of an International Bank for World Reconstruction and Development, and an International Monetary Fund. These two institutions were to have a combined capital of 18 billion dollars, one-third of which the United States would be expected to furnish. The United States, however, would be expected to provide more than one-half of the gold or gold currency in the fund. In other words, our gold and sound currency would be put in "to match the depreciated currencies of the busted nations." Congressman Reed of New York, in describing the Bretton Woods agreements, said: "Boiled down to the lowest common denominator the Bretton Woods agreements propose the establishment of an international bank, Uncle Sam to furnish most of the money, but the borrowers to control the bank."

The guiding spirit of the Bretton Woods Conference was Lord Keynes, a British economist. The agreements arrived at were for the most part his proposals. This is the same Lord Keynes who persuaded President Roosevelt early in 1933 to discard his economy program and embark upon the spend and spend and spend program of the New Deal. The Bretton Woods agreements, if accepted by Congress and implemented by law, would start us off on a spending spree to rebuild a war torn world in the face of our 300-billion-dollar debt. Why should Uncle Sam follow the lead of a discredited English economist, one whom the English themselves refuse to follow?

ADVICE FROM ANOTHER ENGLISHMAN

Sir Walter Citrine, a titled Englishman, in a speech at the recent London World Trade Union Conference, proposed an international T. V. A., which would include a Rhine Valley authority and a Danube Valley authority to develop electric power for European use. Sir Walter did not say so, but the inference was plain that this international T. V. A. should be set up, established, and paid for by the taxpayers of the United States. If the Bretton Woods agreements are implemented by law, they will provide convenient machinery for financing this international T. V. A.

The post-war monetary scheme of Lord Keynes and the international T. V. A. scheme of Sir Walter Citrine are very closely related. The President's message to the Congress urging the passage of legislation to implement the Bretton Woods agreements same immeditely after Sir Walter's speech at the London conference. Can it be possiby that the proposals of these two titled Englishmen add up to the fact that John Bull again wants Uncle Sam to pull England's financial chestnuts out of the fire, and once again get our fingers burned while doing it?

ROCKS AHEAD

The ship of state is entering troubled waters. A few months back James Petrillo, czar of the musicians' union, demanded a royalty on every musical phonograph disc. The manufacturers and radio people held out against his demand for awhile but finally surrendered when they found out that Washington would not back them up in maintaining their constitutional rights. When John L. Lewis found how easy it was to gouge the American consumer, he determined to try the same thing, and now blandly announces that, in addition to a number of other conditions, he is going to demand a flat royalty of 10 cents on each ton of coal mined in the United States. This will amount to a private tax of $55,000,000 annually, all to be paid by the consumer into the mine-union treasury.

Before you jump on Lewis with both feet and denounce him as un-American you should realize that he is only asking that his miners be treated as Petrillo's musicians are now being treated, and he has every right to do that. If Petrillo has the right to rob the American people, then certainly John L. Lewis has the same right. But it won't stop with John L. Lewis and the miners' union. It will not be long before the automobile workers will be demanding a royalty on every automobile, truck, and tractor produced; the clothing and garment workers a royalty on every suit and garment that they turn out; the shoemakers, hatters, weavers, etc., ditto. Thus we will create a new circle of increasing costs that will inevitably lead to an inflation that is bound to destroy our whole economy. Where will it all end?

FULL EMPLOYMENT IN A FREE SOCIETY

The title of this article is the title of Sir William Beveridge's new book. We are going to hear a lot in the days just ahead about "Jobs for all," about Senator MURRAY's full employment bill, about "Sixty million American jobs," etc., all based upon the assertions and the assumptions found in this new book. Sir William's book rests wholly upon the false assumption that a nation can banish want, poverty, unemployment, disease, and ignorance simply by passing a law. Overnight, by legislative fiat, Sir William claims we can create a new world free from all the ills that have afflicted mankind since Adam and Eve. Wouldn't that be a wonderful thing if we could do it? Of course, what Sir William and the rest of our world planners are talking about is a planned society, an authoritarian government—the very thing we are fighting against today, Japan, Germany, and Russia have enjoyed a planned society, have had authoritarian governments for some time now. Do we want to follow in their footsteps? Do we want to exchange our privileges, our freedoms, and our high standards of living for what these nations have today?

A FREE FOOD FEDERAL HAND-OUT

Senator AIKEN of Vermont has introduced a bill, S. 185, that proposes to set up a national food allotment program. It provides for dispensing free food coupons to all families whose expenditures for food are below the standards the national food allotment director deems necessary for the proper nourishment of each person in the family. These undernourished families would take the free food coupons to the store, and receive groceries or meats for them gratis; the Federal Government providing the cash to redeem the coupons. The appropriation called for in the bill for the first year is $500,000,000, or so much thereof as may be necessary. However, the bill also says "The appropriation of such sums as may be necessary to carry out the provisions of this act is hereby authorized"; which is in reality a blanket authorization for an unlimited amount in addition to the $500,000,000 specified.

The bill establishes a basic food allotment per person per week, as follows: 5 quarts milk, or its equivalent; 4 pounds potatoes; 8 ounces dried beans, peas, and nuts; 1 pound 8 ounces tomatoes and citrus fruits; 2 pounds 5 ounces of cabbage or leafy vegetables; 4 eggs; 1 pound 8 ounces of meat, poultry, and fish; 4 pounds 7 ounces flour and cereals; 14 ounces fats and oils; 12 ounces sugar, sirups, and preserves. (Quite a menu for one person each week.) The director under the bill must also establish standards for normal food expenditures, taking into consideration the amount of food produced in the gardens of the families of these undernourished people. As a part of this program the bill states: "The director shall in cooperation with existing Federal, State, local, or private agencies, provide an educational program for improving the buying habits, the food ultilization techniques, and the food preservation methods of the participants in the food allotment plan." What do you think of the Senator's bill? Would you vote for it? It will require at least 200,000 more jobs on the Federal pay roll to administer the program. If John Doe spends too much of his income for rent, clothes, drink, or auto, and not enough for food for his family, what can the director do about it? This is a $64 question. Can you answer it? I cannot.

PERTINENT QUESTIONS CONCERNING S. 185

1. Is it consistent to tax these undernourished families, as we are doing, and then hand them free food coupons to buy food with on the ground that their income is not sufficient to buy those goods that are essential to health? Why not stop taxing such people?

2. If the Director has the power to say what families shall be eligible for benefits, how can the administration of the bill be kept on a non-partisan, impartial basis?

3. Would not such a program be an indirect wage increase for the selected beneficiaries of these free food coupons?

4. What limit, if any, should be placed upon the amount of the appropriation that could be spent for "educational facilities to improve buying habits, food utilization technique, and food preservation methods?"

5. Should the power to "hand out" or "to deny" the free food coupons be placed in the hands of one man?

Need for Bretton Woods Plan

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, there has been misunderstanding on the part of some people with reference to the Bretton Woods plan and some opposition to it which would not exist if it were thoroughly understood.

One of my constituents sent me an article which appeared recently in the press from the pen of Mr. Thomas L. Stokes, an able and impartial news columnist of Washington, which is a simple and direct explanation of the vital need for the enactment of this legislation, and, under leave granted, same is submitted herewith:

SEES NEED FOR BRETTON WOODS PLAN

(By Thomas L. Stokes)

WASHINGTON, March 8.—The American people are looking hopefully to the United Nations Conference late next month at San Francisco to create an international organization designed to keep the peace.

This has come to be symbolized in the name "Dumbarton Oaks" because a preliminary plan was drafted at the estate here by that name.

But, meanwhile, there is something going on here in Congress that is tied up directly with Dumbarton Oaks and the international security organization to which the people also ought to pay attention, for there are powerful interests busy trying to scuttle this companion effort.

This is symbolized in the name "Bretton Woods" from the restort in New Hampshire where representatives of 44 nations met some time ago. There they drew up 2 plans—1 for an international bank for reconstruction and development and the other for an international monetary fund. The 2 are to form keystone arches in the world economic organization to put devastated nations on their feet again and to promote trade among nations.

Dumbarton Oaks is for international organization on a political basis; Bretton Woods, on an economic basis. They go hand in hand, or, as Secretary of Treasury Morgenthau expressed it, their objectives are "as interdependent as the blades of a pair of scissors."

He was speaking to the House Banking Committee which has just begun to consider legislation to authorize the Bretton Woods agencies, on behalf of the United States. Passage of that legislation will contribute much toward the success of the Dumbarton Oaks plan at San Francisco. Its failure, or modification, would have a dampening effect.

This is the first real test in Congress of the sincerity of its intention to cooperate with the rest of the world.

Big international bankers in this country who are trying to kill this plan for international financial cooperation, though giving it a species of lip service, are raising up the usual tangles of technical language, seeking to make out that it is something the ordinary person cannot understand and has no business trying to understand, as is the way with lots of bankers.

But it is really very simple in purpose and it is something that is close to the everyday lives of everybody.

The relation between Dumbarton Oaks and Bretton Woods might be very simply illustrated. Dumbarton Oaks is for the world what the local political government—the mayor, the council, the police force—is to the average town or city. Similarly, Bretton Woods has the purpose for the world that the banks and building and loan associations have in the average community—to provide capital for conducting the business of the community in normal times and, in times of emergency, to finance reconstruction of a building or home that has been burned down.

Each is necessary for the community. Each is necessary for the world if people are to be prosperous and wars are to be avoided.

The projected international bank, which will have a subscribed capital of $9,100,000,000, of which the United States will furnish $3,175,000,000, can either guarantee loans by private bankers, as the Federal Housing Authority does in this country, or it can lend directly, as the ordinary bank does.

The monetary fund is a stablization fund to keep currencies stable so the businessmen of the world always can be sure just what they will get for what they sell and what price they have to pay if buying. Its capital will be $8,800,000,000 of which the United States will furnish $2,750,000,000.

These financial agencies have a very close relation to every individual, in this country and all over the world, for the aim is to provide funds for sound investments which mean all sorts of enterprises that will furnish jobs.

The objective is for governments, representing the people, to have a voice hereafter in international finance and economy, rather than to let the big international bankers do it all, though this plan still leaves private bankers in the various countries all the business they can handle.

The international bankers naturally don't like it. They are fighting it just as they fought the Federal Reserve System, the Securities and Exchange Commission, bank-deposit guaranty, and numerous other agencies created in this country in recent years.

National Cemetery in Massachusetts

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions of the General Court of Massachusetts regarding the procurement of land in Massachusetts for the establishment and maintenance of a national cemetery:

Resolutions memorializing Congress urging the Federal Government to procure land in Massachusetts for the establishment and maintenance of a national cemetery

Resolved, That the General Court of Massachusetts hereby urges the Congress of the United States to take such action as may be necessary to procure in a central location within Massachusetts such land as may be necessary for the establishment and maintenance of a national cemetery; and be it further

Resolved, That copies of these resolutions be sent forthwith by the State secretary to the President of the United States, to the presiding officer of each branch of Congress and to the Members thereof from this Commonwealth.

In house of representatives, adopted March 12, 1945.

LAWRENCE R. GROVE, *Clerk*.

In senate, adopted in concurrence March 15, 1945.

IRVING N. HAYDEN, *Clerk*.

Attest:

F. W. COOK,
Secretary of the Commonwealth.

Pattern for Peace

EXTENSION OF REMARKS

OF

HON. CHARLES M. LaFOLLETTE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. LaFOLLETTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following speech of my colleague, Hon. MICHAEL A. FEIGHAN, of Ohio, delivered March 21, 1945, before the Cleveland Round Table of the National Conference of Christians and Jews, Hotel Cleveland, Cleveland, Ohio:

The seventh proposition of the Pattern for Peace which we introduced in the House as part of our concurrent resolution declares that the harmony of the world community is intimately bound up with the internal equilibrium of the individual States. This internal equilibrium, it declares, must be achieved by the "collaboration of all groups and classes in the interest of the common good."

I am happy to appear with my able and distinguished colleagues, Mr. LAFOLLETTE and Mr. WEISS, under the auspices of an organization which has done so much in the past years to develop that collaboration of all groups and classes of our Nation in the interest of the common good of the whole country.

I believe that our sponsorship of House Concurrent Resolution 21 is another example of that collaborative effort in behalf of the common good. We are members of three different faiths and of both political allegiances: Yet we joined to gether impelled by a profound conviction that these are times which demand that men rise above partisanship whether it be religious, racial, or political to help build a better and a safer world.

In the building of that better future there is no place, I am firmly convinced, for seeking partisan advantage. That is why I deplore the statement made by David Lawrence yesterday in his syndicated column that the Dumbarton Oaks plan is regarded by the administration as a desirable minimum while the Republican leaders will work to influence the San Francisco Conference to go further toward maximum improvement in order more perfectly to safeguard peace.

The cooperation of both parties in the field of our foreign policy has heretofore been excellent. I hope and pray we can continue to go forward together keeping partisan politics out of the peace. By their willingness to forego partisan advantage by combining

on a common program, the religious groups of the country have offered an inspiring example of unselfishness which our political parties would do well to emulate.

When we introduced the pattern for peace as part of our concurrent resolution, we were convinced of the necessity of building the new world order which will follow our victory on the sound and solid foundations provided by that seven point pronouncement of the three religious faiths. We wanted to bring to the attention of our policy makers those basic principles of morality which are held in common by Catholics, Protestants, Jews, and Pagans alike.

I am informed that since the Dumbarton Oaks proposals were issued for public discussion and debate, all three of the official agencies which a year and a half ago published the seven point code have issued official commentaries on the proposals. It is indeed heartening to note upon examination of these three documents issued by the Catholic Welfare Conference, the Synagogue Council, and the Federal Council of Churches, the substantial agreement they show in their evaluation of that tentative draft. Speaking as a legislator, I want to pay tribute to the realistic approach of these churchmen to the problem of organizing the peace. There is nothing visionary or utopian in their proposals. They offer, in fact, a series of valuable suggestions which the San Francisco conferees cannot afford to ignore.

The delegates of the 44 nations who will meet at San Francisco on April 25 must draft a covenant as perfect as the wisdom of man, aided by the grace of God, can achieve. It is, therefore, of supreme importance that they do not lightly dismiss the wise counsel of the official leaders of the three faiths in this country.

Among their most notable agreements as to improvements which should be made at the Golden Gate conference I call your attention to these: First, a preamble is needed which shall acknowledge that the signatory nations are bound by the same code of moral conduct as individuals are. You may recall that Colonel House proposed such a preamble in the first draft of the League Covenant which he prepared for President Wilson. Secondly, they ask also for the creation of commissions on international law, human rights, non-self-governing peoples and on minorities. The proposed world organization will be quite incomplete without them.

Furthermore all three faiths seem to agree that the political and economic independence of small nations must be strongly safeguarded. And here let me voice my concern over the apparent inactivity of the three-man commission which was set up at Yalta to preside over the reorganization of the Polish provisional government. The base of that government must be broadened as soon as possible in order that it may prepare to play the part it deserves to play in the coming conference at San Francisco. Much longer delay in completing the new provisional government will seriously handicap Poland's preparation for the conference—if it does not prevent its participation entirely. We all remember the failure of the European Advisory Council. World opinion should demand that the Board hasten the work of reorganizing this government. Already there has been too much drift and delay in this crucial test of Yalta's sincerity.

Speaking as a Democrat I want to subscribe to Senator VANDENBERG'S proposal that the final charter provide for revision of territorial and other arrangements made before and during the peace conference. I see no other way in which the inevitable injustices in the original settlements can be rectified.

However, I should like to note that this doctrine of revision has been preached by all three faiths together since the publication of the Pattern for Peace, and has been strongly reiterated in their recent commentaries on the Dumbarton proposals. Without question the final draft should provide more clearly for the revision of unjust treaties and other arrangements made during the transition period.

The American delegation to San Francisco would be well advised to give serious consideration to the demands for these improvements made by religious leaders whose constituents number in the neighborhood of 60,000,000 citizens. Perhaps here today we could launch a Nation-wide movement to stimulate not only greater interest in the San Francisco conference in general but also begin a Nation-wide demand that these improvements based upon moral principles should be incorporated in the final text.

As part of the campaign to develop public interest in the Dumbarton proposals, petitions have been sent to the Governors of all the States asking them to proclaim a Dumbarton Oaks Week or a Foreign Policy Week. I suggest that this assembly petition the Governor of Ohio to proclaim such a week in the immediate future. I further suggest that this assembly petition him to proclaim Sunday, April 22, as a special day of prayer throughout the State of Ohio. The whole message of these church leaders which we three as your Representatives have been privileged to voice in the Halls of Congress is to the effect that without God and without the moral principles of His law, no world organization to maintain peace can possibly succeed. Without His guidance and assistance at San Francisco, enlightening the minds and strengthening the wills of those conferees, neither can they succeed.

International Economic Cooperation

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of the Council for Social Action of the Congregational-Christian Churches of the United States of America, New York, N. Y.:

[The Council for Social Action of the Congregational Christian Churches of the United States of America]

NEW YORK, *March 21, 1945.*

DEAR FRIEND: The legislative committee of the Council for Social Action, an agency representing more than a million members of the Congregational Christian Churches, believes that a healthy international economic system is absolutely essential to the maintenance of peace. It is also our considered opinion that the proposed International Security Organization (as developed at Dumbarton Oaks) cannot function except in an atmosphere of international economic cooperation. Adequate instruments and organizations are needed to put such cooperation into effect. We believe that the Bretton Woods proposals relating to an International Bank and an International Monetary Fund are part of the instruments needed to bring about a sound basis for the exchange of goods between nations, the development of the world's resources, and the full employment of American workers. In short, the Bretton Woods plans are integrally related to the effective operation of the International Security Organization. Without Bretton Woods and other forms of international economic cooperation, the Dumbarton Oaks proposals become nothing more than a well-meaning but ineffective organization for a peace which would be bound to collapse.

The legislative committee specifically approves the International Monetary Fund. Furthermore, because the fund is to serve a radically different purpose than the bank, it is our judgment that the fund should be kept separate from the bank.

It is our conviction that the separate existence of the fund is necessary for the following considerations:

1. The need for the fund will be greatest during the period immediately following the cessation of hostilities. During this period, unstable and chaotic situations will exist in many parts of the world. Lend-lease and U. N. R. R. A. will either be withdrawn or limited in function. The fund would be used to prevent violent swings in exchange rates and to encourage the full interchange of currencies, thus facilitating trade and investment. Furthermore, it is during exactly such chaotic situations that the bank itself could not function. Nor could the fund work as it should if it is tied to the bank with the motives and considerations which should govern the bank.

2. The bank itself cannot function properly until stability in the exchange rates and the free interchange of currencies has been established. The usefulness of the bank will be greatly impaired by the lack of an independent fund.

3. In the absence of the fund, governments will set up exchange controls, restrict the movement of currencies, and generally create anew, and in more extreme forms, the monetary warfare of the 1930's. In other words, the real alternative to the International Monetary Fund as proposed is not a substitute fund controlled by the bank but rather a series of unilateral currency controls which spell nothing more nor less than economic warfare.

In view of these considerations, the legislative committee urges you to support the Bretton Woods proposals with a separate and independent International Monetary Fund. The American people mean business about international economic cooperation. Your support is necessary so that the desires of the Americans will not be thwarted again.

Very truly yours,

THOMAS B. KEEHN,
Secretary, Legislative Committee.

A Letter From the Boss

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein A Letter From the Boss, Brig. Gen. Frank S. Besson, Jr., of the Third Military Railway Service, Persian Gulf Command, which bespeaks the esteem he holds for his men:

LETTER FROM THE BOSS

HEADQUARTERS THIRD MILITARY RAILWAY SERVICE,
PERSIAN GULF COMMAND,
Tehran, Iran.

To the Men of the Third Military Railway Service:

"It's the same the wide world over—
While the poor get all the blyme,
It's the rich what gets the pleasure.
Ain't it all a bloody shyme."

Many of you men, stymied by lack of T/O vacancies, are doing work which calls for a higher grade. In spite of failure to receive deserved promotion, you have never failed to do more than required in delivering goods to Russia.

It is paradoxical that your outstanding successful performance has resulted in rewarding not yourselves but me.

I have no illusions about who has earned the promotion I have received. I realize that my good fortune is a byproduct of your desire to get this job done, to get the war over, and to get back home.

While I appreciate the fact that I owe my promotion to the work of you men in the Railway Service, I am nevertheless mighty happy to be a brigadier general, and I thank you-all sincerely for the honor you have bestowed upon me.

FRANK S. BESSON, Jr.,
Brigadier General, United States Army.

What To Do With the German Nation and the Japanese Empire

EXTENSION OF REMARKS
OF
HON. SAMUEL A. WEISS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. WEISS. Mr. Speaker, Corp. Peter H. Perich, of Port Vue, Pa., one of the finest young men of my district, fearless and courageous, is a wounded veteran of this war now stationed at Turner Field, Albany, Ga. Corp. Perich has submitted his opinion on what to do with the German Nation and the Japanese Empire which I am happy to include as part of my remarks:

A WOUNDED VETERAN'S OPINION ON WHAT TO DO WITH THE GERMAN NATION AND THE JAPANESE EMPIRE

(By Corp. Peter H. Perich)

I do not profess to be a diplomat, world analyst, nor do I profess to be a barbarian. I am a soldier of the United States—a soldier who in combat has faced the enemy whose wish is to enslave the world. Among the soldiers who are fighting our ruthless enemies, there are varied opinions on what to do with the German Nation and the Japanese Empire after their defeat; but foremost in the minds of all is the hope that we do not "bungle" the job again when victory is ours. I want to be able to face my future sons in a world of peace and endow to them the inheritance of security from aggression.

How to bring this about? First we must face the problem squarely and honestly, and lay all the cards on the table. There aren't any good Germans in Germany and there aren't any good Japanese in Japan. The German people—the majority of the German people (that is what we are dealing with) wanted and welcomed the rule of Hitler as do the Japanese the rule of the Emperor. The German and Japanese people knew of the atrocities that their governments and soldiers were inflicting on the world, and yet they did nothing to prevent it. No; they gloried in that brutality—yes; every last man and woman who has in any way helped build that machine of aggression.

Can we salvage any part of these nations? I contend that the children of Germany and Japan can be rehabilitated and taught that the world can live in peace, but the older generation is incorrigible, so we should turn all our efforts to the children.

1. We must separate the children from the older generation, who, as I have said, are incorrigible, and, above all, show the children—not by mere book study what becomes of the aggressor, but by the living examples of their ancestry spending the rest of their lives if necessary, rebuilding the world they attempted to destroy.

2. I believe that with truth, environment—yes, and love—these children can find their rightful place in a world of peace.

3. We must destroy the military machines of Germany and Japan and their war factories that have made those military machines possible.

4. We must endeavor and demand that our Government forbid private capital from entering Germany and Japan to exploit these countries after their defeat.

5. We must, without reservation, make the German and Japanese people rebuild the world they meant to destroy, and I mean rebuild it by the sweat of their brow and not by mere cash payment.

6. Above all, we must be just but firm, and prove to any nation who should aspire to become an aggressor that it doesn't pay.

When all hostilities have ceased, if we, the living, can write "mission completed" to our endeavors of eternal world peace, then we have truly completed the difficult task set before us; but if we fail, then we have failed not only our children who are to live in this world ahead of us, but we have criminally failed all those who have willingly given up their lives in the belief that eternal world peace is possibe. Let us pray to God we do not fail.

What Goes on Here?

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. SPRINGER. Mr. Speaker, a very enlightening article, in the form of an editorial, appeared very recently in the Indianapolis Star, on the subject of "What goes on here"? It is high time that the people of this Nation begin to make a survey of the things that "are going on here"—before it is too late. It is true that we are fighting this war for the preservation of the American way of life, but the question recurs to all of us—and very frequently—are we accomplishing that desired end? On our home front, and in our western hemisphere, many things are being done which cause our people to pause and wonder what the end will be, and what our situation will be when this war ends. While our people want to do all within their power to win this war quickly and completely, yet they do not want to yield their heritage, their possessions, and their birthright in their own nation for the future years. Many things are being done that are unnecessary even in time of war. Waste and extravagance has been the rule, rather than the exception, in this war.

It is time for those in power to get back to earth, inject some sound business judgment into the war effort and on the home front, and thus convince the people that there is at least some effort being made to save our Nation, and the possessions of the people. These are serious days. These are sad days in untold thousands of homes throughout our land—because a gold star represents those brilliant lives that have been spent in this frightful war for the preservation of the American way of life. If those in power give away, or lend-lease or barter, or ruthlessly abandon every vestige of our American heritage under the guise of the war emergency—then we are in a frightful situation. And, may I say, Mr. Speaker, if the present policies are continued—and they have been continued throughout this war to this very hour—we will awaken, after the war ends, and find ourselves in the embrace of bondage, regimentation, and with practically every right as an American citizen frittered away. These are serious thoughts, and these are serious days.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD, and to include the editorial, appearing in the Indianapolis Star, of recent date, which follows:

WHAT GOES ON HERE?

The time has come for a little plain speaking about the administration of civilian war effort. Glaring inconsistencies, extravagant excesses, absurd pampering in the name of "good will," are dissipating the patriotic fervor of the American people. Discussion of these injustices are shushed, shushed by official Washington on the grounds that nothing must be said that will affect civilian morale. Well, the truth is that the very fact the administration closes its eyes to these things is definitely weakening morale.

Take the case of rationing. No sensible American objects to rationing. It is necessary, it is patriotic, it is wise. But it should be administered with consistent common sense. And our neighbors to the north and south should be requested in plain language to play ball on rationing.

An Indianapolis man who happened to spend a day in Mexico recently saw things which made his blood boil. There is no rationing in Mexico. Not even of American goods. One shop displayed in a single window 18 electric irons, American made. A radio store had 26 late models of Philco radios. Another offered electric refrigerators and washing machines. Meats of all kinds, cigarettes, hosiery are to be had in unlimited quantities. Gasoline is available to all without coupons. Yes; and there was plenty of Scotch liquor.

But American citizens are prohibited from bringing across the border American-made goods that are rationed in the United States. There are plenty of radios, electric irons, electric refrigerators and washing machines—all made in this country—for the Mexicans but not a single one for an American citizen. Practically the same thing is true in Canada. In dear old Canada, which to date has not been able successfully to conscript soldiers for its armies.

And another bit of good will absurdity. There is at Florence, Ariz., a magnificent new and splendidly equipped German prison camp. It is complete in comfort and convenience. The German prisoners who occupy this camp were brought down to the Valley of the Sun from Montana early in the winter. But—and this is the last word in "good will"—they will be taken back to Montana in April or May because it gets pretty hot in Arizona in the summer and our German "guests" must not be allowed to become uncomfortable while enjoying our hospitality. Of course, it doesn't seem to matter much that thousands upon thousands of fine American boys will suffer through the torrid Arizona heat in Army training camps at Tuscon and

Phoenix. Our own boys, you see, are merely soldiers, not "guests."

What goes on here, anyway? We are fighting a war to provide equal opportunity to all the people of the world. As Americans we have proved, with few exceptions, our willingness to pay any price in blood, sweat and tears for unqualified victory. But isn't it time that equal opportunity be interpreted to mean equal responsibility as well?

The Sunshine International Air Route

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, I am, under unanimous consent, inserting in the RECORD, copies of a letter I have sent to all the Senators and Congressmen from various States in the Rocky Mountain, Central and southern regions as well as a paper showing the numerous advantages this route—the Sunshine International Air Route—possesses. This sky road, developed by the Army Transport Command over the past 2½ years, is very vital to our future relations with Alaska, Siberia, China and the Orient. We are on the verge of the Pacific era with its many potential advantages and opportunities. Because of the importance of this route I am taking this means to bring it to the attention of the Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 22, 1945.

DEAR COLLEAGUE: As you perhaps know, the Western Air Lines has an application before the Civil Aeronautics Board for a route extending from Great Falls, Mont., to Alaska. Representatives from seven States interested in furthering this route, the Sunshine International Air Route, met in Denver March 9 and arranged for a larger meeting where representatives of all chambers of commerce and others interested will meet again on April 3 to perfect a permanent organization of the Sunshine International Air Route.

This route is of tremendous importance to the States of Texas, Utah, New Mexico, Colorado, Kansas, Oklahoma, Nebraska, Wyoming, North Dakota, South Dakota, Montana, and the eastern half of Idaho. In the post-war period this great region will wish to convert their great steel, copper, iron, oil, chemical, airplane, and other war-developed plants to industrial uses. The people of all these States have a vital interest in establishing and maintaining daily air service over a route running through the heart of the United States from Houston, Tex., north through Denver, and Great Falls to Alaska. This route will permit the central and Rocky Mountain area of the United States to assist in supplying Alaska, Russia, and the Far East with products originating in their area.

I feel that the experience of the Army Transport Command flying the Great Falls route since the summer of 1942 has proven its value. As you know, Great Falls is the principal northwest point of air embarkation for the route going to Alaska over which flows a very substantial part of the aid going to Russia. We of Montana know, the Army knows, and I feel sure the Civil Aeronautics Board knows, that this route is entirely feasible and is, in fact, more flyable than any other route to Alaska. The thousands of planes, the tens of thousands of tons of cargo, and the hundreds of passengers carried over this route over the past 2½ years would, I am sure, equal and probably exceed the total flown over any other route to Alaska in a similar period. It is to our mutual advantage that we have a direct air connection to Alaska over such an excellent and well-established route.

Another point that is certainly worth serious consideration is the military advantage of maintaining this route in peacetime. The raids by our carrier-borne planes on Tokyo show what can happen to any transportation or industry along a coast line. It is absolutely essential to our national safety that this route be maintained in peacetime and it can be maintained and improved only if it has flying over it a strong commercial airline.

Another point of importance which is not to be overlooked is the great number of flying days. Great Falls runs usually about 300 flying days per year which is considerably better than Seattle and somewhat better than Minneapolis. It is true that newly developed instruments make blind flying possible but, to quote an experienced ferry command pilot, "when a pilot can take a choice between flying on instruments, and going the same place by a shorter route, over which he can see where he is going, he is certainly going to choose the latter route." That is only common sense. If the Seattle or the Minneapolis routes had been as good as the Great Falls route, the Seventh Ferrying Command would not have located at Great Falls. They have had a delivery percentage of better than 98 percent on this route, which is well nigh perfect.

I am bringing these matters to your attention because I feel that together we can accomplish a great deal in behalf of our section of the country and I urge that you give this matter your most serious and earnest consideration. We stand on the threshhold of the Pacific era and the skyways of tomorrow are going to have a great deal to do with the development of our country and with the safeguarding of our future. If you agree with the prospectus as outlined in this communication I would appreciate it very much if you would do what you can in its behalf.

With best personal wishes, I am,

Sincerely,

MIKE MANSFIELD,
Member of Congress.

ADVANTAGES OF GREAT FALLS GATEWAY FOR INTERNATIONAL AIR ROUTE, MEXICO VIA UNITED STATES TO ALASKA

SHORTEST AND MOST CONVENIENT ROUTE

The Great Falls gateway is the most convenient gateway to Alaska for that portion of the United States west of Omaha and Kansas City to west line of States of Utah and New Mexico, or more than 41 percent of the area of the United States.

SUNSHINE ROUTE

The air route from Great Falls to Alaska has more days of sunshine and consequently more flying days than any other route.

GOOD-NEIGHBOR ROUTE

Development of the good neighbor idea should include provision for the shortest, safest air route across the United States and Canada for use of travelers from Central and South America to Alaska, Russia, and the Orient.

SAFEST ROUTE

Military selection of the Great Falls gateway to Alaska and Russia for delivery of thousands of planes and the handling of an immense war traffic, requiring the construction at Great Falls of large warehousing facilities and modification shops, proves conclusively that the Great Falls-Alaska route is the safest and best route for regular and quantity air traffic.

VACATION ROUTE

Emphasis is being placed on anticipated Alaska travel for vacation purposes. Use of Great Falls gateway will permit Alaska travelers to also visit the great playground area of the United States, including Glacier, Yellowstone, Grand Teton, Bryce Canyon, Zion, Rocky Mountain, Estes National Parks, Colorado Springs, and other points of interest to persons on vacation trips.

POST-WAR IMPORTANCE

The States of Texas, New Mexico, Utah, Colorado, Kansas, Oklahoma, Nebraska, Wyoming, North and South Dakota, eastern half of Idaho, and Montana in the post-war period will wish to convert the great steel, copper, iron, oil, chemical, airplane, and other war developed plants to industrial uses.

Senators, Congressmen, governors, chambers of commerce, and citizens of the States mentioned in above paragraph have a vital interest in establishing and maintaining daily air service over a route running through the heart of the United States from Houston, Tex., north through Denver, and Great Falls to Alaska, as this will permit the central area of the United States to participate in supplying Alaska, Russia, and the East with products manufactured in Central States.

ORGANIZATION OF SUNSHINE INTERNATIONAL AIR ROUTE

Representatives from seven States met in Denver on March 9 and arranged for a larger meeting where representatives of all chambers of commerce and others interested will meet on April 3, 1945, to perfect the permanent organization of the Sunshine International Air Route.

Address of Rev. Father Robert J. White, Chaplains' Corps, U. S. N. R.

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include herein a splendid, powerful, and inspirational ovation made in connection with the historical exercises of the evacuation-day celebration in South Boston, Mass., by Rev. Father Robert J. White, captain, Chaplains' Corps, United States Naval Reserve, on March 11, 1945, conducted under the auspices of the South Boston Citizens Association:

This is my first speech during my service as Navy chaplain, breaking my rule not to speak in wartime, but to devote all my efforts to the men of the armed services. However, I accepted this invitation gladly not only because of my friendship for Boston, but because the invitation was extended from Congressman JOHN W. MCCORMACK * * *.

The celebration of a great historic anniversary, such as the evacuation of Boston in 1776, acquires an added solemn significance in the days of our trial by war in 1945. In the days of peace, it was easy to parade and place wreaths upon monuments to victories of the past, which endowed our present with the heritage of a great and free democracy. In these, the days of our trial by war—with victory not yet won, however certain, and

long days of hardship ahead—monuments may lose their meaning and traditions may fade into forgetfulness. Yes, that can happen even here, unless our men and women, and even children, rising above the temptations and trials of war, valiantly uphold the arms of our fighting men, by sustaining the strong spiritual supports of American democracy, which our fighting men defend

Now the greatest of these strong supports of democracy, next after religion, is the strength of the God-fearing and God-loving American home. Neither the Constitution, nor laws, nor bureaus, nor surveys, nor subsidies, can build or reestablish the traditional American home. That must be done by the faith and the devotion and the self-sacrifice of the mothers and fathers of America, young and old.

Fortunately, in God's providence we have been spared the material devastation of our land, while many other nations have suffered desolation. But tragically, we may suffer a far greater devastation and a more vital permanent loss if American family life is allowed to weaken and break in the trials of war.

No casuistry, however bold, can excuse the disloyalty to family ties, the immorality, the sham gentility without morals, the drunkenness and the break-down of family discipline, which blights American life today. Scientists can create synthetics, but there is no plastic substitute for the tough moral fiber necessary for the American people to survive the war and to progress in peace.

Indeed, the demands upon the people of the home front in war call for more than giving of their sons and daughters, more than buying War bonds, more than the mutual efforts of all war endeavors. And that vital something more is a sturdy and devoted allegiance to the American home.

It would be silly to deny the fact that there exists some strain between the people at home and their sons on the war front. Let us not indulge in any self-deception. This strain comes from a critical concern by the men at the front over the apparent success of sordid and selfish interests, and over the rise of the futile attempt to escape reality in a cheap and tawdry search for thrills and gaiety.

Such deterioration of character can never be excused as the wholesome relaxation to which a people under the strain of war are entitled. The greatest worry of our men in war comes from their anxiety of how things are going in the American home. I have had to tell men they were going to die. That was a stern and trying duty. However, it was not to be compared with the tragedy of having to tell a man and the father of children that his wife had become infatuated with another and was about to desert him. For him the war was lost. For him, life had lost all its hopes in the bitter consciousness of a final personal defeat in black despair.

Yes, our men are thinking of home. I remember so often, when men were tired almost beyond human endurance, had suffered the horrors of war, and seen the death and injury of their shipmates—how the arrival of mail from home would lift them with new courage and hope for the dangers and tasks of tomorrow. I have been in a room with many men at dinner when someone started to sing a solo White Christmas. Like the hush of a cathedral, all talking ceased; all eating stopped; and men choked back the sobs that moved them—they were thinking of their American home.

I have watched them in religious services, stalwart young sons of America, Catholic, Protestant, and Jew raising their voices to their Maker. They sang as never before. But the overtones were clear. They were praying in song for a return to America and home.

More important than all the charters and the agreements; more important than Dumbarton and Yalta, or even the terms of the final peace treaty—is the needed restoration of the American home in its strength and in its purity, in its self-discipline and generous sacrifices of mutual devotion—the one strong spiritual support of the present and future hopes of America—the God-fearing and God-loving American home.

Who fails the hopes of these young heroes sins in basest ingratitude, and stands adjudged by all decent men as guilty of treason. Through my experience with thousands of these young warriors, I know their heart's desire. They want to return to America—blessed with the God-fearing and God-loving American home of our tradition.

Moreover these heroes demand a united America. They want no blocs—no veterans' bloc, no labor bloc, no farmers' bloc, no manufacturers' bloc. They would willingly hurl a block-buster into all American blocs that we might rebuild our essential American unity, working together in mutual confidence and understanding, planning, and collaborating in the problems of peace.

May God grant us the strength and courage to justify in our lives the sacrifices so generously made by the young manhood of America. Let us not deceive ourselves. The road to victory and peace is still long and hard, and filled with death and wounds and sorrow. Let us, with God's help, bravely face these future days of our hardship and our trial.

Nor let any man deceive himself that V-day will mark the end of the mutual sacrifices necessary to achieve at long last the peace for which men hunger, and the good will between nations, necessary in a world that has grown so small that isolation becomes the wish for a myth.

Indeed, the calm night that brings victory in war will usher in the dawn of a new day filled with the tasks of peace. Now nations like combatants may suffer from war fatigue, and in their exhaustion show profound and strange reactions when released from the compulsions and conformities demanded by war. From the Revolution down to and including World War No. 2 there is a fateful and ominous pattern in the post-war problems of every American war. Some common factors in one or more of these periods have been the depreciation of values, apprehensive uncertainty, widespread unemployment, a cowardly search for a scapegoat in some minority of race or religion, and the swing of the pendulum away from an idealistic and generous cooperation to sullen and suspicious isolation. It is then that the excessive stress upon sovereignty no entangling alliances and national self-sufficiency may raise slogans that serve as the stalking horses for demagogs rising to power upon the emotions of a tired, confused, and worried people.

America cannot turn back history, even if she would. It is far wiser, much less costly in men and arms, and far more honorable for America, now come of age, to take her powerful place in maintaining world peace.

This course is better by far than to retreat again to supposed security and later to be drawn reluctantly into wars that can only be averted by the wisdom and power of world collaboration.

Indeed, there must be sanctions in the post-war world that can prevent the repetition of the stark tragedy of our days—yes, even sanctions that mean military cooperation. History is the witness of such necessity. For the failure to avert World War No. 2 in its real beginning, was not so much due to lack of knowledge of the danger, and of the logical conclusion of wars that would follow. That failure was rather due to the primary lack of wisdom in not implementing peace after World War No. 1. It was also due to lack of courage in nations in not resorting to arms at once rather than submit to the futile policy of appeasement. Truly, then, America must fulfill the responsibilities of leadership in world affairs, not only because such a course fulfills the promise of her ideals, but as well because cooperation is the only certain guarantee of this Nation's survival and progress in peace.

Until that day, when rocket bombs are harmless, when bombers cease to fly, when submarines fail to ply their evil course below the ocean's surface, when radio and radar and gas and chemicals, as weapons of warfare, have become mere shadowy dreams of a fitful slumber—until that day—which will never come—let us courageously face the necessity for American cooperation in world peace.

In the choice of methods to solve the problems of war and peace, our citizens—never compromising in principle, nor yielding on reasonable freedom of speech—should respect with tolerance and understanding the honest opinion of others. Finally after free discussion has served its proper purpose, there is a plain duty upon the citizens of American democracy to pay respectful deference to the decisions of our duly elected representatives, and in particular to the Congress of the United States, under the leadership of the courageous world leader—our President Franklin D. Roosevelt.

If the magnitude of the tasks before us dismay us by their greatness and complexity—let us for a moment draw back the curtain of time and revisit the revolutionary scene we commemorate. Lacking ammunition, weakened by illness and cold, clinging to a strategically untenable position—those heavy odds against them dismayed not Washington and his men.

Washington's plan to attack Boston came through a sudden daring decision to attack forces greatly outnumbering his own. His broadsides from the cannons shook Boston—the most terrific bombardment the British had yet felt. Strategically Washington feinted an attack to draw the British to the wrong place while General Thomas moved his regiments into place. The Yankee farmers rose to the occasion, and left their plows behind them, to appear suddenly in the ranks, eager for action. This sudden mobilization completely amazed the British generals. General Howe said he had never seen such flexibility, like a tornado against which no army could fight successfully. The impregnable breastworks of earth and blocks of ice, of sharp timbers, and hogsheads filled with gravel and old iron, menaced the British with death if they attempted to assault the heights. General Howe reeled, dazed by the American spirit and daring, and recoiling from further death and slaughter evacuated Boston on Sunday morning, March 17.

As General Howe sailed with his men for Halifax, the evacuation of Boston meant more to American freemen than the military possession of a great city. It gave proof to the world that fewer Yankees, fired by their love of liberty, could drive the British Army before them. By this victory the Yankee fighters restored a people's faith in the prowess of this undisciplined militia of free men fighting for freedom.

In honesty we recognize, and in fairness we pay tribute, to the hardy pioneers of New England—men and women of faith and courage, who for two centuries before the coming of our ancestors wrested a wilderness from the savage Indian, and built a new civilization, dedicated to freedom. Honor is due those men and women who though struggling in poverty and hardship, brought in their share of wheat and corn, and even shoes, to establish institutions of learning, which should give glory to God, and light the lamp of learning for generations to come.

If in the years up to our own time they and their descendants have sometimes unloosed the sting of a cold social and political disdain, of racial prejudice, and of religious hostility, let us, the descendants of later immigrations, prove the truth of the faith that we profess and forgive past wrongs in

genuine charity. Nor let us be too indulgent of our own failings and occasional lapses in political responsibility in yielding to persuasiveness and personality rather than demanding the essential virtues of honesty and character.

Of this I am convinced: That out of the past and the present unity of our war efforts comes a certain confidence and strong hope that the best of the old and the best of the new, working together, can, united, solve the problems of peace and of the progress of Boston.

Indeed, the tradition of Boston's devotion to freedom was not to be the exclusive possession of early settlers and their descendants. Nor was it to belong to the people of any particular period. That tradition has been the glory of all our people in all our days of peace and war.

The call to arms in the War between the States brought to the aid of the Nation thousands of sturdy immigrants who had braved the sea in exile to escape from persecution and famine. They knew the meaning of America's promise of freedom and opportunity. They were profoundly grateful.

Boston's own, the gallant fighting Ninth, marched proudly behind three standard unfurled in the breeze—the red, white, and blue, the blue and white of Massachusetts, the flag of emerald green whose embroidered words proclaimed:

"As aliens and strangers thou didst us befriend,
As sons and true patriots we do thee defend."

Was it any wonder, that in the World War No. 1 new generations, heirs of the traditions of the brave Ninth, volunteered willingly and marched proudly in the One Hundred and First Infantry of the glorious Twenty-sixth, that division among the first to land in France, which battled in the front lines without break for 210 days, and carried through every major engagement to final victory.

And now I come to the heritage of this day and hour and the deeds of the American youth in blue and khaki and olive green. They are your sons, your brother, and your friends—the bluejacket, the G. I. Joe and the leatherneck marine—my men. I have seen them in the blazing heat of Africa and the freezing hills of Italy and seen them stung by the frozen winter spray.

I have seen them marching abroad the LCI's and the LCT's, young men old before their time, tired but smiling through to victory.

I bow in reverence to the splendor of their deeds—their stalwart faith in God and His divine providence—their fidelity to their religious duties that led bishops in far-off Africa and Italy and priests in distant Corsica and France to exclaim to me in open admiration of the deep devotion—the bluejackets, G. I. Joes' and leatherneck marines. Their bravery, no man could adequately portray. Fearless in danger, I have never seen a single man of them cringe or complain at the horrors of total war—American youth—brave, hardy, and unafraid—the blue jacket, the G. I. Joe, and the leatherneck marine.

Of their loyaly to each other—epics will be written in the days to come. I have stood on the decks of a destroyer, into whose machinery poor lads have been literally blown by torpedoes, and heard from the lips of the young captain, his praise of his men who in the same night of disaster, unloaded their ammunition on another destroyer that their shipmates might attack the enemy again without delay.

In their generosity there is no youth in all the world that can compare. Their love of children—how deeply touching to remember. The little orphan lad of the docks adopted by the bluejackets; the sweet little girl of 7 the pride of the Army post; the amusing little courtship of the sailor and the miss not more than 6, sitting on the fence in Corsica, just watching the jeeps go by. Finally the great, generous efforts of the bluejackets of our fleet providing Christmas for children who have not known the meaning of the word in desolation with a prodigal generosity, showering over 30,000 poor ragged kids with clothes, and shoes, and candy, and toys, and the things that make Christmas.

Such faith, such bravery, such loyalty to fellow comrades, and such generosity best portray your sons and brothers—my men, the bluejacket, the G. I. Joe, and the leatherneck marine.

Surely standing in the hallowed light of such a historic past, and conscious of such tremendous sacrifices of the present—we Americans may face the future, brave, confident, and unafraid. Strengthened by our heritage, fortified by our faith—with God's help we consecrate our all to achieve victory in war and to establish justice in peace—the promise of America to the world, the light and the hope of all mankind.

Vocational Training for Handicapped Veterans

EXTENSION OF REMARKS

OF

HON. MICHAEL J. BRADLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under the unanimous consent which I have received, I am submitting for printing in the RECORD an address by Dr. Loyal D. Odhner on vocational training for handicapped veterans:

Never before in my life have I made a study in which I started out knowing so much and ended up knowing so little as I have in this instance.

When I commenced work on this subject I definitely knew that I was dealing with a topic that had been grossly ignored both by public and private agencies and that I was a pioneer sailing forth on uncharted seas.

By the time I was ready to commence writing this paper, I had discovered that in the New York Public Library alone, one can find 48 articles on what Germany has done for the rehabilitation and vocational training of her wounded veterans; 7 on what Italy has done; 30 on England's work in this field; 2 on New Zealand; 1 on South Africa; and 120 on United States; and just to top that off, I found that the Russell Sage Foundation has issued a bibliography on the rehabilitation of the disabled serviceman, containing the titles of 276 articles, books, bulletins, and other publications on this subject, practically all of which have been written since 1942, and none of which are duplications of those mentioned above.

Valuable studies have been prepared by the War Manpower Commission, the Veterans' Administration, Selective Service, the United States Office of Education, and the Civil Service Commission. The departments of education of most of the States have issued bulletins on the subject, as have the departments of vocational rehabilitation. Many corporations already have made studies in which they have analyzed the physical requirements of every job in their organization and have paralleled them with similar analyses of what handicapped men are able to do according to the type of their handicap. This point is illustrated in the attached job analysis made by the Kroger Grocery & Baking Co.

Among corporations which have made such studies are the Carnegie Illinois Steel Co. and the General Motors Corporation. Some corporations are making invaluable experience studies. They are now employing workers with a wide variety of physical handicaps and are carefully studying what they can and cannot do and are giving especial attention to the handicapped workers' psychological reactions.

Following the last war, the Red Cross under the guidance of Douglas C. McMurtrie, operated a school exclusively for handicapped veterans and kept a careful record of their experiences.

An organization known as the National Rehabilitation Committee recently has been established with headquarters at 9 Rockefeller Plaza, New York City. The Disabled American Veterans, a well-known ex-servicemen's organization formed after the last war, just last week, announced in New York City the launching of a $1,000,000 campaign to finance their proposed program for the wounded veterans of World War No. 2.

The American Legion and the Veterans of Foreign Wars have their committees on handicapped veterans. Army and Navy hospitals are having thorough psychological tests made of handicapped veterans before they are discharged and careful records are made of their aptitudes and attitudes.

Right here in Philadelphia our vocational schools have in operation a plan worked out in conjunction with the Philadelphia Naval Hospital and the Pennsylvania Bureau of Vocational Rehabilitation for training handicapped veterans while they are still under naval hospital jurisdiction and before they have been discharged. As a matter of fact, a whole session on this same subject is now in process in this very hotel at industrial vocational section of this same convention. Also here in Philadelphia a group of firms—large and small—are cooperating with the Veterans' Placement Bureau of the United States Employment Service and the Philadelphia Naval Hospital and the Army hospital in Valley Forge in employing wounded veterans while they are still under hospital care. Nearly 100 injured veterans are now working in Philadelphia plants on this pioneering program.

Firms on the honor roll to date are: Kellett Autogiro Co., R. F. Sedgely Co., J. J. Smith Electric Co., Philadelphia Record, Eastman Kodak Co. (Philadelphia office), Bendix Aviation Co., Sloan Blabon Corp., Sears, Roebuck & Co., Renninger & Graves, Railway Express Co. (Philadelphia office), Philadelphia Navy Yard, Annex Philadelphia Hearing Aid, Cramp Shipbuilding Co., Baldwin Locomotive Works, Whiting Paterson Paper Co., Limeburner Optical Co., Globe Ticket Co., Cuneo Eastern Press, J. J. Pocock, Inc., Thomas Martindale Co., General Motors (Philadelphia).

All of the above is written merely by way of introduction, and to beg your indulgence in my attempt to talk to you on this topic.

After all, who am I to speak to you teachers on such a subject as vocational training for handicapped veterans? I am neither a teacher nor a personnel man for industry, nor a handicapped veteran. And yet, gentlemen, I proceed. I do so because of the tremendous importance of this problem. I do so because our country is now, and will increasingly continue to be faced with a more serious situation with handicapped veterans than ever before in its history.

I ask you to bear in mind continually during this discussion the all-important fact that in this war there will be a greater number of handicapped veterans in proportion to the total number engaged in battle than during any previous war in world history. This con-

dition is a direct result of the miraculous advances made in medical science and transportation during the last several years. The sulfa drugs and penicillin and blood plasma have made it possible to save the lives in this war of countless thousands of wounded soldiers who would have bled to death or have died of infections in any previous war. And the airplane has made it possible to place severely wounded men in the hospitals at Atlantic City or Miami within 48 hours after they have been picked up off the battlefields of Europe. There they receive the very last word in medical science and care. And so, we already have and increasingly will continue to have with us handicapped men who never would have lived in any past war.

It is this fact which makes this subject one of such paramount importance and which makes it so intensely interesting to me as a public relations man, for that—and not teaching nor personnel work—is my profession.

The handicapped veteran will be an influence which simply cannot be ignored following this war and it behooves all of us in the field of public relations to make certain that we give him primary consideration in our thinking, planning, and actions. With this thought in mind, therefore, let us proceed to constructive consideration of our topic.

In the first place, let us get a clear picture of the Federal agencies involved and of their respective responsibilities.

1. Army and Navy hospitals: After a soldier is wounded in battle or otherwise disabled, he is transported as quickly as possible to a naval or Army hospital. There he is given the necessary medical and surgical attention. He is thoroughly "reconditioned." He is then given a psychological test to determine his aptitude and attitude and in some cases is given vocational training even before discharge.

2. Selective service: Immediately upon discharge the veteran, whether disabled or not, must report to his local draft board. (All draft boards are under Selective Service.) There he must interview the employment committeeman who reviews his record, determines whether or not he wishes to go back to his pre-war job and in the case of handicapped veterans, whether he is able to do the work involved. A veteran must make application for return to his pre-war position within 90 days after separation from the military service. (It was 40 days, but I believe that it was lengthened to 90 days only last week.) The employment committeeman then refers the veteran to the—

3. United States Employment Service: The U. S. E. S., as it is commonly called, then takes over and goes through the necessary procedure either to relocate the veteran in his pre-war position or to find new employment for him.

4. The Veterans' Administration: The Veterans' Administration takes care of all other matters affecting veterans, such as provisions for apprentice training, vocational training, loans for homes, farms, and business education, hospital care, medical attention, disability pensions, etc.

There is no question that the veteran of World War No. 2 has been generously provided for under the G. I. bill of rights and that the handicapped veteran will not be thrown out of the service to become an object of charity. But let us remember that even though the handicapped veteran may receive a pension of nearly $100 a month, he does not want to waste away his life doing nothing. He wants to be a self-supporting, self-respecting man, just as much after his injury as before.

What can industry, the community, and vocational education do to help him obtain this goal?

Industry, and by industry I mean all employers, can thoroughly analyze every job in the business to determine the physical requirements and working conditions of each rsepective job. It can then match this rtudy with the physical abilities that each wounded veteran has left and fit him into jobs that will require no more than he is able to perform.

Industry also can revamp its entire thinking about the physically handicapped, so that instead of rejecting the wounded veteran applicant for what he cannot do, it will employ him for what he can do.

Industry must never employ a handicapped man out of charity. It must employ him because it needs him to fill certain jobs.

Finally, industry must start now to determine where it can and where it cannot employ handicapped veterans. The problem of employing or reemploying the wounded veteran is not one that can wait for demobilization following the cessation of hostilities. It is one that is facing us now. War injuries do not wait for peace to be signed. They happen while the war is being fought, and we already have a tragically large number of severely injured men now in the process of reconditioning. Every day adds many more.

I do not know the total number of permanently handicapped veterans today, but it can be safely predicted that before this war ends the number will exceed the combined total of all wars in our country's history, including the Civil War and World War No. 1. Therefore, immediate action on the part of industry is a fundamental necessity.

I want to add a word about the small employer. Some way must be found to aid him in making the same studies and employing the same proportionate numbers as the large employer, who can maintain a personnel department.

Small business employs more workers than big business. It is in this field that I believe that vocational education can perform its greatest service.

I will go into this further under the subject What Can Vocational Education Do? Above all things, industry must give handicapped veterans sympathetic consideration, especially during the early months of their employment.

The community has a very important part to play. It can organize veterans rehabilitation committees, perferably under the most aggressive existing local agency such as the chamber of commerce, junior chamber of commerce, Red Cross, the Public Charities Association, the Disabled American Veterans, the American Legion or the Veterans of Foreign Wars.

This committee should—

A. Mobilize local employers now to study the problem of employing handicapped veterans and to follow that up by employing the largest number possible. Some employers fear that they will involve themselves in difficulties with their insurance if they employ handicapped veterans. They should be shown the publication entitled "A Plan to Help You Employ Disabled Veterans and Other Handicapped Persons, Productively and Safely," published by the National Association of Mutual Casualty Cos.

Not only do the casualty companies not oppose the employment of handicapped persons, they encourage it. All firms having had extensive experience in the employment of the handicapped, agree that they excel the average worker in dependability and carefulness. This should be emphasized to all employers.

B. See that material for making this study is on file in the local public library. This is essential because many employers will want to make this study privately before committing themselves publicly.

C. See that this material is on file with the local board of education and that some teacher or teachers are assigned to specialize in its study.

This is essential because many employers will want to consult with someone well versed in this problem before making a commitment.

D. Keep in close touch with the Veterans' Administration to determine the total number of handicapped veterans from the community. Every community will want its handicapped men to return home, yet many severely handicapped men feel that they never want to face the home folks again and would prefer to start life over again in some other community. It is also important that the local committee should know at all times the extent of its handicapped veterans' problem.

E. Make a study locally of what handicapped people have done for themselves. (Nothing will give one a clearer idea of the great possibilities for gainful employment of handicapped veterans than to study what handicapped people already have done for themselves.) Also, nothing can be more encouraging to wounded men than to learn of the successes of others who are similarly handicapped.

F. To study the experiences of local homes for cripples. Almost every large American community now has one or more homes for crippled children. Many of the "graduates" from these homes are now self-supporting. The children have disabilities paralleling practically everything that has resulted from war injuries.

G. To follow up on handicapped veterans who are employed and study their experiences.

H. To forward the result of all studies to a central national agency, perhaps by way of a central State agency for redistribution to all localities so that every community may benefit from the other communities' experiences.

I. To interest local groups, such as the luncheon-service clubs, to specialize in helping certain types of disability. I have in mind the work the Lion's Club has done for the blind.

Please note that in submitting this proposed community committee program I have kept two important points in mind: The first is to avoid, if possible, the creation of a new organization or assocation. The second is to refrain from entering the field of interviewing the handicapped veterans. Remember, he already will be interviewed by the Army or the Navy, by Selective Service, the U. S. E. S., the Veterans' Administration, and his prospective employers. If there is to be any interviewing of these veterans by volunteer groups, I strongly urge that that be left to their own kind, namely, the local chapter of the Disabled American Veterans. Even the follow-up of disabled veterans who are employed should be confined as much as possible to the employer.

The purpose of the voluntary Community Veterans' Rehabilitation Committee is to mobilize employers to hire handicapped men and to study the community's experiences with handicapped people in order that all interested may gain thereby.

There is going to be a veritable rush of well-intentioned organizations to enter the field of helping the handicapped veterans. Most of them will be unnecessary duplications of existing agencies, and many of them will do more harm than good through confusing rather than helping the wounded man. There is a need for mobilizing the employers and for studying local experiences. These two tasks will give the local voluntary committee all that they can do with the time available to them.

In general, I think the local committee should be comprised of:

A. Representatives from the leading lines of employment—manufacturing, distribution, construction, transportation, service trades, professions, agriculture, etc.

B. A social worker from the community chest or united social agencies or Red Cross.

C. Representatives from the public and private school system.

D. A representative from municipal government.

E. Representatives from veterans' associations.

F. Representatives from local press and radio.

G. A leading medical man.

Wherever physically handicapped people can be found in the lines above suggested who are competent to represent the community, I believe it would be wise to have them as members of these community committees.

What can vocational education do for the handicapped veteran?

1. Having learned where handicapped veterans can be employed and where there is likelihood of a need for them, open classes in those lines.

2. Make a thorough study of the most likely lines for self-employment of handicapped veterans and open classes in those lines. Self-employment means going into business for oneself. No field offers greater prospects for this than retail distribution. It, therefore, behooves distributive education to make the training of handicapped veterans a major item in its 1945 program of activities.

3. America is rapidly losing the art of reading. Many of the handicapped will not be able to flit over the countryside with the ease of the average man. Therefore, I urge that any program of vocational education for the wounded veterans shall include a course in the good old art of reading worthwhile literature. If this can be done, it will be a source of permanent joy to the veteran and will be a boon to the country.

4. Distributive vocational education and the distributive industry should frankly face the fact that we are far behind manufacturing in the matter of vocational education and employment of handicapped veterans.

We are not backward when it comes to claiming that distribution is one of the largest employers in our economic system, but we are definitely backward when it comes to training and employing our wounded soldiers. We can't begin to match manufacturing in the percentage of our large companies which have made job analyses for the purpose of determining our possibilities for employing handicapped veterans and of engaging in current experiments in adding them to our pay rolls.

I believe that distributive education can perform a great national service in taking the lead in educating employers in our line to become more aggressive in this activity.

There is a very definite reason for our backwardness. Our classification and treatment as a nonessential industry has compelled us more and more to resort to the employment of women and high-school students and we have found that they have done wonders in helping us meet a manpower emergency far more serious than faced any other line of endeavor and in fulfilling our function far beyond the most wildly optimistic hopes of 1942 (only 2 short years ago).

But suppose for a moment that the pessimistic predictions of a post-war slump should not prove true. Suppose for a moment that those who are planning for a maintained national income of $150,000,000,000 should succeed. Suppose that the necessary $70,000,000,000 retail volume to support such an economy should develop. And again, suppose that with the war pressure removed the husbands, sons, fathers, and brothers of our women workers and our student help should decide that they want them back in the home to reestablish a normal home life.

Then where would we be?

I don't like to introduce this type of appeal, because we should be planning to employ our handicapped veterans regardless of the probabilities of meeting our employment needs with mothers, wives, and high-school students.

Nevertheless, I think it is important for us to keep this possibility in mind. What a tragedy it would be if distribution failed to meet a post-war boom because of manpower shortage after the magnificent job that we have done in meeting the war emergency—and no one can deny that we have done a magnificent job.

Distributive education can add to its war laurels—and they are many—by taking the lead in selling distribution to match manufacturing in the training and employing of handicapped veterans.

5. Education—if not vocational education—can contribute materially to the solution of the problem of training the handicapped veterans through encouraging students to make this the subject of their graduation theses. There seems to be a tendency on the part of many who are studying the problem today to start from 1940 or 1942 and to ignore the mass of material that developed from the last war and the many years of experience of our homes for the physically disabled. Such studies should contribute materially to the general good.

6. Distributive education can render a great service to little business through studying the subject of the placement of handicapped veterans and acting as advisers to the small businessman who cannot employ personnel managers.

7. One of the most important things that distributive education can do for our handicapped veterans is to train its teachers to become sympathetic listeners. All of those engaged in this work whom I have interviewed have emphasized the importance of this apparently unimportant point. It seems to be characteristic of these men that they want to talk—not about their military experiences—but their personal problems, to anybody who will listen. They are nervous, unsettled, yes—unstable. They have had experiences so foreign to their normal lives that they are changed to their very foundations. They want to think—but they want to think out loud. Those who hope to contribute to their education simply must become patient and sympathetic listeners or else they should not continue in this particular field of education.

The Office of Education seems to be the logical Federal agency to make the study of the subject that should be on file with all libraries and boards of education.

In conclusion, I wish to present a plan for employment of handicapped veterans, which was presented to me by Walter Spear, himself a wounded veteran, on behalf of the Junior Chamber of Commerce of Philadelphia. Mr. Spear was a member of the Rangers who landed at Salerno before the infantry went ashore. He is one of the few men left out of his entire unit, and few men know the thinking of our injured soldiers more intimately than he does.

"While the soldier or sailor is in the Army or Naval Hospital, have the doctor or a board of doctors state to what degree he is disabled. Then have him discuss his desires with qualified men who will make suggestions to the soldier in regard to the positions in industry open to him and describing the nature and possibilities in every industry for which he is qualified. Have books and plans of all positions and training needed so that the soldier can read and study this material to acquaint himself with the possibilities in industry for which he is qualified. In doing this at the hospital or camp, the men will not have time to think they are helpless cripples—thus new interest will be started. And, when the veterans are ready to leave the hospital for home, they will know better what they are fitted for and perhaps what job they want to go after.

"In their home city have one recognized board of experienced men whom these veterans can see for a final discussion. An appointment should be made for the veterans before they leave the hospital or camp and they will be expected to report to the designated board or a predetermined day. The names and reports of qualifications for desired job or training of each should be forwarded to the board in his particular city in advance. Such a report would indicate his physical condition so that the returning veteran will not have to keep telling his advisers and employers about his condition. The board will, of course, expect the veteran to have an idea as to his desires and qualifications.

"With such information supplied in advance, the soldier will, to a certain extent, feel that the board knows him personally, thus creating a friendly helpful atmosphere. This board will not be expected to place the soldier in his desired school or job, but just to advise and suggest local possibilities for his benefit.

"Train these men so well that industry will want them, not so that industry will take them just to help. Show the soldiers and employers the record of performance of the handicapped civilian workers while the boys were at war.

"WALTER SPEAR,
"Chairman, Veterans' Rehabilitation Committee, Junior Chamber of Commerce, Philadelphia, Pa."

Finally, as a guide to those who may desire to make a study of this subject, I submit the following:

1. Communicate with:

(a) United States Civil Service Commission.

(b) United States Office of Education.

(c) United States Employment Service (try to secure if possible copies of "Special Aids for Placing Military Personnel in Civilian Jobs" and "Special Aids for Placing Naval Personnel in Civilian Jobs."

(d) Veterans' Administration.

(e) Selective Service.

(f) Office of Vocational Rehabilitation—Federal Security Agency.

(g) United States Department of Labor.

(h) State Department of Vocational Rehabilitation.

(i) Visit your nearest army or navy hospital.

2. Procure a copy of Bulletin 162 of the Russell Sage Foundation—130 East 22d Street, New York City (price 20 cents). It is a bibliography of all recent articles on the Rehabilitation of the Disabled Serviceman.

3. Review articles in your local library under the subject Disabled, Physically Handicapped, and Crippled.

4. Contact your local Red Cross, Disabled American Veterans, American Legion, Veterans of Foreign Wars, Community Chest.

5. If you are Philadelphians, contact your chamber of commerce.

One of the finest of all of the studies which I have reviewed on employment and training of veterans has been made by our own Philadelphia Chamber of Commerce and has been summarized in two pamphlets, entitled "Employment of Veterans" and "Soldier, We Wish You Well." Don't fail to obtain copies of them if you wish to study this subject.

By following the above suggestions one can compile for oneself a bibliography of bibliographies and can study the subject as extensively or as sketchily as one may wish.

And I unhesitatingly predict that anyone making a study of this subject will become convinced of the vital importance of the problem of vocational training and employment of our handicapped veterans and will volunteer his services for as long as they may be needed.

Cartels Threaten Economic Progress

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of J. Howard Pew, president, Sun Oil Co., before the National Conference of Business Paper Editors, Waldorf-Astoria Hotel, New York, Monday evening, March 19, 1945:

We are here tonight as representatives of the trade press. As such it is our responsibility to advocate those measures which are good for the American public, and that which is really good for the American people is good for business. Ours is the responsibility of providing wise leadership, so that all segments of business and industry may clearly understand our economic system.

Under the impact of the world's most terrible war, we have been jarred loose from our social, economic, and political moorings. Emotion has replaced reason. Expediency is adopted in the hope that thereby the war may be brought to a speedier conclusion. Many people would stoop to use the war to impose their panaceas on us for our economic salvation. Virtually every dawn brings a new crop of prophets of a brave new world in the future. Virtually each twilight has seen unfolded new and beguiling schemes whereby men may live without the painful process of work or thought. Yours is the task of analyzing in ar impartial and logical manner these grandiose schemes, and of pointing out the fallacies in their glittering promises. It is in the hope of making some small contribution in assisting you in that task that I have come nere tonight.

In recent years there have been various pressures undermining our competitive enterprise system and pushing us toward a collectivist system under ever-expanding governmental authority. I shall discuss tonight only one of these pressures—that of monopolistic restraints of trade. The widespread movement that recently has come to the front to cartelize world trade under government control through so-called trade accords is, in my opinion, the greatest danger now threatening economic progress in America. My desire is to arouse you to a realization of the gravity of that danger, and, through you, our leaders of business, industry, and the American people.

Discussions of this sort mean very little unless we have before us a clear definition of the terms and words we are using, and a definite exposition of the principles upon which we make our stand. So, as a starting point, all that I say shall be bottomed upon a strong and fervent faith in the superiority of our American competitive enterprise system as a means of raising the standard of living for all, providing employment for those able and willing to work, and creating opportunities for men and women to utilize their talents to the utmost.

Business and industry render their greatest service to the Nation when they constantly produce better products and services at lower prices through an efficiency that reconciles a low-cost policy with the payment of high wages. But that objective can be realized only through constantly increasing the productive efficiency of everyone engaged in business and industry. It cannot be achieved under the restrictions of bureaucratic control; nor can it be achieved in the face of feather-bedding practices, whether imposed by government, labor, or the owners of industry; and it cannot be achieved if we are going to adopt policies that remove both the stimulus and the means to increased efficiency by reducing alike the rewards for seeking it and the penalties for ignoring it.

If you believe in that principle and its implications, then you cannot regard cartels, in any form, as good business practices. If you do not believe in that principle, if you favor collectivism in our economic life, national socialism, national ownership, and all the other philosophies which lead to the all powerful state, then you will find cartels an admirable instrument to achieve your objectives.

When I use the word "cartel" I mean an arrangement whereby two or more independent enterprises undertake to restrict the production, fix the prices, and/or allocate markets or sales quotas covering commodities in which they trade. This is the so-called private cartel.

A government-controlled cartel is such an arrangement under the direction or with the sanction of the government having jurisdiction over such enterprises and it usually contains provisions for the enforcement of the arrangement.

A super-state cartel is an arrangement requiring independent enterprises to restrict production, fix prices, and/or allocate markets, made pursuant to an international agreement or treaty between two or more governments which undertake in some manner to enforce upon their nationals the terms and conditions of such an arrangement.

The private cartel embraces monopolistic practices in restraint of trade that have been outlawed in this country for more than 50 years. The evil and reprehensible nature of such practices is beyond dispute. Their effect has been to destroy initiative, close the door of opportunity for new individual entrepreneur, destroy small business units, encourage inefficiency, raise prices, and thus lower the standard of living. These fruits of the cartel system result in the freezing of industrial progress to the detriment of workers, consumers, and those with savings to invest.

Few voices today are openly raised in defense of the so-called private cartel. But there is a school of thought which believes that an undertaking which is against the general welfare, and thus bad, can be made good if it is conducted under government control. Illustrative of the Government-controlled cartel were the N. R. A. codes of a few years ago. There we have the Government urging and even forcing upon American industries practices, which, if undertaken outside of the N. R. A. codes, would have been unlawful. Their counterpart has flourished in Europe for many years and is a primary reason for the backwardness of European industry compared with our own.

The superstate cartel is a relatively new evolution of the cartel idea, under the deceptive labeling of trade accords. These agreements compound all the evils found in private and government-controlled cartels, adding to them a dangerous expansion of power in our Federal Government through the treaty-making device. Illustrative of the superstate cartel is the abortive Anglo-American petroleum agreement submitted to the United States Senate last summer, but subsequently withdrawn under pressure of the unanimous protest of the American petroleum industry. The objectives of this proposal were never clearly set forth beyond vague statements that the purpose was to bring about an orderly development of the world's oil resources through the stabilization of the operations of the industry.

Such euphemisms as orderly development, stabilization, fair competition, rationalized competition, elimination of waste, and fair prices always are used to describe the objectives of a cartel. They are terms which should immediately arouse your suspicions and command your close scrutiny.

The Anglo-American oil agreement provided the framework for restrictions on the production of petroleum and its products, the fixing of prices, and the allocation of marketing quotas upon the recommendations of an international petroleum commission. Inherent in the implications of the agreement was the assumption of an obligation by our Federal Government, when it concurred in such recommendations, to undertake to carry them out in the domestic field. This would necessitate the exercise by the Federal Government of an authority which it does not now possess under our Constitution, since jurisdiction over national resources is among the powers reserved to the States in the tenth amendment.

The Federal Government would have gotten the authority to fulfill its part of the

bargain made with other nations through the treaty-making power.

Our Constitution makes treaties the supreme law of the land, on a par with the Constitution itself, and overriding other Federal laws and State constitutions and laws which may be in conflict with the treaty. Thus the reserve powers of the States would, through treaties dealing with them, fall into the orbit of Federal authority and jurisdiction.

As a matter of fact, such a procedure is the only lawful way, since the N. R. A. was declared unconstitutional, to cartelize effectively the American petroleum industry. Even were private cartels lawful, there are too many enterprises within the industry for any master plan to embrace all of them. Those outside of the cartel arrangement in a reasonably short time would succeed in defeating the conspiracy. To make a petroleum cartel effective here it must necessarily be implemented by the lash of governmental authority. What is more, the petroleum industry, by and large, wants no part of cartel action, since its growth has resulted from spirited competition. Here we had the amazing spectacle of the administrative agencies seeking to force an industry into a superstate cartel against its wishes.

Throughout the controversy over the oil agreement, it was difficult to avoid the conclusion that those who had proposed it were desirous of taking a short cut designed to change our American system overnight to the status of the German system of national socialism. Just remember that the advocates of socialism long have proposed the promotion of cartels in the conviction that a system of extensive monopolies controlled by the State paved the way for a socialist economy. The Fascists and Nazis seized upon existing cartel systems for the foundation of their totalitarian states. For those reasons I believe the superstate cartel is far more reprehensible and detrimental to the public welfare than private cartels entered into by individual companies, bad as they are.

Much of what I have said specifically in regard to the oil treaty, would be applicable to similar undertakings affecting other industries. This use of the treaty-making power to override constitutional limitations and set the stage for transforming our American system into national socialism is a danger that may engulf all of us.

During the controversy over the petroleum agreement it was reported that similar international agreements were contemplated covering approximately 60 commodities and services in international trade. These were said to cover rubber, tin, sugar, coffee, shipping cargo space, and global airways. Undoubtedly others had to do with metals, leather, wool, cotton, chemicals, as well as manufactured articles, that could be fitted into a cartel framework.

The list is sufficiently broad, if those plans are pursued, to encompass a large part of world trade in a superstate cartel system. More alarming, however, this movement would entangle a large part of our domestic economy in the tentacles of the vicious cartel system, with destructive repercussions upon every other line of economic activity. International trade and domestic trade are not two different things. They cannot be isolated in compartments, one from the other. They are parts of the same thing. This country cannot be cartelized in its foreign trade and free in its domestic enterprise any more than a nation can survive half free and half slave. Once we start to regiment through allocations, price fixing and production controls our activities in the foreign field, we of necessity will have forced upon us by the Government restrictive measures upon operations falling wholly within the domestic field.

Turning to the arguments advanced in behalf of the negotiations of these superstate cartels, we find the contention that cartels are a necessary device to safeguard industry and invested capital against unfair and destructive competition and the wastes which result from wide fluctuations in industrial activity—that they serve to permit the orderly development of industries and stabilize prices.

Now all of that argument begs the question of what is best for the general welfare. Like the League of Nations' definition that cartels are associations of independent undertakings in the same or similar branches of industry established with a view to improving conditions of production and sales, it fails to state to whom the benefit or improvement accrues. The answer is obvious, since the primary purpose of cartels is to restrict competition. Competition, bringing better products at lower prices, benefits the consuming public. So whatever restricts competition, in the long run, harms the public welfare. Price stabilization usually means the establishment of a rigidity designed to protect high cost and marginal producers. It destroys incentives for low-cost policies. Thus, cartels operate against the smaller or relatively newer enterprises which, through increased efficiency, are challenging the position of larger and older enterprises when the latter have become waterlogged through plant obsolescence and inefficiency.

Prof. Anton de Haas of the Harvard Business School in a recent defense of cartels, distributed, ironically, by an organization calling itself American Enterprise Association, cites all of these justifications for cartels. He also attributes to the cartel the virtue of providing equality of opportunity. This phrase contradicts itself. Since all men differ in talent, initiative, and industry, creation of equality of opportunity would shut the door of opportunity for the efficient, and drag them down to the level of the inefficient.

Much written in defense of cartels makes little sense to me. We find, for instance, Milo Perkins, former Executive Director of the Economic Warfare Board, concluding a recent magazine article with the assertion that "where we cannot eliminate cartels, we must gradually perfect ways to make them into instruments which serve the public interest." But at the beginning of the article, emphasized by italic type, Mr. Perkins states: "All cartels are in business to keep prices at levels which could not be held if free competition existed." In other words, Mr. Perkins in one breath asserts cartels are devices for rooking the public, and in the next breath that such devices can be made to serve the public interest.

Another group asserts that although in normal times cartels may be undesirable, they are necessary devices for short terms in periods of depression to prevent the too precipitous drop in price levels, which has disastrous consequences. I suppose that here and there a showing of facts could be made to sustain that conclusion. But it also could be demonstrated that the operation of cartels creates depressions and prolongs them. The danger in resorting to cartels during emergencies is that the cartel survives after the real emergency has passed.

Aside from all of that, however, it is significant this argument is put forth at this time by the cartel advocates. This country does not face a post-war depression. This approach to post-war prboblems is illustrative of the defeatist attitude marking the economic thinking in Washington during the last 12 years. Too much Washington planning is being done under the shadows of the past. These planners should approach the problem in a venturesome spirit determined to seize upon the great opportunity presented for a dynamic expanding economy, the only hope for the restoration of full employment in this country.

Some argue that American participation in superstate cartels is necessary to assure lasting peace. I remind them it was cartels, subsidies, unduly high tariffs, bartering, and governments trading with other governments which generated so much of the economic friction preceding this war. The cartel idea had its origin in Germany. When Adolf Hitler seized power he found in the cartel system a completely forged weapon for his program of rearmament and war.

This peace argument is based upon a corollary contention that they are necessary to expand world trade. Actually cartels operate to contract world trade. At best they might serve to transfer markets from one nation to another without increasing the total of world trade. But if the ills of the world are to be healed through international trade, then the volume of international trade must be expanded. New consumer markets must be created and this can be done only through the production of better goods for sale at lower prices.

A healthy foreign trade is essential to our well-being as well as that of the rest of the world. Our Government should be vigilant in opening and preserving trade opportunities abroad for American business and every effort, compatible with our national interest, should be made to expand world trade. Our volume of world trade, proportionately small as it has been, is of great importance to our economic life, particularly to those industries largely dependent upon export business. But this foreign trade is not worth the price, if that price is abandonment of our competitive enterprise system and placing our domestic economy in a totalitarian strait jacket.

Finally we hear it said our participation in super-state cartels is inevitable. The argument goes that most of the world has embraced cartels and there is nothing that we can do about it. Thus, we are urged to climb aboard the cartel bandwagon, even though it means the destruction of a system at home which has given our people the highest standard of living ever achieved anywhere at any time upon this earth.

As Friedrich Hayek wrote in his excellent book, The Road to Serfdom, nothing in social evolution is inevitable unless thinking makes it so. Who can be certain that other nations will remain wedded to the cartel system? Events in Europe have not progressed far enough to indicate definitely the political and economic desires of the people upon the European continent. Nor are the English united in support of cartels. Only last week Prime Minister Winston Churchill called upon the Conservative Party to make private enterprise versus collectivization, and liberty versus controls, the issues of the forthcoming election. The London Economist weekly thunders that cartels and other forms of collectivism are will o' the wisps leading Britain to disaster.

Assume that we must live in a world which outside our borders is wedded to the cartel system. Then we should use our great economic power to give world leadership and direction toward a more universal adoption of the competitive enterprise system. For instance, when the war in Europe ends, there will be billions of dollars of lend-lease material that can be converted to peaceful industrial use—perhaps as much as thirty billions worth. In disposing of that surplus material in the countries in which it is stored, let us attach a condition that none of it may be sold or given to any enterprise that is a party to any cartel arrangement. There have been suggestions in Congress that the surplus war material in this country should not be sold to monopolistic enterprises. There is no reason for any less exclusive requirement for the disposal of surplus material abroad.

Again, why should not Congress enact legislation making it unlawful for America to lend money to foreign enterprises participating in cartel arrangements. Such action

would apply to foreign loans the prudence and common sense exercised at home by bankers against lending to enterprises engaged in practices destructive of their markets.

Pending before the Senate are the Bretton Woods monetary agreements. One of these provides for establishment of the International Bank for Reconstruction and Development with a capital of $8,800,000,000, of which this Government would be obligated to provide two and three-quarters billions of dollars. In ratifying that agreement, why should not the United States Senate attach a reservation providing that no part of this sum may be loaned to any enterprise participating in cartel arrangements. We also could shut out of our rich market foreign monopolists set on discriminating against us and thereby driving us into a totalitarian economy. I am not proposing that any of these things be done. I merely suggest courses of action open to us as protective measures against countries, if any there be, attempting to strong arm us into cartel arrangements.

In conclusion, I appeal to you gentlemen to proclaim on every occasion your faith in our competitive enterprise system; to demonstrate by fact and example the superiority of this system over the programs of the collectivists and totalitarians; to scrutinize with realistic eyes schemes that are labeled "free enterprise," but which might well undermine our competitive enterprise system, ending the best hope we have for economic progress, high levels of employment, and a rising standard of living.

Let us not be beguiled by emotional appelas and glittering promises, but let us give sober reflection to the Wall Street Journal's recent observation that "No people ever entered the compulsory state through a door on which the price of admission was plainly posted." Through the doors of superstate and Government-controlled cartels lies the road that leads to nationalism, isolationism, totalitarianism, and finally, to another disastrous war.

Veterans' Hospitals

REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. PHILBIN. Mr. Speaker, next to the war itself, next to the preservation of our Government itself, there is no more vital need facing this Congress today than the prompt and thorough investigation of veterans' and servicemen's matters, an investigation of the entire rehabilitation program from the top to the bottom. Some of the alleged conditions in Government hospitals throughout the country are unspeakable. Of that we have an abundance of evidence. I hope this House will soon and expeditiously authorize a real investigation to deal with these matters and to correct these situations that now exist. This must be a thorough, sweeping, impartial, independent, and fearless investigation, I repeat, one that will look into these conditions from the top to the bottom, of the entire rehabilitation program.

I cannot understand the trepidation on the part of some officials whose departments are concerned with the subject matter of this proposed investigation, and indeed some Members of the House, concerning House Resolution 172 which merely proposes a sweeping and general investigation of veterans and servicemen's matters. If there are no irregularities to uncover, if no abuses exist, if no intolerable conditions are present in these institutions, I cannot understand why anyone, in or out of this House, should fear a thorough, impartial investigation. In fact, I should think that the officials concerned, and certainly Members of this House would welcome such an investigation.

Apparently the able and distinguished chairman of the Veterans' Committee, since he has introduced a resolution for a limited investigation, embracing the Veterans' Administration alone, is now of the opinion that an investigation of some knd is necessary. Let me assure you gentlemen—and I know that you are all vitally interested in the welfare of our beloved veterans—that there can be absolutely no question concerning the need—the very urgent need—for an investigation. I have gone into this matter quite thoroughly and for some months past have been withholding this resolution in the hope that the agencies concerned would be able to pick up the slack so to speak, and correct some of these impossible conditions that affect practically every part of the rehabilitation program. But the situation has steadily progressed until it has become truly intolerable, if we are to believe the evidence at hand which has come to me from all sections of the country complaining of unspeakable conditions in many Government hospitals controlled by the Veterans' Administration and also by the Army and Navy.

Not only does it appear from this evidence that these facilities are overcrowded but it is asserted by many reputable persons, some of unquestionably high standing and repute, that the character and quality of the medical service, attention, and treatment leaves very much to be desired. It is charged that first-rate men—our war heroes—wounded, disabled, shattered in body and mind—are being treated by third-rate doctors, using outmoded methods, and apparently not aware of the progress of their own medical profession. Some of the charges made—and I will refer to them later—are almost unbelievable.

According to figures furnished by the Veterans' Administration, there is admittedly a backlog of about 88,000 cases as of January 31 still pending, unsettled, and unadjudicated in that agency, while thousands of returned veterans, many of them in sore distress and need, are compelled to wait for months before they receive consideration. Serious complaints are made about the rating boards, and it is charged that the allowances made in many instances are woefully inconsistent with the condition of the veteran.

The Congress has provided generous funds to build adequate hospitals for these men and women, yet it is repeatedly charged that overcrowding exists in many of these installations. The Congress has provided generous funds for wholesome, healthful food for these unfortunate victims of war, but in many instances the veterans and servicemen complain that they are poorly fed. The Congress has intended that the supervisors and superintendents presiding over these hospitals shall accord our boys considerate and respectful attention, yet in many instances it is stated that our boys have been treated with insult, unreasonable restrictions, and harsh discipline, more resembling that of a concentration camp than a Government hospital. The Congress has contemplated a speedy adjudication of the claims and cases of our boys, but, as I said before, the record shows on the face of it that this process is bound up with so much red tape that needy boys are kept waiting month after month for a decision, and then, in all too many cases, are awarded a rating which does not enable them to live decently. The Congress contemplated that under the G. I. bill of rights it would be made easy for veterans to buy homes or go into business, yet the official figures show that relatively only a few returning veterans have been accorded this entitlement.

The conditions warranting this investigation, as proposed under House Resolution 172, let me make it clear, are not confined to the Veterans' Administration nor to its institutions. There are many complaints, I am sorry to say, concerning Army and Navy installations and stations that are equally bad, that reflect neglect, mistreatment, and disregard and disrespect for our returning heroes. Members of the House, you can believe me when I tell you that the evidence is so abundant that it would be unduly repetitious, cumulative, and a trespass upon your time to produce it in full; in fact, it would take hours to produce all the evidence that I have in my possession concerning these most regrettable and intolerable conditions.

Now I am not prepared to assert that all of this information that has come to me is necessarily accurate, true, and correct. I fully appreciate, as you all do, that some it may be, for one reason or other, because of bias or prejudice or animosity, unworthy of credibility. I do not contend that all this information is trustworthy. I do not contend that all of it can be believed absolutely. But I do contend that where so many people, including men of unquestionable authority in the field of medicine and retired officials and employees of the Veterans' Administration, and personnel of the Army and Navy, and experts in Government and medical science, and also a very large number of alleged victims—the wives, the children, and the parents of those who claim to have received unconscionable treatment—have taken the pains to present their complaints and offer to submit their evidence under oath before any impartial governmental inquiry, that these facts are a clear indication that where there is smoke there is fire, and it becomes the duty of this Congress and this House, responsive to its investigative function and its responsibility to the veterans of this and other

wars, to make a speedy and effective inquiry into these matters.

In other words, this abundance of evidence, whether all of it is true or not, makes out at least a prima facie case and places upon the agencies involved an obligation to present evidence refuting and contradicting these charges and upon this House the burden of taking up these questions and these serious allegations and investigating them thoroughly, completely, and impartially, so that if these conditions do exist they can be speedily rectified, whether they exist in the Veterans' Administration or Army and Navy installations, so that justice may be done to our brave veterans and their dependents, and families who are the wards of this Government and to whom we, as Representatives of the people, owe a most sacred trust to see to it that they are accorded decent and generous treatment at all times and under all circumstances in connection with the administration of laws which Congress has passed for their benefit, and especially in connection with the helpless and pitiable victims of war, the broken and the maimed, the sick and the weak, the tubercular and those who have lost their reason and who are now hospitalized in Government institutions of one kind or another.

As I pointed out, these complaints cover practically every phase of the rehabilitation and hospital program. I have great respect for the ability and patriotism of the chairman of the Veterans Committee but in all deference to him I do not believe that he is ready to assert that this type of investigation, which I think most of us acknowledge is absolutely necessary, should be conducted by the Veterans' Administration itself. That, of course would be a travesty. Neither do I believe that this investigation, embracing as it does Army and Navy installations, which might come under the jurisdiction of the Military Affairs or Naval Affairs Committee of this House should or could be conducted by the Veterans' Committee of this House alone. However, talented, however experienced and however zealous and patriotic the chairman and members of the Veterans' Committee may be, because many of these matters, affecting perhaps millions of our boys before this war is over and in the post-war period, clearly go beyond the jurisdiction of that able committee. These matters are far too serious and far too important to so very many of our boys to be trifled with or delayed, and I am assuming that every Member of the House wants to see them corrected at the earliest time possible, they are far too sweeping and too broad I must repeat, again with due respect, to be confined within the province and jurisdiction of the Veterans' Committee alone.

Recognizing the experience, great ability, and special knowledge of veterans' problems possessed by the veterans' committee, in House Resolution 172, I provided that 5 of the 11 members of the proposed investigating committee, if the resolution was adopted, be named by the Speaker from the Veterans' Committee. By this proviso, I think I have given most generous recognition, consideration, and respect to the members of the Veterans' Committee and it is only proper and fair in the interests of our veterans and the House that this proposed investigating committee be comprised of a cross section of our entire membership so that in the eyes of the country there will be absolutely no question whatever concerning either its impartiality or its representative character.

We should have one integrated investigation by one all-embracing body authorized to deal with all these matters instead of several investigations conducted by various committees which may be the case in the event House Resolution 172 is not adopted, because certainly, some committee or committees of this House, whether it is an integrated committee, or whether it is the Military Affairs Committee, or the Naval Affairs Committee, the Invalid Pensions Committee, the Pensions Committee, or all five committees, conducting separate inquiries, will have to look into the question of conditions in Army and Navy hospitals and compensation and pensions. Nor should we be concerned with whatever expense is required to conduct this broad-scoped investigation which I propose. I appreciate the view which some Members have that investigations where possible should be conducted by standing committees in order to avoid expense, but I do not believe there is a Member of this House who would be willing to deny funds legitimately required for a comprehensive and complete inquiry of veterans' and servicemen's matters.

Before I close I would like to pick out at random a few comments and quotations from the tremendous volume of complaints directed against practically all phases of veteran and servicemen's rehabilitation problems that have come to me both before and since I introduced House Resolution 172. Because I do not wish to stigmatize anyone unfairly on the basis of ex parte statements, in some cases not under oath, I will not mention the name and location of these hospitals, or the names or addresses of any individuals at this particular time. I would like to have you listen to what this returned veteran writing from a Southwestern State hospital had to say about conditions he observed in several veterans hospitals. I quote:

> Why are they making such an effort to prevent this investigation if there is nothing to be disclosed? I have spent sufficient time in several facilities to observe conditions that are the lack of executive and administrative ability. We need a complete independent investigation into veterans and servicemen's affairs. Why keep patients in a hospital such as the one located—

And he mentions an eastern hospital—

> where dampness and fog make conditions unbearable for all tubercular, arthritis, and asthma patients.

He continues:

> I know personally where the patients at night would put in a call for the officer of the day and he would never show up. The night nurses are under orders not to disturb them, and if they should come their language is insulting. Before I left the eastern hospital they had about 100 cases of ptomaine poisoning due to eating a stew that in my estimation was rotten, but this affair was squashed. The food up there became utterly repulsive to me. We need a thorough investigation to expose inefficiency and neglect of our veterans.

Here is a veteran from an eastern State who was discharged from the Army because of a lung condition for which he subsequently had to have an emergency operation. He complains as follows:

> I was under the impression that the Veterans' Bureau did pay for emergency operations that were service connected. I made visits out to the (X) Veterans' Hospital but was told that they did not have the facilities to treat me. Later I was told by the Veterans' Bureau that they have to receive notice within 24 hours of the time the patient enters the hospital but these doctors never told me that. It has cost me a lot of money for these two operations. Frankly I can't afford to pay it as I am unable to work most of the time. I have been told I may have to have another operation on my left lung. I doubt if the Veterans' Bureau would tell me the right way.
>
> I also have been having trouble in regard to my service insurance and sent quite a few letters. I received a reply from them last November saying that the Veterans' Administration had no official notification of discontinuance of the service-pay allotments from the Army finance, so they could not tell me the status of my account. It seems to me that they should know by now as I have been out of service about a year and a half.

And here is another statement under oath from the Nation's Capital. I quote:

> The attendants at Hospital (X) handled me so rough they caused me to be ruptured. My back, arms, legs, kidneys, and rupture on account of rough treatment are giving me a lot of trouble. I refused to eat the food at Hospital (X) because it wasn't fit for a dog to eat.

Here is one from the great State of Missouri:

> I am a permanent and total disabled veteran and have been to the Veterans' Hospital for treatment and examinations and all I have ever got was a push in the face. I have been under doctor's care all the time. I have seven gun-shot wounds and many other things wrong. I have four decorations and though I have tried every way, at present I have to live on relief. You can investigate me any place in my home town.

The next is from a discharged lieutenant in the Army who served in Alaska, who according to his story was improperly treated in a service hospital, and when he complained about it, was thrown into a small cell and locked up. I quote:

> In the cell next to me was a veteran of World War No. 1 who had become a liquor addict. This poor devil died screaming during the night after several corpsmen and a doctor tried to quiet him with a needle and evidently blundered.
>
> At Hospital (X) I was transferred to a place where there were a hundred of us in one large room. The only time I ever saw a doctor to talk to was after I had been there a week. I was pretty much run down with 5 weeks of hell on the west coast. My discharge was made effective in October and I have been afraid to open my mouth to any one until now about the terrible error on the part of someone on Attu.
>
> Any number of my fellow officers are willing to testify to my character and my actions. They, like myself, don't understand it at all.

From Chicago I quote the following:

My brother came home February 7, 1945, and since then he hasn't received any money that's due him. In fact when he was leaving the hospital (out in the far Middle West) he did not have any money for train fare—not one cent in his pockets.

Speaking of another hospital in the Middle West, a veteran says:

I would personally much rather be on Iwo Jima Island with our marines than be in a veterans' hospital under the same experiences I have had. I could certainly fight back there, but here you cannot.

From Indiana comes another complaint:

In February of this year I had occasion to visit my daughter who was in a (here he mentions a service hospital in the Southwest). There I heard a returned nurse say that she had been in the hospital for 9 days and hadn't seen a doctor up to that time. One little returned nurse waiting her papers for discharge was told she was filthy lazy because she refused to go out on the floor and work. In a dark hall room made into a so-called ward, I saw about 8 or 10 patients lying in a bed and a more neglected sight I never hope to see again.

In another hospital in the Middle West mentioned in this letter, I quote:

Patients confined with measles were ignored and had to get up and try to care for each other. Food and services were terrible. It is time somebody put the fear of God in these people and looked after the ones who need care.

Still another very intelligent letter from the Middle West, from which I quote:

I was a patient for 23 months in hospital (X) and I never thought the place was managed properly and that all possible was done for the patients. I also considered some of the wards unsanitary and some dark and dirty and in need of paint and other things. Food was not warm and was poor. My present employment is in a defense plant where I have a responsible position so I would not be able to spend much time away from my job, but if the Legion or some other organization gives me notice, I will have my notes ready.

From the great State of Connecticut, I quote from a letter, as follows:

I spent 6 weeks at hospital (X), an eastern hospital, and the conditions there were so bad that I went AWOL and spent the rest of my hospitalization in our State Sanitarium. I have to go once a year to determine my eligibility for pension, but the doctors who do the examining aren't TB experts, which they should be.

From Kentucky, a lady writes as follows, speaking of her husband, hospitalized in a midwestern veterans' hospital:

They finally were about to operate for a hernia when out of a clear sky, they told him they couldn't operate, that his heart was in such bad condition he would die on the table. We later consulted a heart specialist and were assured his heart was perfect. Our son, on leave, was taken ill during the night and was taken to a service hospital. The doctor in charge assured us they would have an ear specialist to take care of him. Next afternoon when I went to see him, he had a temperature of 103. He was in bed for two weeks and never once was given a bath except those I gave him myself. He laid in filthy linens and was handed pajamas with no buttons. The food was atrocious. The cockroaches nearly carried us away. The room, windows, floors were filthy. He was given pills which knocked him out, but never saw an ear specialist. Finally toward the end when he was able to be up a little, the doctor stated Bill's ear was ruptured and that he had never seen his ear—though it was the same doctor who examined him upon entrance. They at last sent him to our own ear specialist and by the grace of God the ear was not ruptured. We were very fortunate to get him out of that filthy place. We could have given him such good care at home if they let us. We feel that the officials must surely not know existing conditions at this hospital or they would insist on better treatment for our boys.

She continues:

I went up to see another boy in the hospital who was a pal of my son's. The second day after his arrival—he was injured in an auto accident—he was still lying on a blood-soaked pillow, clotted blood all over his face and hands and pajamas. He was too ill to move or eat. Nothing was done, not even did he receive a bath until he was able to get up and take a shower. These two boys are at present in the Pacific and I pray God that they and all returning veterans can expect and will get something better in our hospitals than they have had.

From Virginia, I quote concerning a veterans' hospital:

I could give you some first-hand information as regards conditions here and at other facilities with names, dates, and witnesses. You understand that severe reprisals would be taken against me by the authorities if they knew of this letter.

From California, let me cite the following case concerning an Army hospital:

Unfortunately, these alleged intolerable conditions did prevail in the psychiatric section of (X) General Hospital during my 4 months stay there. It was my misfortune, as one of others whom I can name, to be the recipient of some of these intolerable conditions at the hands or fists of attendants.

It seems to me that such treatment is to be deplored not only from the standpoint of humanity, but also as definitely poor psychiatric therapy.

The following conditions are said to exist in a veterans hospital in Colorado:

An attendant sat on an 86-pound patient and twisted his leg until it broke.

A Missouri letter states:

The brutal treatment of inmates at the (X) hospital during February of 1944, revealing the kicking of inmates or stomping on them after they were knocked down. Slapping or pushing inmates with open hands or fists. Choking inmates with arm or towel. Whipping inmates with a wet towel. Confinement of inmates without clothes or bedding in strip cells devoid of all furnishings. Unfortunately, the above all resulted in the usual whitewash and passing of the buck, as most investigations usually do. It is time to talk less about concentration camps in other countries when we have many individuals needlessly tortured in mental hospitals.

From my own State of Massachusetts, a distinguished citizen writes me, as follows:

For some time now, I have been active in matters pertaining to the welfare of the returning veterans. From actual experience, I know the statements you made to Congress are borne out day after day in the City of Boston. I have personally escorted many veterans who have only recently been discharged from service through the tangled maze of procedure which they must unravel in order to obtain their compensation and benefits.

The present set-up in Massachusetts is entirely inadequate and inconvenient for the veterans who are, in all conscience, entitled to a well-equipped veterans' bureau where all their needs can be taken care of.

A correspondent from our great State of Washington sends the following:

The writer is prepared to give a committee the harrowing details of his experience in the X hospital here, provided such information would be considered as strictly confidential, inasmuch as I am still under treatment at said hospital, and although my present attending physicians are in no way to blame for the treatment I received while a patient, still from an ethical standpoint, there might be repercussions on their part that I would prefer to avoid. I feel sure that you gentlemen will understand the situation in which I am placed and grant my request for secrecy. As a matter of fact there are many former patients in all Government hospitals who feel the same as I do regarding these matters, and it would be very difficult indeed to arrive at the true state of affairs in these institutions unless this was done.

From California again:

I have just returned from the veterans' hospital at X, Calif., where I have been trying for some time to have dental work and eye work done. The administration office is considerably overstaffed, but even so, a veteran cools his heels there for days, weeks, and sometimes months before he can get action on his case.

Tennessee reports the following:

For 10 years I have spent all of my vacations from my job near the veterans' hospital, which kept my brother. Whenever possible, he returns home with me and improves greatly under the influence and conditions enjoyed away from the institution. The more I know about discipline and restrictive regulations at these institutions, the greater I yearn to see changes in them.

This is what one writer says about one well-known Government installation near the District of Columbia:

I am an honorably discharged Navy veteran of this war. I lost a kid brother, also Navy, in a Veterans' Administration hospital. I spent 3 months at the X hospital. What I have witnessed out there would make your hair stand on end. Especially, in the psychoneurosis division of the hospital.

Nearby Virginia reports the following:

On my three visits there when things were supposed to be at their new best, I came away so depressed that I could scarcely bear it; and then began a red-tape process to get my brother out, and at the same time retain his veteran's status. It took 3 months to do that.

There was much display of uniforms, etc., among doctors and nurses, and the patients seemed to be secondary considerations. My brother, when we would go there, would be brought to visit with us for a limited time in a little dark room, with one window, and a sofa and a chair, and it was like having a prisoner brought out by a guard.

From a Naval hosiptal in California:

We are most certainly thankful that we have seen the day when the conditions we have been forced to undergo have at last been brought to light. Many of us have had terrible days overseas and suffered many hardships. Now we have had to come back to conditions much harder to bear.

Here is an incident that would make the blood of any true American reach the boiling

point. A mate of ours here was sick and required a 24-hour watch. Meanwhile, the Captain's dog became ill and the corpsman was taken from the bedside of this man and detailed to sit up that night watching the dog. Next day, our mate died.

We have seen our mates who are bed patients chained to their beds because of infraction of a rule; while others have been taken from their beds and put into the brig on bread and water for as much as 10 days because they were not in bed at the time bed check was made.

We know men returning from overseas and hospitalized for a period of 60 days or more are entitled to a convalescent leave of 30 days, but these cannot be gotten here. These are just a few of the things that are an everyday occurrence here, and God only knows it would take pages to print all the others.

We sincerely hope and with a fervent prayer in our hearts, ask that you include this concentration camp in the investigation. We are with you 100 percent in bringing the ones responsible for these conditions to justice

Massachusetts again:

The conditions here are not as satisfactory as they could be, due mainly to the shortage of beds The waiting list is tremendous. In fact, recently a veteran who needed hospitalization very badly was required to wait 2 months before they could take him into the hospital. This condition should not exist as a veteran very ill many times cannot wait that length of time without serious results.

The two mental hospitals in this State are packed and the waiting lists there are very large also, and, of course, this is a very sad situation.

This one about Pennsylvania:

Under no circumstances should Congressmen of the particular congressional district or United States Senators of that senatorial district be allowed to carry on an investigation for the simple reason that some time or other they have asked favors from the heads of these institutions for one or more of their constituents.

A real progressive head of a Veterans' Administration would advocate that all tubercular, arthritis, and asthma patients be placed in a hospital situated in a climate that would be favorable to their recovery.

Why keep patients in a hospital such as the one located at X, Pa., where dampness and fog make conditions unbearable and all the medicine they might give them will never lead to recovery?

California, again:

After they looked me over they decided that all they could do for me was to take out the ribs on my left side. The doctor who would do the work was not very experienced, so I left and went to a private surgeon. This man operated on me and was able to do what was necesary without removing my ribs.

The surgeons at the Army's largest tuberculosis hospital were unable to do the job on me that was necessary and the veterans' hospital was likewise unable to help except by the most drastic of measures. Yet, I have found two men in the San Francisco Bay region who do this operation. The veterans' wouldn't call in outside help on my case, yet the same man who operated on me was called in by the veterans' to operate on another case.

Here is another from California:

Investigation will prove that conditions in the hospitals are but the outward manifestations of a deep-rooted evil system set up, within the Veterans' Administration; a system by which the personnel of that one Government agency constitutes the investigators, the examiners, the prosecutors, the adjudictors, the judge and the jury. From their decision there is no appeal. As a result, claims are presented and adjudicated on the basis of favoritism rather than rights under law. Justice is made to curry favor.

The average monthly payment for service-connected disability is $30.67. Is this what the people mean when they say, "Nothing is too good for our boys; when they come home disabled we are going to see to it that they receive the very best this great Nation can afford"?

From Texas, I have the following:

I was a witness in a Federal investigation, and after they found that out, those who testified for the Government have not been able to light there and no other veterans' hospital after they find out who you are.

Again, concerning naval hospitals here and overseas:

I contracted filariasis during a 14-month stay in American Samoa. At the time, the medical authorities knew (and told us) that any man staying there over 3 or 4 months was likely to get it. Knowing this, we were kept there for over the time limit, and between the time we left and the time we went into action, nearly half the men were afflicted with it.

Our kick is not with field hospitals and aid stations, it is with mobile and base units far behind the lines. I spent some time in nine different hospitals, and of the five, in back areas, only two could possibly be considered fit places for a man just out of combat to get decent treatment.

Mobile No. X in New Caledonia, and especially base No. Y in New Zealand, and the B Hospital in the States, are much nearer concentration camps than hospitals.

Base No. A was as beautiful a spot as I have even seen. When we men first saw it we were enraptured. It was high on a hill, surrounded by fir-covered ridges, hillsides blanketed with wild flowers, and from the foot of our hill, a broad valley was centered on a lovely stream. And all around the hospital was an 8-foot barbed-wire fence.

What we wanted was peace of mind, not medicine. Instead we were bound up in all kinds of petty rules and regulations; we couldn't sleep in our bunks during the day no matter how tired we were, couldn't use the library in the evening, could only see certain shows, use the sanitary facilities at certain times, and liberty—the one thing everyone had lived through hell for—was forthcoming only after many hours of work a day.

Doctors seldom agree on a diagnosis and I've known men to be treated for three different ailments by three different doctors in as many hospitals, and in the end, all three were wrong. Several hundred of us "patients" came back on the same "hospital" ship—a merchant marine Victory ship. Our meals consisted of an apple and Spam sandwich at noon and a fairly substantial (in quantity) meal in the evening. This lasted for 21 days. The patients also swabbed and swept the decks.

The same writer describes conditions at a naval installation here in the United States:

So we spent 6 hours a day in the sun, with picks and sledge hammers, tearing out the walls, making little ones out of big ones, as they say at Leavenworth, and carrying away the pieces. Hard work for patients, but either that or go to sleep at night as you had done for years.

By the time you reach the States, another corpsman or nurse's aid (WAVE) has been added; four people taking care of the now almost-recovered men. And they talk of a manpower shortage.

Please do not use my name in connection with this, as I have no desire to be transferred to China.

A widow from California writes me as follows:

He entered the (X) hospital at 3 p. m. February 9 and died April 12 at 3 a. m. He had five fractured ribs on the right side, three on the left side and a fractured sternum bone. Also a large bruise on his jaw. He had no bruises when he entered the hospital. That was brought out at the coroner's inquest. * * *

At the inquest, it was brought out by the testimony of their employees (husband, aged 75) was tied hand and foot in bed with shackles on his feet and arms and a heavy restraint sheet over that tied to the bed in a ward with 15 violent patients and was kept in that cruel and inhuman position for 10 hours.

I could go on indefinitely citing the evidence. I have not even scratched the surface; I hope that I have clearly manifested and emphasized to this committee my own impartiality and lack of bias in this matter. I desire to be fair to everyone concerned and I desire that every official of this Government shall have fullest opportunity to rebut and contradict charges that may be made against any hospital or facility or any other thing or matter in his charge.

I am endeavoring to point out the immediate pressing need for this inquiry, which I think is generally admitted, and then, to impress upon you the desirability and necessity, if we are to have an investigation at all, of authorizing not a limited, but a sweeping, fearless, impartial, and thorough investigation of all these matters and all of the very many charges of neglect, incompetency, maladministration, omission, and inhumane treatment that have been leveled against various programs which Congress has set up for the benefits of our returning veterans.

We cannot delay any longer to deal with this vital matter without being confronted in the very near future by a national scandal that will shock the country to its roots. Let us move now, therefore, to direct the kind of an inquiry by this House that will prove to the Nation that we of the Congress are determined to carry out the oft-expressed and inflexible will of the American people that our beloved veterans who have offered their lives to our country and who have returned to us broken and shattered in body and in mind shall receive the very best treatment that this Congress can provide, and that we propose promptly and fearlessly to uncover and speedily to correct policies and actions by administrative officials of the Government or of our armed forces, whoever they are, which militate against the adequate and proper care, consideration, and treatment of our wounded or disabled or mentally afflicted veterans.

As I said before, I desire to be fair in every respect to the distinguished and very able gentleman who has proposed a different, limited, and a circumscribed investigation of these matters which may well be misinterpreted by the country because it does not go far enough. I should be perfectly willing to let the House decide the issue that I raise here today, let the full membership decide whether it wants a limited inquiry containing necessarily certain jurisdictional disabilities and complications I have al-

luded to or whether it wants a clear cut, unlimited, sweeping, independent, complete, and fearless investigation that will go over the entire rehabilitation program from the top to the bottom hospitals and everything else and set it right once for all, so that it may be said of our Congress and our House that we have done our full duty by those who fight and die for our democracy and our liberty.

I regret exceedingly that the leadership of the House has exerted its powerful influence to kill House Resolution 172 and advance the resolution calling for a limited and uncoordinated investigation for consideration. I particularly deprecate the fact that this action was taken right on the threshold of a recess when many Members are not present and also when it is not possible to have adequate general debate on the matter. For my part, I stand my ground, because I know that when all the facts are disclosed the country will not be persuaded that a limited, curtailed inquiry is in the true interests of our beloved veterans and service men and women.

Meat Distribution

EXTENSION OF REMARKS
OF
HON. EDWARD J. GARDNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Saturday; March 24, 1945

Mr. GARDNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 24, 1945.

Mr. WILLIAM H. DAVIS,
Director, Office of Economic Stabilization, Federal Reserve Building, Washington, D. C.

DEAR SIR: It was very gratifying to me to note in the papers this morning that your agency is planning to issue regulations which will halt the cornering of the cattle market by a few large packers and will allocate cattle to all slaughterers.

I am enclosing herewith a copy of remarks which I inserted in the CONGRESSIONAL RECORD on March 23, and a press release thereon, outlining some of the things that were causing the maldistribution of meat, and citing principally that the local nonfederally inspected slaughterhouses were being unfairly discriminated against in all meat orders starting with Meat Restriction Order No. 1.

I hope that your statement in the paper means what it says and that there will be no discrimination between nonfederally inspected slaughterhouses and those which are federally inspected. If there is discrimination you will face the black market on two fronts. First, the large packers with control of the greatest proportion of meat refuse to ship into the territories they formerly served, and are holding the civilian supply of meat for territories immediately surrounding their slaughterhouses. This results in more meat per capita being available in that close area than there are ration points to absorb it and the surplus reaches the black market. Second, if the order discriminates against the small nonfederally inspected slaughterhouses, the man with live cattle on his farm in areas of meat shortage will butcher and sell in the local black market and will have no trouble in disposing of his meat.

The only way to prevent these two black markets is to provide that all slaughterhouses, both federally and nonfederally inspected, shall be permitted to kill the same proportion of their meat that they killed in 1941, and that they shall serve the same customers and areas in exact proportion to the permitted civilian poundage as compared with the civilian poundage available in nonrationed base periods.

There is little or no difference between the requirements of Federal inspection and non-Federal inspection, insofar as health requirements are concerned; the principal difference is architectural, in connection with height of ceiling in rooms in which dressed meat may be hung.

The military needs could be provided for by setting aside poundage in all slaughter houses in the United States, and accepting the health certification of the local veterinarians to cover inspection.

Your attention is also called to the fact that the meat grading service has been extended to nonfederally inspected slaughterhouses without undue hardship on the Government agency providing the grading service, and the meat-inspection service could be extended similarly without undue hardship on any governmental agency. Further, the elimination of duplicate meat inspection by the Army and the Department of Agriculture would release a large number of veterinarians to cover the inspection in the small nonfederally inspected slaughterhouses.

There is just no excuse for a continuation of this discrimination between federally inspected slaughterhouses and nonfederally inspected slaughterhouses. I trust that the regulation proposed will authorize equal supplies of live cattle and hogs, in proportion to their 1941 kill, for both federally inspected and nonfederally inspected slaughterhouses.

Very truly yours,

E. J. GARDNER.

Bretton Woods Conspiracy

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. LEMKE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article on Bretton Woods by Hon. Charles G. Binderup, former Member of this body.

The older Members of this House will remember Mr. Binderup as a conscientious, hard-working liberal. They will remember the eloquent half-hour addresses on the money question that he delivered from the well of this House. They will remember Mr. Binderup as an authority on both the national and international monetary situation. Mr. Binderup was not only a Democrat but he was also a student. He was not a partisan. He voted for the best interest of the people regardless of partisan politics.

I feel that his article is thought provoking. I have long felt that the Bretton Woods agreement was nothing more or less than a clever contrivance to fleece this Nation, or should we say the taxpayers of this Nation, out of another $17,000,000,000 in addition to the lend-lease billions. I am sure that his many friends in Congress, and throughout the Nation will be pleased to get his views on Bretton Woods.

Here is former Congressman Charles Binderup's article:

We must destroy the Bretton Woods conspiracy or the Bretton Woods conspiracy will destroy us. For it is as impossible to reform our corrupt money and banking system by going in partnership with Morgenthau and his international bankers as it would be to reform hell by going in partnership with the devil and his imps.

Bretton Woods, where was first displayed that strange creation that silently and secretly emerged from the Nation's most dishonored and immoral spot, Wall Street, the cancer at the heart of our Government.

Whose offspring is this illegitimate child so foreign in a great representative government? That bastard child for who they have chosen as foster father Henry Morgenthau, out of the President's Cabinet.

The first news of the birth of this miserable brat came, as usual, from England, where it seems all of these guarded secrets leak out. At first Morgenthau remonstrated "impossible," but later modified his denial, saying, "It was offered only for the reason he wanted the kid dressed up a little nicer before presented to the public."

When it became generally known the baby had been born, everyone pointed the accusing finger to Maynard Keynes of London, but Keynes came to Bretton Woods with his own brat right from Downing Street.

Keynes and his kid were not welcome at Bretton Woods. His child was dressed up somewhat, but it lacked the gold corpuscles in its blood stream. So after Bretton Woods had looked it over one round, they tied the weight of gold around its neck and drowned the baby.

We have looked in vain for the real father of Morgenthau's baby, but everybody said, "No, not me." Didn't know a thing about it until I heard the gossip from London. Yes, when the pie was opened the birds had flown away.

Let us stop for a moment and remove the beautiful, glittering, glimmering, swaddling clothes, so spendidly prepared for public consumption, and view the kid in its nakedness. Lo! and behold! the bastard laid bare. It is the skeleton of the old gold-standard witch all padded up with its face lifted, the same old son-of-a-witch we buried in 1934, resurrected by the international bankers, fostered by Morgenthau, and promoted by President Roosevelt in the same voice that sang the swan song at the funeral, directed to the London Monetary Conference, "we are not interested in stabilizing the English pound or the French franc, we are only interested in stabilizing the American dollar so it will have the same debt paying and purchasing power, now and generations hence," and the refrain, "we will drive the money changers out of the temple and move the capital out of Wall Street back to Washington." And do you remember we shouted back, "Amen, amen; thank God for a leader who is for America first, who will lead us in the terrible unequal fight against Wall Street and international bankers, the Nation's most ruthless dictator," and with profound faith we waited for action to give force to his magnificent words, but the words died away, drowned by the noise of the clicking of the coin in the cash register of the international bankers.

Yes; let there be no mistake about this, the Bretton Woods agreement is only and purely for the purpose of putting us back on the old corrupt gold standard that we repudiated long since.

For 12 long years we have wondered why all at once without any explanation, all the

gold and gold certificates belonging to our citizens was conscripted into our Treasury by the President's edict in 1933 for $20.67 an ounce and we were compelled to take in exchange money created for the Federal Reserve banks that was not legal tender for our gold, but now we see.

For 12 long years we wondered why we bought, until we had three-fourths of the gold of the world at $35 an ounce from foreign lands and put it in the Kentucky hole, when we didn't use the gold, didn't want the gold, as we were off the gold standard and never wanted to go back, but Bretton Woods explains.

For 12 long years we wondered why all this gold collected was given to the bankers in gold certificates, a mortgage on the gold that can only be redeemed by taxation, and we add to the gold gift we give to the bankers currency amounting to 60 percent more than the face value of the gold certificates, but Bretton Woods explains it all.

For several years we have wondered why and how Morgenthau could secretly and silently without the knowledge or consent of Congress take of what gold we had left in the Treasury and buy the worthless I O U's of foreign nations, but now we know for it was thus the 40 nations, destitute of gold, could qualify at the Bretton Woods conference and go on the gold standard, with 25 percent gold back of their currencies.

So it didn't surprise us, when last week Morgenthau advised the gold requirements back of bankers gold certificates should be reduced from 40 percent to 25 percent, thereby according to the same plan the bankers would receive another donation from the people amounting to $4,800,000,000 including the 60 percent bankers privilege.

In this letter we have only given a brief prelude to the Bretton Woods conspiracy. We beg the privilege of writing you further in letter that follows. Believe me Members of Congress, of all the diabolical schemes hatched out by the international bankers and hidden in false propaganda, nothing has ever equaled this Bretton Woods conspiracy. Congress must defeat this vicious so-called agreement.

St. Patrick's Day in the Evening

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. WHITE. Mr. Speaker, it is my privilege to insert a poem commemorating St. Patrick's Day by an Irishman born in Ireland on St. Patrick's Day 81 years ago, John P. Delaney, of Long Beach, New York:

PADDY'S DREAM

(By J. P. Delaney)

Sure me ould heart is light and me spirits are gay,
For Oim filled wid the jys of this St. Patrick's Day,
An' out thru the smoke av me durlin dudeen
I see Erin's lakes and the hills that are green.
Far beyant o'er the green in a boggish brown patch
Is a small little cot with a weather-worn thatch,
An' there in the dure is a face with such charms
As I never saw equaled, and a pair of fond arms
That are eager to clasp me close to her breast.
Says she: "Thanks be to God, bye ye have come home to rest."
Ah though plainly I heard Mother whisper me name,
Me dudeen has gone out an' I wake from me drame,
But me ould heart is light and me spirits are gay,
An Oim drinking the joys of this St. Patrick's Day.

Hey, Skinny, Fight!

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. WORLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Nashville Tennessean of March 22, 1945:

HEY, SKINNY, FIGHT!

In a recent moment of extreme rashness, the New York Herald Tribune took on the State of Texas for bragging and listed a motley of products and pursuits in which, it asserted, other States than Texas excel. As soon as news of this overt act reached Fort Worth, Mr. Amon Carter's breech-loading Star-Telegram let go with both barrels, and the charge wasn't paprika. There was no bluster in it. The Ft. Worth newspaper merely called the roll, beginning with military personages—Eisenhower, Nimitz, etc.—great leaders in international affairs like Senator TOM CONNALLY, and going through to "roses, sheep, goats, hides, mohair, pecans, onions, mutton, spinach, turkeys, highways, pipe lines, cottonseed, land in farms, sorghum, grains * * * and total number of domestic animals," in which the Lone Star State leads in a gallop. It grants that Texas may come off second best when it comes to lying, and suggests that laurels in that classification must go to the writer of the Herald Tribune editorial.

Hostilities thus having commenced, each of us can take his stand as his conscience tells him. While a scattering of Tennesseans have settled around the fleshpots of Gotham, the plains of Texas literally are populated with Tennesseans at once removed. It is estimated that as high as 50 percent of Texas traces to Tennessee extraction, and it well may be 51 percent. Blood is thicker than seltzer water. Texas has always been Tennessee's favorite suburb. The Tennessean heeds the ties of kinship, knotted long ago at the Alamo and consecrated on a hundred battlefields under the Bonny Blue; we enlist with the cactus carbineers, kneel, aim, correct for the variable wind, and contribute to the volley. A flag for Texas. A fig for New York.

And it matters little that the writer of the Tribune editorial to which Texas justifiably takes exception sounds suspiciously like an ex-Texan himself—Mr. Stanley Walker in pinstriped pants. It matters nothing. Your New Yorker by adoption ordinarily contracts the near-sightedness chronic to the natives in its most virulent form and never again looks across the Hudson save in scorn.

But Mr. Walker or another, the Tribune's writer, in a city as monstrous for sheer noise and pompous show, for prententiousness and superciliousness and patronizing posturing, as New York has no cause to look down his nose at Texas. O city that would starve in 3 days without the produce trains from the South and West in disparaging the quality of Texas beef commits the top folly of quarreling with its bread and meat. The prettiest showgirls on the White Way may indeed come from Texas, as the Tribune's writer grudgingly concedes; but it is the strutting little mayor of New York, not the justices west of Pecos, who, in callous defiance of wartime defense measures, has moved to keep open the clipjoints where the jaded strip-teasers unhook after midnight to relieve the boredom of metropolitan wasters.

Texas brag? In a million efforts it could not approximate a fraction of the self-puffing, the public preening, the insufferable condescension that has characterized the New York attitude since the ancestors of the present toffs escaped from the melting pot of the Bowery into their pigeon-roost skyscraper apartments—and overstuffed editorial offices—uptown. The trouble with the New York point of view is that it is expressed by men who have had to live with artificialities so long they simply cannot recognize facts when they encounter them.

Whatever Texas says it has got, it has got, in all probability. And the Tennesseean, of the State from which most of Texas sprang, shares Texan resentment of the doubts and slurs pointed South by the professional sniffers of Broadway. We have taken up arms about it, and will join the van whenever the indignant Texans set out with their incomparable bullwhips after the impertinent mediocrities of effete Manhattan.

Poles Keep Fighting in Face of Disaster—Army, Overwhelmed in France, Builds Anew in Britain to Good Purpose

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Ann Su Cardwell that appeared in the Detroit News of March 22, 1945:

POLES KEEP FIGHTING IN FACE OF DISASTER—ARMY, OVERWHELMED IN FRANCE, BUILDS ANEW IN BRITAIN TO GOOD PURPOSE

(By Ann Su Cardwell)

The Poles acted quickly after their country's fall. The Polish Constitution provided that in an emergency, the president could appoint his successor. This enabled President Moscicki, interned in Romania, to name a head of the Polish state who could and did establish a Polish government-in-exile, with headquarters in France.

The first task of the new government was the formation of a Polish army, made possible by the steady influx of Poles from Romania, Hungary, Lithuania and Latvia—whither they had espaced from the Germans—and by the presence in French and Belgian industry of many thousands of Polish workers. By 1940 this new army numbered some 70,000.

The shock of losing family, home, country, possessions was deep tragedy but instead of being discouraged, the Poles were determined to regain their independence, and salvage what was possible of earlier achievements. Poles do not beg for liberty, it is said; they fight for it. As Paderewski once remarked in my presence, Polish history is the record

of a thousand years of fighting. Poles have always fought to win and maintain their independence.

LOVERS OF LIBERTY

When other peoples have been deprived of their liberty, Polish sympathy has gone out to them, particularly if the victim has gone down fighting. I recall the Polish attitude toward Ethiopia when Mussolini extended Italian sovereignty. In the spring of 1940, the Poles were the first to apply for inclusion in the British and French expedition to Norway.

That was a bad chapter in Allied annals but the Poles won merited praise for their achievements from the French general in command.

Polish troops next met the Germans in France. The two Polish divisions, with the very inadequate and often antiquated equipment the French supplied, fought till the last. A part of the 2nd division lost 2,000 men covering retreating French forces.

Every unit of that division was decorated with the French Croix de Guerre. The Polish First Division, fighting with the Twentieth French Army Corps, lost approximately 45 percent of its combat strength. When Marshal Petain asked for an armistice—I was in Vichy that day—General Sikorski, the Polish commander, ordered what was left of the Polish Second Division to cross into Switzerland, where it was interned; ordered the remnant of the first, farther west, and men in training camps to make their way to the coast any way they could and thence to Britain.

NEW POLISH ARMY

Those who succeeded became the nucleus of a second Polish army formed in exile. The Polish Government had, of course, been obliged to leave France, just as its predecessor had been obliged to leave Poland.

Here conditions for training were much better, equipment was excellent and the group was daily augmented by the arrival of Poles who had traversed half Europe to reach the British rock, each man with a tale of fantastic adventures.

The Polish land forces were assigned to the defense of a section of the Scottish coast. But it was the aviators who had their chance in Britain.

When that country had its September it came off better than did Poland, thanks to Polish aviators who shot down every eighth German plane destroyed, spelling the difference between British victory and German invasion.

The British fully recognized that fact. By the end of 1944 the Poles had destroyed more than 1,000 planes and 223 flying bombs. Polish aviators have maintained their record in every phase of air activity, in transport as well as combat and reconnaissance, whether their base be Britain or Africa.

LAURELS IN AFRICA

Poles had fought in Norway's snows. Now they were to experience the heat of African sands and learn desert war technique in defense of Tobruk. Again they won laurels. The ill-starred Greek expedition was to include them; and when that failed they were set to be a part of a great Allied expeditionary force going into the Balkans—Churchill's cherished plan that went into the discard at Tehran.

Italy was next for the Poles, this time men who had been brought out of Russia and equipped and trained in the Middle East, plus the Polish brigade from north Africa.

This group is now the Second Polish Corps, the base of the First being in Britain and that of the Third, now forming, in Egypt. Tens of thousands of Poles who had been forced into the German armies and now are falling prisoners to the Allies are recruits for this new corps.

Of the constant activities of the Polish Navy and merchant marine, both of which have achievements to their credit out of all proportion to their size, we hear little or nothing. Up to 1944 the Polish Navy had accounted for 2 German destroyers, 1 auxiliary cruiser, several submarines, 35 transports, and many smaller fry. It had served in over 600 convoys and as many patrols.

HOME ARMY FIGHTS

And lastly, that powerful factor, the Polish home army. Its operational units in the summer of 1944 numbered 250,000 men, living in barracks hidden in remote forest regions, always ready for combat or sabotage. The Germans had to keep 19 divisions besides some 350,000 SS men, special guards, and police in Poland because of them. Sabotage accomplished by the Polish home army was of inestimable value to the Soviet Union, since it prevented men and supplies reaching the Germans on that front.

In June 1944, for example, the Polish home army derailed 54 trains, staged 42 railway hold-ups lasting from 3 to 90 hours, damaged 177 engines and 956 cars, burned 49 railway transports, 38 times interrupted telegraph communications for long periods, killed 379 Gestapo agents. And that is by no means the whole of the month's work.

The material contribution of the Poles to the conduct of the war is impressive, but the moral contribution is no less important, perhaps more so. With their losses in killed and missing in battle, dead, or murdered in concentration camps, deported to forced labor in Germany, even at the beginning of 1944 amounting to 18 percent of Poland's total pre-war population, the Poles show no sign of breaking. They continue to fight for justice and a free world.

Incident Affecting Negro Soldiers at Jackson, Miss.

EXTENSION OF REMARKS

OF

HON. DAN R. McGEHEE

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. McGEHEE. Mr. Speaker, the gentleman from New Jersey [Mr. POWERS] on March 21, 1945, page 2546 of the CONGRESSIONAL RECORD, in speaking in behalf of a discharge petition that he filed to discharge the Judiciary Committee from further consideration of H. R. 1698, known as the antilynching bill, quoted from the Plaindealer, a periodical published in Kansas City, Kans., issue of March 16, 1945, which article stated:

On Tuesday, March 13, 1945, a group of civilian police in Jackson, Miss., severely beat with blackjacks a group of Negro overseas veterans because they were fraternizing with some white soldiers whom they met in the railroad station at Jackson. These men had fought together overseas and had congregated in the lobby of the station between the Negro and white waiting room. The police, seeking to preserve southern custom, informed the men that they could not mingle together in Mississippi. When they did not immediately break up the conversation, civilian police armed with sawed-off shotguns and tommy guns, beat the Negro soldiers about the head with blackjacks and formed them to immediately board their train en route to Camp Shelby.

Mr. Speaker, after my colleague from New Jersey made the foregoing statement, I immediately called Leland Speed, mayor of the city of Jackson, Miss., to ascertain if this was true. Mayor Speed advised me to get in touch with Colonel McIlhenney, of the prisoner of war camp at Clinton, Miss., who is in charge of the military police in that area and secure a statement from him, that Colonel McIlhenney would confirm the statement he was giving me. Mayor Speed gave the following account of the happening on this date:

A troop train bearing Negro soldiers arrived at Union Station, Jackson, Miss. Two or three Negro soldiers who were drinking, jumped off the train, ran into the station and created a disturbance. A military policeman accosted them and when he did so, they knocked him down. This military policeman called for other military policemen and they, in trying to arrest the Negroes, followed them back into the train. When the military policemen entered the train the Negro soldiers in the car pulled out their knives and other weapons and ran the military policemen out. The military policemen then called upon the civilian police for aid in the arrest of the perpetrators who had caused the disturbance. The military policemen with the aid of the civilian police, finally quelled those in the train and picked out the culprits and placed them under arrest. The civilian police were under the direction and jurisdiction of the military police during the entire time.

Mr. Speaker, if those who are fostering a campaign for the advancement of the colored race and also a utopia for all persons do not cease misrepresenting happenings like this and adhere to the truth when a disturbance between the races occur, we all know that a continuation of the misrepresentations that emanate from those who claim to be working for the advancement of the colored people will the more so cause friction between the white and colored races.

As I have said on the floor of the House several times, the actions of the administration and the lady in the White House in trying to promote social equality between the white and colored races, and the manner in which they are doing it, will cause more bloodshed to correct the situation than was shed during the entire Civil War.

The white and colored races will get along harmoniously if let alone. Certainly they will in the South, because there are no people in the world who are better to the good colored people than our southerners. The good colored people of the South are today trying to put on a campaign to stop the trend that is being created by the work of the radical whites and radical colored, who are causing this tense situation.

Mr. Speaker, I merely want to correct the false reports published by the Plaindealer relative to the incident happening in the capital city of my State and quoted by the gentleman from New Jersey.

Extension of National Service Life Insurance

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. McDONOUGH. Mr. Speaker, I would like to call the attention of the House to a problem that is going to become more and more pressing as time goes by.

Under title VI of Public Law 801 of the Seventy-sixth Congress, Government life insurance was made available to members of the armed forces. This act of Congress made available to our fighting men a maximum of $10,000 worth of national service life insurance at low-cost rates. This insurance can be applied for only by members of the armed forces. It is a 5-year term insurance policy that is convertible into ordinary life insurance during the force of the contract.

The premiums of these policies are based upon the ordinary risks according to the American table of mortality during the 5-year period to be covered by the policy. The premiums are based upon the expected mortality of the age group, to which the applicant belongs during the following 5 years. This type of insurance costs the serviceman less than half of the amount necessary to carry a like amount of ordinary life insurance.

Because of its low cost, this type of policy means a great deal to a serviceman who is carrying the full amount permissible, and has a dependency allotment as well. A man with a dependency allotment, and who is carrying the full amount of insurance, were he forced to convert this insurance into ordinary life, would find that he had very little coming to him at the end of the month. And out of the little he had left he would still have to pay his laundry, tailor, and other bills. There is no question, but that a jump of $10 a month in his insurance premiums would work a great hardship in many cases.

Mr. Speaker, an additional allotment of 10 percent of their pay to cover the increased premiums of an ordinary life insurance policy would be too steep. Especially when the serviceman, already, has allotments amounting to as much as one-third of his monthly income, and in some cases even more.

I know that no Member of this body desires such an occurrence to take place. I know that they will not permit it. Nevertheless, the first contingent of inductees and National Guard men to answer the call of their country very shortly shall either have to execute new allotments of this very nature or else give up the protection that Congress intended that they should have. This first contingent were called into the service in the fall of 1940. That means that their policies will expire this year unless converted or Congress does something about it.

Since such an increase in insurance costs would work a hardship in so many cases, I introduced H. R. 2441 on March 2, to extend the force of these policies another 5 years without an increase in premium rates.

This bill provides for the automatic extension of the life of these policies for men who are serving at the front, fighting. For them it eliminates the necessity of taking time out in a fox hole in order to fill out papers so that the protection of their loved ones at home may be continued.

For the serviceman who is still here or has returned from overseas, but who, as we all know, is liable to go across at any time, all that is required is that he fill out a simple form extending the force of his policy. And all of this is done at no extra cost to those who are fighting our battles in defense of our country.

Mr. Speaker, I want to urge upon this body the necessity for an early consideration of this bill to extend the force of national service life insurance policies owned by our fighting men, H. R. 2441.

Life Magazine Discusses Its Concept of An Un-American Activity

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. MUNDT. Mr. Speaker, without confirming or contradicting any of its statements, I am inserting in the RECORD at this point an interesting and thought-provoking editorial from the March 26, 1945, issue of Life magazine; the editorial discusses the nature of the un-American activities which the editors of Life feel should rightfully come within the purview of the newly created permanent House Committee on Un-American Activities.

It is gratifying to know that a magazine with the circulation and influence of Life has thus gone on record in pointing out the need for a congressional committee on un-American activities and that it has defined an area of activity in which it believes a properly conducted continuing investigation can render real service to this Republic in protecting it from enemies who would bore from within in their efforts to replace our system of government with something imported from the bloody laboratories of Europe or Asia.

The editorial follows:

UN-AMERICAN ACTIVITIES: WHAT ARE THEY?—THE SUCCESSOR TO THE DIES COMMITTEE IS TRYING TO FIND OUT

What was wrong with the late Dies committee? One thing, certainly: The prejudiced and primitive methods of its chairman, Martin Dies. In 6 years he spent $675,000 investigating un-American activities. At the end of it he had so many enemies, so few friends, that he decided not to run for reelection. But though Martin Dies is politically dead, his committee is not. Congress has established it on a new and permanent footing.

The new committee's auspices are better. One of its Republican members, KARL MUNDT of South Dakota, has begun his job in a very serious and public-spirited manner. Seeking advice, Mr. MUNDT has written to both friends and foes of the dead Dies committee, including Eleanor Roosevelt, Henry Wallace, Harold Ickes, officers of the American Legion, and Knights of Columbus, and the editors of Life and other publications. "Too often," he writes, "we are inclined to attribute un-Americanism to political, economic and social theories with which we disagree. Obviously this is not the proper test." test."

Then what is it? Mr. MUNDT wants to know.

One piece of advice to the new committee is easy: Avoid Martin Dies's obvious bias and errors. Toward the end he ran a one-man show, issuing committee reports which the other members had not even read. He attached as much importance to gossip and opinion as to evidence and facts. The facts he got were often wrong and seldom corrected. His star investigator was one J. B. Matthews. As an avowed fellow traveler in earlier life, Matthews had made irresponsible attacks on good conservative Americans. So he tried to atone by making equally irresponsible attacks on good liberal Americans. The Dies committee's high-handed methods and procedures are easily corrected if the new committee obeys a single injunction: Play fair.

WHAT "UN-AMERICAN" IS NOT

The Democratic mayor of Jersey City, Frank Hague, once said in a speech: "We hear about constitutional rights, free speech, and the free press. Everytime I hear those words I say to myself, 'That man is a Red, that man is a Communist. You never heard a real American talk in that manner.'" That is one definition of un-Americanism. Is it also an example of it? The New York Times has called the Dies committee itself un-American. Is the poll tax un-American? Is anti-Semitism? Anglophobia? Anglophilia? The Anti-Saloon League?

The doctrines of Americanism are gloriously many and diverse. Only in totalitarian countries is the national dogma so flat and bounded that heresy can be readily spotted. Nevertheless, there is something peculiarly American about the impulse that starts an investigation of un-American activities. A restless national conscience is always driving us to examine and reexamine our own beliefs and behavior. The quest may do much good if it does not get lost in false objectives.

First of all, the committee is directed (by resolution) at "un-American activity." As Representative VOORHIS has pointed out, this does not mean thoughts. There is no such thing as an un-American thought. To hold any views, popular or not, is "a fundamental, moral, and constitutional right," says VOORHIS, "so long as they are openly and honestly held and so long as the ends sought * * * are pursued only by open, peaceful, democratic, constitutional means." Even this may be too restrictive a charter. Jefferson prescribed "a little rebellion now and then" for a healthy nation. Lincoln spoke of the people's "revolutionary right to dismember or overthrow" the Government. Such views are American enough. Against incitement to crimes of violence there are specific laws, whose violators may safely be left to the courts and police. So much for what the Japanese call dangerous thoughts.

In the second place, all that is non-American is not necessarily un-American, even if it is clearly activity. Pulaski remained a Pole, Lafayette a Frenchman, but their activity was not un-American. Non-Americans have

defended American interests in every war we have fought. We need no congressional investigation of foreigners as such. They may be left to the Immigration and Naturalization Service—and in some cases to the Hall of Fame. So much for aliens.

Not even all that is criminal activity is un-American. To err is human and so sin—like virtue—is international. Jesse James, Richard Whitney, and G. I. cigaret hijackers in France are all sons—erring sons—of our Nation. So are the convicts who volunteer as guinea pigs for wartime malaria experiments. Care of all such may be left to our penal code. So much for lawbreakers.

And, finally, not all foreign-directed activity is un-American. Ambassadors, consuls, visiting lecturers of all nationalities who are financed from abroad speak for foreign interests. Some may even be anti-American; but they are not what we mean by un-American. They are required by law to register as foreign agents. Care of them may be left to the State Department.

THE MASKED

Thus many activities which are non- or even anti-American have been foreseen and their handling provided for by law. What then remains for a congressional committee on un-American activities?

If we bear in mind that the main function of this congressional investigating committee is not to convict, not to indict, not necessarily even to propose legislation, but to study and expose, the answer becomes a little easier. Its chief target should be political activity which pretends to be what it is not.

Both of the world's great revolutionary organizations—the Communist Party and the Nazi Party—are adepts at the masquerade. They employ sympathizers to perform innocently or at least legally what they cannot effectively do themselves. Thus Social Justice, Father Coughlin's magazine, used to carry articles which pretended to be written from one American to another, but which were actually written in Berlin in pursuit of Nazi foreign policy. Assuming that Father Coughlin knew what he was doing, he was un-American. He may tell himself that his end—a technocratic, theocratic America or whatever the h—— it is—justifies the means—concealed collaboration with a foreign power. But one basic tenet of Americanism is that ends never justify means, the means are just as important.

So with the Communists. America needs strong radical parties as a challenge and stimulus to free capitalism. The Communist Party (or political association, as it is now called) cannot fill that usefully competitive role because it has no scruples about means and because its first loyalty is to the national interest of a foreign (however friendly) power. The Communists operate through numerous and ever-changing fronts, from labor groups to share-cropper rallies. These fronts often hold good American aims. But so long as the Communist interest in them is concealed, we need a committee with sovereign powers to keep unmasking it (to use a favorite Communist word). The subsequent fate of the exposed front is no business of the committee.

AND THE UNBELIEVERS

The Swiss dealt with the Nazi and Communist masquerade by outlawing both parties. That was the easy way. For us to do so would seriously weaken our Bill of Rights. Yet this fact brings up another reason why these and other parties, such as the Ku Klux Klan, need exposure. Although they are protected by the Bill of Rights they do not respect its protection of others and if they came to power they would abolish it.

It would be un-American to deny the protection of the Bill of Rights to its enemies. In the center of that paradox lies the vital area where a committee on un-American activities can usefully operate. Let it, without fear or favor, ceaselessly look for the unbelievers and the masked. Not to persecute, but to expose and identify. A good labeling job would be worth many times the $675,000 which Martin Dies misused. And if the labels are correctly affixed, our Bill of Rights will survive its foes and our political fortunes may be safely left to the good sense of the American people.

Investigation of Veterans' Administration

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement before the House Committee on World War Veterans' Legislation by Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs:

Mr. Chairman, I appreciate this opportunity to appear before the House Committee on World War Veterans' Legislation and I welcome your investigation of the many allegations recently published relative to the operation of the Veterans' Administration and particularly of charges directed at the hospital and medical services.

Within the Veterans' Administration itself, I have already launched an investigation designed to inform me whether or not there is any truth in the charges that have been made. This was done as soon as these charges were called to my attention and was prompted by a very real fear that, whether true or false, they would create anxiety and worry among those most directly affected—soldiers, sailors, veterans and families, and friends.

Because an investigation made by our own people might be opened to the suspicion that it would be ex-parte or colored or controlled, I also invited to Washington, the National Commanders of the American Legion, the Disabled American Veterans, and the Veterans of Foreign Wars.

In conference, I asked the cooperation of these organizations in developing a program to reveal the facts about the hospital, medical, and other services rendered veterans through the Veterans' Administration. A plan was agreed upon and I received from these leaders a pledge that they will exhaust all their resources to gather the truth through their experienced officials in all of the States.

However, my efforts to secure all available data have extended beyond the three organizations I have named. Since meeting with them, letters have been sent to numerous other veterans' organizations and civic associations, requesting each of them to submit all factual information they possess or may be able to develop.

In each instance I emphasized that in an investigation of this sort opinions are of little value. Because of this I have requested that they supply me with specific facts, as it is upon facts that we must base any changes or corrections that appear justified.

Last December I announced the appointment of an advisory group selected from among the most eminent medical men in the Nation. The gentlemen serving on this group are acting as advisers to me in all matters pertaining to hospitalization and medical services for veterans.

There are now 16 outstanding physicians and specialists on this group. I have writeen each of these gentlemen requesting that he visit veterans' hospitals which are accessible to him and make a thorough investigation and report to me on the conditions as they find them.

In making this request, I urged that each of these doctors take as much time as possible to complete a comprehensive study.

I feel sure that in its survey of the Veterans' Administration, your committee will insist upon witnesses presenting factual information in support of charges. Opinions not only differ but are also often incapable of support and little progress may be made unless concrete proof is presented.

At this time I cannot furnish complete factual evidence in answer to all of the numerous lay opinions and allegations which have been directed at the Veterans' Administration in newspapers and magazines. I can, however, assure you from my personal knowledge of the treatment of patients in Veterans' Administration facilities that third-rate medicine is not practiced.

I can also assure you that the charges which have been leveled at us are, on the whole, either gross distortions of the facts or misrepresentations.

As our investigation progresses, this committee will be kept informed as to our findings. At the present moment the reports are still far from complete, but I have already received sufficient information to prove that certain specific charges brought against us are without foundation in truth.

I trust the committee will grant me and my associates other opportunities to appear before it so that we may report the results of our determined effort to establish the entire truth concerning our services to and treatment of veterans.

At this time I would like to give you an outline of the organization and purposes of the Veterans' Administration, together with an indication of the work-load handled by the various services, and to suggest the tremendous increase in the volume of our work.

While this information does not go into great detail or show the many ramifications of our service, it will point out to some extent our present difficulties as well as our accomplishments.

ORGANIZATION

The organization of the Veterans' Administration is highly departmentalized. Policy-making officials and certain operational divisions are centered in the Washington office. But services to veterans are operated through regional offices, facilities, and field offices which have been established in the various States and Territories. Full responsibility for this organization is vested in me as Administrator.

There are three assistant administrators, each of whom is responsible for definite divisions of the work, an executive assistant to the Administrator, a solicitor, and a chairman of the Board of Veterans' Appeals. These constitute the top policy-making body.

Maj. O. W. Clark is assistant administrator in charge of compensation, pension, vocational rehabilitation, and education. In his office are: Claims for compensation or pension filed by living veterans of all wars and of the Regular Establishment in time of peace; the dependents claims service which handles claims for compensation or pension filed by dependents of those who have served in the armed forces, the vocational rehabilitation and education service which handles all matters pertaining to vocational rehabilitation under Public Law 16, Seventy-eighth Congress, and education or training under title II of the Servicemen's Readjustment Act of 1944 (Public Law 346, 78th Cong.).

Each of these services is under a director who is responsible for all functions within his

service both in the central office and in the field stations.

Mr. Harold W. Breining is assistant administrator in charge of finance and insurance. Under him, the director of the finance service has charge of all matters relating to accounting for public moneys, for the personal funds of patients, the guarantee of loan to veterans under title III of Public 346, Seventy-eighth Congress, and administration of readjustment allowances under title V of the same act.

The director of the insurance service administers the provisions of the War Risk Insurance Act as amended, Government Life Insurance and National Service Life Insurance, and article IV of the Soldiers and Sailor's Relief Act of 1940.

This includes all claims for insurance payments involving either death, permanent and total disability or waiver of premiums because of total disability.

Col. George E. Ijams is assistant administrator in charge of medical and domiciliary care, construction and supplies. Under him, the director of medical and hospital service is responsible for providing not only medical and hospital care, but also out-patient treatment and examinations for returning veterans who are entitled to such care or treatment. This includes the operation of all hospitals.

The Director of the National Homes Service is responsible for all matters relating to the domiciliary care of veterans and the operation of domiciliary homes.

The Director of the Construction Service is responsible for developing sites for new facilities and preparing plans, specifications and estimates covering construction, alterations and repairs of plants and equipment, maintenance of buildings, grounds, and mechanical equipment and the operation of utilities at all facilities.

The Director of the Supply Service is responsible for the procurement, maintenance and distribution of all supplies and equipment. He is accountable for Government property and property accounts, contracts (except construction contracts), leases and agreements and traffic management.

The Executive Assistant to the Administrator, A. D. Hiller, responsible for the work of the Investigation Division, the Office of Budget and Statistics, Office of Personnel, Office of the Chief Clerk, including records and auxiliary administrative services, the Regulations and Procedure Division, the Contact Division and the Press Relations Section.

The Investigation Division conducts audits, investigations and inspections as ordered by the Administrator. He compiles and coordinates reports on investigations and maintains contact with the United States Secret Service.

The Budget Officer and Chief of Statistics prepares budget estimates and maintains control of statistics and liaison on budget matters with the Appropriations Committees of Congress and Bureau of the Budget. He makes surveys of related functions in field stations and maintains records for annual reports to Congress or other necessary reports, and prepares recommendations concerning legislation involving the expenditure of funds.

The Director of Personnel is responsible for all personnel activities and maintains liaison with the Civil Service Commission and other Government agencies on personnel matters.

The Chief Clerk is responsible for records, mails and files, the procurement and distribution of printed matter, and custodian of property and equipment.

The Chief of the Regulations and Procedure Division is responsible for editing, compiling, and coordinating regulations and other issues of the Veterans' Administration. He maintains contact with the Federal Register and National Archives, making studies of policies, methods, and procedures pertaining to organization and territorial assignments.

The Chief, Contact Division, is responsible for furnishing information and assistance to veterans and their beneficiaries or representatives pertaining to benefits provided by laws administered by the Veterans' Administration. He assists them in the presentation of their claims before rating agencies of the Veterans' Administration and maintains liaison with service and welfare organizations and otherwise assists veterans in all ways compatible with the law.

The Director, Press Relations Section, prepares statements to inform the public concerning the operation of the Veterans' Administration and assists representatives of the newspapers and periodicals in securing information regarding these activities. It also maintains contact with representatives of radio and picture services.

The Solicitor, E. E. Odom, is responsible for drafting opinions on legislation relating to the Veterans' Administration and submits to the Attorney General, claims for damages; recognition, suspension, disbarment of attorneys and agents practicing before the Veterans' Administration. He cooperates with the Department of Justice in civil and criminal investigations involving the Veterans' Administration or its officials in their official capacity.

In his office there is a legislative counsel who has general supervision of matters pertaining to legislation and Executive orders affecting the Veterans' Administration. It is his duty to maintain a history of all bills and enactments in the compilation of Federal laws pertaining to veterans. The guardianship service is responsible for general supervision and directs all guardianship affairs, including litigation in State courts, foreign countries, and insular or territorial possessions.

The chairman, Board of Appeals, R. L. Jarnagin, is responsible for determinations and decisions on all laws and motions in appellate status.

FIELD ORGANIZATION

Offices and facilities of the Veterans' Administration are located throughout the United States, in Puerto Rico, Hawaii, and Alaska. There are 94 facilities for the hospitalization of veterans. These are divided into three types: 51 are general medical and surgical, 30 are neuropsychiatric, and 13 are tuberculous. Specialized clinics and diagnostic centers are operated in connection with many of the larger facilities. Ten of the facilities are also especially prepared for the domiciliary care of veterans, and 1 is devoted entirely to domiciliary purposes.

Nine area offices are now operating. The records of all persons now being discharged from the armed forces because of disability are sent to these offices and initial awards of compensation or pension are made there.

For administrative purposes, the United States is divided into 53 regions. In each of which there is a regional office or a facility having regional office activities. These offices render medical out-patient treatment; and they make physical examinations for pension, compensation, and insurance purposes. Claims for disability and death compensation or pension are adjudicated in them. They also handle the vocational rehabilitation and training of disabled veterans under Public Law 16 and the education or training of other veterans under Public Law 346. They maintain a guardianship service; issue loan guaranties on homes, farms, and businesses and private information and assistance to veterans in all matters within the jurisdiction of the Veterans' Administration.

Branch offices and contact units operating under regional offices also extend services to veterans. There are at present 89 branch offices and 159 contact units which have been authorized. In addition to these, contact representatives have been assigned to Army and Navy separation centers and to Army and Navy hospitals where service personnel may be discharged because of disabilities. There are in all 370 field stations of the Veterans' Administration which have been established or authorized to render services to veterans. This does not include the representatives at Army or Navy installations. A break-down of these field stations shows them to be classified as follows:

Regional offices	16
General medical facilities	51
Neuropsychiatric facilities	30
Tuberculosis facilities	13
Facility with domiciliary care only	1
(37 of the GM, TB, and NP facilities have regional office activities.)	
(10 of the above have domiciliary activities.)	
Area offices	9
Insular offices	2
Branch offices	89
Contact units	159
Total	370

PERSONNEL

In view of an increasing work load we have opened new offices and are constantly adding to the number of hospital beds available to veterans. But we have been unable to secure the necessary personnel to keep pace with the increasing work load.

We first began to feel the pressure of World War No. 2 in February 1943. Since that time our work load has increased about 300 percent but we have been able to add only 14 percent to our personnel.

One of the best over-all measures of work volume is the mail handled. In Washington, D. C., only, we are now receiving approximately 1,500,000 pieces of mail each month. This is a far cry from January 1942, when we received about 926,000 pieces, and the year before, 1941, when we received less than 700,000 pieces of mail during January.

As a further indication of the increase in work, let me give you a few comparisons I recently had compiled.

At the end of February 1943 we had only 32,435 World War No. 2 disability claims filed. By last February 28 we had 693,146 such claims filed.

By February 1943 we had only 14,000 death claims filed on account of service in the present war. By last February we had 144,980 such claims filed.

By February 1943 we had only 18,588 National Service Life death claims filed. By February 28, 1945, we had 259,557 such claims filed.

As of February 1943 we had adjudicated 23,985 disability and death claims of all types concerned with World War No. 2. At the end of February this year we had adjudicated 734,580 such claims.

It should be kept in mind also that at the end of February 2 years ago we had no nonservice-connected hospitalization for veterans of the present war; no vocational rehabilitation to teach the disabled new ways of earning their living; and no G. I. bill of rights with its partial guaranty of home, farm, and business loans, educational benefits and readjustment allowances as the unemployment benefits are called.

These activities, as you are aware, have been superimposed upon the many which were already in existence, and as I have just indicated, some of these latter have now been enlarged a great many times.

I think all of us realize that Veterans' Administration expansion is still in its initial stages, and that by far the greater part of it is yet to come, considering only the administration of the laws now on the books.

On January 31, 1945, we had authorized 68,149 positions in the Veterans' Administration. Of these, 52,610 were in the field, 7,896

in the central office in Washington, 7,443 in the New York branch of the central office.

At that time we had on duty a total of 54,088 employees, of which 41,794 were in the field offices, 6,395 in central office in Washington, 5,899 in the New York branch of central office—a shortage of 14,061 in spite of a constantly increasing work load. However, this shortage has been somewhat alleviated through help we secured from the armed services. We had actually on duty in the field medical and hospital service 4,315 enlisted men serving as hospital attendants and approximately 1,500 ommissioned officers who are physicians and surgeons. All of these except some 500 are our own militarized personnel.

In the medical and hospital service we had authorized 1,871 full-time doctors, 5,062 nurses, 702 technicians, and 15,814 attendants.

On this same date, January 31, 1945, we had on duty 4,213 nurses, so that we were short approximately 841 nurses, and this shortage is daily becoming more acute as the work load increases.

Our authorized number of attendants is now 15,814. We have on duty 12,181, exclusive of the military personel that has been loaned us. In this emergency, the Army has agreed to let us have a maximum of 8,000 military personnel to meet our attendant needs. These men, of course, are not trained hospital attendants and, therefore, require more supervision than would be necessary if we could secure qualified personnel. This in turn emphasizes the urgency of our need for nurses.

Our shortages, other than doctors, nurses, attendants, and technicians are growing. We now have 29,361 authorized positions in all other categories, including clerical and stenographic. Some 5,000 of these positions are currently vacant and need to be filled.

In the central office at Washington we have 1,500 positions which are now vacant.

In New York we had 1,544 positions which we were unable to fill. And as the work load is increasing daily, this shortage becomes an increasing handicap to the Administration in its effort to keep up with its work load.

In anticipation of the increased need for workers we began the recruitment of workers through our field offices more than a year ago. As this did not result in the procurement of the necessary personnel we have more recently organized and are now conducting a Nation-wide campaign to secure the personnel needed to fill vacancies both in the field and in the central office.

HOSPITALS AND CONSTRUCTION

On March 8, 1945, the Veterans' Administration was operating 94 hospitals with 76,248 beds. In addition there were 11 having domiciliary facilities providing 14,885 beds. Of these, 13 hospitals were for the care of tubercular veterans. These had 6,544 beds, of which 5,684 were occupied.

There were 30 neuropsychiatric hospitals having 42,706 beds with 39,937 patients receiving treatment.

In 51 general medical and surgical hospitals there were 26,997 beds, of which 21,916 were occupied.

Of the patients in the tuberculosis hospitals 2,497 were World War No. 2 veterans; 9,293 World War No. 2 veterans were in neuropsychiatric hospitals, and 6,202 in general medical and surgical division.

So that on March 8, out of a total of 91,133 hospital and domiciliary beds available in our facilities, 77,142 were occupied, and of these, 18,345 patients were from World War No. 2. In addition some 4,346 veterans were being cared for in hospitals not operated by the Veterans' Administration.

It is expected that the percentage of World War No. 2 cases in our hospitals will steadily increase from now on as battle casualties are just beginning to be released from the Army and Navy hospitals, and the number of discharged veterans needing hospitalization is of course increasing.

In anticipation of this increased load, we have planned a building program which is expected to keep abreast of the demands made on us. Between now and July 1 of this year, we will complete and have ready for occupancy some 8,250 additional beds, and between the 1st of July and December 31, 1945, construction will be completed on 4,600 more. Other projects which are already included in our program but will not be completed until after January 1, 1946, will provide approximately 6,400 more beds before July 1, 1946. Our construction program for the fiscal year 1946 has already been submitted and is awaiting final action by Congress.

This program contemplates building 14,100 beds and construction under this program is expected to be completed not later than January 1, 1947.

While it is compulsory that we wait for the appropriation contained in the 1946 independent offices bill before undertaking any of these projects, considerable progress has been made in the acquisition of sites for 18 new hospitals included in that program.

In addition to the programs I have just outlined, we expect in the very near future to acquire approximately 3,500 beds in facilities which we have obtained by transfer from the Army.

When our present program and that authorized for 1946 have been completed we will have increased the number of Veterans' Administration facilities from 94 to 120, and will have available 127,000 beds in our own facilities which will provide a wider distribution of hospitals and make hospitalization more easily accessible to veterans throughout the country.

The extension of our hospital service which will be required for the care of World War No. 2 veterans is being continuously studied by the Veterans' Administration and the Federal Board of Hospitalization, and I expect to appear before Congress in the near future and request a material expansion of our construction program.

COMPENSATION AND PENSIONS

At the end of February 1945, disability claims had been filed by 693,146 World War No. 2 veterans. Of these 66,476 are still pending and 626,670 have been adjudicated. Of those adjudicated 422,088 were allowed and 204,502 disallowed.

In March of 1944, the Veterans' Administration established area offices which have since that time relieved both regional offices and the central office of much of the work of adjudicating disability claims. Since that time these offices have received 225,228 claims and have allowed 187,848 of these and disallowed 34,469, an average of 84½ percent allowed. These are all claims of veterans who have been discharged from the armed services on account of disability and have filed claims at the time of their discharge. The claims of veterans who are discharged into Veterans' Administration facilities for further treatment are not adjudicated by the area offices. During this same period the regional offices allowed 148,081 claims and disallowed 75,262, an average of 66.3 percent allowed. These claims are mostly from veterans who did not file claims at the time of their discharge or who were not discharged because of disability.

On February 28, 1945, there were 403,525 veterans of World War No. 2 being paid pensions because of service-connected wartime disabilities. This is a greater number of pensions of this type than were paid to veterans of World War No. 1 for similar purposes at any time in the 23 years from 1918 to 1941, as the maximum number of World War No. 1 service-connected beneficiaries was 349,724. In addition to these, 317 World War No. 2 veterans are now being paid pensions because of permanent and total disability not the result of service and 4,574 are receiving pensions for disabilities incurred in previous peacetime service. The average pension paid veterans of World War No. 2 during February was $31.93 a month.

Claims for death pension on account of a person who served in World War No. 2 have been received at an average rate of 10,000 a month for the past 6 months. At the end of February 1945 a total of 144,980 such claims for death pension had been received. Pensions had been approved and payments ordered in 78,518 of these cases and 29,392 claims were disallowed, the greater majority of these because the dependency of parents was not demonstrated. There are still 37,070 claims for death pension that are pending; that is, action is being withheld on them awaiting evidence in proof of relationship or dependency which it is necessary to obtain from the claimant before a pension can be allowed.

The number of these claims filed is not an indication of the number of veterans involved, as more than one person may file dependency claim because of the service of a single veteran.

Every effort is made to adjudicate all claims as rapidly as they are received and in the great majority of cases, a prompt decision is reached if the evidence submitted is complete. Every effort is, of course, continuously made to keep these claims current.

EDUCATION AND REHABILITATION

The vocational rehabilitation of disabled veterans is authorized under Public Law No. 16, Seventy-eighth Congress. To be eligible for rehabilitation under this act a veteran must have a pensionable disability which constitutes a vocational handicap, and be in need of rehabilitation to overcome such handicap. He must have been in service after September 16, 1940, and have been discharged under conditions other than dishonorable.

In cooperation with the War and Navy Departments the Veterans' Administration has adopted a procedure which assures that all disabled veterans are informed of their right to file a claim for pension and to be assisted in filing such claim. Each pension claim when it is review is also checked to see if the veteran is entitled to rehabilitation under Public Law 16. If he is found to be entitled, he is immediately notified of this fact. Already 257,910 disabled veterans have been notified that they are eligible for vocational training. Of these, only 56,202 have made application for rehabilitation, and up to February 28, 1945, only 11,937 had actually entered training. Of these, 8,673 are attending institutions of learning and 3,264 are being trained on the job. As of this same date, there were 363 veterans who had been rehabilitated and attained the employment objective for which training was given; 1,788 cases in which training had been interrupted, and 977 cases where training had been discontinued. This compared with 858 World War No. 2 veterans who were receiving rehabilitation on January 31, 1944.

Special advisory and guidance groups have been established to assist and direct disabled veterans in selecting courses of training which are best suited to their abilities, inclinations, and handicaps. These advisory groups are operating in 53 regional offices of the Veterans' Administration and contractual agreements have been made with 63 educational institutions for them to operate such guidance centers. Contracts for similar centers are now pending with 34 other educational institutions and 180 others have been contacted as a preliminary to making such contracts.

The advisement of veterans who are being rehabilitated under Public Law 16 is a legal requirement. It is not required in the case of veterans who are undertaking education under Public Law 346, Seventy-eighth Congress, but the services of these advisement

centers have been made available to these veterans. Under this latter law, any veteran who has been in active service after September 16, 1940, and prior to the termination of the war who has seen 90 days of service and has been discharged or released under conditions other than dishonorable, is entitled to at least 1 year of education or training. Under some conditions they are entitled to additional training or education up to a maximum of 4 years.

Under the law the Veterans' Administration is not permitted to exercise any curbs on the veteran in the selection of his training so long as it is in an approved institution. Upon application, the veteran is issued a certificate of eligibility which he presents to the educational or training institution of his choice. If he is acceptable to the institution the Veterans' Administration pays both the institution and the veteran at rates established by law. While not required to seek advice or counsel, these veterans are encouraged by the Veterans' Administration to accept advice and guidance before entering training in order that they may secure the maximum benefit from this legislation. While the Administration is not permitted and has no desire to interfere with or alter either directly or indirectly the educational system as in operation, it has been the practice to report to the proper State agency whenever it is found that training institutions are following policies which adversely affect the training of veterans.

Already 52,682 veterans have applied for education or training under Public Law 346. Of these, 48,555 have had their eligibility determined and the veterans have been notified. Forty-six thousand five hundred and sixty-nine of these have been found eligible for training and authorized to start their education. As of January 31, 1945, 17,583 had actually entered their training courses.

To assist me in solving problems connected with vocational rehabilitation and education, I have appointed a special committee of educators. On this committee there are two college presidents, the financial heads of two colleges, the presidents of two junior colleges, and a vocational school director.

INSURANCE

By the act of October 8, 1940, national service life insurance was inaugurated. Between that date and March 20, 1945, 17,093,500 applications had been received representing $131,149,409,500. By comparison, during World War No. 1 there were filed 4,529,889 insurance applications, representing $39,606,743,000. Thus the load on the national service life insurance has so far been considerably over three times that experienced in the First World War.

In this connection it is thought that it also might be of interest to state that the total amount of life insurance in effect on the books of the several hundred commercial insurers within the United States aggregates only something in excess of $140,000,000,000.

The average amount per insured life under national service life insurance is $9,180, which is several times that under commercial insurance. There have been received 259,557 death claims and 99,310 claims for waiver of premiums under national service life insurance. Two hundred thirty-nine thousand two hundred and sixty-five death claims have been awarded representing insurance totaling $1,474,438,272.

In addition, 63,883 waiver-of-premium claims have been allowed. There are now pending 21,826 death claims and 25,151 waiver-of-premium claims. However, the connotation "pending" does not mean that the Veterans' Administration has not taken any action in connection with these claims, but rather that they are claims which have been filed but not completed, great numbers of them being in the category of awaiting evidence from the beneficiary.

Some conception of the work that has been accomplished may be gained from the fact that over 50,000 more death claims have been awarded under national service life insurance than have been awarded under war-risk insurance from 1917 to date.

In all frankness I cannot say to you that insurance claims are settled with the promptitude I desire but this has been occasioned by the great difficulties we have experienced in the obtaining and training of the necessary personnel. The situation is most acute in the higher executive classes where it has been impossible to supplement the force which was on duty prior to the emergency, so it has been necessary for the same small group of executives, who previously administered the life insurance carried over from World War No. 1, to assume the additional burdens of this tremendously expanded insurance program which is many times larger than any other life insurance activity that has ever existed. Given the personnel necessary to carry the load I am sure that the work could be brought to a degree of currency within a reasonable time so that it could be handled with the dispatch we all desire.

Almost 3 years ago it was recognized that personnel and space were not available in Washington so that to cope with the situation arrangements were made to have the great bulk of the national service life insurance work performed in New York City. This location was chosen because it offered the best opportunities for space, manpower, and proximity to the central office. While at first the manpower and space situation in New York was satisfactory in the last year or so there has been a tightening of both these elements with the result that it has been most difficult to obtain persons with the background and training needed efficiently to perform the work.

In appraising what has been accomplished under the national service life insurance program you may find it worthy of consideration that while the burden of work has been over three times that of World War No. 1 the maximum number of employees engaged on such work has been less than 50 percent more than the number of employees on insurance work during World War No. 1.

Summarizing, I think it fair to say that while insurance claims are not handled as quickly as I am sure you and I desire, they are being handled orderly and not chaotically and any delay is largely attributable to inadequate personnel. I do not believe anyone will disagree with me when I say that these claims should be handled with the utmost dispatch and that every effort should be made to provide the facilities for making awards and mailing checks promptly.

READJUSTMENT ALLOWANCES

The readjustment-allowance program under title V of the Servicemen's Readjustment Act of 1944 has resulted in payments being made up to March 3, 1945, to an aggregate amount of $9,621,802. Twenty-eight thousand eight hundred and ninety-two veterans being on the pay rolls for the week ending March 3, 1945, and receiving for that week $652,964. Readjustment allowances are paid through the several State unemployment compensation agencies except in Puerto Rico where it was necessary that the Veterans' Administration set up its own system and organization.

I believe that mechanically the readjustment allowance program is functioning satisfactorily although I am giving constant study to the question of whether the numbers on the rolls are in balance with the presently existing manpower situation.

LOAN GUARANTIES

Under the loan guaranty operations authorized by title III of the Servicemen's Readjustment Act of 1944—1,406 loans have been guaranteed representing $2,416,743 and guaranties have been rejected on 304 applications. Eleven thousand eight hundred and forty-three certificates of eligibility have been issued. There are comparatively few loan-guaranty applications pending action in the Veterans' Administration so that it would appear that numbers of veterans have applied for certificates of eligibility but have not as yet completed the loan transaction to the point of submitting the loan to the Veterans' Administration for a guaranty.

In making this statement I have attempted to present an over-all picture of our operation and of some of the problems confronting us as well as to suggest what we are doing and plan to do to meet these problems.

I have not attempted to make specific answers to any accusations as it has been my experience that answers of this kind are more clearly developed in reply to direct questioning, and I imagine you will prefer to develop the answers in this manner.

I again want to thank you for this opportunity to appear before you and to assure you that I and all of my associates will be happy to assist you in every way possible in developing the true facts about conditions in the Veterans' Administration.

I, and the members of my staff will all be ready at your convenience to discuss with you specifically and in detail the several separate phases of our work, and to present such facts as you may desire to answer any and all adverse criticism which may come to the attention of your committee.

What Is G. I. Joe Thinking About Today?

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. BRADLEY of Michigan. Mr. Speaker, I think it is very important to all of us back here on the home front to get some insight into what the boys are thinking about over there in the European theater—especially those who have been wounded and have plenty of time to think over their past, present, and their future. We have a lot to answer for to those boys, and it is not easy to reply to some of the pointed questions that they ask.

Under permission granted to extend my remarks in the RECORD, I include a letter typical of several I have received from wounded boys, together with my reply thereto:

ENGLAND, *March 2, 1945.*

DEAR MR. BRADLEY: In writing this letter, sir, I am hoping that you personally will read it. First, I want to state that I have only been overseas 3 months—all time spent in the front lines with the Infantry. I was very seriously wounded a month ago and this letter is being formed in a hospital bed. The writing probably will be poor but hope you will bear with me.

Last evening a news program from the States stated that the Secretary of War made the statement that all possible men in the E. T. O. would go to the South Pacific as soon as the war in Europe was over. The men were all very discouraged. We on the western front have eyes and a little sense of fair play. The United States has four complete armies on this front with at least one in reserve. The French have one sup-

plied completely by our equipment. The British have two with one being made up of Canadians, Indians, Scotch, Welsh, and probably other nationalities. Why are we able to spare so many American men to protect countries that can't or won't do their share? We are doing at least the bigger part of the fighting and suffering on the western front—why?

In the eastern front, the Russians are making a great fight; true, but if looking back at the start of Germany's invasion of Russia, the Russian Army suffered all defeats. When did this stop? Not having official figures, I for one cannot say that our vast amount of war matériel that started to reach Russia was the turning point; at least I believe this to be true, their supply lines are kept going by American-made trucks; their air force is kept up by our country sending planes by the thousands to them—tanks, jeeps, and supplies of every description. This I believe is true in every part.

Third and last, but not least. Are we to have an army of 8,000,000 men, plus our great Navy, sent to the Pacific to fight an army of 4,000,000 Japs? What are the countries of Europe, that we fought and died for, going to supply for moral support; are their men going to sit and listen to the war over the radio to see how the Americans are doing in the Pacific while eating the food and wearing the clothing and using the supplies that we shall be sending to them for some years to come? Are we slaves to Europe that we fight for them? That we will fight the Japs by ourselves practically, and then come home and pay the bills of this war for the next 20 years, or even longer? What will our American people gain over here in Europe? Nothing but headaches for our Government. Russia will be a major power. England will still rule as she always has. France will be restored to a major power. How did all these things come about? Well, by our people at home working like slaves and our men dying on the Western Front for what gain for us? Did I hear somebody mention that the Allies will fight the war in the Pacific together? Then why are we sending all our great Army and Navy to eliminate a Jap army of 4,000,000 men.

I hope that this letter will be thought about in the same way that I am writing it. Give the Americans a fair break. Let us believe that we will not have our children doing the same, being slaves and puppets to the rest of the world by the use of high-powered propaganda. The American man has a good mind and knows how we were brought into this war and how we have been made the tool of other countries. Isn't there some way that some fair man can get this mess cleaned up? You can, I believe, although you are only one man. You have my complete permission to use any part of this letter or the complete letter in any way that you think is proper. I am hoping to get an answer, sir, and will wait for it with great hopes and patience.

Thanking you.

MARCH 24, 1945.

MY DEAR SERGEANT: I am extremely grateful to you for your thoughtfulness in writing me as you did under date of March 2 and March 17. You will be interested to know that your letter of March 2 reached me on the 19th and your March 17th letter reached me on the 23rd.

I assure you that I have not only read your letters very carefully and with a great deal of interest, but further because of the statement which you made, "You have my complete permission to use any part of this letter or the complete letter in any way that you think is proper." I am today inserting it in the CONGRESSIONAL RECORD, together with my reply, so that all of our membership and people all over the country who get the CONGRESSIONAL RECORD may have the privilege of reading it also. Enclosed with this letter is that part of the CONGRESSIONAL RECORD in which it appears. You will note that I have omitted your name, believing that to be in your best interest, and I am sure you understand what I mean by that.

Now, I will try to reply to you in detail. I note that you say you have been overseas 3 months and all of that time spent at the front lines with the infantry. While I did not see the statement by the Secretary of War to which you refer, nevertheless, I have heard it frequently said here in Washington that it would undoubtedly be necessary to send many of our European theater troops into the Pacific theater of action if we are to continue our program of unconditional surrender. I have no doubt, however, that probably many of you will be given some sort of a 30-day furlough back home—if you are lucky—before being reshipped. That may be considered by some—but I know it won't be by you boys over there—as a sop to your feelings.

Likewise, we in Congress hear many questions from the home front and from your folks which are similar to those posed by you, namely, as to why seemingly we should be carrying not only the manpower but the financial burden of this war on several fronts. Frankly, it is as much of a puzzle to me and as alarming to me as it is to you.

As one individual Member of Congress, I am embarrassed when I go back home to my Congressional District and I am asked by the parents of boys like you why is it that we should crucify American boys on foreign shores, especially on islands in the Pacific, only to have the flag of one of our allies raised at the masthead when the invasion has been completed. Frankly, I cannot answer. We must all admit—especially after talking with some of those boys who have been over on those islands—that certainly there is little that is desirable about them to make them permanent possessions of ours especially if we had to ask our boys to protect them. On the other hand, there are many over here who have been asking us why it is that Russia can take a large slice out of Poland—to say nothing of the Baltic and Balkan nations—as she has done—while we in the Pacific continue our policy of recapturing our allies' property and returning it to them. Then, there are others of our returning Pacific veterans who ask why it is, for instance, that in some of those islands our allies' military governments have taken over full control immediately after recapture while we continue to do the police work and the mopping-up work for them. Their military government set-up has in some instances even gone to the point where they prevented some of our occupying officers and troops from enjoying a little Christmas cheer unless their government collected the import duty on certain products brought from the United States and purchased by voluntary contributions on the part of the occupying troops. Others asked me why it is that while they are still policing some of these islands with thousands of well-armed Japs still at large in the mountains, caves, and jungles, that the native population is permitted to get hold of food from our own supply depots and smuggle it out into the hills to the Japs, receiving payment therefor which our allies military government set-up would exchange for their own "coin of the realm."

I agree with you that it does not make sense and it certainly seemingly is a gross injustice to our own flesh and blood who are spending it on foreign soil. However, we are committed to a world-wide war which, as one Member of Congress, I tried my utmost to avoid but which nevertheless we seemingly must see through to its complete conclusion.

You ask about the Russian situation on the eastern front and when the turning point came. While I personally have no doubt that Russian military supplies were at a very low ebb at the conclusion of the first German offensive and that our supplies were then and undoubtedly are still very urgently needed and doubtless were in large measure responsible for Russia's rejuvenation, still I believe there is another answer. I have been told that the real turn-about came when the Russians began to recognize merit and stopped their previous policy of electing their company officers rather than promoting them based on their merit to command. I was told that on good authority and I am inclined to believe it because the story has a sound ring to it to say the least. In other words they gave up their old-time Marxian Communist methods of running things and got wise to themselves.

We seemingly have not learned that lesson in this country yet—at least not down here in Washington.

Referring further to the Pacific we get constant reports that the British and Dutch and others of our allies are going to send us ever-increasing reinforcements of naval and aircraft and ground troops as well. We can all hope that they will make good on their promises because, believe me, from all the information I can get from those who have returned from the Pacific theater, we have an awful long and an awful rough road to travel if we are going to overrun Japan; if we are going to push the Japs out of China; if we are going to push them out of the Malay States; to say nothing of the many islands on which hundreds of thousands of them are still sitting tight and undoubtedly building up their defenses. We must all realize that gratifying as have been our naval victories and our air victories in the Pacific; and gratifying as has been General MacArthur's success in island hopping his way back, nevertheless we have not yet launched a real out and out land assault on the Japs in strength but have been merely out-foxing them and setting up air bases from which we can launch an aerial offensive on Japan's home front. And the fact further remains that despite the promises of our allies, all the information I have been able to gather from the Pacific is to the effect that so far very little of their promised reinforcements have as yet been forthcoming and we are being asked at this present time to shoulder at least 90 percent of the Pacific war, to say nothing of what we are doing in the European theater with which you are familiar.

And that isn't all that you boys have to worry about. We recently have made very generous arrangements for you boys to borrow money to set yourselves up in business and go to school and various other things under the so-called G. I. bill of rights. And we provided that you can borrow money at 4 percent. Just the other day our State Department consummated a new lend-lease agreement with the provisional government of France to lend-lease them $2,575,000,000 of American heavy equipment merchandise for the reconstruction of their country; some of which will be paid for, I hope, within the next 30 years and bearing an interest rate of 2⅜ percent—figure that one out. And it is our information that this is but the first of several such arrangements now in the making; one of which, we understand, is to Russia for something like $6,000,000,000 of lend-lease merchandise for post-war reconstruction. True, in the last lend-lease bill we added a clause which theoretically outlaws the use of lend-lease for post-war reconstruction, but the best commentators in Washington point out that it can be very easily gotten around.

I share with you your sincere worry as to how and when we are ever going to repay all of this and I shudder to think of the tax load that is going to have to be borne by your children, your children's children—and probably theirs too.

However, in conclusion, I repeat what I said earlier—I did my level best as one lone Member of Congress to keep us out of this

war. I voted against all of the measures which we were assured by this Administration "would keep us out of this war" and which we now find in accordance with my belief at that time actually led us down the road to war. Nevertheless, we are in the war with both feet and it is only thanks to the courageous efforts of you boys out there who are doing such a bang-up job of it and showing so much downright guts—and due to the ingenuity of American mechanical genius on the home front and American know-how in the industrial world, and the cooperation by and large of American labor (not American labor leaders in many instances) and in spite of Government interference—thank Heaven we are not in the war over our heads yet, but we have come awful close to it on more than one occasion. I am hopeful that today we can see the distant shore of peace in the European theater, but unfortunately it seems a long way off on the other side of the globe. It seems to me that the main thing that you boys have to concern yourselves with right now—and you must make your pressure felt on Congress and on the administration—is to be sure that when peace does come it be made a lasting peace and that is not going to be any easy job, believe me.

It is my further hope that you men who have fought this war under many adverse circumstances and disappointments remember on your return to the United States in civilian life that these matters are settled in America in a constitutional manner peacefully by the ballot—which right no man can take away from you. Keep the Constitution intact and fight for that right after you get home just as earnestly as you fought for it in somebody else's backyard—and exercise that franchise inherent to every American to correct inequities in government by voting.

With kindest regards, I am,

Very sincerely yours,

FRED BRADLEY,
Member of Congress.

Letter From Mr. Jay B. Plangman, Technical High School, Fort Worth, Tex.

EXTENSION OF REMARKS
OF
HON. FRITZ G. LANHAM
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 24, 1945

Mr. LANHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I am calling attention to a letter I have received from Mr. Jay B. Plangman, Technical High School, Fort Worth, Tex., in which he outlines the true situation which recently was erroneously interpreted by Mr. MANSFIELD of Montana from newspaper articles which he had read. It is clear from this letter that the statement about Texas were not answers by students in any historical examination, but that they were inspired by a desire to send some cheer of levity to our brave boys fighting in the various theaters of war. Mr. Plangman's letter follows:

FORT WORTH, *March 21, 1945.*

Hon. FRITZ G. LANHAM,
Washington, D. C.

DEAR SIR: Today's Associated Press wires carried a story from Washington on "answers" given by Fort Worth high school students on a history test. The Dallas News carried it on the front page and the news broadcasts gave it a big spot.

There was no test and no answers as Representative MIKE MANSFIELD of Montana represented. Mr. MANSFIELD probably got the idea from a reproduction of the enclosed card that was run in the New York Herald Tribune Sunday, March 11, and at no time was anything said about any student answering any history question. That part was MANSFIELD'S idea and I would like very much for you to call his hand on it by reading the entire card before the House and explaining that it was printed as a morale booster for the more than 700 Technical high school boys in service.

Incidentally, since the postcard was reproduced in the Herald Tribune I have received letters asking for additional copies from Pennsylvania, Ohio, Connecticut, New York and Canada. These requests all take the card for what it is—a bit of humor to enliven the day of a soldier or sailor 1,000 or more miles from home. One boy wrote me from France that he was offered $1 for his card and I am mentioning this fact in order to show that it is really appreciated by the boys who are doing the fighting.

Inasmuch as the story of Representative MANSFIELD'S inspired interpretation of "The History of the United States—Texas Style" will probably appear in many papers throughout the nation I feel that we Texans should at least explain that it was not answers by students.

Very truly yours,

JAY B. PLANGMAN,
Technical High School,
Commercial Art Department.

The Late Senator Charles Dick

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 24, 1945

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Akron Beacon Journal of March 15, 1945:

SENATOR CHARLES DICK

Many readers of the Beacon Journal among Akron's augmented population of war workers possibly were surprised yesterday at the space and attention devoted to the death of former Senator Charles Dick. To them the name was not a familiar one in the news columns.

That could not have been said a few years ago. For Mr. Dick was a national figure in the public life of America following the Spanish-American War, in which he won honors and promotion in the service of his country.

The home which he built on West Market Street, on acreage which he bought on the then western edge of the city, was the scene of important political conferences and brilliant dinners that brought to Akron the social, political, and business leaders of the country.

As a Member of the House of Representatives and later of the United States Senate, Mr. Dick left his impress on the events of that period. He was the author of tariff legislation that shaped the course of industry and business. He sponsored bills on military affairs and the National Guard that were the basis for our military organization.

His life span covered three great conflicts, the Spanish-American War, World War No 1, and the march toward sure and ultimate victory in World War No. 2.

He was disappointed when he could not take an active part in the military affairs of the First World War and he watched as the Nation swept back toward isolationism after the defeat of Germany in 1918. To the last he was a keen and shrewd observer of events that carried the world toward the present conflict and put the United States again in the path of world cooperation toward peace.

In our opinion the outstanding characteristic of Mr. Dick throughout his life was his forward-looking philosophy. He had no time and little patience with those who looked only backward. In the later years of his life when he could only watch from the sidelines he constantly turned his vision to the future of the community and Nation.

But, while concerned for the future, he did not abandon his friends and memories of Akron at the turn of the century.

He spent many happy hours recalling events of the past, as his contribution toward founding Akron's unique Fifty Year Club testifies. He took great pride in the organization and its parties, bringing together his friends of the years.

Senator Dick has long held a place among Akron's first citizens. He will retain that honor in our memory.

Our Political Immorality

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 24, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by R. H. Markham, from the Christian Century, and sent to me by Miss Aniela Poray, of Royal Oak, Mich.:

OUR POLITICAL IMMORALITY

(By R. H. Markham)

It seems to me that America is letting itself be carried away on a wave of immorality. I am not referring to Hollywood, juvenile delinquency or sexual looseness, deplorable as these are, but to prevailing political attitudes.

I have spent most of my adult life in central and southeast Europe and have recently returned from a long sojourn in that vicinity as an employee of an American war agency. For many months I was in close contact with events in eastern Europe and could not fail to see that something ominous is taking place. Developments there may radically affect the future of America and of all other peoples. They may determine to what extent the nations of the world will retain freedom, self-government and self-respect. Yet many Americans try to escape recognition of this unpleasant prospect and of responsibility for overcoming it, preferring to ride along on a current of euphonious self-deceit.

The most striking demonstration of this irresponsibility is a prevalent American attitude toward Poland. Here are some indisputable facts in the situation:

It was partially on the insistence of Great Britain that Poland took the stand which led to Hitler's attack on her. Poland faced the full power of the Nazi war machine alone and without military help. She fought well and, since defeat, has remained faithful to the Allies. She has an excellent record of loyalty and bravery.

POLAND AS A TEST

When Poland made her stand against Germany, Russia was siding with Germany and helping the Nazis. All Russia's admirers in all lands, including the United States, were then on the side of Germany. They were extremely active in working against Great

Britain and its allies. Russia and Germany partitioned Poland, both for imperial reasons. Russia's spokesman callously said that Poland was liquidated and advised Great Britain against trying to help her.

We should keep in mind that there are 25,000,000 Poles in a fairly compact mass and only 48,000,000 Britishers. We should also recall that for the sake of the security and well-being of those 48,000,000 Britishers the British Government intends to preserve its whole Empire intact, thus continuing domination, control, or ascendancy over 400,000,000 non-Britishers. This means that the security of 48,000,000 Britishers is considered of supreme importance, while the security of 25,000,000 allies is treated as a bagatelle.

It should also be added that Russia partitioned Poland at about the time of our Revolutionary War and later seized most of the country, as Germany took the rest. The Poles were held in a terrible bondage until 1918. Perhaps it is not strange that the Poles cannot forget that a partitioning was the prelude to Poland's complete enslavement.

These are plain facts. It is also a fact that the Russians, after being attacked, have fought magnificently; along with the Americans, other United Nations and Britain itself, they have saved Great Britain. Having done this, Russia again insists on partitioning Poland and on setting up its own Polish Government. The second policy is far from vital than the first, though both seem to be part of a single plan. Poland, after more than a century of complete subjugation, followed by barely 21 years of liberty, again finds itself on the point of being controlled by a puppet government.

REMEMBRANCE OF THE PAST

London backs Moscow in this plan and many Americans applaud. Russia and hard-pressed Britain are completely subordinating Poland's interests to their own. Thinking of this, one cannot but recall that Germany, for its security, threatened to take part of Poland, that Mussolini, as Mr. Churchill is now doing, urged Poland to accept, and that Japan applauded, as many Americans are now doing. And recalling this, one cannot but ask: What did the heathen Axis do more than we freedom-loving nations? Do we not even the same?

The main issue is not boundaries. I think that at an international conference Poland's boundary might well be changed. The vital thing is that we rob an ally of independence and pretend that this is right, liberal, and progressive. Would it not be just as right for us Americans to impose a government on Canada that would give us all territory west of Winnipeg and would promise to do anything, else Washington demanded? Would it not be just as right for us Americans to impose a government on Canberra that would take Australia out of the British Commonwealth of Nations and bring it into our sphere of control and security? Is it not interesting that Britain does not expect to relinquish one island or piece of the mainland in the Americas, but tries to impose upon Poland a government that would presto-chango give away Lwow and other areas which Poles consider just as vital as Britain does North Ireland or Wales? And is it moral for Americans to applaud such an attempt in the name of "liberalism"?

AMERICAN NAME CALLING

Because 25,000,000 Poles refuse summarily to accept vassalage, many Americans call their government reactionary and fascistic. Many Americans call the Poles undemocratic because they hesitate to accept a government imposed upon them by a dictatorial neighbor. It is true that Poland needs land reform, even though a far larger proportion of our own American land is in great private holdings than that of Poland. It is also true that Poland has had reactionary ministers. But it is likewise reported that America has had some pretty bad ministers, or rather secretaries. I heard of one who accepted bribes in connection with oil lands; and it has been rumored that Chicago, Albany, and Philadelphia are not perfectly governed, that Mississippi is not quite a utopia, that Boston's school system has slight defects, and that Texas' university is not utterly free from the control of slightly conservative men. However, I haven't heard responsible Americans seriously say that America should be made a vassal of a foreign dictator because of these fascistic practices.

A DISSERVICE TO THE WORLD

Many Americans in their attitude toward Poland are adding two insults to an injury. Not only are they giving up an ally to partitioning and subjugation, but they are calling that act moral and are trying to salve their consciences by calling Poland immoral. It is as though Jezebel had called the little peasant immoral because he wouldn't give his field to King Ahab. When Americans call wrong right to salve their consciences and to bring peace to their souls they perform a disservice to America and to the world.

Let us look at another aspect of the political situation. Our press and broadcasters constantly praise the Balkan partisans as democrats and bearers of freedom. I have just spent months in direct contact with them and though I have the warmest admiration for their courage and energy I saw that they are by no means democratic.

They are among the world's most fanatical autocrats. We should praise them for being as brave as Nazis, as devoted to their cause as the Japanese to their Emperor, as firm in their faith as Moslems. Bravery, devotion, and faith are admirable qualities, but they do not constitute democracy. The partisans are terribly intolerant. They have divided humanity into Fascists and anti-Fascists and are determined to liquidate, dominate, or exploit the Fascists. Anyone whom they dislike they may call a Fascist and thus place him beyond the pale. This attitude makes democracy impossible. It cannot serve as the basis for a good new world.

The prevalent talk of a world revolution for little people is a sad delusion which we fondly nourish to make us feel good. We resemble desperate Christians who have given up the long, hard struggle for the Kingdom of God on earth and sit around, self-hypnotized, singing of the second coming. The people's world revolution is apocalyptic politics of the most regrettable sort.

REVOLUTION FOR LITTLE PEOPLE

Where is the world revolution of little men? What I have seen on the spot is that little men are furiously killing little men. Little Serbs kill little Serbs; little Croatians kill little Croatians; little Slovenes kill little Slovenes; little Greeks kill little Greeks; little Germans kill little Americans; little Hungarians kill little Russians. In Albania, young girls and boys are busy in the killing.

Of course, since the time of Amos little men and women have yearned for a better world. How beautifully and poignantly the Hebrew psalmists sang about it! What an inspiring Messiah they envisioned! The early Christians ardently expected a millennium. So did the French revolutionists and so did the Nazis. All of us little men have been longing for a better world for millenniums. But there are no indications that it will arrive through a second coming of any sort. When we stake all on an apocalypse, we destroy what has already been created. We go backward and not forward. We become defeatists.

So let us quit fooling ourselves about a good world revolution as little people butcher one another. Let us face facts, pray God for strength, consecrate ourselves to love and service, prepare to rebuild ruins and resolve to help the little men gradually get back as much freedom as they had 50 years ago.

And take the sad case of Greece. All good men deplore what is going on there. But it is easy for us to deceive ourselves about it. The liberals have cried for intervention every place. They have constantly agitated for us to interfere in order to make people do right—in Italy, Spain, the Balkans, everywhere. Well, here is intervention. American guns are killing Greeks. That's what intervention in other people's affairs means. Napoleon did it; Maria Theresa did it; Hitler did it; Mussolini did it. Now our allies are doing it.

It must be pointed out that this is a sample of Big Three cooperation. That is how the regional set-up works. Britishers shoot Greeks in the British region; Moscow kills Poles in the Russian region—and incidentally a hundred times more than the British. This is a foretaste of a world arranged by deals, with each empire getting its shooting preserves. Never in history has it been good for the common man when two or three conquerors divided the nations among themselves. We have no excuse for fooling ourselves about that.

STOP FOOLING OURSELVES

If we in America, who know what right and freedom are, approve of such a plan, instead of a beginning of real collective security it will mean that we have allowed ourselves to be led into immorality. We live in a very tense time and are in danger of giving way to mass emotions. We tend to become political Holy Rollers. As we shout happy slogans about big power domination, democracy, one world, people's revolution, we deceive ourselves and debase truth. Let's leave such incantations and return to integrity, honesty, and intellectual decency.

We should not be foolish perfectionists, and we shall have to accept practical arrangements which we don't like, but let us quit humiliating ourselves by calling wrong right, slavery freedom, and the subjugation of an ally the basis of international justice. Let's get clear in mind. If we still have to keep some of our neighbors in slums, let us not call those slums beautiful architecture or a paradise for little people. Let's recognize them as slums, and with all our might keep on trying to clean them up.

Broadcasting Congressional Proceedings

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. COFFEE. Mr. Speaker, the distinguished and scholarly, liberal Senator from the State of Florida, CLAUDE PEPPER, and I introduced in the Congress identical bills providing for the broadcasting of congressional proceedings over the radio.

My bill is known as H. R. 89. This proposed legislation has evoked from thoughtful people throughout our country great interest; newspaper editorials have discussed the idea pro and con.

Naturally, in broadcasting congressional proceedings, tact and discretion must be employed. All debates are not interesting to the public, nor are they all of national or international import, but if the public, following the lead set in New Zealand, could hear their representatives on the radio, they would be in

a position to appraise their solons and would also be greatly enlightened and educated in more ways than one.

The eminent writer and progressive thinker, Jack H. Pollack, has written a very clever and well-documented article in Liberty magazine, in the issue of February 17, in which the whole idea is explored. I commend its reading to my colleagues and to the country. Here it is:

SHALL WE BROADCAST CONGRESS?

(By Jack H. Pollack)

The United States Senate was debating the peace treaty. It was November 1919.

Bewhiskered Senator Henry Cabot Lodge, chairman of the Senate Foreign Relations Committee, rose to speak.

"Will the Senator allow me to interrupt for just a moment?" he asked.

"Surely."

Measuring his words, the irreconcilable legislator announced, "There will be no adjournment, if I can help it, until we vote on the treaty again. When we vote on it—be under no misapprehension—it is final."

Would world history have taken a different course if the American people had been properly informed of these proceedings? There is a growing belief that had Americans been able to hear with their own ears how the League of Nations was being butchered, they would have stopped the butchering.

Today Congress once again is grappling with problems of peace. But most Americans must depend on the often incomplete newspaper and radio reports if they want to know what their elected Reresentatives are saying and doing. For the first time, many Americans wish they had a direct pipe line to Capitol Hill.

A bill to put Congress on the air was introduced in both Chambers of the Seventy-eighth Congress by two liberal legislators: Florida's silver-tongued CLAUDE PEPPER in the Senate and Washington's JOHN COFFEE in the House of Representatives. It was not acted upon, but it is expected to be reintroduced in the new Congress.

Under the bill, any station or network could send Congressional proceedings over the air waves, but none would be required to do so. A station could make a "live" broadcast of Congress in action. Or it could buy a transcript at cost price, since "a complete and continuous" legislative recording would be made by Uncle Sam. Of course, both Senate and House would retain the right to keep off the air any debate they wished.

Opinion is divided on whether to broadcast Congress. Some scoffers insist that nobody would listen. Advocates, on the other hand, argue that such a program would be "popular." They say people would tune in their congressmen the way they do baseball games, Frank Sinatra's voice, or Jack Benny's jokes. Weren't millions glued to their radios on election night and during the political conventions?

Congressmen themselves have mixed feelings about the proposal. Forward-looking legislators in both parties favor it strongly. But some of their colleagues are terrified at the thought of being put on the air, chiefly because they won't have a chance to amend "for the permanent RECORD" their inaccurate and sometimes ill-advised extemporaneous remarks. Naturally, a handful of demagogic lawmakers are not overjoyed at the prospect of having constituents hear their inflammatory or asinine oratory. One forthright Senator groaned, "Broadcasting us would make people think we're bigger boobs than we are."

A long prejudice has existed on Capitol Hill against ordinary microphones, let alone broadcasting equipment. Every so often someone suggests that our lawmakers should be made more audible—even to one another. Elderly senators such as JOHNSON of California and CAPPER of Kansas, speak scarcely above a whisper.

Yet many of the people's choices are opposed to all newfangled talking contraptions. About 15 years ago it was urged that mikes be placed in back of each Senator's desk. This prompted a testy South Carolinian, the late Senator Coleman Blease, to grumble:

"Now they want to put a radio back here, right behind me, so as to broadcast what is going on in the Senate. I do not know anything about radios; I never listened to one of them in my life. I do not know what they might do. They might fill that thing up with gas, some deadly gas, and just about the time the crowd assembled in this Chamber—everybody in control of the United States—some fellow might turn on a machine down here and just gas out the whole business."

And not many years ago, when John Nance Garner was Speaker of the House, a loudspeaker microphone was placed before him. Shortly afterward he was told that a Member wanted to deliver a speech. Forgetting that with the mike the slightest whisper could be heard throughout the Chamber, the plain-spoken Texan roared, "Now what in the h— is that —— —— —— —— going to talk about?" While the Chamber rocked with laughter, "Cactus Jack" ordered electricians to "get that —— thing out of here."

However, it was later put back, and today the Speaker not only has an ordinary mike in front of him on the rostrum, but he can use a "breast mike" if he wants to move around. When Members address the House, they come to the front and use a mike. Majority and minority leaders also talk through loud-speakers, as do the clerks. All told, the House now has 7 microphones plus an operator controlling voice volume from the gallery. Should it be decided to broadcast House proceedings, half the technical job is already done.

The austere Senate, however, has remained suspicious of speaking devices. In fact, Congress generally has viewed with jaundiced eye any departure from its traditions. As a recent example, a movie screen was set up in the Senate Chamber to show Army films. The purpose was to supplement the Senators' knowledge of many of the subjects they debate. When Senate officials got wind of it, they immediately ordered the screen removed.

Those who advocate the broadcasting of legislative sessions contend that it would improve the make-up of Congress. It would expose the stupidity and unfitness of some legislators and strengthen many an able, hard-working Congressman whose words too often reach only the readers of the CONGRESSIONAL RECORD and the sparsely filled Capitol galleries.

Alert New Zealand has improved the quality of its legislative body since it began airing parliamentary proceedings 9 years ago. The Labor Party complained that it was not getting a square deal in the country's press. M. J. Savage, who later became Prime Minister, asserted, "I would sooner put up with the publication of my remarks over the air than with the reports which I read in the newspapers."

So when the Labor Party came into power in 1936, it immediately began to broadcast legislative sessions. To meet objections of those claiming not to be interested in parliamentary broadcasts, it was arranged for a special government station to carry them. At first only the most important debates were aired. But so enthusiastic were listeners that complete proceedings, including the opening prayer, were soon sent over the air waves.

Today New Zealand's most powerful station, 2YA, a 60,000-watt station in Wellington, broadcasts the lawmakers from 2:30 p. m. to 11 p. m., with time out for dinner. Daily newspapers list parliamentary programs with scheduled speakers and topics.

The legislators don't talk directly into a microphone; six mikes are suspended from the ceiling. The debate is lively and extemporaneous because members are not allowed to read speeches while on the air. Most popular listening hours are between 7:30 and 10 p. m.

Seated in a corner "covering" the event is a radio announcer. Whenever a representative rises to speak, the announcer switches on the microphone nearest him to control voice volume. During lengthy debates he whispers the names of the speakers for the benefit of late tuners-in. Committee hearings are also broadcast.

The speaker has great authority. Occasionally a representative will try to "grandstand" for the benefit of the home folks at the dial by prolonging debate. But the speaker will speedily stop him. Any time he sees fit—say, for reasons of national security—the speaker can press a button underneath his desk and shut off debate from the air.

After hearing their representatives, New Zealand voters decided to make some changes. Nevertheless, many of the nation's poorest orators continue to be reelected, indicating that New Zealanders can be educated without being entranced. Nor has the novelty of listening to their legislators worn off. Thousands of fans follow their favorite voice, and so popular have the broadcasts become that the opposition party has promised to continue them if it is returned to office. And with it all, New Zealand's legislative tradition—faithfully copied from the British House of Commons—has been zealously maintained.

Although New Zealand is the only country in the world now broadcasting legislative sessions, other nations have experimented with the idea. In 1926, Finland, then a liberal-democratic republic, began to air debate of the 200 members of the Finnish Diet. A similar movement was afoot in Germany during the '20s. Even in imperial Japan, the proceedings of the Japanese Diet were aired in 1925.

In March 1926, the question of broadcasting debates arose in the British Parliament. The broadcasting committee urged Prime Minister Baldwin to put Parliament on the air. But Baldwin demurred, as have successive Prime Ministers despite widespread British interest and the ease with which it could be accomplished under the government-owned B. B. C.

Occasionally a municipal station in the United States will broadcast local legislative sessions. Outstanding was the experience of WNYC, which aired New York City Council proceedings for 2 years (1938–40). A howling success, it made blasé New Yorkers vastly more civic-minded. Manhattan cave dwellers found the broadcasts both educational and entertaining—admitting in a survey that they preferred hearing city council to live on canned music. But Gotham's councilmen whimsically voted themselves off the air.

"I wish they'd go back on," a listener complained. "Broadcasting them made the councilmen work harder, be on their toes and more apt to do the right thing by us." WNYC's manager agreed that the broadcasting "raised the quality of the discussions * * * the councilmen * * * were more prepared, since a corrected copy or handout could not be given to the press."

And how does the radio industry itself feel about broadcasting our national lawmakers? A large segment of it has been cool to the idea, especially the networks. Many a hard-boiled radioman, while admitting it wouldn't be any problem to wire Congress for broadcasting, insists that Congress would be too high-brow and dull for the average listener. Who, such men ask, wants to hear the long-winded reading of a 35-page appropriation bill? One official insists radio would soon find itself "betw en congressional pressure

on the one hand and audience disinterest on the other." Another protests that "debate would have to be staged and we would be merely putting on a show instead of attending to the business of Congress." A leading radio magazine declares that "if a poll were taken, the public would vote for less rather than more congressional speechmaking."

And many broadcasters freely admit that they are not overanxious to surrender hours of lucrative time. Under the Pepper-Coffee bill, stations wouldn't be paid for airing Capitol Hill. Congress on the air would be a public-service sustaining program. Stations couldn't very well stop every 15 minutes for a commercial. Of course, Congress might have its own station, but this probably would be regarded by broadcasting officials as drastic Government encroachment on their ether domain.

Nathan Straus, president of independent WMCA and a long-time champion of broadcasting Congress, recently polled radio officials on the question. Of those who answered, 69.2 percent favored the idea, as against 13.5 percent opposed. However, while Straus sent questionnaires to 875 stations, he received only 133 replies. Of these, 26 stations agreed to carry Congress. None were network giants. Most of them were small stations—250-watters. Ten were affiliated with the Mutual and 6 with the Blue Network.

A Georgia radio executive believes the program would result in sending more capable people to Capitol Hill. The owner of a Cleveland station protests. "There's no valid reason why Congress, with nothing to hide, should attempt to block this method of bringing the public more complete knowledge."

Meantime, while waiting for Congress to make up its mind, Straus has done what he considers the next best thing. Each Sunday, between 3:30 and 4 p. m., WMCA now broadcasts a Halls of Congress program in which professional actors portray Washington lawmakers in dramatizations of texts taken from the CONGRESSIONAL RECORD of the week.

Rural folks are among the most spirited supporters of the proposal. At its latest convention, the Farmers Union strongly urged putting Congress on the air. Paul Sifton, the union's Washington representative, has been one of the most vocal champions of the idea. Small-town editors, lacking access to full press wires, admit that it would benefit them greatly.

Other advocates include the A. F. of L. and C. I. O. locals, Southern Methodist churchwomen, the Writers War Board, and the Union for Democratic Action. Much of the support stems from the far West and northernmost New England.

Objections, aside from those already mentioned, are many and varied. A common complaint is that Congress would lose its dignity by being open to public inspection. Since the Senate and House are in session simultaneously, which should be broadcast? Wouldn't the daytime audiences be limited to women? Since it isn't possible to broadcast all debate, wouldn't whatever was broadcast be false and misleading? What good would it do to broadcast floor proceedings when the real work is done in committee? Will Congressmen still enjoy congressional immunity if their remarks go over the air?

Other critics of congressional broadcasts have been more flippant. One columnist thinks the program should include a House vocalist warbling When the Sol Bloom Is on the Rose in the Good Old Jessie Sumner Time. The Washington Post slyly suggests Two Chambers Hath the Heart as a congressional theme song, while Time magazine quotes Congressmen as finding the whole idea nightmarish.

Proponents of the plan counter all objections with a potent argument. Today, they say, when popular government has collapsed in so many nations, the greater citizenship participation resulting from the broadcasting of legislative sessions would serve to strengthen our democracy. People today, they insist, are Congress-conscious. They are taking the actions of their legislators more seriously, as indicated by their rejection of isolationists in the last election.

These men admit there are operational problems, but insist they can be met. They point to the popularity of network forum programs as evidence that Americans are hungry for scrappy discussions. And they feel that listeners will prefer the oral frailties of their public servants—all the "ers" and "ahs" and the "hmms"—to the stock streamlined speeches.

Since the expense is not prohibitive, congressional broadcasting champions propose to give the idea a trial and then measure audience interest. Senator PEPPER warns, "If we don't broadcast our proceedings and keep step with radio, people are going to begin asking whether we're afraid to let them hear what we're saying. After all, it's their business we're transacting."

In the days to come, Congress will be debating questions touching every American's life; post-war jobs, social security, taxes, low-cost medical care, compulsory military training, etc. Advocates emphasize that were Congress on the air, American democracy could prove that it is possible for a government to grow huge and complex and yet remain close to its people.

But the most overpowering argument suggested is that broadcasting Congress would give millions of Americans front-line seats in the making of the coming peace. All-outers for Congress on the air hold that radio can render no greater service than this.

Two-thirds Rule for Treaty Ratification Should Be Changed

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an excellent article advocating the Sumners amendment to have treaties ratified by Congress, instead of two-thirds of the Senate.

The article is written by Jack H. Pollack, well-known Washington correspondent, and published in the March 1945 issue of the magazine This Month. The article is as follows:

One hundred and fifty-six years ago, George Washington notified the Senate that he wished to consult with it about an Indian treaty. But Members of the upper Chamber, jealously guarding their constitutional right, did not wish to discuss the treaty in his presence. So the Father of Our Country was kept cooling his heels outside the Senate door for 2 days. Infuriated by the snub, Washington vowed that "he would be damned if he ever went there again."

For over a century and a half all his successors have followed suit. During that time, every important treaty negotiated by the United States has enkindled bitterness between the President and the Senate. Biggest thorn between them is that redoubtable constitutional clause giving the President power to make treaties provided two-thirds of the Senators present concur.

Historians have called this two-thirds clause the great mistake of the Constitution.

Over a hundred years after the signing of the Constitution John Hay wrote, "A treaty entering the Senate is like a bull going into the arena. No one can say just how or when the final blow will fall. But one thing is certain—it will never leave the arena alive."

In recent times, the most tragic example of the two-thirds rule was the Senate's long and stormy consideration of the League of Nations. One Senator, Henry Cabot Lodge, was able to attach 14 different delaying reservations to the treaty.

A sick President Wilson carried his case to the country. The final note on March 19, 1920, showed 49 Senators favoring ratification with 35 against. Though a majority, it was seven votes shy of the required two-thirds. On that day, a little group of willful men, The Irreconcilables, gave wings to the Second World War.

In Washington, down Pennsylvania Avenue, it is only about a mile from the White House to the Capitol. But in ratifying the Nation's treaties, it is the long mile. A generation ago, a treaty suffered a deadly blow in making that trip. It went down the avenue but never came back.

Very soon, a treaty will once again be traveling that long mile. In it will be embodied the peace terms—an agreement to form some kind of association to discourage man from killing his brother. One-third of those present in the upper Chamber on R (Ratification)-day control the coming peace. Even if it is the best treaty in the world, a handful of Senators representing a handful of Americans can scorn it and give birth to World War No. 3.

On treaties, it takes two cooperationists to equal one isolationist. The two-thirds rule enables a Senator representing a State with 110,000 population (Nevada) to have an equal voice in treaties with a Senator representing 13,000,000 people (New York). In other words one Nevada voter has the same say in international affairs as 120 voters in New York. It is possible for Senators repereseenting 8 percent of the country to reject a treaty supported by the rest of the Nation.

Many people believe some basic United Nations peace treaty could muster the necessary two-thirds Senate vote today. But a peace treaty will only be the beginning. After that, treaties dealing with food, finance, aviation, oil and shipping will arise. Today, with the world contracting, these questions demand international solution. If each treaty must risk veto by one-third of the Senate, the dearest hopes of the American people are in danger.

The Constitution's framers gave the House of Representatives no voice in foreign affairs. Throughout American history, members of the House have resented this Senatorial stranglehold. Today they point out that the welfare of the country should take precedence over an eighteenth century tradition.

Some even go so far as to contend that the power to ratify treaties belongs exclusively to the House. Isn't the House closer to the American people? Doesn't its Members, elected every 2 years on the basis of population (instead of every 6 like Senators), more nearly reflect the popular will? Isn't a filibuster impossible in the House, whereas in the Senate this weapon can kill a measure that has not only the overwhelming support of the American people, but even of the Senate itself?

A movement to modernize and democratize our treaty-making machinery is now under way. Increasingly, many national organizations are demanding that the Constitution be amended so that treaties can be ratified by a simple majority of both Chambers. Not

waiting for the stand-pat Senate to take action, the House is boldly knocking on the treaty-making door.

Before the Seventy-eighth Congress died, the House Judiciary Committee voted to seek a constitutional amendment repealing the two-thirds rule. The resolution was introduced by Representative HATTON SUMNERS (Democrat, Texas), an eminent constitutional authority. But pressure of closing business prevented the House from voting on it.

The resolution is being reintroduced in the present (79th) Congress and will undoubtedly pass the House by a huge vote once it reaches the floor. Before it can become law, however, it must pass the Senate—by a two-thirds vote—and then be approved by three-fourths of the State legislatures.

Conditions which led to the adoption of the two-thirds rule have long since disappeared. Actually, the two-thirds clause was a compromise, a concession to the small States fearing large-State domination. And so the New England States which didn't want their fishing rights bargained away by treaty and the Southern States, determined to keep the Mississippi open to navigation, were given an equal voice in the Senate. That is why the impractical, obstructive two-thirds rule was put on the books.

Virtually every President and Secretary of State has had bitter experience with the two-thirds rule. One minor treaty was held up in the Senate for 21 years. Despite having rejected outright only a dozen or so of the 800 treaties submitted to it, the Senate has amended, never voted on, or by-passed hundreds of them.

Sometimes, it is true, the Senate keeps the President or Secretary of State from making serious treaty mistakes. Occasionally, it even exhibits farsighted statesmanship as when it secured the Panama Canal for exclusive American control.

But more often the two-thirds rule has been a stumbling block in American history. A treaty to annex Texas in 1844 was rejected by the Senate. A half century later Hawaii could not be annexed by treaty. Stumped by the two-thirds bug-a-boo, Presidents Tyler and McKinley were forced to resort to the subterfuge of joint resolutions to acquire both these territories. Had Texas not been annexed, at least a third of this country would now be foreign soil. Had Hawaii not been annexed, Japanese soldiers might now be fighting on this continent.

On different occasions Presidents Harding, Coolidge, and Roosevelt have championed American adherence to the World Court but none could circumvent the two-thirds jinx. As late as 1935 public opinion forced its consideration in the Senate. Though over a majority favored it—52 for and 36 against—7 votes were again lacking to meet the two-thirds requirement. Without this hurdle the United States could rightfully have taken its place in the family of nations supporting the only World Court that ever existed.

The two-thirds rule mocks democratic principles, giving too much power to too few men. History has shown that there have always been Republican Senators who opposed a treaty negotiated by a Democratic administration and vice versa.

The only way to circumvent the two-thirds rule is by Executive agreement or joint resolution which requires merely majority approval of both Houses. Some foes of the two-thirds rule are now suggesting that the coming peace treaty be submitted to the Senate as an Executive agreement, cheerfully pointing out that 1,200 compacts with other nations have been concluded this way.

But these optimists ignore American history. Forty years ago, for example, Secretary of State Hay negotiated agreements with several foreign governments to arbitrate legal differences. Each arbitration dispute was to be a "special agreement" and not to be submitted to the Senate. Promptly, the supersensitive Senate proclaimed it had a right to pass on each specific dispute and proceeded to amend the treaties by substituting the word "treaty" for "special agreement."

The question of treaties versus Executive agreements is bound to become more confusing in the days ahead. Most important objection, however, is that since an Executive agreement is obviously an attempt to avoid the Constitution, even if approved, it will never be considered as binding as a treaty.

Upholders of the two-thirds rule contend that it is safer to entrust our destinies to 66 Members of the Senate. Defenders of this ancient rule likewise argue that any attempt to amend the Constitution while the boys are overseas, would arouse bitterness among them. These adherents claim that in any case it would take at least 2 years to pass a constitutional amendment. (The prohibition amendment became law 10 months after voted upon in Congress.)

Senator HUGH BUTLER, Republican, of Nebraska, insists that "the House shares in the substance of foreign relations in a manner where it is safe for the House to share." Other lawmakers proclaim that most foreigners are too crafty for us and therefore for our own protection, we should be deterred from negotiating with them.

It would seem logical that if we can trust a majority of both houses to declare war, we should be able to trust a majority of both houses to ratify the peace. The two-thirds rule is a constitutional anachronism, an obsolete appendix to a great human document. Majority vote is the general rule of the Constitution. Congress may pass laws by majority vote. The Supreme Court and lower courts render judgment by majority vote. Congress can even annul treaties by majority vote.

Kenneth Colegrove in the American Senate and World Peace concludes that "If simple majorities in both houses cannot protect the country, the Nation is already lost."

The real fight for repeal of the two-thirds rule will be in the Senate. Many Senators have open minds on the subject. The stubborn ones may begin to yield when they see defenders of the two-thirds rule picked off at the polls. Senator Straddle will then face a battle.

Americans do not want the peace of the world quibbled away on the floor of the United States Senate. They have paid too dearly in this war to risk losing the peace again by leaving control over treaties to one-third of the Senate plus one.

Memorial to Tadeusz Kosciusko and Casimir Pulaski

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial to Tadeusz Kosciusko and Casimir Pulaski adopted by Sarmatia, with headquarters at New Bedford, Mass., March 24, 1945:

In this most crucial era when mankind in all parts of the world finds itself fighting for that most precious of heritages—liberty—we, members of Sarmatia, an organization of Polish youth, assembled in our respective states, pay tribute today, March 24, to Tadeusz Kosciusko and Casimir Pulaski, two sons of Poland who devoted their lives not only to the restoration of Polish freedom, but to the restoration of American independence as well.

One hundred and fifty-one years ago, on March 24, 1794, Tadeusz Kosciusko, with a handful of Polish peasants, rose against the despotism of the Tsarist regime when his beloved country, Poland, was threatened with a third partition.

On this same day, 151 years hence, we, the Polish youth of America, pay tribute to Poland's great crusaders of freedom, reminding the world, and our statesmen in Washington, in particular, of the great services rendered to America, in the past by patriots of other lands who sacrificed their all in the cause of American liberty.

These men were not mercenaries, not soldiers of fortune. The urge which impelled them to fight with the American colonists sprang from their love of liberty. They wished to help establish in the New World what had been proclaimed in the Declaration of Independence, "Liberty throughout all the land."

They saw clearly that an effort was being made to establish a new order in the world in which the individual would be assured certain inalienable rights and in which government would derive its powers from the consent of the governed. Wherever the torch of liberty was being raised, they considered it an obligation, as well as a privilege, to support the hand that raised it. They understood that freedom is indivisible; that it is meant to be shared and enjoyed equally by all; that where the liberty of peace-loving peoples is concerned there can be no compromise.

The principles of human liberty and justice are the same in every clime, and Tadeusz Kosciusko and Casimir Pulaski were eager to resist a mighty empire that was trying to wrest these precious heritages from a struggling people, a people whose slogan was "Give me liberty or give me death."

Kosciuszko's services were many. He fought throughout the Revolution as colonel of engineers, prepared the defenses at Fort Ticonderoga, planned the fortification for the Battle of Saratoga, and engineered the construction of the works at West Point. On October 13, 1783, Congress awarded him with a brevet commission of brigadier general.

When Kosciusko arrived in America on his second visit after his unsuccessful struggle for the liberty of Poland, Washington said, "No one more sincerely wished during your arduous struggle in the cause of liberty and your country that it might be crowned with success."

Before his death Kosciusko once more did service to America. In 1800, in Paris, he wrote Manoeuvres of Horse Artillery for the United States Army. The War of 1812 was fought by artillery in accordance with these "manoeuvres". It may be justly and fairly claimed that Kosciusko was the father of American artillery.

Like Kosciusko, Casimir Pulaski devoted his life to the cause of freedom. Like his famous compatriot, General Kosciusko, who, when he appeared before Washington and was asked by him what he could do, answered, in a quiet way, "Try me and see," Pulaski did not wait for an appointment from Congress, but, on hearing that the enemy was attacking General Washington's forces, hastened to join them as a volunteer.

Pulaski struck his first blow for American independence at the Battle of Brandywine on September 11, 1777. At Brandywine, Washington's Army was repulsed and a large part of it might have been captured had it not been for the masterly aid given by Pulaski. Four days after this event he was appointed

by Congress to the command of the Cavalry, with the rank of brigadier general.

Dissatisfied with the condition of the American Cavalry, he urged Washington and Congress to strengthen this branch of the Army. Congress would not appropriate any money for this purpose. Pulaski asked Washington and Congress to give him leave to organize an independent corps, known later as the famous Pulaski Legion. It is estimated that Pulaski advanced $50,000 of his own money in forming and equipping his Legion. The scheme of independent legions proved of the greatest importance in the subsequent operations of the war and, above all, in the southern campaigns.

Pulaski played a valiant and helpful part in America's struggle for independence until his death, October 11, 1779, as a result of a wound received in the siege of Savannah.

Thus ended the brilliant career of the illustrious and gallant officer, a heroic figure of two continents, who had written to Col. R. H. Lee on August 13, 1778: "Honor and a true desire of distinguishing myself in defense of liberty was the only motive which fired my breast for the cause of the United States."

In the American Military Biography containing the lives and characters of the officers of the Revolution who distinguished themselves in achieving our national independence, the author says: "Perhaps a braver man than Pulaski never drew a sword"—and in describing his death at Savannah—"Thus fell, in a most bold and daring achievement, the distinguished Polish patriot, and hero in the cause of American liberty; his memory is entitled to our veneration, as his life forms an item in the price of our independence."

That the love and admiration for Kosciuszko has not died out in America is attested by the words of Joseph Grew, Under Secretary of State: "His name has been written in marble and bronze throughout our country; his deeds of valor in fighting for a cause which he was great enough to take as his own are written deep in the annals of history; but the true character of the man who, a century and a half ago, fought for the ideals which have inspired the progress of Poland and the United States is enshrined in the hearts of all of us; and it is from our hearts that the call goes forth in salutation from our people to the people in Poland: Kosciuszko lives."

As these two great sons of Poland will live forever in the hearts of all freedom-loving individuals, so may the sacrifices made by the valiant Polish fighting forces in World War No. 2 become enshrined in the hearts of mankind for generations to come. Like Kosciuszko and Pulaski, the brave defenders of Warsaw, Narvik, Tobruk, Mount Cassino, Ankora, Falaise, Breda, and Arnhem fought not for their independence alone, but for the independence of all humanity.

We, the Polish youth of America, are proud that Tadeusz Kosciusko and Casimir Pulaski and other distinguished men of Polish blood stood by the cradle of American independence and helped to lay the foundation for a new government in the New World, dedicated to the principles of human liberty and justice. May the memory of these two great men and the sacrifices they made for liberty bring renewed hope to our hearts that out of the present chaos a better world will evolve * * * a world wherein will abide love for all and malice toward none.

God grant that our honorable statesmen, in making decisions which will seal the fate of liberty-loving nations for generations to come, be guided by the words of Lord Halifax, uttered in the House of Lords on August 24, 1939: "In failing to uphold the liberty of others, we run the great risk of betraying the principle of liberty itself and with it our freedom and independence."

God grant that America refrain from appending its signature to a fifth partition of Poland; that freedom be restored to every nation in the world and that the Polish fighting forces and the Polish refugees scattered all over the world be allowed to return to their homeland and to a government truly representative of the Polish people.

God bless America.

God save Poland.

While the Buck Is Passed, You Go Hungry

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Wakefield (Mass.) Daily Item of March 22, 1945, which I believe is expressive of the sentiment of New England people regarding one phase of the food situation and the current methods for regulating the distribution of meat to civilians. The editorial follows:

WHILE BUCK IS PASSED YOU GO HUNGRY

The New England section will be the hardest hit of any when the 3 months' 12 percent reduction of meat supplies goes into effect April 1.

This is the word of the secretary of the Massachusetts Grocers' and Provision Dealers' Association.

His contention is that the Government should give more margin to allow meat packers to raise prices providing their products were "distinguished more equitably in New England than they are now being distributed."

"Until O. P. A. and W. F. A. allow these changes and the packers agree to increase local supplies," he says, "the retail purchaser will remain in the middle."

Meanwhile, in another newspaper, but on the same evening, there was a featured story to the effect that a meat dealer in nearby Melrose had a chestful of meat and butter, but couldn't sell it because his customers had no points left; that he had been selling meat back to wholesalers and to other dealers who had no meat, and that he had lost 50 customers. He said he called O. P. A. and was advised to write to his Senator.

The War Food Administration is blaming black markets, Army, and lend-lease exports as among major reasons for the present shortage. Meat dealers add to those classifications the fact that Government regulations of the feeding of cattle and uncontrolled slaughter at the farm is helping to deplete civilian supplies.

Does all this add up to the fact that neither the O. P. A. nor the War Food Administration can control what they have been appointed to direct and regulate?

Disposition of Surplus Property

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein a statement by the American Labor Party on promulgation of appropriate regulations by the Surplus Property Board and for necessary amendments to guarantee the most productive disposition of surplus property.

PROMULGATION OF APPROPRIATE REGULATIONS BY THE SURPLUS PROPERTY BOARD AND FOR NECESSARY AMENDMENTS TO GUARANTEE THE MOST PRODUCTIVE DISPOSITION OF SURPLUS PROPERTY

The estimate of surplus war property is $100,000,000,000. If this surplus war property is properly disposed of, so that the factories, consumer goods, scrap, land, and ships are used to the fullest extent rather than taken off the market or out of production, a substantial advance will be made toward our goal of 60,000,000 jobs.

On the question of surplus property, President Roosevelt has stated, "Surplus-property disposal should contribute to filling the needs of production, domestic and foreign. It should be carried on with full recognition of the objectives of price stability." Further, he has said, "Every effort should be made to achieve full civilian use of plants built for war purposes when they are no longer needed for war production * * * temporary lease arrangements may facilitate early productive use while permanent arrangements for transfer are being worked out."

The Surplus Property Act of 1944 is preeminently sound, and if properly administered, will be workable. It sets forth a clear-cut program for using surplus property to help develop and expand our economy. It provides specific protections against the acquisition of surplus property by monopolies or speculators. It sets forth a program for using surplus Government land to promote family-type farming. It provides protection for small business. It protects the Government against fraud.

However, since its efficiency depends upon its administration, it is absolutely urgent that all members of the Board and its staff be vigilant in using the act to further the goal of full employment and full production.

We therefore make the following proposals:

A. ADOPTION BY THE SURPLUS PROPERTY BOARD OF AN AGGRESSIVE POLICY TO INSURE THE ACHIEVEMENT OF THE OBJECTIVES OF THE ACT, AND TO INSURE COOPERATION TO THE SMALLER WAR PLANTS CORPORATION BY THE OWNING AND DISPOSING AGENCIES

1. Surplus war property should be made available to small businesses.

2. We propose that surplus machine tools and equipment should be disposed of to small businesses which are loaded down with obsolete tools, so that small business can obtain the most modern machinery, tools, and equipment declared to be surplus.

The administrators of the act should accomplish this either by selling the tools at a specially reduced price to such businesses which may turn in or dispose of their old tools as junk, or by leasing the tools on a hire-purchase system with the privilege of return when the tools are no longer needed. The latter method is followed by the largest machinery corporations in the country.

3. The Administrators of the Surplus Property Act should insure the greatest and most

efficient production by the 180,000 small plants in the country.

4. The act should be administered to prevent the growth of monopoly, by making available the billions of dollars worth of plants and facilities with their modern construction and equipment to small businessmen, either singly or in groups.

B. PROMULGATION OF APPROPRIATE REGULATIONS BY THE SURPLUS PROPERTY BOARD

Regulations should be drawn with the objectives and directives of the Surplus Property Act in mind, so as to give the act full force and effect by providing for:

1. Rules setting forth adequate public notice of the proposed disposal of surplus properties.

2. Establishment of appropriate procedures to avoid disposal of surplus properties to speculators and to guarantee the preferences intended for small businessmen, small farmers, veterans, etc.

3. Establishment of appropriate safeguards of the right of small enterprises to have access to contractor inventories.

Opportunity should be given to industry committees, consisting of representatives of management and labor, small business and farmers to consult with the Board with respect to the proposed regulations.

C. LEGISLATION TO AMEND THE SURPLUS PROPERTY ACT

1. Providing adequate guarantees in the conditions of transfer, sale, or lease which will insure that the purchaser will maintain all its plants and facilities in substantial operation and production for a minimum period of 2 years next succeeding the date of their acquisition and to permit the Government the right of repossession in the event of a breach of this vital condition.

2. Authorizing the Surplus Property Board to direct the declaration of property as surplus and order its disposal pursuant to the terms of the act.

3. Requiring publication in the Federal Register of the terms and conditions of the proposed sale of properties valued at $1,000,000 or more.

The A. L. P. statement to Senator MEAD and former Senator Gillette was transmitted by Hyman Blumberg, state secretary of the American Labor Party.

Resolution Adopted by the Polish-American Clergy of the Diocese of Hartford, State of Connecticut, at Their Meeting Held March 20, 1945

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas at the recent Crimea Conference held at Yalta by the leaders of the three great powers, President Franklin D. Roosevelt, Prime Minister Winston Churchill, and Marshal Joseph Stalin, plans were formulated for the settlement of world affairs with a view toward the pr vention of future wars; and

Whereas as part of the permanent solution of the problem of Poland it was decided to partition Poland by granting to Russia all territory east of the so-called Curzon line; and

Whereas it was decided to reorganize the Polish Government by adding to the so-called Lublin government various other unidentified Polish leaders and recognizing this reorganized group as the true Government of Poland: Now, therefore, be it

Resolved, That we hereby strongly condemn as an outrageous act of injustice such a decision on the part of the three leaders to thus partition Poland, an undaunted ally who was the first to take up arms in a seemingly hopeless cause against the mighty Nazi aggressor and has longer than any other Allied Nation fought ceaselessly against the common enemy and has borne sacrifices which exceed those of any other nation. This cavalier treatment of Poland, which thus punishes her worse than any of the satellite Axis countries for her loyal and steadfast devotion to the Allied cause, outrages our consciences, and, we truly believe, the consciences of the great majority of the American people; be it further

Resolved, That the recognition of any government except the sole, legal, and constitutional Polish Government in exile in London makes a mockery of duly constituted authority and the processes of democratic government. Such slavish submission to the Soviet-sponsored puppet government on the part of our leaders is truly a cause for shameful self-reproach; be it further

Resolved, That as American citizens we bitterly resent and condemn this radical departure from the idealistic principles of the Atlantic Charter in favor of power politics, the continued adherence to which we feel will surely lead to another great world conflagration in the future; be it further

Resolved, That copies of this resolution be forwarded to our Representatives and Senators from Connecticut in the United States Congress and to President Franklin D. Roosevelt, Secretary of State Edward R. Stettinius, Jr., Hon. Harold S. Stassen, Senator Arthur H. Vandenburg, Senator Tom Connally, Senator Charles A. Eaton, and Representative Sol Bloom.

Knowing Your Congressmen

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record, of Wilkes-Barre, Pa., March 16, 1945:

KNOWING YOUR CONGRESSMEN

Every industrialist and businessman should get acquainted with his Congressman, both House Members and Senators, the National Association of Manufacturers has counseled its members. In giving the advice, the association made observations which might well be considered by all the constituents of the Congressmen—wage earners, salaried men and women, professional people, and even citizens of leisure.

The 531 Members of the House and the Senate are just everyday American citizens; a Congressman is a human being. The fact that they are Members of Congress does not change their nature or their emotions. A pat on the back is appreciated as much by them as it is by you and a slap in the face arouses their anger as readily as yours. All these points are made in a booklet entitled "Know Your Congressmen."

It is a good idea. If we knew our Congressmen better probably we'd get greater service out of them. It would be found, in many instances, that the Congressmen themselves are eager to give service to their constituents. He must know their problems to understand them, and to gage his course of action and his stand on various bills in accordance with good understanding.

Aid to Veterans

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein a statement by the American Labor Party on aid to veterans:

To hasten the victorious conclusion of the war and to lay the foundation of a lasting and stable peace, adequate provision must be made to insure the economic and physical well-being of the people of our country. Jobs for all and the establishment of a decent standard of living are indispensable requisites for the attainment of those ends. Unemployment and insecurity breed ill-will and disunity and would impede and impair the building of lasting and democratic peace. In this light, the welfare of the veteran and the civilian are inseparably one. However, the returning veteran does present problems that require special consideration. In a large measure these problems have been recognized by the enactment of the Servicemen's Readjustment Act of 1944 (G. I. bill of rights) and other related veterans' legislation.

We wholeheartedly endorse the general aims of the existing veterans' legislation, but we are aware of certain defects in that legislation and therefore urge the adoption of the following amendments:

1. The returning veteran should have a legally enforcible right to medical care and treatment, with the right of review by a qualified civil tribunal without expense to the veteran.

2. Veterans shall be entitled to hospital and medical care at convenient public and private institutions at Government expense, where Veterans' Administration facilities are inadequate or unavailable.

3. The absolute right to educational benefits should be extended to all veterans.

4. The allowances to war veterans during educational training should be increased to provide at least the amounts received under the Servicemen's Dependent Allowance Act.

5. Provision should be made to enable veterans to obtain low-rent housing facilities, as well as loans to purchase homes.

6. Veterans' pensions should not be subject to attachment, execution, or garnishment.

7. The interest rate on loans to veterans should not exceed 2 percent.

8. The facilities of the United States Employment Service should be enlarged and expanded so that it is capable of coping with the problems of unemployment of war veterans.

9. On returning to their jobs, veterans should be allowed cumulative seniority rights for all time spent in the military service.

10. Present limitations on unemployment benefits to veterans should be replaced by provision for payment for full period of involuntary unemployment.

11. Unemployment allowances should be increased to $35 per week, as proposed in the original veterans' aid bill.

12. Uniform regulations should be promulgated by the Administrator to control in all States.

13 The term "veteran" in the act should be defined to include those engaged in the merchant marine, Red Cross, and similar wartime services

14. The sole physical test of a veteran's right to reinstatement to his former job shall be his ability to substantially perform his work, with liberal enforcement in favor of the veteran.

15. The amendment of the Federal law to direct the Administrator of Veterans' Affairs to publish a list of educational institutions which bar entrance of veterans to their schools because of race, color, creed, or national origin.

Kings River Project—Preliminary Investigations

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. GEARHART. Mr. Speaker, in accordance with the unanimous consent of the membership, just a moment ago granted, I hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD, an editorial which recently appeared in the Fresno (Calif.) Bee, an editorial which relates to a legislative subject which is at this moment under study by the Department of Interior Subcommittee of the House of Representatives Committee on Appropriations.

As the editorial represents the viewpoint of thousands, among them those who would be benefited by the construction of the Kings River project, I hope that it does not escape the attention of those of our colleagues upon whose shoulders rests the burden of decision.

The editorial, Mr. Speaker, to which I have referred, is the following:

APPROVAL SHOULD BE GIVEN TO KINGS RIVER MEASURE

The Subcommittee on Interior Department affairs of the House Appropriations Committee has before it a proposed appropriation of $490,000 to finance investigations and the preparation of plans and specifications for the Kings River project.

The preliminary work looking toward realization of this vital and long discussed project would be carried on by the Bureau of Reclamation under congressional authorization granted on February 10, 1940.

President Roosevelt has voiced his support of the Kings River project as a multiple purpose development by the Reclamation Bureau, and approval of the $490,000 appropriation has been given by the Budget Bureau.

Early and favorable action should be taken by the subcommittee on this appropriation measure so the machinery may be set in motion at the earliest practical date to bring about this much needed development in the interest of the people of the San Joaquin Valley and indirectly the whole State of California.

On February 7, 1944, the President wrote the chairman of the House Flood Control Committee anent the Kings and Kern Rivers projects as follows:

'These projects should be constructed by the Bureau of Reclamation and that portion of their cost to be charged to irrigation should be financed on the basis of the prevailing Federal policy of 40 annual payments by irrigation beneficiaries. These projects should be maintained and operated by the Bureau of Reclamation, but operation for flood control should be in accordance with regulations prescribed by the Secretary of War."

The President's letter sets forth clearly the White House attitude in regard to the Kings project, and likewise should clarify the atmosphere with respect to the Chief Executive's wishes on construction and operation.

Organization of a World Federation

EXTENSION OF REMARKS

OF

HON. SHERMAN ADAMS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. ADAMS. Mr. Speaker, it is once again my privilege to call to the attention of the House the attitude of the people of New Hampshire toward post-war world organization. Last Monday it was my privilege to notify the House of the vote of the town meetings in emphatic favor of preservation of peace and freedom and their approval of an organization similar to that proposed by the Dumbarton Oaks Conference.

Today I have received from the New Hampshire Legislature a joint resolution, approved March 20, requesting the Representatives in Congress, of New Hampshire, to support legislation in favor of the organization of a world federation and requesting the President to initiate procedure to form a constitution of the federation of the world. Under leave to revise and extend my remarks, I include this joint resolution providing for a declaration of the federation of the world:

Joint resolution providing for a declaration of the federation of the world

Whereas it is necessary at the present juncture of human affairs to enlarge the bases of organized society by establishing a government for the community of nations, in order to preserve civilization and enable mankind to live in peace and be free, the following principles and objectives are hereby enunciated in the declaration of the federation of the world.

Man, the source of all political authority, is a manifold political being. He is a citizen of several communities; the city, the State, the nation, and the world. To each of these communities he owes inalienable obligations and from each he receives enduring benefits.

Communities may exist for a time without being incorporated but, under the stress of adversity, they disintegrate unless legally organized. Slowly but purposefully through the centuries, civilization has united the world, integrating its diverse local interests and creating an international community that now embraces every region and every person on the globe. This community has no government, and communities without governments perish. Either this community must succumb to anarchy or submit to the restraints of law and order.

Governments can be established only through the deliberate efforts of men. At this hour two elemental forces are struggling to organize the international community; totalitarianism and democracy. The former, a recent version of repudiated militarism and tyranny, is predicated upon principle of compulsion, rules through dictatorship and enslaves men; the latter, a proved bulwark of the rights of man as a human being and as a citizen, derives its authority from the consent of the governed, embodies the will of freemen and renders their collective judgments supreme in human affairs. The cornerstone of totalitarianism is the ethnographic state, whose restricted interests define the scope of its favors; the foundation of democracy is man whose integrity is inviolable and whose welfare is its primary concern. The motivating power of the former is violence; of the latter, freedom. One feeds upon unscrupulous ambition; the other upon an enlightened sense of obligation.

One or the other of these forces will now triumph and govern mankind. The present conflict is irrepressible and decisive. It is the challenge of the ages to the generation of today, and represents those spiritually cosmic forces which visit the world at critical periods in human history to shape the destinies of men. This world cannot remain half slave, half free; half totalitarian, half democratic. The laws of civilized society prevent intercourse between slaves and free men from being either congenial or profitable. If totalitarianism wins this conflict, the world will be ruled by tyrants, and individuals will be slaves. If democracy wins, the nations of the earth will be united in a commonwealth of free peoples; and individuals, wherever found, will be the sovereign units of the new world order.

Man has struggled from time immemorial to endow the individual with certain fundamental rights whose very existence is now imperiled. Among those rights is man's freedom to worship, speak, write, assemble and vote without arbitrary interference. To safeguard these liberties as a heritage for the human race, governments were instituted among men, with constitutional guaranties against the despotic exercise of political authority, such as are provided by elected parliaments, trial by jury, habeas corpus and due process of law. Man must now either consolidate his historic rights or lose them for generations to come.

The ceaseless changes wrought in human society by science, industry, and economics,

LAW LIBRARY FEDERAL WORKS AGENCY

as well as by the spiritual, social, and intellectual forces which impregnate all cultures, make political and geographical isolation of nations hereafter impossible. The organic life of the human race is at last indissolubly unified and can never be severed, but it must be politically ordained and made subject to law. Only a government capable of discharging all the functions of sovereignty in the executive, legislative, and judicial spheres can accomplish such a task. Civilization now requires laws, in the place of treaties, as instruments to regulate commerce between peoples. The intricate conditions of modern life have rendered treaties ineffectual and obsolete, and made laws essential and inevitable. The age of treaties is dead; the age of laws is here.

Governments, limited in their jurisdiction to local geographical areas, can no longer satisfy the needs or fulfill the obligations of the human race. Just as feudalism served its purpose in human history and was superseded by nationalism, so has nationalism reached its apogee in this generation and yielded its hegemony in the body politic to internationalism. The first duty of government is to protect life and property, and when governments cease to perform this function, they capitulate on the fundamental principle of the reason for their existence. Nationalism, moreover, is no longer able to preserve the political independence or the territorial integrity of nations, as recent history so tragically confirms. Sovereignty is an ideological concept without geographical barriers. It is better for the world to be ruled by an international sovereignty of reason, social justice, and peace than by diverse national sovereignties organically incapable of preventing their own dissolution by conquest. Mankind must pool its resources of defense if civilization is to endure.

History has revealed but one principle by which free peoples, inhabiting extensive territories, can unite under one government without impairing their local autonomy. That principle is federation, whose virtue preserves the whole without destroying its parts and strengthens its parts without jeopardizing the whole. Federation vitalizes all nations by endowing them with security and freedom to develop their respective cultures without menace of foreign domination. It regards as sacrosanct man's personality, his rights as an individual and as a citizen, and his role as a partner with all other men in the common enterprise of building civilization for the benefit of mankind. It suppresses the crime of war by reducing to the ultimate minimum the possibility of its occurrence. It renders unnecessary the further paralyzing expenditure of wealth for belligerent activity, and cancels through the ages the mortgages of war against the fortunes and services of men. It releases the full energies, intelligence, and assets of society for creative, ameliorative, and redemptive work on behalf of humanity. It recognizes man's morning vision of his destiny as an authentic potentiality. It apprehends the entire human race as one family, human beings everywhere as brothers, and all nations as component parts of an indivisible community.

There is no alternative to the federation of all nations except endless war. No substitute for the federation of the world can organize the international community on the basis of freedom and permanent peace. Even if continental, regional, or ideological federations were attempted, the governments of these federations, in an effort to make impregnable their separate defenses, would be obliged to maintain stupendously competitive armies and navies, thereby condemning humanity indefinitely to exhaustive taxation, compulsory military service, and ultimate carnage, which history reveals to be not only criminally futile but positively avoidable through judicious foresight in federating all nations.

It being our profound and irrevocable conviction:

That man should be forever free, and that his historic rights as an individual and as a citizen should be protected by all the safeguards sanctioned by political wisdom and experience;

That governments are essential to the existence of communities and that the absence of government is anarchy;

That there exists an international community, encompassing the entire world, which has no government and which is destined, as a consequence of the present war, either to be ruthlessly dominated and exploited by totalitarianism or to be federated by democracy upon the principle of freedom for all nations and individuals;

That all human beings are citizens of this world community, which requires laws and not treaties for its government;

That the present conflict will determine the survival of free institutions throughout the world and that it is morally incumbent upon this generation, as one of the declared objectives of the current war, to federate the nations, in order to make secure, and hereafter unchallenged, freedom for all peoples everywhere, and in order to impart to those who are called to give their lives and fortunes for the triumph of democracy the positive assurance of the incorruptible utility of their sacrifice;

That world federation is the keystone in the arch of civilization, humanity's charter of liberty for all peoples and the signet authenticating at last the union of the nations in freedom and peace;

That the universal ordeal, through which mankind is now passing, marks the birth of a new epoch that will affirm for all time the indestructible solidarity of civilization and the abiding unity of the human race;

That there are supreme moments in history when nations are summoned, as trustees of civilization, to defend the heritage of the ages and to create institutions essential for human progress. In the Providence of God, such a crisis is this hour, compelling in duty and unprecedented in responsibility—a fateful moment when men meet destiny for the fulfillment of historic tasks:

Resolved by the senate and house of representatives in general court convened:

That the general court of New Hampshire does hereby solemnly declare that all peoples of the earth should now be united in a commonwealth of nations to be known as The Federation of the World; and to that end it hereby endorses the Declaration of the Federation of the World as is specifically set forth in the preamble hereof, and makes said declaration a part of this resolution in the same manner as if same were recited herein; and request the Senators and Members of the House of Representatives in Congress from the State of New Hampshire to support and vote for a resolution in the Congress of the United States approving the principle of world federation and requesting the President of the United States to initiate the procedure necessary to formulate a constitution for The Federation of the World, which shall be submitted to each nation for its ratification;

That a copy of this resolution be sent to each of the Senators and Members of the House of Representatives in Congress from the State of New Hampshire.

NORRIS COTTON,
Speaker of the House of Representatives.
DONALD G. MATSON,
President of the Senate.
CHARLES M. DALE,
Governor.

Approved March 20, 1945.

A Great Discovery

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. HOFFMAN. Mr. Speaker, during the past week official Washington made a great discovery. J. A. Krug, Chairman of the War Production Board, announced it. Just who pioneered in the thought which brought it about has not yet been disclosed. It is of great importance not only to us here at home but to the people of all the world. This discovery, which may have far-reaching effect not only upon our war effort but upon the future of millions of the people of other nations was stated by Mr. Krug in substance as follows: "There is a limit to what America can produce."

Analyzed, I gather it means that someone here in Washington, connected with the Administration and in a position of authority, has learned that milk has an existence before it reaches the groceryman's store in a can, or the back door in a bottle. Someone has discovered that, before the milk can be put in a can, there must be a cow; before that, a calf, and that incidentally someone must feed and milk the cow.

Other investigators now finally concede that, if the farm machinery is taken from those who work the land; if the men who plow, disc, roll the soil, sow or plant seed, cultivate, harvest and transport and process crops; the men and women who tend the chickens, gather the eggs, kill and dress the poultry; those who feed and tend the cattle that produce not only milk but beef, worked in war industries or were drafted for the armed services, there might—yes, possibly some day there would—be a shortage of food even here in America.

Putting two and two together, these bureaucrats finally arrived at the conclusion that, if there was not enough food to adequately feed civilians here at home and our armed men in foreign service, including also those in war industries, it might be some of those abroad, in whom the administration is so greatly interested and whom it has heretofore insisted must at all hazards—no matter how much it took—even though they were not contributing to the war effort—be fed, clothed and sheltered in comfort, would not get all that the Administration desired them to have. Even the President said we might have to pull in our belts.

And, in the meantime, while bakers and housewives were calling for lard, an administrative agency admitted that it had bought, stored and let spoil 20,000,000—yes, 20,000,000—pounds of lard, which will now be sold to make soap. But please don't criticize the administration.

Yes, sir, officials high in administrative councils discovered all that, but it

was only after, in the Senate, a threat had been uttered to the effect that, if the planners did not mend their ways and their plans, legislation would be introduced requiring them to mix with their decisions a little common sense.

In the House, by a vote of 122 to 33, the Lemke resolution, providing for an investigation of the drafting of agricultural laborers and requiring the administration to obey the Selective Service Act as applied to the drafting of farm labor, was adopted. All of which leads to the conclusion that finally and in the last analysis, if you step on the toes of enough people; if a sufficient number suffer from bureaucratic misdirectives, Senators and Congressmen will finally hear from their constituents so forcefully that they will venture to oppose some of the theorists, some of the planners. That is something now, is it not? Odd that the people's Representatives must be kicked good and hard by their real bosses—the people—before they can forget that the do-gooders, the pressure groups, do not really know it all.

So please remember that, while those who kick and criticize and find fault, and whom you sometimes criticize for finding fault, do occasionally bring about some good by the kicking. Folks back home should be cheered by the thought that, if and when they see something radically wrong in their Government, if they, in sufficient number, make themselves heard, there may ultimately be a remedy, even though it seems somewhat slow in coming.

When enough people are hurt; when rules, orders, and directives pinch hard enough on enough people so that those who are losing something—maybe a son or husband—outnumber those who are getting something from the Government, the unsound policies will end. Sorry, reform must await that day, but that is the way it looks from here. I hope a better day, not too long delayed, is coming.

Here in Congress, I am doing what I can to put that hope into a reality. I hope that we will finally insist that nature be permitted to take its course; that the law of supply and demand be permitted to operate without too much interference from those who would fix everything by the writing of a law.

Yes, sir; there will be plenty to eat if the administrative agencies let the home folks alone and do not give too much away.

Burial of Deceased Veterans

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. CLASON. Mr. Speaker, there is growing sentiment for the Federal Government to determine in the near future its position on the issue of providing for the proper burial of its veterans of all wars. Two lines of thought have been advanced. One group feels that the Government should authorize the expenditure of a reasonable sum of money to defray the burial costs and to purchase suitable lots in private cemeteries in which other members of veterans' families may be buried. A second group believes that in addition to the first program the Federal Government should establish at least one national cemetery in every State in the Union, in which veterans of the armed services of the United States may be buried at the expense of the Government in the full knowledge that the cemeteries will be suitably maintained throughout the years to come.

It is interesting to note that the General Court of Massachusetts has adopted resolutions urging that "the Federal Government procure land in Massachusetts for the establishment and maintenance of a national cemetery."

In fact, the Quartermaster General of the War Department proposes that national cemeteries be established at Boston and Springfield.

Congress has not yet acted upon the War Department plan. Therefore, the Quartermaster General has furnished some interesting information about existing national cemeteries in which I am sure all Members will be interested.

At the present time, there are 78 national cemeteries in the United States. The first was established in 1861, although Congress did not enact operating legislation until 1867. A good many of these earlier cemeteries were merely enclosures around battlefields, hospitals, and so forth. In recent years, cemeteries have been established in 1937 and 1938 and the latest in 1939. Including Civil War dead, both of the Union and Confederate armies and those buried later, approximately 470,000 veterans of our wars are buried in national cemeteries.

Of the various cemeteries located in all parts of the country, only six or seven are what might be termed active at the present time. Arlington National Cemetery, in nearby Virginia, is, of course, very active, since we look upon it as the outstanding national cemetery of the Nation. The new cemetery at Farmingdale, Long Island, is also very active, and I am advised that burials there have been as high as 1,400 a year. Another located at San Bruno, Calif., had nearly 1,100 burials last year, and a new cemetery near Fort Snelling, Minn., had 400 burials in 1944. Likewise, the cemeteries at Fort Bliss and Fort Sam Houston, Tex., have had an increasingly large number of burials in recent years.

It is the plan of the Quartermaster General to increase the number of national cemeteries in the United States to 90, so that each State will have at least one.

I am glad to bring these facts to the attention of Congress, which I expect will soon consider the manner in which the Government shall provide its honored veterans with suitable resting places on their death.

Keeping America First in the Air

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. WOODRUM of Virginia. Mr. Speaker, on Friday, March 23, at noon, before a notable audience, composed of members of the National Press Club, officers and members of the armed services, and Government officials, there was delivered an address which I think will be of great interest to Members of Congress and all others who are interested in aviation and its future. Mr. John F. Victory, secretary of the National Advisory Committee for Aeronautics, was the speaker and his subject Keeping America First in the Air.

It was my great pleasure and privilege to hear this splendid address and I take much satisfaction in knowing that as a member of the Appropriations Committee of the House, I have sponsored for many years appropriations for the National Advisory Committee for Aeronautics, which made possible their achievements. The House Select Committee on Post-War Military Policy, of which I am chairman, has just concluded interesting hearings on scientific research and development in the post-war period. This committee will be interested in Mr. Victory's address. The address follows:

Mr. President, members of the National Press Club, distinguished guests, and friends: The honor of being invited to address this distinguished organization is especially appreciated because to me it evidences your interest in keeping America first in the air. Your curiosity about the work of the National Advisory Committee for Aeronautics (N. A. C. A.), which I have the honor to represent, is encouraging.

The overwhelming influence of German air power during the first year of the war in Europe awakened the American people to the danger of having to pay taxes to the Axis. With the invasion of France and the Low Countries the President sounded the burglar alarm with his call for 100,000 airplanes, and American industry responded with the miracle of aircraft production. No single measure has had more far-reaching effect in changing the whole course of the war.

Subsequently, in the battle of Britain there was a demonstration of the relative value of superior numbers on the German side, versus superior performance by Britain's aircraft. That test made it clear that the airplanes that America was destined to produce in great quantity must have superior performance. The dollar cost of the aircraft program was alone sufficient to require enormous expansion of the work of the N. A. C. A. in order to assure a sound return upon the investment. But in time of war money loses significance alongside the imperative military requirements for superior airplanes.

Although the Congress, too, can seemingly work miracles in its field, it cannot legislate superior performance into an American airplane. But it can set science to work. It did so, and that is where the N. A. C. A. comes into the picture.

There is no natural law known that today fixes a limit upon either the speed or the

size of aircraft. All types of American airplanes in production today, and many foreign types, make use of fundamental design data from the laboratories of the N. A. C. A. Let me emphasize, however, that in the development of America's air power the N. A. C. A. has been only one member of the firm, a silent partner, so to speak, of the military services and of the aircraft industry. The over-all progress is the result of the organized effort of millions of Americans involving many organizations, governmental and private, including not only the military and manufacturing establishments directly concerned with aeronautics, but many supporting agencies and industries. Developments in aeronautics have been extremely rare, for which any single organization or individual, in or out of the Government, deserves all the credit.

The airplane and the tank were introduced in World War I, but it remained for the present war to develop their dominant role. In like manner, we may expect that the new weapons recently introduced in this war may be but the forerunners of a whole new line of weapons that may dominate the future.

Aviation is entering an era of revolutionary change resulting largely from the development of new methods of propulsion. Entirely new fields of research must be explored. The new propulsive systems open up extraordinary high speed possibilities which must be studied and evaluated.

At the close of World War No. 1 the top speed of a typically good pursuit airplane was 135 miles per hour; its ceiling, 22,000 feet; and, its maximum endurance 1 hour and 40 minutes. Scientific research gradually penetrated the veil of the unknown as it existed at the time and made possible in a single generation the remarkable improvements in aircraft performance which are now well-known to you. We are just piercing the veil in the field of gas turbine and jet propulsion development and can at this time but faintly glimpse the possibilities in the great unknown fields of guided missiles and supersonic aircraft.

Other nations may be succeeding better than we know. Present American developments as yet undisclosed would, alone, change the character of future warfare. It is staggering to contemplate the full potentialities of present reasonable probabilities as they may be developed for the future. Continuous scientific research is the best insurance that America shall not again fall behind. Neglect of research, even for one generation, may jeopardize freedom in the next.

It appears certain that never again will a nation considering aggression give us a year or more to prepare our offensive. We may expect that no nation considering aggression will attack America in the future, or provoke it into war, without having the capacity to hurt us at home, and to do so promptly and in great strength. What with self-propelled rocket bombs, and supersonic aircraft already looming on the horizon, it does not require much imagination to see, in the shape of things to come, no security against sudden attack by new scientific weapons, unless our defense is such as to discourage attack.

The favorable box score in aerial combat in this war, which has averaged upward of 4 to 1 in our favor, is, no doubt, due in large part to the careful selection, and to the fine fighting qualities and superb training and leadership of our airmen, but it also reflects superior performance of American aircraft.

The National Advisory Committee for Aeronautics was established by the Congress 30 years ago "to supervise and direct the scientific study of the problems of flight with a view to their practical solution." It is a committee of 15 appointed by the President and serving as such without compensation. The membership includes General Arnold and General Echols of the Army Air Forces; Vice Admiral Fitch and Rear Admiral Richardson; the heads of the Civil Aeronautics Administration; the Bureau of Standards, the Weather Bureau, and the Smithsonian, and 6 technically qualified experts from private life.

Out of N. A. C. A. research has developed the engineering basis for a rapidly advancing technology. Consequently, America had, when the war started, a healthy nucleus of a strong, competitive aircraft industry. Had it not been so, we might now be studying German and learning how to do business with Hitler.

The country can be grateful to the Congress that had the vision 30 years ago to establish the N. A. C. A. as a separate agency to advance aeronautical science, although that Congress was quite cautious about how it appropriated the taxpayers' money. It started the N. A. C. A. with an appropriation of "$5,000 a year for 5 years, or so much thereof as may be necessary." It was not clear whether the phrase "so much thereof as may be necessary" related to the $5,000 or to the 5 years.

However, from that modest start the N. A. C. A. has, with continued far-sighted support of the Congress, grown to an organization of 6,500 employees, with an annual operating budget of $26,000,000, and with three major research stations at the Army's Langley Field, Va.; at the Navy's Moffet Field, Calif.; and at the Cleveland Municipal Airport, Cleveland, Ohio.

Experience through two great wars has enabled the N. A. C. A. to blaze new trails in aeronautical research, and to lay the foundation in America for the new science of aeronautics. Under the leadership of able chairmen from Dr. Durand in World War No. 1 to Dr. Hunsaker, present Chairman, and including the illustrious names of Charles D. Walcott, Joseph S. Ames, and Vannevar Bush, the N. A. C. A., with the invaluable assistance of Dr. George W. Lewis as Director of Aeronautical Research, has worked as one with the Army, the Navy, and the industry to gain for America definite leadership in aircraft development.

This first became generally recognized in the late twenties. I recall that in the early thirties there was a meeting in the United States of the Federation Aeronautique Internationale. Discussions by European leaders after visiting the N. A. C. A. laboratories at Langley Field were to the effect that America was at that time 10 years ahead of any other nation in the development of aeronautics. I asked how they measured time. They replied that, if progress were to cease in the United States, and Europe were to continue at its own pace, it would take any European nation 10 years to catch up.

Then came Hitler and the resurgence of German militarism. Setting about quietly at first to build a superior air force, Hitler authorized Goering and Udet to do all things necessary to build for Germany the strongest air force in the world. Did they rush into mass production of airplanes based on 1933 designs? They did not. Realizing that the struggle for supremacy in the air must start in the research laboratory, Germany expanded and multiplied its research facilities until at the time of the pact of Munich in 1938, the German aeronautical research establishment had grown to five times the size of that of the United States. By that time Germany had also built its great air force and was then the strongest power in the air.

The N. A. C. A. had started in 1937 to anticipate the oncoming emergency, and to expand its research facilities. It is most fortunate that these additional facilities were constructed in time to increase the effectiveness of the whole aircraft program in this war. Let us see how that has been done. The problems are too numerous to recount in detail, but I would like to give you a few examples.

The aircraft program required enormous quantities of aviation gasoline and lubricating oil, involving first of all a determination as to the kind of petroleum stocks that could be used to produce high octane gasoline in the quantities needed.

In cooperation with the oil industry's laboratories and with the Army and Navy, the N. A. C. A. was able to bring forth research data upon which decisions were based for the early expansion of the aircraft petroleum industry. The shortage of natural rubber made it necessary quickly to reach decisions as to the petroleum stocks to be used and N. A. C. A. research served as a guide by indicating how different products would perform in an aircraft engine.

The chief tool for aerodynamic research is the wind tunnel, which is, generally speaking, an apparatus or structure for measuring the various characteristics of airplanes under simulated flight conditions.

Tests are made at the throat, or smallest section, of the tunnel where the air velocity is greatest. Throat sizes vary from 4- by 18-inches to 40- by 80-feet, the latter being the largest in the world, and large enough to test a full size airplane. The N. A. C. A. has in operation about 30 wind tunnels used for different purposes; such as, to investigate stability and control; to increase lift and reduce drag of wings; to improve streamlining in general; to develop engine installations; to study propeller efficiencies; to make airplanes controllable when spinning; to prevent ice formation in flight; to improve operating characteristics at high altitudes; and to explore the possibilities and obtain fundamental data in the entirely new field of flight at speeds above the velocity of sound, roughly 750 miles per hour at sea level.

Speed is still the most important single characteristic of an airplane. Through the ages the speed of man's travel has increased slowly up to the time of the conquering of the air. Since then improvement has been rapid. One of the greatest developments in the evolution of the aerodynamic or streamline form has been the N. A. C. A. high-speed wing. This wing makes possible under flight conditions as much reduction in wing drag, or resistance to forward motion, as all previous research had accomplished in this respect since the original Wright airplane first flew in 1903.

The first significant application of the N. A. C. A. high-speed wing was in the P-51 Mustang. That airplane was voted by Europe's outstanding aeronautical experts as the best fighter airplane on either side in the European war. Since Pearl Harbor the N. A. C. A. has investigated, on request of the Army alone, 42 types of bombers, 50 pursuit types, and about 40 miscellaneous types, and a comparable number for the Navy. As an example of what the N. A. C. A. does on a new type of airplane, let me tell you of some other aerodynamic characteristics of the P-51 which are also the product of N. A. C. A. research: Air scoops to provide combustion and cooling air, which greatly reduce the drag of air intake openings as formerly used on airplanes; filleting, that is, the fairing at the junction of the wing and the fuselage; the windshield and canopy shape; N. A. C. A. flush-type rivets; and improved controllability in dives. The N. A. C. A. also provided the basic data for the design of exhaust stacks on the P-51 in order to get additional speed by the use of the exhaust as a form of jet propulsion.

The early versions of the Mustang had a 1,000-horsepower engine. The design of the airplane was such that no fundamental bar to speed increase existed, so that when engines approximately twice the power became available, they were used. The resulting large increase in speed caused serious rumb-

ling and strong vibrations around the radiator scoop. The causes were investigated by the N. A. C. A. in a wind tunnel at 600 miles per hour. By application to the air scoop of the same principles as used in the high-speed wing design, the rumbling and vibration were cured. This simple improvement permitted a full realization of the speed possibilities of the Mustang design.

The basic principles of the N. A. C. A. high-speed wing are gradually coming into general use on American airplanes where high speed is desired. The Bell P–59 Aircomet, the Bell P–63 Kingcobra, the Douglas A–26 Invader, and the Lockheed P–80 Shooting Star are mentioned as a few examples. In the present state of knowledge, it is now regarded as practically a physical requirement that all new high-speed airplanes apply the principle of the N. A. C. A. high-speed wing.

The new Lockheed P–80 Shooting Star jet-propelled airplane recently announced by the Army, the Lockheed Co., and the General Electric Co. was investigated in model form in a wind tunnel at over 500 miles per hour to determine its high-speed control characteristics and to obtain an estimate of its performance. It was confirmed by those tests that the N. A. C. A. high-speed wing which the Lockheed Co. had chosen would permit the P–80, with its new jet power plant, to fly at a higher speed than any previous airplane. Extensive flight tests were made by the N. A. C. A. flight research staff to correlate the performance data obtained in the wind tunnel and in flight, and to make full-scale load measurements by recording the air pressure on the wings and tail surfaces during various high-speed maneuvers. This information is of exceptional value to designers because it is the first ever obtained at such high flight speeds. The N. A. C. A. test pilot who conducted the flight tests on the P–80 flew, in those tests, faster than any other human being, without, however, bothering to establish an accredited world speed record.

As airplane speeds approach the velocity of sound new problems are encountered because the character of the air flow over the wing, in obedience to natural law, changes abruptly at that speed and causes an important loss of lift and serious increase in drag.

Although the speed of any airplane can be increased through the simple use of more power, this method has serious limitations because constantly enlarging the power plant would increase weight and fuel consumption, and reduce useful load. The major objective of aerodynamic research, therefore, is to increase speed by reducing the drag of the whole structure. The ability steadily to achieve progress in this direction has distinguished aviation from other forms of transportation. For example, to increase the speed of an ocean liner 5 knots would require twice the horsepower. To increase materially the speed of railroad trains would require not only more power, but greatly improved roadbeds and rolling stock. Likewise, to increase materially the speed of automobiles would not only consume more gasoline and tires, and cause more rapid depreciation and more accidents, but would also require improved superhighways.

On the other hand, the onward march of aeronautical science shows increases in speed being attained with increased efficiency. For commercial aircraft this will mean increased speed at less cost per passenger-mile. And the more we learn how to improve the performance of the airplane, the greater and more practicable of accomplishment seems to become the need for further improvement. Of course somewhere in the course of airplane development there will come into the equation some limiting factor of diminishing returns, which will impose a practical limit on speed and size. But, if we judge the future from the past we will, as limits are approached, merely raise our sights a little higher and press for some further scientific development that will permit us to carry on.

As an example, the N. A. C. A. has demonstrated by recent research that flight at supersonic speeds, that is, above the velocity of sound, is possible with new types of power plants, and is conducting further research to make it an actuality.

Despite such development, large increases in drag will still occur at speeds between present flight speeds and supersonic speeds and represent one factor in hindering the immediate development of higher speed airplanes. It is essential that the drag of high-speed airplanes be made as small as possible. This problem is being intensively studied in high-speed wind tunnels and in flight, and considerable progress has already been made in the development of improved configurations not only for wings but also for fuselages, tail surfaces, cowlings, air intakes, windshields, and canopies.

The huge passenger airliners of the future may be powered by gas turbines of 5,000 to 10,000 horsepower per engine, using low-grade nonvolatile fuel. The gas turbine has many fundamental advantages over the reciprocating engine. It has, for example, fewer moving parts, is considerably lighter in weight and smoother in operation, and its relative efficiency is superior at high altitudes and at high speeds.

The N. A. C. A. is pushing research on the metallurgical and aerodynamic problems involved in the development of light, powerful compressors. Aircraft turbines will also require research to develop materials that will keep their strength at high operating temperatures.

The idea of a gas turbine has been known for 2,000 years and has been used for at least a score of years in other forms of transportation and in stationary power plants. Why has it only recently attracted such attention that it is hailed as the engine of the immediate future for aircraft? One reason is because since 1939 the N. A. C. A. has initiated and sponsored research by others in the development of new alloys having high strength at high temperatures.

German turbine development so far has been accomplished without using such high-temperature alloys, but this has required a complicated system of cooling which would not have been necessary had they the high-temperature alloys that have been developed in America. Another N. A. C. A. contribution was the improvement through research of the efficiency of supercharger compressors from below 70 to 85 percent and higher. These improvements enabled us, after a slow start, to gain the lead in this most important field.

The N. A. C. A. initiated steps for the development of jet propulsion in this country. Several years ago the N. A. C. A. formed a special committee on jet propulsion and got three large firms interested in accepting membership; namely, General Electric, Westinghouse, and Allis-Chalmers. As a result, each of these firms developed designs of jet propulsion units, two of which are now in production. The third was more expensive and seemed better adapted for post-war development and, therefore, has not been pushed.

Parallel with that activity, General Arnold saw what the British were doing with the Whittle engine and in conferences with our committee, it was agreed to get an American firm to manufacture the Whittle engine. The General Electric Co. was indicated as the most hopeful organization for that purpose and the Army made a contract with General Electric resulting in the production of the Whittle jet propulsion engine, first used in the Bell P–59 airplane.

Flowing directly from their original interest in the subject, the General Electric Co. went on further and developed the jet propulsion unit, now used in the Lockheed P–80 Shooting Star. In the P–80 we have something fully as good and perhaps superior to either the German or the British.

The P–80 has been studied by the N. A. C. A. to show where modifications could be made or must be made to obtain satisfactory performance at altitudes for both winter conditions and summer conditions.

There is no way to measure the value in war of superior performance of aircraft. It may mean the difference between winning and losing a war. The Battle of Britain in 1940 is a case in point. But the scientific research of the N. A. C. A. has also a tremendous economic value which can be measured in part in dollars and cents. Take for example the B–29 which has so rudely awakened the Jap leaders from their comfortable dream of world conquest by putting so many of their industries to sleep. That airplane is at present the great white hope of the Army Air Forces in the long-range bombing of Japan, although the Army has three new bombers coming along which are expected to be more powerful and capable than the B–29. They are the Consolidated B–32, virtually a parallel project to the B–29; the Northrop B–35, and the Consolidated B–36, which is larger than the B–29. The American people are putting into the B–29 program alone several billion dollars. Now what is the end product of that great expenditure? Transportation of bombs for long distances. Recent N. A. C. A. research indicates a possible fuel saving which could very materially increase the return upon that investment either in terms of dollars and cents, conservation of material resources, or by making more bombings sooner, to shorten the war. And that research cost only a few thousand dollars.

I could give you another interesting example of research as applied to the B–29. That airplane was designed for a certain gross load. Military necessity required that it carry a greater load. As a result, the engines had to produce more power, which resulted in their overheating. This in turn shortened their service life and sometimes caused failure in flight, and endangered the airplane and crew. N. A. C. A. research showed where the overheating was critical and pointed to a partial remedy which is being applied and is resulting in greater safety in operation and considerable lengthening of the service life of B–29's.

One of the most serious hazards to flying is ice formation. The N. A. C. A. exhaust heat deicing system for the prevention of ice formation on aircraft is being applied on several types of military aircraft now in production and has permitted safe flight in weather conditions which otherwise would have grounded airplanes. It is one of the greatest contributions to the safety of flying ever made.

In time of war the N. A. C. A. operates as a research and engineering facility of the Army and Navy. Its work is the most fundamental activity of the Government in connection with the development of aircraft and its relations with the military services and with the aircraft manufacturing industry are constant and intimate. It is this teamwork that has made possible the great development of America's air power in this war. The results of N. A. C. A. research will continue to be reflected in the steady improvement in the speed, range, carrying capacity, stability, controllability, maneuverability, ceiling, and rate of climb, and, in short, in the general military effectiveness of America's aircraft.

One of the outstanding lessons the present war teaches is that the problem of insuring America's future security is inseparable from the problem of keeping America first in the air.

N. A. C. A. research on military problems will be largely applicable to commercial and private aircraft after the war, with this significant distinction: In military aircraft superior performance must be achieved, if at all possible, even at the expense of lowered safety and economy. In the development of civil and commercial aircraft the research emphasis must be primarily on safety and economy of operation.

Following the war the world will enter the aerial age about which men have dreamed. Air transportation to all parts of the world will shrink time and distance and bring the peoples of the earth closer together in forceful emphasis on the fact that we all live in one world. Underwriting America's future in the aerial age, and underwriting America's investment in such future preparedness in the air as will effectively preclude attack, is its liberal support of research in aeronautics. America's aeronautical research policy is thus, in the military sense, an insurance policy on the very life of the Nation, and in the commercial sense it is a sound investment assuring America a position in the forefront of progressive nations when the progress of civilization is resumed after the war.

There is one unique wind tunnel I would like to speak about. The N. A. C. A. altitude wind tunnel has just recently been placed in operation at the Cleveland laboratory. That extremely important equipment has been the most difficult project ever attempted in the realm of aeronautical research anywhere in the world. In an air stream 20 feet in diameter, flowing 500 miles per hour, there are maintained altitude conditions of temperature and density existing at elevations up to 50,000 feet, i. e., about 67° below zero (Fahrenheit) and a pressure about one-ninth of that at sea level. And this despite the fact that the power output of the engine under test and the energy of an 18,000-horsepower motor to create the wind must be absorbed as heat by the rarefied air stream while the temperature is kept to 67 below. The N. A. C. A. altitude wind tunnel is the only place on the surface of the earth where the performance of jet-propulsion engines can be investigated under altitude conditions. Without it many months and the running of dangerous trials would be needed to obtain flight data that can be obtained with ease and safety in the altitude wind tunnel in a very short time. It should give America a definite advantage in the development of jet-propulsion airplanes.

Whereas a year ago only a few types of airplanes in all the warring nations could attain a speed in level flight of 400 miles per hour, the United States, England, and Germany now have airplanes in the 500 mile-an-hour range. Now N. A. C. A. scientists, and no doubt those of other nations as well, are preparing to enter the entirely new field of aerodynamic problems involving flight of aircraft and of guided missiles at speeds above the velocity of sound. In order to explore these possibilities the National Advisory Committee for Aeronautics is actually constructing new supersonic wind tunnels having airspeeds much faster than the speed of sound, ranging up to the neighborhood of 2,000 miles per hour.

N. A. C. A.'s John Stack, chief of the Langley laboratory's compressibility research division, and recognized authority on high-speed problems, indicated in the last annual Wright brothers lecture the possibility within a few years of aircraft traveling westward at clock-stopping speeds. This would mean a speed at our latitude equaling the earth's speed of rotation on its axis and giving the effect of keeping the sun in a fixed position, or, in other words, regular air transportation leaving Washington, say, at 12 noon and arriving at San Francisco at 12 noon the same day!

Resolution of American Farm Bureau Federation

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I herewith insert a letter from Hon. Edward A. O'Neal, president of the American Farm Bureau Federation, and the resolution endorsing the proposed International Monetary Fund and International Bank for Reconstruction and Development, adopted at the twenty-sixth annual convention of the American Farm Bureau Federation, December 14, 1944:

AMERICAN FARM BUREAU FEDERATION,
Washington, D. C., March 23, 1945.

Hon. BRENT SPENCE,
Chairman, Committee on Banking and Currency, House of Representatives, Washington, D. C.

MY DEAR CHAIRMAN SPENCE: I am sorry that as yet I have not had an opportunity to appear before your committee relative to the Bretton Woods proposals, but I appreciate your courtesy in promising to hear me at a later date.

In case you have not seen the resolution of our national annual meeting on this subject, I am enclosing a copy of the same. I hope you will read them and give them your earnest consideration.

As you will note, the American Farm Bureau Federation favors the participation of the United States in the proposed international monetary fund and the proposed international bank for reconstruction and development, as outlined in the Bretton Woods monetary conference.

With best wishes, I am

Sincerely yours,

EDW. A. O'NEAL,
President.

RESOLUTION ADOPTED AT TWENTY-SIXTH ANNUAL CONVENTION OF THE AMERICAN FARM BUREAU FEDERATION DECEMBER 14, 1944

2. INTERNATIONAL COOPERATION ON MONETARY PROGRAMS

The American Farm Bureau Federation favors the participation of the United States in the proposed International Monetary Fund and the proposed International Bank for Reconstruction and Development, as outlined in the Bretton Woods Monetary Conference.

In adopting these new international institutions, it should be realized that they are not substitutes for sound domestic fiscal policies. Unless sound domestic and foreign trade policies are adopted by the nations of the world, no plan of international monetary stabilization or monetary cooperation will succeed.

The International Monetary Fund and the International Bank should not be used as relief agencies in the post-war period, but should be conducted on a business basis, leaving relief grants to other agencies of government. In adopting this plan, it should be clearly understood that the United States will not provide funds to perpetuate uneconomic trade practices or unsound monetary policies through the operation of the stabilization fund. Foreign trade must be developed upon a basis of the exchange of goods and services among the nations of the world, and not upon the basis of extending credits.

These proposed international institutions should be operated in such a manner as to promote stability in the general level of prices within the various countries of the world.

Since the proposals by necessity leave wide discretionary powers to the administrators of the two institutions, the individuals chosen to operate these institutions must be high-type men, representative of the various segments of our economy, experienced in international affairs and free from political domination.

In Justice to Scrooge

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under permission to extend my remarks in the RECORD, I am including an article by Samuel B. Pettengill, a formerly highly respected and valuable Member of this House, entitled "In Justice to Scrooge," as follows:

IN JUSTICE TO SCROOGE

Scrooge in his countinghouse. Old Scrooge. I have always been grateful to Charles Dickens because he made me hate this grasping clutching old man.

I reread the Christmas Carol the other day. I pondered over one passage I had never thought of before. It tells of Scrooge when he was a boy and how fond he was of his little sister. If he loved her, he might have loved another fellow's sister also, and grown up to be the kind of man whom Dickens gave us in the last page.

Yes; Scrooge had been young. He wasn't always Old Scrooge. Once he had been Young Scrooge—carefree, happy, full of hope, and enjoyed a hot grog with the other young bloods on a frosty night.

Why did Young Scrooge become Old Scrooge? What happened to curdle Young Scrooge into a miserable old misanthrope?

I resolved to find out.

It was bleak and cold when I reached his door—the same biting weather Dickens described. Probably the old miser was in a worse humor than ever. The knocker on the door bit my fingers with its frost.

Getting no response and thinking the old duffer might be ill, I opened the door. There he was bent over his counter, a large sheet of paper in front of him, dozens of smaller sheets scattered about covered with scratches from his quill.

I recognized the large sheet. It was an income-tax return.

With a start he realized there was someone in the room. Without turning, he snarled, "Get out."

"Mr. Scrooge," I said.

"Get out," he screamed, reaching for a huge iron inkpot.

"Will you answer one question first? What do you think of Charles Dickens?"

I saw I had him. His face grew purple. The veins swelled on his forehead.

"Dickens!" he hissed. "I don't think anything of him. That libeler. That ignoramus. I'll fix him. I'll sue him. I'll take him to court. Wait till I get through with him. Thinks he's smart. But what does he know? Nothing. Nothing, I say. Marley said the same thing. He knew what it was to be in business these days.

"Listen," he shouted, "did Dickens ever make out an income-tax report? Not he. That would have taken the grin off his face. He wouldn't have gone around caroling everybody if he had.

"See that pile of papers filling the Tank? Questionnaires! Did Dickens ever fill out a questionnaire? Just one? Not he. Who reads 'em? Nobody. Who fills 'em out? Scrooge. They killed Marley with the damned things. Killing me, too.

"Rules and regulations! And directives! Ha! That's a new one! Had to rent another room to put 'em in. 80 volumes, 80,000 pages, 80,000,000 words! Did this pansy-smelling Dickens ever decipher 80,000,000 words? No. He spends his idle hours telling what soulless grubbers Scrooge and Marley are.

"Yeh, Scrooge and Marley. Did Scrooge and Marley ever leave a debt unpaid? Did they ever beat a rent bill? Did they ever cost the Crown a shilling? Did they ever live in a poorhouse? No, not yet. Not yet! All we do is pay the taxes to build the jails and poorhouses. For that we get kicked around. Slandered. Villified.

"Miser, huh? Who's going to scatter his dough with new taxes every year and God knows how much anyone will have left?

"Did this Dickens dandy ever figure how long it would take him to get into a poorhouse if his profits doubled every year? No.

"So he goes about saying, Cheerio, cheerio, cheerio. What's there to cheer about, I want to know? No cheers for a business man. All he gets is a kick in the pants.

"Had a row with Bob Cratchit over his pay. One thing. Cratchit's been here 24 years and never missed a pay check. That's something, ain't it? Somebody has to say, No, once in a while to keep ahead of Morgenthau. No-one ever paid his help with a tax receipt, did he?

"Bob and I would have settled it. But they send a smart aleck out from Washington—a thousand miles—somebody born in Russia! Peter the Great! Bah!

"Yeh, Santa Claus. Who's going to pay for Santa Claus? The politicians? No, Scrooge and Marley and Bob Cratchit. They'll pay for Santa Claus all right when we get over the fool notion that we can spend ourselves rich. Humph! Rot! Bah!

"Who made the assets for the politicians to mortgage, anyway? Scrooge and Marley, and thousands like us. They leave us the debts while they skim off the political credits! Do they ever worry about a debt? Never. Onward Christian Soldiers! Every Scrooge a crook, every politician a hu-man-i-tar-ian, ha—one of those fellows who goes about doing good with other people's money. Sir Galahad! Lady Bountiful! Fair Harvard! Lucky to have a rich old man, ain't it?

"Scrooge and Marley started from scratch. The competition was tough. No silver spoon for us. We're not perfect. We might have done more. When I was young I thought of a lot of things I wanted to do.

"Take Bob Cratchit. Faithful fellow. Late only once in his life—the day after Christmas, too. He's got a crippled boy. I never had a boy. Nor nobody. Nobody but Marley. And Marley's dead. Now I'm an old man—Old Scrooge. I'd like to do something for that boy and Bob, too.

"But the snoopers and wasters have got to get off my neck first. Did Dickens ever write a carol about them?"

He got up, hobbled to the wall and tore a leaf from the calendar. He looked. January 1944.

Turning, I thought I saw a faint toothy grin on his gnomelike face.

"Tell this blighter Dickens if he'll write a book about bureaucrats, I'll buy a copy! And dismiss my suit!"

SAMUEL B. PETTENGILL.

NEW YEAR'S, 1944.

Broadcasting Proceedings of Congress

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. COFFEE. Mr. Speaker, under leave to extend my remarks I include therein a resolution passed by the King County Democratic Central Committee in my home State of Washington. I wish to preface the resolution by calling the attention of my colleagues to the fact the Joint Committee on the Reorganization of Congress is giving careful consideration to the proposal of which I am the sponsor, namely House Joint Resolution 89. The resolution follows:

Resolution requesting that the proceedings of Congress be broadcast so that the people will understand clearly the functions of democracy in the making

Whereas the affairs of Congress and of government in general are vital to every citizen; and

Whereas no present method exists to provide full information to the average citizen about the real happenings in our Congress; and

Whereas radio is the simplest and most effective medium for communicating with every American in every part of the country; and

Whereas New Zealand adopted a program of short-wave broadcasts of the proceedings of its parliament, and has successfully demonstrated that full knowledge by citizens of the affairs of government stimulates and strengthens the democratic system; and

Whereas our Congress could lease radio time from one or more networks, several important and powerful stations, or broadcast by shortwave all important debates, excepting such matters as might jeopardize national security during the war: Now, therefore, be it

Resolved, That we propose and urge upon Congress enactment of the necessary measures to establish a Nation-wide broadcast of its proceedings; and be it further

Resolved, That a copy of this resolution be sent to the Members of Congress, to the press, and to the legislative sponsors.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. D'ALESANDRO. Mr. Speaker, yesterday I had the honor of being present at the White House with 100 mothers of servicemen, Americans of Lithuanian descent, representing practically every State in the Union, who were received by Mrs. Roosevelt and who presented a petition of 1,000,000 signatures, requesting President Roosevelt to help Lithuania regain her independence. There were many Gold Star Mothers among them.

Lithuanians, ethnically, are neither Slav nor Teuton. Therefore, any allotment of her territory to, or subjugation by, any of her neighbors would prove to be a disturbing influence upon the future peace of Europe.

Just as Americans of Lithuanian extraction contributed to the progress of the United States, so also, it is an established fact, did the Republic of Lithuania contribute to the cultural progress of Europe, a right which she has been deprived of by her aggressive neighbors. During her period of independence she justified the trust placed in her and proved to the civilized world her capacity to properly govern herself, true to the established principles of democracy.

It is my sincere hope that the delegates to the San Francisco Conference will adhere to the principles of the Atlantic Charter, so that Lithuania and other small nations will retain their rightful place in the sun.

Mr. Speaker, under unanimous consent to extend my remarks, I include in the RECORD a copy of an address by the Minister of Lithuania, which was made last night at a banquet to further the cause of Lithuanian independence:

ADDRESS OF HON. POVILAS ŽADEIKIS, ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY OF LITHUANIA

Mr. Chairman, distinguished Members of Congress, ladies, and gentlemen, we are gathered here tonight in an atmosphere of friendly concern over the freedom of small nations in general and of Lithuania in particular. Among us is a group of Lithuanian American mothers of servicemen. Our thoughts turn to those who are at this very moment performing military duties, in circumstances very different from ours here tonight. I have in mind the gallant American soldiers. To many nations of the world, and also Lithuania, they are the living symbols of the ideals of freedom and democracy, since they are fighting not only for the honor and security of their native land, America, but also for the liberation of enslaved nations of the world.

These American mothers of Lithuanian descent have come to Washington to present a petition bearing hundreds of thousands of signatures to their government because—and I quote from the petition—"they are shocked at the announced intention of Soviet Russia to deprive Lithuania of her freedom and independence." They have respectfully requested their Government to aid in the restoration of the independence of the land of their forefathers—Lithuania. Though each of them is busy with her own tasks and duties as citizens, they nonetheless find time to make such a journey to speak in Lithuania's defense.

I take this opportunity to thank these Lithuanian American mothers of servicemen, and all Americans of Lithuanian descent, for the moral and material support they have given and are giving to the cause of Lithuania's freedom. I would like to say to them in the tongue of their ancestors: "Aciu, aciu Jums labai, kad nepamirsote savo senosios tevynes Lietuvos kurios ateityje matosi begaliniai pavojai."

Indeed, as I have just said in Lithuanian, my country finds herself in deadly danger at the present time. Permit me to open a few pages in the book of Lithuanian realities and hopes for the future.

Though Lithuania declared her neutrality early in 1939, she fell a victim to aggression, and during 5 years of World War No. 2 has seen three foreign occupations. Huge armies of warring Nazi Germany and Soviet Russia

have passed five times over Lithuania. The terrific devastation caused by modern, highly mechanized warfare can readily be imagined. Whole areas of Lithuania have been completely depopulated. Executions and deportations to Siberia and into the interior of Germany are frightful and spell extermination. The cultural gains and material progress achieved by the diligent work during the period of 22 years of independence have been swept away.

By October of 1944 Soviet armies had wrested Lithuania from the Germans. Theoretically Lithuania could be considered among the liberated countries. But the treatment of the peaceful civilian population by the Soviets shows that they are not acting as liberators. Today Lithuania is in the throes of a new Soviet occupation. After 3 years enslavement by the Nazis comes Soviet Russian domination. Though news from Lithuania is scarce because of a rigid wall of Soviet censorship, and no foreign correspondents, observers, or representatives of relief agencies are permitted, we know that Lithuania is being ruled from Moscow by the system of a puppet government. There are indications that deportation of Lithuanians is now proceeding on a large scale. Soviet police are cross-examining the entire population, and compiling lists of all men and women who do not sing the praises of communism for deportation to Siberia. No one is sure of their rights or their future. The people are simply frightened, and those who succeed in escaping abroad are considered lucky. The new wave of executions and deportations certainly dispels the myth of Soviet propaganda that 99 percent of the population once voted in the Soviet's favor. There are no valid arguments that would justify Soviet claims to Lithuania. On the other hand, the Soviet Union is under moral obligation not to seek territorial aggrandizement.

It is argued that small nations are not able to develop a sound economy and a decent standard of living within the framework of national independence. A look at Lithuania's record of 20 years of post-war independence will prove the contrary. Lithuania organized a successful agricultural economy on a sound cooperative basis. Her budget was uniformly balanced. There was no unemployment.

The people are convinced that the restoration of national independence is the only adequate compensation for the suffering of the people and the only sure remedy to raise Lithuania from the ruins left by war and aggression. The Lithuanian people reject the Moscow-made liberation. They demand the termination of the present Soviet domination, and they pray for the restoration of their country's independence. Lithuania bases her hopes for a happier future on moral law; she tenaciously clings to the idea that, after all, right and not might alone will rule the destinies of mankind.

ADDRESS OF ANTHONY A. OLIS, PRESIDENT, THE AMERICAN LITHUANIAN MISSION

The American Lithuanian Mission is strictly an American organization. We are here as Americans who are proud of our Government, proud of our representatives in that Government, and we are particularly proud and grateful to the many United States Senators and Congressmen who honor us this evening by their presence. We also wish to thank the many members of the press and radio who are here tonight representing newspapers and broadcasting outlets from many parts of the United States.

These are critical days because of the war and we would not have imposed on your valuable time were not the purpose of this gathering related to the war effort and the winning of a permanent peace. We are concerned about the rights of small nations to self-determination after the war is won. We are concerned because it is our conviction that there cannot be a permanent peace unless people in both small and large nations are free from political as well as economic bondage.

Now, we understand that there are many problems to be solved and that the length of the war has increased the complexity of these problems. We understand also and we fully subscribe to America's foremost purpose that we must first win a military victory, but under the heavy pressure of the many burdens of war little time has been available for a restatement of the principles which guide us in this conflict. We say we want a permanent peace, but at the same time there has been a tendency to avoid discussion of the principles that should guide us to prevent aggression against small nations and to prevent the very causes which led us into the present war. There has been much talk in Washington that we will have to make concessions, that we will have to sacrifice certain principles, that some small nations and their innocent people are bound to get hurt in the setting up of our post-war world.

It is the view of the American Lithuanian mission that there is not only no need for making concessions or sacrifices of our principles but that it would be fatal to a permanent peace to do so, and it is with a sincere desire that we as American citizens, as constituents, have called this gathering this evening to voice our views to our representatives in our Government upon this vital war issue.

The Atlantic Charter, proclaimed by President Roosevelt and Prime Minister Churchill on August 14, 1941, sets forth that one of the principles for which we are fighting the enemy is the right of small nations to self-determination as independents. The charter states:

"Second. They desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned.

"Third. They respect the right of all peoples to choose the form of government under which they will live, and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

In a speech on September 12, 1943, Secretary of State Cordell Hull reaffirmed these principles in declaring:

"All peoples who, with a decent respect for the opinions of mankind, have qualified themselves to assume and to discharge the responsibilities of liberty are entitled to its enjoyment.

"Each sovereign nation, large or small, is in law and under law the equal of every other nation.

"All nations, large and small, which respect the rights of others, are entitled to freedom from outside interference in their internal affairs."

No people have a stronger claim to the right of self-government and independence than do the 3,000,000 people of Lithuania. The Republic of Lithuania was established on February 16, 1918, as a modern nation under a constitutional government. However, from the earliest times the Lithuanian people had developed their own language similar to the ancient Sanskrit, their own culture and traditions. They are not related to the Russians or to any of the other Slavic peoples, but descended from an ancient people of a distinct nationality. It is therefore not surprising that they desire independence as self-government as a means by which to preserve the ideals near and dear to them, their culture, language—in short, their way of life.

During its days of independence since the last war, Lithuania demonstrated that it had a decent respect for the opinions of mankind and by its progress in its economical and cultural life it demonstrated that its people were qualified to assume and discharge the responsibilities of independence. In light of the above it would seem therefore that on the basis of justice and right, and of the principles announced in the Atlantic Charter and former Secretary of State Cordell Hull there should be no question about the restoration of the independence of Lithuania and yet, though nearly everyone agreed that the rights of small nations must be protected in the post-war world, there is some hesitation on the part of some of our representatives in government to openly voice their support of these principles as to the Republic of Lithuania. They say: "What about Russia? Russia intends to incorporate Lithuania into the Soviet Union. Lithuania was a part of Russia before the year 1918. Lithuania, they say, was torn away from Russia in the closing days of the last war when Russia was helpless because of internal revolution."

Well, the answer to that question is that historically Lithuania was not a part of Russia because if we go back to the fifteenth century in the days when Lithuania was a nation with borders from the Baltic Sea to the Black Sea, Russia was a part of Lithuania. Furthermore, it is not anti-Russian to maintain that Lithuania deserves to be an independent nation because Russia has heretofore solemnly agreed and covenanted that it would respect the sovereignty of the Republic of Lithuania.

These agreements were made, not at the time when Russia was helpless because of internal revolution but in the years when the Soviet Union had a strong government. On September 28, 1926, a nonaggression treaty, which is still in effect, was entered into between the Republic of Lithuania and Soviet Russia. This treaty was extended to December 31, 1945. The language of the following articles of said pact is as follows:

"Article 2: The Republic of Lithuania and the Union of Soviet Socialist Republics mutually undertake to respect in all circumstances the sovereignty and territorial integrity and inviolability of each other.

"Article 3: Each of the two contracting parties undertake to refrain from any aggressive action whatsoever against the other party.

"Article 5: Should a conflict arise, and if impossible to liquidate it in a diplomatic way, both contracting parties agree in such case to nominate conciliatory commissions."

On October 10, 1939, Lithuania and Russia entered into a mutual assistance pact; article 7 reads:

"The realization of this treaty must not infringe the sovereign rights of the contracting parties, especially the structure of their state, their economic and social systems, military instruments, and altogether the principles of nonintervention of one state in the internal affairs of another state."

Soviet Russia is our ally and we have a full right to assume that our ally will keep its promises and its treaties and therefore it is not anti-Russian to take the position of the independent Lithuania which Russia solemnly agrees to respect in all circumstances by its treaty which by its terms is still in effect to December 31, 1945.

The State Department of the United States has continued to recognize and still recognizes the Lithuanian Minister to the United States. Its position in this matter is that the Republic of Lithuania is an independent nation.

Americans of Lithuanian descent know from personal correspondence with their friends and relatives in Lithuania that the people of this little country do not want partial autonomy under the domination of any power whatsoever, but rather do they want the restoration of an independent Lithuania.

The Yalta Conference has suggested the manner and method by which small nations may elect a free and democratic government. Lithuania is one of the small nations which should have the same opportunity to have

a plebescite wherein candidates of all democratic parties in Lithuania may have the right to submit their candidacies to the electorate. The election should be under the supervision of an Allied commission with representatives of all of the three Allied Powers to assure an election free of outside interference.

These views are held by a large portion of the citizens of the United States and should be represented by delegates to the San Francisco Conference. If this is done and the principles heretofore voiced in the Atlantic Charter are supported in the San Francisco Conference and the peace conference to come after the war, the rights of small nations to self-determination will be protected and in this way aggression against the small nations will be prevented and a permanent peace will be assured.

Joint Resolution of the Legislature of the State of Illinois

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

STATE OF ILLINOIS,
OFFICE OF THE SECRETARY OF STATE,
Springfield, March 16, 1945.

Hon. MELVIN PRICE,
Representative in Congress,
Washington, D. C.

MY DEAR CONGRESSMAN: I am enclosing herewith copy of House Joint Resolution No. 10, as introduced by Representatives Berman, McCabe, Skyles, White, and Sullivan.

Very truly yours,
EDWARD J. BARRETT,
Secretary of State.

House Joint Resolution 10

Whereas Senator SCOTT W. LUCAS has introduced in the Seventy-ninth Congress Senate Joint Resolution No. 7, providing for the establishment of a Commision to select a site and design for a memorial to the contributions of members of all religious faiths to American military and naval history; and

Whereas this memorial would symbolize the fundamental American spirit of tolerance and would perpetuate the unselfish idealism which prompted our forefathers to enunciate the doctrine of equality and which ever since has influenced our Nation's political concepts; and

Whereas it has been repeatedly demonstrated during the present international conflict, as well as in previous wars, that devotion to country is not the peculiar attribute of any particular creed but is common to all; and

Whereas a fitting tribute to the memory of those who so nobly have championed the cause of democracy and the dignity of the individual against the hate-inspired forces of totalitarian bigotry and greed should be erected to proclaim for all time our belief in the brotherhood of all men: Therefore be it

Resolved by the House of Representatives of the Sixty-fourth General Assembly of the State of Illinois (the senate concurring herein), That we endorse the proposal contained in Senate Joint Resolution No. 7 and that a copy of this preamble and resolution be delivered to each Member of Congress from Illinois.

Adopted by the house, January 30, 1945.
HUGH GREEN,
Speaker of the House of Representavites.
FRED W. RIEGG,
Clerk of the House of Representatives.

Concurred in by the senate, March 13, 1945.
HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Future Government of Poland

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. CLASON. Mr. Speaker, on other occasions I have spoken in the House in behalf of the people of Poland. They were the first to offer organized resistance to the Nazi military forces. Their men have fought heroically in the armies of Great Britain, Russia, France, and the United States since their country was overwhelmed.

Today the United Nations are endeavoring to determine a peace formula which will insure military and economic security for all the peoples of the world for generations to come. Most Americans desire that the principles laid down in the Atlantic Charter in August 1941 be the bases for such treaty or treaties as may determine the relations between nations after the present war. In previous speeches on this subject, I have told you of my views and I have urged that the final determination of the future government of Poland and of the future boundaries of Poland be based upon the application of the principles of the Atlantic Charter. In view of the message sent to Congress by President Roosevelt on August 21, 1941, and deposited in the files of the Clerk of this House, it is difficult to understand why both Prime Minister Churchill and President Roosevelt have sought to disclaim the authenticity of the Atlantic Charter and to abandon it as a joint declaration on their part of the principles to be followed by them in seeking a just and equitable world arrangement after the war.

It is significant to note that the people of the United States have accepted the Atlantic Charter as a formal declaration by President Roosevelt and Prime Minister Churchill of principles to be followed by the representatives of Great Britain and the United States in any treaty negotiations. The people of Massachusetts desire that the problems of Poland shall be solved by application of the cardinal principles enunciated in the Atlantic Charter. In resolutions recently adopted by the General Court of the Commonwealth of Massachusetts and memorializing the Congress of the United States to take official cognizance of the inherent right of the people of Poland, as well as the people of other small nations, to determine the form and kind of their own government, the members of the senate and the house of representatives have expressed their concern over present conditions in Europe. They call attention to the fact that the territorial boundary lines of the European nations are a matter of universal concern. They express the view that boundaries should be subject to determination by conferences of all the United Nations rather than through the decision of one, two, or three individuals even though they are the heads of governments.

These resolutions, contained in a memorial to Congress, come at a significant time since the people of Poland apparently will be refused representation at the conference in San Francisco which will commence next month. The General Court of Massachusetts respectfully urges the Members of Congress to take such action as may be necessary to insure unto the people of all small nations all of the rights and privileges enunciated in the Atlantic Charter.

I believe that these resolutions which have been set forth in full on page 2519 of the CONGRESSIONAL RECORD of March 21, 1945, are worthy of the attention of all Members of Congress.

Naval Officer Comments on Proposal To Establish West Point for Diplomats

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mr. COFFEE. Mr. Speaker, in the October issue of the Coronet magazine, an article, written by me, was published entitled "Why Not a West Point for Diplomats?"

The proposal set forth in the article evoked much comment from men in the armed services. Among the most interesting of the thousands of letters received by me was one from a naval officer, whose name I will hold in confidence.

I commend the reading of this letter to those interested in the State Department and the need for its improvement.

The letter is as follows:

FEBRUARY 28, 1945.

Hon. JOHN M. COFFEE,
Member of Congress, Washington, D. C.

DEAR MR. COFFEE: I have just read your most interesting article in Coronet Magazine, titled "Why Not a West Point for Diplomats."

As a former employee of the Department of State (8 years), a former aspirant for a commission as a career—Foreign Service officer—and above all as an American intensely interested in the well being of his beloved country and in international affairs, I most heartily endorse your views.

It is my earnest hope to corroborate at least to some small degree, from actual first hand observation and experience some of the main reasons why this institution suggested by yourself should be established.

Before I cite actual examples, let me explain that I am not seeking a Foreign Service career, nor do I have any axe to grind over seeming past failures, but only an honest desire to see that this Nation establish the most enlightened diplomatic corps under the sun.

In the first instance I will cite briefly my own experiences in quest of a Foreign Service appointment, which will illustrate the difficulties confronting the average applicant under the prevailing system.

I transferred from the United States immigration border patrol at El Paso, Tex., to the diplomatic mail section, United States Department of State, Washington, D. C., in June 1930, in accordance with civil-service regulations, at a substantial financial sacrifice, for the sole purpose of attending Crawfords' Foreign Service School, in preparation for a diplomatic and consular career. This school had been highly recommended to me by consular officers on the Mexican border. Moreover, fellow students with master's degrees from Georgetown foreign-service school, Georgetown University, and other outstanding universities have since told me that they actually learned more about foreign service in 5½ months at this school than they had acquired in 5 years at the foregoing institutions. Mr. Angus McDermott Crawford has since passed on, but for your information he was a former college professor and Foreign Service officer.

The tuition at the above-mentioned school amounted to $75 per month. Practically the whole group attending this institution, with the possible exception of myself, were the sons and daughters of Foreign Service officers, Army, Navy, or Marine Corps officers, relatives of high-ranking politicians, and in general of considerable wealth, some students being worth $3,000,000 to $10,000,000 in their own right, but all seeking a $2,500 per year position.

The Foreign Service examinations were conducted for the Department of State by the Civil Service Commission semiannually to fill approximately 30 to 35 billets. The papers were later farmed out to various colleges and universities for grading. On the two entrance examinations which I took, fully 99 percent of the appointees were selected from the group referred to in the preceding paragraph, and in no instance was the son of Foreign Service officer, Army, Navy, or Marine Corps officer rejected. Nor do I recall any graduates from a certain university failing. There were a number of young women found disqualified for reasons described on a subsequent page, and a small number of wealthy or political proteges, members of the party out of power, that failed to receive an appointment, all of which illustrates that candidates possessing ability and merit alone, without political prestige, wealth, or relationship were barred by a closed door.

The examinations were divided into three phases, consisting of a written examination lasting 3 days, covering a wide variety of subjects, such as international, maritime, and commercial law; political economy; world history; economic geography; language and arithmetic (mainly foreign exchange and bookkeeping) and others. Next was the oral language examination. The final hurdle consisted of an oral examination conducted by a board of five members, headed by the then Assistant Secretary of State Wilbur Carr (since deceased), and included a representative from the Civil Service Commission. In order to receive an appointment, you were required to attain an average of 80 on all three examinations. Consequently, if the board did not vote in your favor, you were automatically given a stock mark of 60 on the oral examination, thereby necessitating an impossible average of 100 percent on the other two examinations. Needless to say, I was awarded the standard mark of 60, even though I answered correctly every question propounded by the board.

Since I was employed by the Department of State, I made no effort to obtain political endorsement; in fact, it was understood that the Department frowned upon such procedure, but when I discovered that my name was not included in the list of successful candidates I requested a friend high up in political circles to ascertain from Assistant Secretary Carr, the reason for my failure of appointment. I was not given an answer but my friend was told to inform me to take the next examination in the fall of 1931, which I did. I received an 80.59 on my written examination which was graded by various college professors throughout the Nation, and an 89 on my oral Spanish, from a Foreign Service officer who had attended the University of Mexico and was a specialist on languages, but again to no avail.

I was naturally anxious to discover the reason for the second defeat especially after having been advised to take the examination a second time, so that I might correct any faults or traits of character, and although I was employed in the same Department and in the same building, Assistant Secretary Carr was so inaccessible that it required 4 years to obtain an interview with him, which even then had to be arranged by a friend outside of the Department.

During the interview Mr. Carr averred that it was the lack of academic training although I had graduated from high school, completed two business colleges, two naval aviation schools (one with flight training in balloons), one Spanish school, and Crawford's Foreign Service School. However, Mr. Carr was instrumental in placing me in a better position in the Department, where I was reviewing, editing, censoring, and grading reports submitted by Foreign Service officers on commercial, economic, and political matters. Many of these officers had attained the rank of class I Foreign Service officer, with salaries of $10,000 per year, although my salary was $2,000 per annum. In addition, he, the Assistant Secretary, later recommended me for admission to the United States district court and United States Court of Appeals for the District of Columbia, upon graduation from law college and passing of the bar examinations, and I was admitted to those courts and later the United States Supreme Court.

The wide disparity and contrast between the procedure following by the oral examining board in the case of unsuccessful and successful applicants can best be shown by a few examples. For instance, the board discovered that one young man had the same name and was a collateral descendant of a famous American, and although he had only averaged 75 on the written and oral language examinations, he was given a 95 on the oral examination just to make certain that he would pass. This same individual was shortly thereafter serving as "chargé d'affaires" ad interim in a friendly nation to the south of us, in the absence of the Ambassador who was on leave in Paris, when a political defeat at the polls caused an uprising ,and this young man picked the "wrong horse," thereby estranging this Nation from its oldest and best friend south of the border, until the Ambassador could return to his post and repair the damage done.

One of my fellow students worth $3,000,000, who married the daughter of a minister representing a foreign nation at Washington, came to me a week before the written examination was held and requested the loan of my notes consisting of 650 typewritten pages, in order to have them copied by a public stenographer. The Under Secretary of State at the time was a fellow alumnus of Harvard with my friend, and told the minister's wife (my friend's mother-in-law) that they wouldn't be able to appoint her son-in-law at that time, but they would in the next group some 6 months hence. Needless to say he was appointed. This same friend later told me that he wouldn't have passed the examination without my notes, and when he returned the notes he sent me a check for $40.

Another fellow student, a Harvard graduate and Rhodes scholar worth $10,000,000 was dining regularly with an Assistant Secretary of State and other high dignitaries, and naturally he received an appointment, but was later released from the service for trying to promote a barter system between this country and one of our neighbors.

Still another member of my class, the son of an Army officer, was informed that he had failed both the oral and physical examinations. He immediately contacted the protégé of a certain western Senator, a powerful member of the Senate Foreign Affairs Committee, and told him of his misfortune. The protégé notified the Senator, who was back with his constituency, whereupon the Senator called the State Department by long distance telephone and threatened to denounce the whole affair on the floor of the Senate if the young man was not appointed. Apologies and an appointment followed shortly thereafter.

Notwithstanding the fact that there were a number of very intelligent young ladies in my class, including the niece of a former Vice President of the United States, and a daughter of America's outstanding Air Corps general and prophet, among others, they were all denied appointment, simply because one of our two lady "Foreign Service officers" had married a British vice consul at Bagdad just prior to the examination. It is common knowledge that a considerable percentage of our male diplomats are married to foreigners. In passing, the futility of women seeking appointment to the Foreign Service is best illustrated by one of the questions asked one of the young women by the oral examining board, to wit, "Do you think that women can do anything that men can do?" Upon an affirmative reply, the interrogator said, "Well, why didn't you attend West Point?"

While admittedly these are only a few isolated instances, which could be multiplied, nevertheless they do present some idea of the system involved in the selection of career Foreign Service officers.

In addition there are numerous instances where former automobile manufacturers, meat packers, and other magnates have been appointed ambassadors and ministers direct from civilian life, without training or experience, allegedly for a consideration, namely a contribution to the slush fund of the party in power (reputedly running as high as $150,000 for an ambassadorship), be it Democrat or Republican. In fact, one such individual was appointed to a Central American nation, and he had the misfortune to run into a native oxcart, thereby damaging the oxcart to the extent of $3.50, and notwithstanding the fact that the accident was solely the fault of the American Minister, he requested reimbursement from the State Department for damage to the oxcart, because the accident occurred in the line of duty.

The fallacy of the present system of selection, which relies almost entirely upon obtaining its foreign-service representatives from the wealthy, aristocratic, political patronage group, etc., rather than a cross-section of all classes, suggested by yourself, is in my opinion, that the majority of this group does not truly represent nor reflect the American people as a nation. Hence, the misconceptions formed about us by other nations.

Let it be thoroughly understood that I have no individual battle to fight nor quarrel to pick with any class or group of people, as I have friends in all classes, but I do strongly

feel that the selection of Foreign Service career personnel should include all red-blooded Americans, and not just a select few. In other words the same opportunities would remain as before, to worthy and meritorious individuals of wealth or social position, based upon their ability, but not to a discriminatory or exclusionary degree.

I had an opportunity to attend an address given by Assistant Secretary Carr before the Foreign Service School of George Washington University, Washington, D. C. During the questions-and-answers period, he was asked, "Is it essential to have a private income in order to serve in the Foreign Service?" The reply was an immediate "yes," which might shed some light on the policy motivating the selection of Foreign Service applicants. However, I have not seen nor heard of any requests by State Department officials to correct such a situation, if it does exist, possibly because it might upset the status quo on the method of appointments. As a taxpayer I am in sympathy with a sound national economy, but if an investigation by the proper congressional committees should disclose the necessity for a revised wage scale to accomplish the desired results envisaged in your suggestion, and thereby eliminate personal fortunes as a prerequisite for appointment in favor of recruiting only the best available talent to promote a more thorough understanding between nations and thereby aid in the maintenance of the peace of the world, then I feel that such a request would receive the hearty approval of the Congress and of the American people. The careless or inexperienced handling of a simple problem has been known to cause serious misunderstandings between nations.

According to your learned article in Coronet magazine the graduate of the proposed Foreign Service Academy will speak the language of the country to which he or she is assigned as fluently as he or she speaks English. This suggestion is both commendable and desirable. Unfortunately, for some mysterious reason, it has not been the policy of the Department of State in the past, with the exception of Foreign Service officers assigned to China or Japan, where they are designated language students in most instances and left in the Orient for 10 years. For example, in many cases, a fluent Spanish student has been assigned to France, Germany, Turkey, etc., although there are 19 Spanish-speaking nations in the world. By the same token French students have been sent to Holland, Yugoslavia, South America, and so on ad infinitum.

Such an unenlightened policy has resulted in a wastage of linguistic talent. The only way to speak a language is to think in that language, which requires constant usage and practice to maintain fluency. In other words, it would appear that there is an inane fear on the part of the Department, that if our Foreign Service officers are specially trained in the language of the nation to which they are assigned, that they might enter into a conspiracy or collusion because of that knowledge. In this same connection reliance upon interpreters is not desirable, because you run the risk of being misquoted or receiving an erroneous interpretation due to possible inability or deliberate misinterpretation on the part of the interpreter.

One other item of interest is that under normal peacetime conditions there was a continuous transfer of Foreign Service personnel throughout the world—apparently seeing the world at the taxpayers' expense. However, I feel sure that your proposal will effectively eliminate this condition by assigning personnel to a specific area in conformity with their specialized training.

In conclusion it is, indeed, gratifying in these days of seeming darkness and chaos as the result of years of diplomatic bungling, to see an article so clearly expounded, based on reason and logic, on a subject so vital to us all. It is my sincere hope that your proposal will receive the widespread publicity and careful consideration from every thinking American, to which it is so justly entitled, thereby culminating in the creation of a Foreign Service academy for the United States of America.

Sincerely yours,

———— ————,

Lieutenant Commander, U. S. N. R.

Veterans' Administration

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, March 23, 1945

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Frank T. Hines, Administrator of the Veterans' Administration, and which is an answer to recent criticism leveled at the manner in which the life insurance for veterans has been handled.

General Hines' letter is as follows:

MARCH 15, 1945.

Hon. J. PARNELL THOMAS,
House of Representatives,
Washington, D. C.

MY DEAR MR. THOMAS: Response is made to your letter of March 5, 1945, enclosing copy of editorial from a newspaper published in your congressional district on the subject Insurance requesting my comment on the statements made therein and stating that you desire to use my reply for publication.

The editorial cites no authority, but some of the statements contained in it are not correct. It is not true that the Veterans' Administration is doing nothing "to correct the handling of Government life insurance for the members of the armed forces and their families," nor is it true that "the system is rapidly bogging down." The editorial as a whole obviously gives a false impression as to the manner in which national service life insurance is being administered by the Veterans' Administration.

It is the established policy of the Veterans' Administration to effect settlement of claims for death benefits arising out of the deaths of the holders of national service life insurance certificates as rapidly as possible. In the cases of men dying in service, action is taken as soon as an official report of death is received from the service department. In the cases of men dying after discharge, action is taken as soon as notice of death is received from a responsible source. In each case a form letter is dispatched to the beneficiary advising as to the manner of perfecting claim and enclosing necessary forms. When claims properly executed are returned to the Veterans' Administration they are adjudicated in order of receipt. Contrary to public belief there is no red tape involved in the settlement of these claims. On the contrary, requirements have been reduced to an absolute minimum. For example, under the law the beneficiaries of national service life insurance certificates are restricted to a limited claim and the amount of benefits paid to beneficiaries is dependent upon his or her age on the date of the insured's death. Because of these requirements of the law the Veterans' Administration might properly insist in every case upon submission by the beneficiary of proof of relationship and proof of age. Because of the tremendous volume of the work and the realization that such proofs might not in many cases be readily available, the Veterans' Administration accepts in every case beneficiary's own statement as to age, and in all except a few doubtful cases beneficiary's own statement as to relationship, subject to later submission within a reasonable period of the required proofs. Settlements are authorized upon these statements, and in no single case have payments been suspended because of a failure to submit proofs of age and relationship. This policy, which I believe you will concede is a very liberal one, has met with the approval of the beneficiaries and has proven very effective.

As of the close of business March 10, 1945, the Veterans' Administration had received 247,605 claims for national service life insurance death claims. Of these it had allowed 223,095, disallowed 5,345 and there were pending settlement 19,153. Since the beginning of the calendar year 1945, settlements have been effected at a rate in excess of 900 a day. It will, therefore, be immediately realized that the entire pending load represents a turnover of about 3 weeks' work. This would hardly indicate that the Veterans' Administration has done nothing in the matter of handling claims for national service life insurance benefits nor that its system is bogging down.

I must frankly admit that claims are not being disposed of with the dispatch that I would desire but that has been occasioned by the difficulty that has been experienced in obtaining personnel due to the prevailing serious manpower shortage. However, in this regard I can assure you that I am exerting every effort with the purpose of expediting action to the greatest possible extent the situation permits.

I shall be pleased to furnish such further information on this subject as you may desire. The copy of the editorial is returned as requested.

Very truly yours,

FRANK T. HINES,
Administrator.

The Bright Future of Mankind

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered Monday last, March 12, in Madison Square Garden, New York.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are winning the war. We are not only going to win the peace, we are already winning it. One of the pillars of that peace and of future prosperity as well, is the World Labor Congress, to which, led by your delegation to the London conference, you have already made so great a contribution.

Secretary of Commerce Henry A. Wallace, has said that we are entering upon the "century of the common man." He might have

said "the working man is coming into his own in the world." Organized labor has had its own great part in that victory. It is going to have yet a greater part in greater victories which lie just over the horizon. So are agriculture, and industry, and science, and education, and art, and health coming into their own with great and growing power in the coming new world. We must have not less, therefore, but more such world working-together of the people themselves through their respective organizations and associations.

There has been a great deal of talk lately about what voting procedures should prevail in the security council of the United Nations organization which will be established in San Francisco next month. I do not believe that we can minimize the importance of the attempts of our Government representatives to find a voting formula that will in truth facilitate the terribly important task of maintaining the peace of the world.

Yet, isn't it a fact that world peace depends far more on the trust and confidence and friendship that the governments and peoples of the world repose in each other than in any mechanical voting device however perfectly conceived?

Our governments have been cooperating. They have led the way in building the trust and confidence and good will that is so necessary for our future well-being. At each meeting and conference, our great United Nations leaders, Roosevelt, Churchill, and Stalin, have strengthened the ties that bind all peace-loving peoples together in our common task. They have not permitted isolationists and defeatists to divert them from their work. They have been able to proceed as they have because they know that the people in their own countries and in all the United Nations will support them in the great undertaking they have begun.

But Roosevelt, Churchill, and Stalin would be the first to acknowledge that it is not enough that governments alone cooperate to win a war and build an enduring peace. To complete the job that has been so well started, they must have the united articulate support of all of their peoples and of all groups within the population, whether they are workers, farmers, or business and professional men and women.

To me the deep significance of the London conference of trade union representatives is that it is the first step taken by a major nongovernmental group to cement relations among the peoples themselves, to give form and expression to the profound desire of the common people in all parts of the world for a United Nations victory and a United Nations peace, and to provide the basic support that is so essential to the success of our governments in their efforts.

It is heartening to know that labor throughout the world has accepted its responsibility and has taken the lead in building the peace just as it has played so splendid a role in assuring victory by its magnificent record on the production front. Thus the London labor conference has strengthened the unity of the people of the world for victory and peace.

You are to be congratulated for having provided at the London Labor Conference for the greatest labor organization the world has ever seen—the world labor congress. Let us look forward also to a world business congress, a world agricultural congress, a world scientific congress, a world cultural congress, a world congress on health, which shall also forge hands across the seas into a world understanding and cooperation to preserve the peace and promote the welfare of all the people of the world, just as did this great labor conference.

Indeed, what could better assure the peaceful and profitable living together of all peoples than for the workers of the world, the farmers of the world, the businessmen of the world, the artists and scientists of the world, the people in all the many vocations, to make worldwide their own organizations and constantly working together for both the world and the individual welfare. We may ask if there may not be one day held in some fitting place a congress of congresses, made up of representatives of all the many world-wide organizations. Such a congress would be truly not a congress of governments, but a congress of people in their private capacities, knitting together tens of millions of people and building mightier and grander edifices of human security and satisfaction than man has ever seen.

It is indeed in the deliberations of a world labor congress and of congresses of business and agriculture and others that our hope of an enduring peace lies. The unity and determination thus forged will be our guaranty that our Governments may proceed with confidence to build a United Nations organization. They will be our guaranty that this time the peace will be kept; this time the people of the world will be given the opportunity to build the kind of world they want their children to inherit.

We all see now that as much as a police force is necessary to keeping world peace through an international organization, that alone cannot maintain peace. We must strike at the causes of wars and remove them if we are to have a real peace. There must be, therefore, effective international machinery through which wronged nations and people may seek and obtain redress. And there must be effective tribunals through which the righting of wrong may be assured.

But even this is not all—there must be established the instrumentalities through which the general welfare of the nations and the people of the world shall be promoted. That means that the health, the education, the standards of living of people in any part of the world is the concern of the people in all parts of the world. For we now know also that the economic well-being of any nation is to a very large degree tied to the well-being of other nations. We can no more have isolated prosperity in one nation than we can have isolated prosperity in one American State.

We see the recognition of these principles in the wise policies of our President, the President whom you so much helped to elect—Franklin Delano Roosevelt—providing in the Atlantic Charter that the principal objective of nations today is the welfare of the individual man, woman, and child; providing in the Bretton Woods agreement the real foundation of international economic well-being through an international stabilization fund and an international bank; providing in the Dumbarton Oaks Charter, among other things, a social and economic council, the function of which it will be to improve the conditions of life of the people of the world.

You know that under this social and economic council provision is made for an international labor organization, an international monetary fund, an international bank, an international food and agricultural organization, and other social, economic, and humanitarian agencies which shall from time to time spring up to meet the challenging economic and social problems of the postwar world. It is not too much to say that this social and economic council in its direct and indirect functioning can do more to keep world peace even than an international police force.

I know that those who shall direct this social and economic council will seek the constant guidance and help of such international associations as the World Labor Congress and other international organizations, the members of which shall be seeking to serve, not only their separate interests but the interests of mankind.

There is truly world understanding and cooperation in the hearts of men today—not just on their lips; otherwise, how do you account for the fact that the London Labor Conference and the great Conference at Yalta, without any communication one with the other, arrived at almost the same conclusions?

The agreement arrived at in London, worked out in many languages, is a new dedication of mankind to democracy and to the whole principle of the brotherhood of man. Here, truly, was the preview of San Francisco, and it came from the source which must be the real security of any effective world organization—not the governments of the world but the people of the world. It embodied the sentiment of the Atlantic Charter that the aim of all government is the health, the safety, the security, the well-being of the family and individual man, woman, and child. It recognizes what the foolish seem never to learn, that the strength of the people is the strength of the state and the world.

We all must be encouraged to see all that is being done now to keep the dead and the maimed and the dead-minded from having given themselves in vain in this war. Just let your mind rush back 3½ years, and you will see the towering mileposts of the future world—the Atlantic Charter, the United Nations Declaration, the Moscow Conference, the Fulbright resolution, the Connally resolution, Teheran, the London Education Conference, the Atlantic City U. N. R. R. A. Conference, the Hot Springs Food Conference, Bretton Woods, Dumbarton Oaks, the International Air Conference in Chicago, Yalta, the London Labor Conference, the Chapultepec Conference, and, on the horizon, San Francisco. Is it not significant and satisfying that so many of those conferences have met in the New World? At last the United States has marched into the leadership of international working together. God helping us, we shall never turn back nor falter.

We have learned now that isolation is a false god and that the faith of isolationism leads only to damnation. The America of today is the America of vision and faith and courage. We have cut ourselves loose from all moorings which have bound us to any policy inconsistent with our strength and obligation to ourselves and to our fellowmen. We are today committed to sink or swim, to survive or perish, to live or die, with the decent God-fearing people of the earth.

I say that is the course of America. I mean that is the sentiment that is in the minds and hearts of the people of this great Nation. Whether it shall be in the mouths and in the votes of the politicians is yet to be decided. That will depend upon how determined the people are that they shall not let false prophets be their spokesmen; upon how strongly the people are determined that they shall not let their sons and substance be squandered on the orgy of war again. That depends upon how strongly the people will it that their governments shall truly speak the sentiments of humanity which today echo from human heart to human heart all over the earth. Whether we shall go on to the promised land of the future will be determined by whether the future world is to belong to the people or to somebody else.

Yet you will see that there are today strong forces striving to delay and eventually to defeat the progress we have made in setting up the many instruments of international collaboration. When the issue is only political collaboration among nations, the opposition is pretty much confined to the isolationists. But, when the instrument we seek to set up for the world working together has economic significance, such as the British-American Oil Agreement, Bretton Woods, or the Chicago Air Conference,

then private interests are touched and there spring into the opposition, not only the champions of the private interests affected, but also the economic conservatives and reactionaries who oppose the general welfare of the world as they do the general welfare of the people of the Nation. When they thus mistakenly and shortsightedly press their opposition to the specific measures needed to implement the peace, they also undermine the peace and prosperity of all, and to that extent if they but knew it, they are working against their own welfare and are undermining the authority of their own power. Every man and woman, therefore, who really seeks peace and prosperity in the Nation and in the world, must rise up as a militant warrior to protect and promote every part of this great international program to preserve the peace and promote the well-being of mankind which has been worked out. Do not be deceived nor divided nor delayed by the blind who cannot see or the selfish who will not see.

It is said that there is a Chinese symbol for the word "crisis" which has a double meaning—one meaning is danger, the other opportunity. Only the foolish person would say we are out of danger. Rivers of tears are yet to flow from loving eyes, unspeakable anguish is yet to be wrung from broken hearts and over all the earth is yet to be strewn the wreckage of death and devastation.

Yet, who has ever seen such vistas of opportunity? Such hope for the heart? So many old dreams within realization as now? Surely wide is the gate and broad is the way to the future. If we but under the canopy of peace, mobilize for the service and the satisfaction of mankind the immeasurable facilities and capacities which have been mobilized for war—if we will but achieve it, we can make the old nursery rhyme come true: "The world is so full of a number of things I'm sure we should all be as happy as kings."

And, labor will have its right dignity everywhere in the world because the personality of man will have its own respected integrity.

If there are any who are yet of little faith, any who sit in the scorner's seat and hurl the cynic's ban, let them lift up their eyes and scan the range of history and see the sequence and continuity of this struggle of man for brotherhood and for betterment. From the sparse settlements where man burst into consciousness, across rivers and oceans and mountains and deserts, through forests, men have come together and larger and larger have become the social units, until today we see single nations of hundreds of millions of citizens proud of their identity one with another. We see great commonwealths which are one in spirit and sentiment, though vast oceans keep them physically apart. We see almost our whole hemisphere united in aspiration and purpose. Now we see the crowning glory of the edifice of the world when nations are knitted together by a magnificent world-wide organization with faith in the future. And we see the strong foundations of such an order in the World Labor Congress, and in the congresses of business and agriculture and the arts and all the other organizations of world-reach, yet to come into full birth.

Yes, we, even me, to whom the future not so long ago seemed so dreary, shall live to see Tennyson's dream come true:

"Far along the world-wide whisper of the southwind rushing warm,
With the standards of the peoples plunging thro' the thunder storm;
Till the war drum throbb'd no longer, and the battle flags were furl'd
In the parliament of man, the federation of the world.
There the common sense of most shall hold a fretful realm in awe,
And the kindly earth shall slumber, lapt in universal law."

Conscientious Objectors Create Serious Situation That Must Be Corrected

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. SHAFER. Mr. Speaker, I rise at this time to join my colleague from Michigan [Mr. BRADLEY] in calling upon the Director of Selective Service to take immediate steps to correct deplorable conditions that have been permitted to exist at a camp for conscientious objectors at Germfask, Mich.

These conditions, which could easily lead to a serious situation in northern Michigan, are well described in the following statement made by Charles J. Gray, department commander of the American Legion, at a recent meeting of the executive committee, Department of Michigan:

STATEMENT OF THE DEPARTMENT COMMANDER CONCERNING GERMFASK CONSCIENTIOUS OBJECTORS CAMP

At the request of authorities in Washington who have a conscientious objectors camp under control, last November while in Indianapolis at a meeting of the department commanders and adjutants, I was requested that if, at any time, I should be in the Upper Peninsula of Michigan, I would visit the conscientious objectors at Germfask, Mich.

On January 25, when on a tour of the Upper Peninsula of Michigan, I visited that camp with others of the Legion who were interested in the situation, including Harvey Quick, district committeeman from the upper Eleventh District at Manistique.

In the interim between November and January, I had received various reports including one from the prosecuting attorney of the county in which Germfask is located advising me that he had brought to the attention of Selective Service the fact that the situation there was entirely out of hand but that he had received no assurance that these conditions would be cleaned up. In addition to that, the cities of Newberry, Mich., and Manistique, Mich., had brought to my attention on several occasions the deplorable conditions in that camp and had made various reports in regard to the situation including one, that these boys had even gone into the churches of Manistique and accosted the women and girls there.

So, on January 25, as I say, I visited the camp. I found a camp foreman and one cook as the only employees of that camp with two additional men as foremen allotted to the Seney wildlife project and I visited with all four of them. They took me on a tour of the camp. In barracks No. 1, the condition was not too bad. It was composed largely of the conscientious religious objectors. The barracks was in fair condition but nothing to brag about. It was really below standard.

We passed on to barracks No. 2 and there we found the filthiest camp that I had ever seen. The majority of the men were in bed. The floor of the barracks was filthy and had not been cleaned apparently since the men had been sent to Germfask. There was exhibited on a table all subversive activities that you could think of and the general attitude of those to whom we talked with was that the Selective Service Act was unconstitutional There were men there who were college graduates who wanted to argue that point and there were men in there that had lawbooks and other accessories. In the far end of the hall was an elaborate electric set-up where the men used the quarters for their poker parties at night. The report of the foreman was that they had no power to shut off the lights, and if they did, there would be trouble and that when these men got hungry, they would break the lock on the refrigerator containing supplies for the morning breakfast. If they did not find what they wanted in there, they would go to the larger refrigerator stationed in camp quarters, break the lock and take the food they wanted.

In the kitchen quarters, everything was more or less filthy and anybody that attempted to clean up was reported as beaten up. So, as a result, the kitchen was in a filthy condition. In addition to that, a certain body of the men would take food that was prepared by the cook for breakfast and, without any reason, would throw it out in the snow.

The medical situation was one in which the medical officer appeared in camp every other day and the moment he was gone they all reported to one of their members who was in charge of that office, again reporting on sick call. One, in particular, attracted my attention. A man said he was allergic to blizzards and other equally frivolous diagnosis

As far as the woods detail was concerned, the foreman said that they would get out as much wood as they needed for their own purposes but if anybody got too energetic, he, too, got in trouble.

In my judgment, the majority of these men who have been assigned to conscientious objectors' camps did not belong in that classification. They took advantage of the situation by absenting themselves for days at a time, on frequent occasions from 4 to 9 days, and as long as they did not exceed the 10-day limit they could not be picked up by the F. B. I.

There was also a representative in camp who had the means to provide a $2,500 bond for men who did exceed the 10 days when they became subject to F. B. I. control.

The general attitude of the camp was distinctly poor and it is a blow on the State of Michigan to have any such camp in its midst. Reporters have gone up there and verified the situation. So far, although almost 2 months have elapsed, no report has been made to the American Legion through its authorities as to what corrective measures have been taken to control this situation. It is perfectly obvious that one camp foreman who is the only man left at the camp at nighttime cannot control this situation. He has had no police power and on one occasion they have gone to him and slugged him.

I do not believe, as commander of the American Legion Department of Michigan, that Selective Service or anybody else can be cognizant of such a condition and allow it to continue. I am asking that immediate steps be made to correct these various delinquencies by men who are supposed to be under supervision. We want police supervision for this camp so that it may be made healthier than it is at present and not the cesspool for the delinquents from other camps.

CHARLES J. GRAY,
Department Commander, the American Legion, Department of Michigan.
MARCH 17, 1945.

Following Commander Gray's statement the executive committee unanimously adopted the following resolution:

Whereas the United States Government has established at Germfask, Mich., a camp for conscientious objectors, so classified by the Selective Service System; and

Whereas there have been sent to this camp conscientious objectors from various States

who by their character and attitude have been problem cases in other camps; and

Whereas the accompanying report by the department commander of the American Legion, Department of Michigan, reveals conditions in the Germfask camp which are not only deplorable but which constitute a national disgrace: Now, therefore, be it

Resolved, That the department executive committee of the American Legion condemns this as un-American, unpatriotic, and, in the biggest sense, dangerous to the public morale and war effort of this Nation and urges immediate investigation and proper action to correct the conditions revealed in the accompanying report; and be it further

Resolved, That copies of this resolution and the report attached be sent to the Governor of Michigan, each Senator and Representative from this State in the Congress of the United States, and to the Director of Selective Service, press, and radio, including Walter Winchell and Ernie Pyle, as representatives thereof.

Labor Against Proposed Twenty-second Amendment Sponsored by Fascist Group

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. PATMAN. Mr. Speaker, while reading some of the arguments expounded by a proponent of the proposed twenty-second amendment which would repeal the sixteenth amendment to our Federal Constitution and limit the power of the Federal Government to levy taxes on incomes, gifts, and inheritances to 25 percent, I came across the following:

Workingmen would be hurt more than any other class by any tax system that depletes capital or unduly retards its accumulation. I believe in individualism, rugged individualism, but not ruthless individualism. Any man so imbued with the laissez-faire doctrine that he would not prevent the abuse of concentrated capital is public enemy No. 1, and any man who through high taxation or outright confiscation would unduly slow down or prevent the accumulation of capital is labor enemy No. 1.

I miss my guess if within 10 years all forward-looking labor leaders, having the best interests of labor and the country at heart, will not take a leading part in the inevitable movement for the outright repeal of the income tax amendment, or at least in some drastic modification that will limit the power of the Federal Government to levy destructive and unconscionable taxes. Income and inheritance taxes are an alien importation.

That is one of the many weak arguments which have been directed by the proponents of the proposed amendment to the laboring man. They would have him believe that it would be to his best advantage, even at the cost of raising his own personal income tax, to enable certain people to accumulate great masses of wealth. This accumulation of wealth would be accomplished by a drastic curtailment on income taxes on high incomes while it was being made—and also a drastic curtailment of taxes to permit its being transferred from one generation to another with a minimum shrinkage and also through a drastic curtailment of taxes while these accumulations were being juggled around as gifts to further gain tax advantages.

And how is labor taking these arguments? I believe that question can best be answered by the articles and editorials which have appeared in many of the labor periodicals. With your permission, Mr. Speaker, I should like to submit for the RECORD a splendid example of labor's answer. This is an editorial by Mr. J. J. Guenther, president of the Nebraska State Federation of Labor which appeared in The Unionist of February 16, official newspaper of the Nebraska State Federation of Labor.

Incidentally, I might call your attention to the fact that the standard 25 percent limit proposed by the proponents has been upped to 30 percent in the proposal as submitted to the Nebraska Legislature. I have an idea that the proponents are fully aware by now that there is no chance whatever of foisting upon the public the ridiculous proposal they have been advocating and are now backing water, anxious and willing to make what they believe are concessions and salvage what they can from the tremendous investment in both time and money which they now have in this plot.

Mr. Guenther's editorial follows:

THE PRESIDENT'S COLUMN

(By J. J. Guenther, president of the Nebraska State Federation of Labor)

This article proposes to discuss as dispassionately as possible, not a pending bill before the State legislature, but Resolution No. 5 introduced on January 29, 1945. Since that date this resolution has laid dormant and we wish that it would cointinue to maintain that status. But because that has occurred in several other State legislatures until the closing days of their sessions and then when there was haste to adjourn it was quietly raised and passed we have chosen to point out the viciousness of this resolution and to ask you to study the same and make your objections known thereto.

The rules of the Nebraska Legislature provide "Rule 16, resolutions, section 2. Resolutions proposing constitutional amendments, granting money, or requiring Governor's approval: Consideration and adoption. Resolutions which propose amendments to the State constitution, propose the ratification of amendments to the Federal Constitution, provide for the grant of money out of the contingent or any other fund or require the approval of the Governor, shall be considered and adopted in the same manner as billls. (Const. art III, secs. 13, 14, art. XVI, sec. 1.)"

This rule provides the same safeguards about Resolution No. 5 as is provided relative to any proposed legislative bill. It means that this resolution, because of its nature, must come up for a committee hearing before being introduced onto the floor of the unicameral. Thus, opportunity is afforded to all who oppose such legislation to voice their opposition to the committee. Because it is our belief that such opposition should be voiced we ask all of the citizens of Nebraska to carefully study this resolution and become fully informed as to its intents and purposes. The Resolution No. 5 quoted in full follows:

"Resolution memorializing the Congress of the United States of America to propose an amendment to the Constitution of the United States relative to taxes on incomes, inheritances, and gifts

"Whereas excessive Federal taxes threaten to absorb the revenues necessary to the operation of State and local government; and

"Whereas the legislatures of a number of States have become interested in a cal' by Congress for a convention for the purpose of proposing ar amendment to the Constitution of the United States limiting the power of Congress to tax incomes, inheritances, and gifts; and

"Whereas the Legislature of the State of Nebraska believes it to be for the best interest of the people of the United States and of Nebraska that such an amendment be adopted: Now, therefore, be it

"Resolved by the Legislature of the State of Nebraska, That the Congress of the United States of America be, and is hereby, requested to propose the following article as an amendment to the Constitution of the United States:

"ARTICLE —

"SECTION 1. The sixteenth article of amendment to the Constitution of the United States is hereby repealed.

"SEC. 2. The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States and without regard to any census or enumeration. The maximum rate of all taxes, duties, and excises which the Congress may lay or collect on with respect to or measured by income, however, shall not exceed 30 percent. In the event that the United States shall be engaged in a war which creates a national emergency so grave as to necessitate such action to avoid national disaster, the Congress, by a vote of three-fourths of each House, may, while the United States is so engaged, suspend, for periods not exceeding 1 year each, such limitation with respect to income subsequently accruing or received; and be it further

"Resolved, That the Congress of the United States be, and it hereby, is requested to provide as the mode of ratification that said amendment shall be valid to all intents and purposes, as part of the Constitution of the United States, when ratified by the legislatures of three-fourths of the several States; and be it further

"Resolved, That the secretary of state be, and he hereby is, directed to send a duly certified copy of this resolution to the Senate of the United States and one to the House of Representatives in the Congress of the United States."

Following our oft-repeated statement that we will not indulge in personalitits, we do not name the introducer of this resolution. Further than that we will state for the record we do not hold the introducer responsible for the content of the resolution. It has been and is our contention that the Senators in the Unicameral are here as the representatives of their constituents, both majority and minority members, that it is not for them to finally determine when requested to introduce either legislation or resolutions as to the need or lack of need for the same. That final determination rests upon the legislative body as a whole after the resolution or legislation has been introduced and considered. We ask you to consider the merits of this resolution in the same light. Is it for or against the best interests of Nebraska and the United States that this resolution be concurred in by the Legislature of the State of Nebraska?

We submit the following information: The chief national sponsors of this legislation appear to be the Committee for Constitutional

Government and the American Taxpayers Association.

Sixteen State legislatures have already adopted similar resolutions. We say similar resolutions, for like all such legislation sponsored by the above-cited organizations and similar ones, such as the Christian-American, etc., the wording of the various resolutions submitted varies slightly but their effect is cumulatively the same. For instance the Nebraska resolution says 30 percent while several other States, 25 percent; while the State of Massachusetts in its resolution proposes that additional revenue not be raised by increases in income-tax rates and by reduction of exemptions and increases of rates of estate and gift taxes. Of the 16 States whose legislatures passed the resolution, we would also state that the Governor of Pennsylvania vetoed that State's resolution as did also the Governor of Indiana.

The Treasury Department of the United States was asked to make an analysis of this amendment as proposed in this resolution. We quote verbatim from the Division of Tax Research of the United States Treasury Department:

The credit of the Federal Government rests on its power to levy taxes to discharge debts—and on the fact that several times in the Nation's history this power has been used to bring about a rapid reduction of the national debt. Under the proposed 25-percent limitation * * * (Note that the Nebraska resolution makes this 30 percent; why?) parenthesis ours * * * the Federal tax powers would not permit getting revenues at all above the level of expenditures in a year of prosperity. In fact, the limitation would have very much the effect of a constitutional prohibition on reducing the national debt. For emergencies, unless they involved actual participation in war (so that the limitation would be suspended), there would be no tax powers in reserve. In such a situation as that of 1940, for example—when rearmament became necessary but we were not actively at war—it would be necessary to increase borrowings without taking steps to increase revenue."

In other words, facing a probable national debt of $300,000,000,000 at the close of this war with an annual carrying charge of $7,000,000,000 with the additional expense of carrying on the operations of government in that critical period, with this proposed amendment in force, the tax moneys which we would raise would just about meet the charges without reduction of the national debt and with little or nothing remaining for veterans' benefits and social security to the unemployed, the aged and other dependents. Surely such enactment would make all of our present promises to veterans and others mere lip service and double talk.

Now what does the Division of Tax Research of the United States Treasury predict relative to the market value of Government bonds under this proposed amendment? Read these ominous words and recall of past history. We quote:

"It is well known that when municipal governments operate under tax limitations and have no further tax powers in reserve, their bonds commonly are regarded as second grade or lower, and in such emergencies may bring a sudden and sharp decline in their credit standing. To put hobbles on Federal taxing power would likewise weaken Federal credit and expose it to shocks. Since we have been through two great wars and a great depression without Federal credit being called in question, it is easy to forget that such a thing is possible. But there have been times in the past when Federal credit deteriorated and if we sacrificed the Federal Government's reserve of taxing power it might happen again (as in the instance of the run on the Treasury during the silver difficulties of the 1890's).

"If Federal credit suffers, State and local credit will suffer with it. Any real shock to public faith in Federal securities would undoubtedly involve State and local securities sympathetically. Furthermore, any such shock would weaken the banks and other credit institutions and hinder them in assisting State and local governments. It must not be forgotten, either, that the support of the Federal Government was very valuable to State and local governments in the depths of the depression of the thirties and that Federal credit stood back of State and local credit in this emergency. Could a Federal Government with impaired credit have rescued mortgage debtors through H. O. L. C. and F. C. A. in 1933–34, and enabled them to pay up their back taxes? Could it have rescued the shaky bank system through R. F. C., the mortgage agencies, and F D. I. C.? Could it have financed needed local public works through R. F. C. and P. W. A.? The confidence of investors in State and local securities rests partly on the knowledge that in a major depression emergency Federal credit would always be in reserve."

What would be the effect of the proposed amendment on Federal revenue? The Treasury Department analysis above referred to says:

"If the proposed limitation were adopted, it would mean reducing to a 25-percent level the bracket rates that now exceed 25 percent. It would mean lowering the 40 percent corporate normal and surtax, sharply reducing the estate tax, and reducing all individual income tax rates to about the present first-bracket level of 23 percent. If no other adjustments were made, such cuts would involve revenue losses in the neighborhood of $6,000,000,000 a year. This would eliminate the prospect of a Budget surplus and make a deficit probable even in a prosperous year."

Now let us consider how this loss of revenue might be made up. In other words, let us look into this "pay off" and who will "pay off." The Treasury report has this to offer:

"Part of the revenue loss from rate reduction brought about by the (proposed) limitation could conceivably be made up by measures designed to increase the tax base. In the corporation field, the carry-forward and carry-back of losses could be abandoned, percentage depletion could be eliminated, and deductions for contributions denied, along with pension trust and perhaps other deductions.

"In the individual income field, deductions (for State and local taxes, contributions, interest, and similar items) could be disallowed; forms of income not now included as taxable (for example, interest on State and local bonds and some forms of annuities) could be included in taxable income; personal exemptions could be lowered; and the especially favorable treatment of capital gains could be abandoned."

But threatening as all these measures sound the real "pay off," the thing to "make the rich richer and the poor poorer," the real threat to every man of labor who earns his bread by the toil of his hand and the sweat of his brow is contained in these final words of the Division of Tax Research of the United States Treasury Department's analysis of the proposed amendment, we quote:

"It would be possible to make some tax increases outside the restricted field. But since the proposed restriction covers estates and all kinds of incomes and the Constitution already stands in the way of Federal property taxes, the only major unrestricted field is that of commodity taxes, i. e., sales taxes and excises. If one disregards considerations of equity, the repressive effects of commodity taxes on business activity and employment and competition with State taxes, substantial revenues can be raised from these sources. Under war conditions a 5-percent Federal retail sales tax would have yielded about $3,000,000,000; under post-war conditions, with shortages of goods relieved, the figure would be somewhat higher. But in view of the necessity to avoid seriously repressive effects of commodity taxes and of the many other considerations that point toward reducing war excises below the levels provided in the Revenue Act of 1943, a net gain of more than $1,000,000,000 or so in the commodity tax field would imply drastic use of commodity taxes. Congress might prefer instead to make adjustments involving a reduction of revenue in this field."

We do not want to be classed with the alarmists. Yet we cannot refrain from expressing the opposition of organized labor to all forms of sales taxes. We will oppose them on the State level and we will oppose them on the national level. Therefore it behooves every one of us to oppose this Resolution No. 5, which would be the opening wedge whereby those States which would not pass a sales tax of their own would become the abettor and accessory to a national sales tax. Also bear in mind that as cited in the Treasury Department analysis that sales tax would not be a 2-percent tax but more probably a 5-percent tax. Keep American labor free labor; we do not need this twenty-second amendment to the Constitution of the United States.

Tribute to Alfred E. Smith by John S. Burke

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. John S. Burke at the one hundred and sixty-first anniversary dinner of the Society of the Friendly Sons of St. Patrick, on March 17, 1945. The address is a magnificent tribute to Alfred E. Smith. I have heard many tributes to great Americans, but Mr. Burke's is one of the finest to which I have ever listened. As one of Al Smith's oldest friends, I wish to express my appreciation to Mr. Burke.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When I first looked over the list of speakers who have responded to this toast in the past, I felt discouraged; there were judges, lawyers, Cabinet members, college presidents and even the president of a railroad, but no merchant. I realized, of course, that merchants as a rule have no standing as speakers except about their own goods; indeed my predecessor in business, a sagacious man, warned me that when a storekeeper got a repute as a speaker, his stockholders would be wise to transfer their investment elsewhere. Yet it seemed strange as I thumbed over the yearbooks decade after decade that no merchant had appeared articulate enough at least to talk about the Irish. But when I got back to the early days of the society, my spirits brightened; the merchants seemed like Abou Ben Adhem, for their names led all the rest. I learned that the society had been founded by a group of merchants and soldiers; that a merchant was its first president; that he had served not for one, for three, or a half dozen terms, but for 34

years. So I am happy that they are back again on the dais, and I hope that their present representative will do nothing to return them to that limbo of silence to which they have been confined for over a century.

Today all over the world men of Irish blood commemorate the life, the deeds, and the death of their hero saint, for it was on this date almost 1,500 years ago that St. Patrick died and, as the Book of Armagh states, "was carried to heaven." In that long stretch of time no man has approached his influence on the Irish. He led them out of the bondage of paganism, as did Moses with the Hebrews of old; his spirit has guided them and held them straight on their course like some spiritual polar star in peace and in war, in plenty and in poverty, in union and amid disunion. He remains their greatest hero.

And as the finest tribute that can be paid to a father is to tell of the goodness of a son, we shall offer our veneration tonight to St. Patrick by recalling the virtues of one of his devoted sons, that most illustrious son in the long and glorious history of our society, that son to whom we say tonight our final ave et vale, Alfred E. Smith. The lives of many men of renown are recorded in our annals—statesmen, poets, priests, soldiers, heroes on the land, on the sea, and in the air—and, with the same care the tie that binds us to men of little note but with as sure a claim to our love and recollection has been kept in our memory and in our chronicles. But in that long list of lives, paralleling since 1784, the course of our Nation's history, the name of no man is more firmly fixed, no hero is given higher place than he to whom we here give the hail and farewell of the friendly sons.

We do not worship a hero as did the pagans of old or as do the pagans of the new barbarism. We honor his virtues; we praise his achievements; we are inspired by his example to be better men and to lead better lives, as, in a deeper sense we are inspired by the virtues of a saint, such as that modern saint from the sixteenth century, Thomas More, whose life with its civil activity, wholesome wit, and lack of bitterness at the price paid for spiritual loyalty compares strikingly with the life of Al Smith.

It is thus that we cherish the memory of this uncommon man formed from our own common clay. We honor him for his fruitful use of those special talents that God gave him. We hold him as our ideal of a Christian gentleman in the true sense of that term; a Christian gentleman who loved his neighbor because he loved his God, and so found that neighbor among all men of good will, whether it was in a ditch on the road to Jericho, in the palace of power, or in the mansion of the rich.

We are not concerned here with the detail of his deeds. There is neither the desire nor the skill to draw his figure in all its grandeur. We are too close in friendship and association to fix his place in the Nation's hall of fame. We leave to others to mold the "storied urn," and to time with his sure and supple hands to sculpture the animated bust, as time has done with that other hero of the common man, Lincoln, who like Smith reached down from the heights to lift his neighbor up.

We are concerned with the heart and the spirit; we wish only to record the imprint of his character on us. He was a simple man. There was nothing complex about him. It would be folly, indeed it would be false, to complicate his character now with embellishment in thought or word. He seems to have been one of those rare beings blessed by God with an instinctive sense of the eternal verities. The story that Justice Frankfurter told in a beautiful letter to the New York Times indicates this. Al spoke for an hour to the cream of the Cambridge intellect; when he had finished one of the professors said "How Aristotle would have liked that address." Al could talk to the men in the Fulton Market or to the professors at Cambridge and be understood, because he saw the truth simply and expressed it the same way.

We know that his place in history is secure, that moving up and forward from the warves and streets of a striving city, through the crowded arenas of the Nation's life, he climbed the mountain top of fame with his head pointed constantly toward the stars but with his feet firm on the ground of common sense. But not for this alone, great as it was, do we grant him our accolade of heroism. It is more that, in a world where honesty of purpose should be a common possession instead of an uncommon virtue, his honesty of purpose was like a lighthouse shining above a troubled sea, warning us away from the treacherous shoals of expediency. In one of his rare flashes of clarity, Carlyle said that the essence of heroism is true sincerity; that all truly great men have it, though they must be unconscious of its possession. Al Smith had that essence of heroism; he was without guile, he did not comprehend it; his tools were wisdom, understanding, fortitude, integrity, charity. His whole character was enriched by that true sincerity, a golden thread which ran through the tapestry of his life giving color to his story and form to his conduct; he was ennobled by a God-given humility; that good humility which is strong but unselfish, steadfast but patient, which is born of courage, not of timidity. He had a sturdy self-respect combined with that charity for his neighbor which St. Paul described so beautifully, that essence of goodness with no "sounding brass or tinkling cymbals."

Al Smith knew that God gives each man an individual dignity, and so he respected his neighbors and was humble among them. His life was lived not in the solitudes but amid the passions and ambitions of men. He saw the dross of selfishness and envy surrounding and sometimes obscuring the gold of respect and esteem, but he gathered that gold without soiling his heart or his hands; conscience and reason commanded his will.

It is for this that we honor him, for this we hail him our hero, and as our Ave is muted on the strings of affection into a softer vale, we dare to project our thought even beyond this world. We like to think of our gay and happy friend gazing without fear toward the shore of eternity, while the Master of the Heavenly Harbor sends out an angelic pilot, to guide safely and speedily into port that son, who in the last few minutes of his earthly life, renewed his pledge of allegiance and faith; we dare to imagine that, when the Happy Warrior came home to his beloved Katie, as he drew near the throne of his Divine Master there was a gentle whisper around that throne, fainter even than that "noiseless noise" that Keats heard among the morning leaves, a gentle whisper among the angels and the saints, "Why, there's Al Smith."

Contract Settlements

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. THOMAS of Utah. Mr. President, in view of the importance of the settlement of terminated contracts at this critical period in our war production, I wish to insert in the RECORD the comments on the excellent work being performed by the Office of Contract Settlement under Robert H. Hinckley, Director, as published in the Bulletin of the National Association of Purchasing Agents, the official publication of this important group which has played such a vital part in our war production.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

[From the Bulletin of the National Association of Purchasing Agents of March 14, 1945]

The Office of Contract Settlement, under Robert H. Hinckley, Director, rates a pat on the back for a job well done. Without fanfare, it is making real headway in getting policies and procedures set for the termination job, which will jump to tremendous proportions after the war is over.

O. C S. is concentrating on two objectives in its work—speed and elimination of red tape. Its job of interpreting the Contract Settlement Act of 1944 and translating it into definite procedures is well advanced. It rates a medal, for no criticism is heard.

The framework of its procedures is now laid down in 14 specific regulations. Be sure that your file of O. C. S. regulations is complete. The Bulletin of October 18, 1944, listed and summarized the first 7 O. C. S. regulations; this article brings you up to date on Regulations 8 through 14. The two most important ones are probably No. 10 and No. 14.

REGULATION 8. SETTLEMENT FORMS

Success or failure of an administrative job largely depends upon the simplicity of the forms to be used in handling it and on the clearness of the instructions for the use of tnese forms.

O. C S. is working with only eight basic forms and the instructions for the use of these standard forms make up only four printed pages. The forms apply to fixed-price war-supply contracts only. The same forms are used by prime contractors for filing with the Government, and by subcontractors for filing with the company from which the notice for termination is received.

Short form

Form 1 (a) eliminates all red tape ii the handling of small-settlement proposals. If this form is used, the net proposal must be less than $1,000, and you must retain or dispose of all the termination inventory at the best price obtainable. The Government may examine your books and records related to the proposal; and if you are a subcontractor, your customer must be satisfied with respect to it. Acceptance of this proposal will constitute approval of the price which you offer for the entire inventory, including the proceeds of any sales which you have made.

"At the best price obtainable"—quoted from the instructions—apparently means just that. There are no complicated formulas to apply or market tests to conduct.

Neither the inventory schedules (Forms 2 (a), (b), (c), (d)) nor the schedule of accounting information (Form 3) are to be submitted with this form.

Inventory schedules

Termination inventory schedules which are filed either with or in advance of the settlement proposal (other than the short form) serve two principal purposes:

1. To support the amount of inventory costs included in the settlement proposal; and

2. To aid in arranging for the removal, storage, sale, or other disposition of the termination inventory.

Items having a cost of less than $100 need not be listed separately but may be lumped together in a "sundry" column, with only a general description of the type of items; pro-

vided the aggregate amount included does not exceed $5,000 or 20 percent of the total inventory cost, whichever is less.

REGULATION 9. GUARANTEED TERMINATION LOANS

Regulation 9 spells out policy and procedure for guarantees by the services, of termination loans to war contractors from public financing institutions; that is, the Reconstruction Finance Corporation and the Smaller War Plants Corporation.

REGULATION 10. INVENTORY CLEARANCE

Plant equipment clearance as laid down in O. C. S.—Regulation No. 4, and inventory clearance from plants of war contractors, will be handled in the same manner. The idea is to clear the plants for normal production as quickly as possible. The deadline is 60 days after the receipt of satisfactory inventory schedules by the contracting agency unless the contractor agrees to a longer period. However, "every effort should be made by the contracting agencies to remove or store the material in less than 60 days after receipt of satisfactory inventory schedules."

It is up to you

The speed with which plants are cleared of war production equipment and inventory largely depends upon the speed with which satisfactory inventory schedules are prepared and submitted by the contractor.

O. C. S. provides the forms (see Regulation 8), but it is up to you to fill out these forms and submit them to the contracting agency.

Four steps

The contractor has several choices and he must make up his mind on these before he hands in his inventory lists. It is up to him to:

1. Make tender of title to the Government for all contractor-owned material listed;
2. Make an offer for any of the material he desires to retain;
3. Make recommendation as to the material to be scrapped; and
4. Inform the contracting agency whether he has, or can make, available storage space for any or all of the material.

Time limits

O. C. S. is determined there should be no avoidable delay as far as the contracting agencies are concerned. The same three-time limits established in regulation 4 for plant equipment, also apply to termination inventories.

Within 10 days after receipt of the inventory schedules, the contracting agency must notify the contractor if they are not satisfactory. Otherwise the schedules are deemed to be satisfactory.

Within 20 days after receipt of satisfactory inventory schedules the contracting agency shall, if practicable, notify the contractor which items, (1) may be disposed of as scrap, (2) the Government will require for its use, (3) the war contractor will be permitted to retain at prices agreed upon.

Within 60 days of the receipt of satisfactory inventory schedules, or such longer period as the contractor may agree, all termination inventory on the schedules not disposed of to or by the contractor shall be removed by the contracting agency or stored under agreement with the contractor in space made available by him.

If a subcontractor wishes to take advantage of the plant clearance time limits he may do so by submitting copies of his inventory schedules directly to the contracting agency, at the same time he files with his next higher tier contractor.

REGULATION 11. KEEPING RECORDS

The Contract Settlement Act (in section 19) sets stiff penalties for the destruction of records of war contractors relating to settlements or the disposition of termination inventories.

Records must be kept for 5 years and the strict rules reach down to war contracts involving only $25,000 or to the disposition of termination inventories involving only $5,000.

This means a terrific post-war filing job for all war contractors. Regulation 11 has the purpose of simplifying this job by permitting the application of modern filing techniques such as the use of photographs, microphotographs, or microfilm.

REGULATION 12. CLAIMS UNDER DEFECTIVE CONTRACTS

Fairness is the keynote of the Contract Settlement Act. Section 17 specifically prevents any contractor from being gyped out of fair compensation just because a formal or technical defect or omission is discovered in his contract; or because he relied in good faith, without a formal contract, on written or oral instructions of a contracting officer.

O. C. S. regulation No. 12 sets the procedure under which this mandate of the Contract Settlement Act is to be carried out.

REGULATION 13. PENALTY FOR OVERSTATEMENTS

The Contract Settlement Act states (in section 8) on interim financing under paragraph (d) that in case of an overstatement by any war contractor of the amount due on his termination claim in connection with any interim financing under the act, such contractor shall pay to the United States as a penalty an amount equal to 6 percent of the amount of the overstatement. But the act adds that the Director may suspend or modify any such penalty if, in his opinion, its imposition would be inequitable.

O. C. S. regulation 13 does two things:

1. It delegates the authority to modify and determine the penalties for such overstatements to the heads of each contracting agency, including such agencies as the Reconstruction Finance Corporation and its subsidiaries, the Smaller War Plants Corporation and the War Production Board; and
2. It prescribes the standards to be observed in determining whether or not a penalty would be inequitable.

This is a procedural short cut taken to enable war contractors to estimate their partial claims on war contracts with greater ease of mind.

REGULATION 14, ACCOUNTING PRACTICES

The success of the contract settlement job will primarily depend upon the way the determination of costs to be allowed in the settlement of contracts is handled. It is here that the realistic and constructive attitude of the Office of Contract Settlement is showing to best advantage. Its endeavor is to do the job with as little red tape as possible and to follow to the greatest extent feasible the established accounting practices of war contractors. Moreover, O. C. S. believes that efforts and results should be in proper relationship and that "the Government should not insist on undue effort on the part of the contratcor to obtain precise information which is not readily available if reasonable estimates or approximations may be satisfactorily substituted."

Basic principles

Regulation 14 spells out * * * how the cost philosophy embodied in the Contract Settlement Act of 1944 is to be carried out. Its purpose is to clarify accounting practices and to assure greater uniformity in their application without, however, putting them in a strait jacket that would defeat the basic intention of the Contract Settlement Act that the accounting practices of the contractor are to be recognized wherever they are reasonable and appropriate.

No strait jacket

The memoranda are intended to serve as guides to prime contractors, subcontractors, and contracting agencies. They represent a standard of accuracy and acceptability in the accounting treatment of the costs to which they relate. However, Regulation 14 is quite emphatic that "accounting data may be accepted when determined on bases different from those set forth in the memoranda if such bases nevertheless represent recognized commercial accounting practices and yield equitable results."

Particularly where the amounts involved are relatively small, O. C. S. has no intention of insisting that the accounting methods outlined in the memoranda must be followed literally. It is frankly admitted that in such cases the "possibility of greater accuracy to be derived by an exact application of the memoranda may not justify the increased time and effort involved in their use."

Recognized practices

All that O. C. S. wants of a contractor in accounting practices is that they may reasonably be expected to produce "acceptable results when consistently applied considering the contractor's proposals in the aggregate, rather than those which might be especially suited to a particular termination."

As long as the spirit shown by these definitions prevails in the Office of Contract Settlement, the termination job should be easily managable by the company executives that ordinarily handle contracts. The use of special legal, accounting, and technical experts, except in large and specialized war plants, would seem to be wasted manpower and unnecessary expense.

Excerpts From Statements on Full Employment Bill

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a series of excerpts taken from statements made by men prominent in public life and in business and industry, relating to the full-employment bill now pending before the Senate. I have had an estimate made of the cost of printing this matter. It is $156.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

QUOTATIONS AND EXCERPTS ON FULL EMPLOYMENT

I. DO WE WANT FULL EMPLOYMENT?

Eric A. Johnston, president, United States Chamber of Commerce, Cosmopolitan, December 1944, pages 170, 171:

"Virtually everyone agrees that we must have high employment, high production, and high purchasing power to make our economy click. * * *

"The consumer is the kingpin in our economy. His ability to buy and his decisions to buy or not to buy give us good times or bad times. It is he who determines whether there will be jobs for all."

Alfred P. Sloan, Jr., chairman of General Motors Corporation, address at annual meeting of the Investment Bankers Association, Edgewater Beach Hotel, Chicago, November 28, 1944:

"I just want to say that if the problem of jobs is not solved as part of the post-war problem, in my opinion, democracy and free enterprise are likely to pass out with the war itself. * * *

"There is an opportunity to recognize the fact that the levels of national income prewar died with the war. We ought to do a better job. We must do a better job; we must move toward a greater utilization of our increased economic resources—material, manpower, capacity—and there is a responsibility on the part of the management of American enterprise to step up and do the job, even if they did, by so doing, take a risk. They must plan aggressively. They must go forward. We cannot go backward."

Thomas E. Dewey, Chicago acceptance speech, June 28, 1944:

"We Republicans are agreed that full employment shall be the first objective of national policy."

Thomas E. Dewey, San Francisco speech, September 21, 1944:

"Yet, if there is one thing we are all agreed upon, it is that in the coming peacetime years we in this country must have jobs and opportunity for all. That is everybody's business. Therefore, it is the business of Government."

Alvin Hansen, National Resources Planning Board, After the War—Full Employment, January 1942:

"A positive program of post-war economic expansion and full employment, boldly conceived and vigorously pursued, is imperative. Democracies, if they are going to lead the world out of chaos and insecurity, must first and foremost offer their people opportunity, employment, and a rising standard of living.

"If purchasing power is maintained at a high level, we need have no fears that private manufacturers, retailers, wholesalers, and farmers will not come forward and supply the market with the goods demand by the public. * * * Private enterprise can and will do the job of production. It is the responsibility of Government to do its part to insure a sustained demand. We know from past experience that private enterprise has done this for limited periods only. It has not been able to insure a continuous and sustained demand.

"A positive governmental program looking toward full employment would greatly vitalize the invigorate private enterprise. An expansionist program would permit private enterprise to operate at high output levels."

E. J. Phelan, acting director of the International Labor Office, New York Times magazine, April 30, 1944:

"JOBS: A WORLD-WIDE PROBLEM

"The time has gone forever when men and women, able and anxious to work are to find that no one has any use for their services, that they are economic outcasts whom the community will perhaps not allow to starve but who otherwise are condemned to a hopeless and aimless inactivity and to the frustration of all their legitimate hopes and ambitions. It will not be regarded as sufficient that the public authority should provide them with some kind of minimum subsistence allowance or shepherd them into relief works in an unsuccessful attempt to disguise their unwantedness.

"What they expect, and will indeed demand, is precisely the opposite. They want to be wanted. They want to feel that they have a real place in the community and a real and acceptable contribution to make to its general productiveness and prosperity. They want, in short, a position of dignity and not of degradation, and they want, too, to be able to feel that the road of opportunity is open to them, that they can aspire to such heights as their abilities justify.

"* * * There is need also for national social action providing the machinery whereby jobs and men can be brought together and whereby workers may be trained and given the opportunity of reviving their skills which the changing features of industry and demand may require."

James H. McGraw, Jr., Business Week, January 6, 1945, pages 94–95:

"WHAT DOES AMERICA WANT?

"Here there is space only to indicate in broadest outline what I conceive to be desirable foundations for an economic policy of the United States:

"I. The attainment of high and sustained level of business activity and employment in the United States and in the world." (Out of five points, this is first.)

Business Week, editorial, February 5, 1944:

"Full employment is, after all, a social goal, as unemployment is a social danger. And social measures to reduce unemployment are as proper, if not so important, as economic steps to increase employment."

Henry A. Wallace, address before the American Statistical Association, Washington, D. C., December 27, 1944:

"Full employment in the United States is the first step on the road to permanent world-wide peace. * * *

"Jobs for all should and will be the economic battle cry of all the world for the next 20 years."

Portsmouth (Va.) Star, editorial, December 26, 1944:

"It [1] opens with a laudable declaration on which there can be no argument: 'Every American able to work and willing to work has the right to a useful and remunerative job in the industries, or shops, or offices, or farms, or mines of the Nation. * * *'

"Everyone is in favor of jobs for all."

Chicago, Ill., Journal of Commerce, editorial, December 19, 1944:

"The post-war employment challenge to the Nation is obvious, and there should be no dissent from the Senate subcommittee declarations that every man and women willing to work and capable of working has the right to a job."

Kansas City Kansan, editorial, December 27, 1944:

"It [1] opens with the entirely laudable sentiment that 'every American able to work and willing to work has the right to a useful and remunerative job in the industries or shops, or offices, or farms, or mines of the Nation.' That's fine."

Chicago, Ill., Chicago Sun, editorial, January 8, 1945:

"The companion piece of national service in wartime is realistic acknowledgment of national responsibility for full employment in peacetime."

New York Journal of Commerce, editorial, January 10, 1945:

"There can be no debate over the desirability of full employment."

Washington Post, editorial, December 28, 1944:

"Undoubtedly, it should be the aim of Government to create conditions under which private industry can function successfully—that means with profit—and thus create an active demand for labor.

"* * * It does not follow, because we disapprove of taking on such large and indefinite responsibilities, that the Federal Government should do nothing whatever to supplement the efforts of private enterprise to lift employment levels. Far from it. Government has a distinct responsibility not only to counter business depression but also to encourage the attainment of full employment. * * *

"Business activity in the United States in post-war years will be a political stabilizer the world over."

Portsmouth (Va.) Star editorial, December 26, 1944:

"It seems logical that the first step in our post-war employment program should be creation of an economic atmosphere in which an unprecedented 60,000,000 jobs can exist."

[1] The preliminary draft of the full employment bill, as it appeared in the Year-End Report of the War Contracts Subcommittee to the Committee on Military Affairs, December 18, 1944.

Ernest G. Draper and Walter R. Gardner, Federal Reserve Bulletin, November 1944, pages 1052–1053:

"GOODS AND DOLLARS IN WORLD TRADE

"While this can be said regardless of whether or not we have full employment, it is apparent that a domestic program which carried reasonable assurance that unemployment would not again be permitted to develop on a substantial scale in this country would be of inestimable help in getting American farmers and businessmen to accept the sort of readjustments in our foreign trade that will be necessary if a sustained gold inflow is to be prevented. Once assured that the economic outlook is favorable, they might be ready to see our tariff duties steadily lowered and exchange rates placed at levels at which foreign enterprise could offer effective competition in the markets of the world. Moreover, a full production economy in the United States would directly swell our demand for foreign imports, since most of the commodities we import from the world are materials for further processing. From every point of view an adequate domestic program must remain the paramount need of the American people."

John Bell Conliffe, the International Economic Outlook, 1944 edition:

"It may be argued that the greater part of the vigorous economic activity which was so productive of social advancement in the latter half of the nineteenth century was national rather than international. That is true Indeed, it has always been true and must be true in the future as in the past, if prosperity is to be restored. In particular it must be true for the United States, which is now the greatest manufacturing country and therefore the greatest buyer of raw materials in the world.[2] Unless there is active production and employment it is unlikely that this country can take an active part in organizing an effective system of international trade. If it does not do so, the changes of such a system being organized are remote. Yet it is as unrealistic to consider national economic activity apart from its international repercussions as it is to draw a distinction today between the home front and the battle lines. The connection between domestic and international economic policy is so inimate that for many practical purposes they constitute a single entity."

The London Times, editorial, November 24, 1944:

"The critics contend, however, and are entitled to contend, that the Bretton Woods arrangement in the field of monetary relations can have the desired result of more regular and more expansive world commerce, larger world output, and higher standards of living only if certain conditions—about which, among other things, Lord Keynes has presumably been conferring recently in Washington—are fulfilled. These conditions include both an effective decision by the participating nations, and especially those possessing the largest industrial and financial resources, to keep their resources fully and continuously employed and a willingness, on the part of the same rich and powerful countries, to buy as well as to sell."

Dr. Calvin B. Hoover, Post-war Goals and Economic Reconstruction (pp 288–291):

"AMERICAN FOREIGN TRADE AND INVESTMENT

"A second point to be emphasized is that the volume of imports and exports is itself more affected by cyclical fluctuations in the United States than it is affected by changes in our tariffs. That is another very interesting fact. As we follow the annual fluctuations in the amount of imports and exports, we find that the factor that determines the volume of trade is the volume of our own

[2] Cf. Hal Lary and Associates, "The United States in the World Economy," Bureau of Foreign and Domestic Commerce, Economic Series No. 23, Washington, D. C., 1943.

industrial production. If we have prosperity, then we have high imports and exports. If we have depression, the opposite is true. Now we cannot tell with certainty about the effects of the tariff in all this; but we can make some sort of statistical analysis. We know, for instance, that the changes in volume of trade in commodities on which duties were raised during the Hoover administration were not so strikingly different from the changes in the volume of imports of other commodities upon which duties were not raised. Moreover, when we try to calculate the effect of lowering prices through tariff reduction on the quantity of goods imported into this country, we find that this effect is not likely to be as great as that due to changes in industrial activity, that is, due to shifts from depression to prosperity.

"In short, if we asked what would increase our exports and imports more than anything else, we would have to answer: 'Anything which would insure a high level of employment in the United States.' Now that is a very interesting and striking thing, and it needs to be emphasized. The most important thing that would increase the volume of our foreign trade would be increasing the level of employment in the United States. We would increase trade not beyond what it is now but beyond what it was in the thirties during the period of the depression. Any policy that produces relatively full employment will have a salutary effect on our imports and exports, an effect more significant than changes in import duties."

II. How Can Full Employment be Achieved?

Thomas E. Dewey, San Francisco speech, September 21, 1944:

"Government's first job in the peacetime years ahead will be to see that conditions exist which promote widespread job opportunities in private enterprise.

"If at any time there are not sufficient jobs in private employment to go around, the Government can and must create job opportunities, because there must be jobs for all in this country of ours."

Wendell L. Willkie, fourth of series of seven articles setting forth suggested policies for Republican Party platform in 1945, June 15, 1944:

"Industry, labor, and government—local, State, Federal—should set up a cooperative mechanism which will act as a clearing house for information and constructive programs. Through such a mechanism capital goods expenditures—such as the building of roads, public works, industrial plants—so important a factor in the wide fluctuations of our economic cycle, can be spread and leveled over the years. * * *

"But we must be realistic enough to acknowledge that the best efforts of private industry, even supplemented by such intelligent cooperation—with labor and government—will not always be enough. In addition, the Federal Government must exercise a countercyclical influence against depression in order to preserve a reasonably high level of employment.

"Some of the obviously necessary measures to this end are: Direction of the capital market to encourage the flow of new capital when depression threatens and to discourage it in the face of a boom; the undertaking of legitimate Government projects at Government expense, but by private contract, the moment depression sets in—projects, for instance, that will improve the health and welfare of the people, create new markets, new purchasing power; broad social insurances which will both protect the individual and help to stabilize consumer industries and agriculture. * * *

"Also, in order that industry may function venturesomely, new and effective methods must be found for counteracting and controlling the tendency toward monopoly and monopolistic prices.

"The Republican Party cannot meet the need of the post-war period by merely passing resolutions in favor of 'free enterprise.' It must realize the inevitability and the justness of the people's demand for both protection and opportunity, and it must find the answers which exist unquely within a responsible enterprise system."

Beardsley Ruml, chairman of Federal Reserve Bank of New York address before Southwestern Pennsylvania Group of the Investment Bankers Association, February 21, 1944:

"It would be folly to expect that buiness can make the transition from full wartime employment to high peacetime employment without cooperation from public government at every level—Federal, State, and local. * * *

"It must be clear that planning of the sort we are thinking about does not mean regimentation.

"In certain quarters there is a prejudice against the word 'planning' that probably springs from apprehension that planning may lead us to a regimented way of life. I feel that just the opposite is the case.

"Regimentation arises after planning has failed. Regimentation must depend on force and violence to implement its intuitions and its fantastic will. Free, open, democratic planning, thinking about our national future out loud, will contribute to the success of our form of Government by bringing abiding satisfaction in the American way of life.

"Thus planning will render regimentation always distasteful, unnecessary. * * * Business today does not accept either regimentation on the one hand, or the statistical inevitability of mass unemployment on the other. * * *

"* * * the national state, through a clear and workable fiscal and monetary policy, must complement and supplement the activities of private business in the maintenance of high production and high employment. * * *

"Business wants a fiscal program that will help it create good products, good jobs and good investments. Business does not expect a national fiscal policy to do the work of business for it. It does ask for cooperation in maintaining a flow of purchasing demand that will have some general correspondence to what agriculture, labor, and business are able to produce and distribute."

Paul G. Hoffman, president of Studebaker Corporation and chairman of Committee on Economic Development, and Frazier Hunt, Cosmopolitan, January 1945:

"BET ON TOMORROW'S AMERICA

"We have to have an equitable and stable economic climate. The establishment of such a climate can only take place in an atmosphere of friendliness and cooperation between Government, business, labor and agriculture."

Leverett S. Lyon, chief executive, office of the Chicago Association of Commerce, address at Conference on Post-War Goals, conducted by New York University Institute on Post-War Reconstruction, October 13, 1943:

"The ability of business to give full employment will depend upon the adoption of national policies which will make it possible for those who want work to be employed, which will make it impossible for monopolies * * * to prevent the benefits of technical advance from being passed on to consumers, and which will make it advantageous and profitable for the business system as a whole to expand. * * *

"The national policies which will make these things possible cannot be established in directors' meetings. They must be established primarily in national legislation."

New York Times Magazine, October 29, 1944, page 41:

"HENRY KAISER FORESEES PLENTY OF JOBS

"* * * When peace comes, I don't think a single factory need stand idle nor that any man or woman need be jobless. It goes without saying that some Government assistance will be necessary. This does not mean that the Government must go into business. It will play its part in helping both capital and labor, for it cannot help one without aiding the other. Take it from me, this is no wild dream. It's just plain common sense."

Irving S. Olds, chairman of the board of directors of United States Steel Corporation, The Outlook for Post-War Industry, address before one hundred and fiftieth dinner of the Economic Club of New York, Hotel Astor, New York, N. Y., December 5, 1944:

"'Full employment' is both a most significant and a most puzzling problem. Some people seem to think that its solution rests solely within the control of the American industrialist. Nothing could be further from the truth. It is equally a problem for Government, labor, and every other segment of our society. In this connection, it should be borne in mind that before the war manufacturing accounted for only about one-quarter of the total number of those employed in this country * * *.

"More and better goods are produced and more and better jobs are created, only because some person, either singly or with others, hopes or believes that he can locate a sufficient number of customers and can sell to them his products or his services at a price which will leave him a profit after all costs have been met. He is willing to risk his savings and to devote his energy to that end. If we are to have more and better goods and more and better jobs, then that hope or belief, wherever it appears, must be permitted a fair trial; it must not be unreasonably or unwisely curbed, regulated, or opposed. The creation of new jobs is as simple as that, in my opinion. With it all, there must be a general feeling of confidence and self-reliance, rather than a defeatist attitude of mind."

Alvin H. Hansen, professor of economics at Harvard, special advisor to Board of Governors of Federal Reserve System. Address before American Federation Forum at Hotel Commodore, New York City, April 12, 1944:

"To offset the inevitable post-war slump we need to prepare a compensatory public investment program. We should have Federal, State, and local public improvement and development projects planned clear through to the blueprint stage. * * * Adequate planning ahead and proper timing of public investment can do the job. Boldly thrown in on a sustained basis, public investment outlays could have prevented the ever-widening breach which we did experience in 1929 and 1932, and which brought us close to national bankruptcy. * * *

"A program of public investment can provide not only a stabilizing balance wheel to our economy; it can also open and enlarge private investment opportunities, revitalize private enterprise, and give us in the generation ahead an expanding economy with rising levels of income and employment. * * *

"The spending programs of the thirties was essentially a salvaging process. * * * we now need a positive program to prevent serious depression. Yet the fact is that we are still making no adequate preparation. We have done nothing so far which gives us any assurance whatever that we shall not again be confronted with a devastating depression. * * * Without useful and productive public improvement projects planned ahead, we shall again be forced to resort to boondoggling. Our utter lack of a well-developed public investment program is a shocking revelation of economic and financial irresponsibility."

Chester Bowles, O. P. A., in an October 15, 1944, letter to James C. Patton, New York Times, October 16, 1944:

"While Federal underwriting of total investment is not the only measure required to

convert our economy to full peacetime activity, it is an essential elements in a post-war program for full employment.

"We should, of course, do everything possible to encourage increased investment of risk capital by private business.

"* * * if private business were assured that the Government stood ready, through public investment, to underwrite the huge markets that go with full employment, there might be very little need for the Government actually to undertake investment above the normal amount involved in immediate essen- the public works."

Leon H. Keyserling, general counsel, National Housing Agency, in the American Economic Goal (prize winner ($10,000) in Pabst post-war employment awards):

"Democracies do not want totalitarian unity. But any system, to go ahead, requires some agreement on fundamentals. * * * We must evolve some economic rules of the game, and some economic ideal to strive for, so that we can plan and work and prosper—and not bicker our way to post-war disillusion instead of America's post-war promise.

"* * * The American economy should enable all the people to enjoy material comfort, good education, security, jobs, and creative leisure. * * *

"Maximum standards of living depend upon full employment of manpower, skills, plant, and resources. This is the American economic goal. * * *

"Achievement of full employment is predominatly a task for the system of American enterprise, including industry, agriculture, and labor. * * *

"Congress should establish an American economic committee as the first practical step in an evolving democratic teamwork by American enterprise, Congress, the Departments, and the President toward an American economic policy and an American economic goal.

"The Government should provide incentives to American enterprise to expand toward full employment, beginning with: a Government policy stable enough to encourage enterprise to plan; direct incentives to enterprise to plan, including tax incentives wherever workable; governmental research and fact-finding where enterprise needs facts but cannot get them alone * * *; timely simplification of restrictions and regulations peculiar to wartime. * * *

"Insofar as additional incentives are needed to expand American enterprise toward full employment, the Government should prepare fiscal incentives, moving from narrower to broader commitments in this suggested order:

"Governmental insurance or guarantees, such as those stimulating $4,000,000,000 of private housing investment without public cost.

"Public credits, providing cheaper money in the city and on the farm.

" 'Marginal' public expenditures to general private investment. For example, interest subsidies on insured, long-term, low-rate loans for acquiring and cleaning blighted urban areas.

"We should boldly explore additional incentives, using systems and funds to encourage employment at least as willingly as palliatives for unemployment, and discarding the paralyzing doctrine that utilizing American enterprise is incompatible with planning. * * *

"Where all these incentives fail to achieve full employment by American enterprise, direct Government programs represent bedrock civilized responsibility. Profiting by experience, these programs should be readjusted as follows:

"We should abandon defeatism, such as * * * planning public works on the assumption that seven to ten million post-war 'unemployed' are inevitable.

"We should integrate spending, taxing, and regulations with an American economic policy, measuring their long-term effect upon all employment, and using them primarily as incentives to full employment by encouraging a healthy balance of prices, business activity, savings, investment, and consumer expenditures, instead of just using them to cure maladjustments after they occur;

"Public works and related undertakings to provide jobs, instead of being planned in isolation, should be coordinated with plans for expansion of American enterprise, so that they will be really supplementary to the employment capacity of American enterprise."

Business Week, editorial, December 23, 1944, page 120:

"Just as the National Budget proponents recognize the possible danger to our institutions in a continually expanding role of Government and would prefer steps to encourage private business to carry the entire full employment load, so also do most businessmen now agree that the course of economic events cannot always be permitted to run unchecked. * * *

"Having agreed on trying to avoid both mass unemployment and the replacement of private enterprise by Government, the problem comes down to one of degree.

"Economic theory gives no clear-cut general answer to the question of whether, in the long run, Government investment tends to inhibit or release private investment. * * *

"Can Government forecast business at the start of each year? We may or may not agree to rely on such predictions, but the extensive additional information required for them would, in any case, be helpful for private or official use—on business investment plans, on consumer spending habits, on private employment expectation."

Report of the Senate Special Committee on Post-War Economic Policy and Planning, June 12, 1944, page 4:

"THE PROBLEM OF POST-WAR EMPLOYMENT AND THE ROLE OF CONGRESS IN SOLVING IT

"* * * This country never has had and never will have real prosperity without full employment. A man vainly seeking a job is not a potential customer for the products of American farms and factories. * * *

"* * * It therefore seems fundamental that the first consideration in the shaping of Government policies should be to inspire confidence on the part of management, the investor, the employee, and the consumer.

"* * * Careful consideration should also be given to the preparation of a portfolio of useful public works that can be started quickly and terminated quickly, to be held as a reserve, and to be utilized only when necessary. In order to avoid Government works projects merely for the purpose of providing work—to which everyone apparently is opposed—useful public work projects in the field of road building, reclamation, irrigation. flood control, and probably many other fields are thoroughly justified * * *

"Congressional attention to these matters cannot wait. Prompt action on them is of transcendant importance, and this committee feels most strongly that no extended congressional recess should be considered pending their disposition. The very destiny of the Nation may depend upon wise and prompt decisions in respect to them."

Washington Daily News, editorial, May 24, 1938:

"If the first group (those who believe the 'world do move') could only get busy and vocal to the extent of selling the second (those who yearn for the 'good old days') that it's time to wake up, the futile fight between business and Government might be turned into an harmonious advance toward better days and finer democracy."

St. Petersburg Fla.) Times, editorial, December 26, 1944:

"The bill [3] is an interesting start toward a realistic solution of the problem of providing 60,000,000 jobs. It recognizes the principles of planning on a national scale with the cooperation of all economic groups. This is the basic principle essential to full employment of the Nation's labor and resources."

Pittsburgh (Pa.) Post-Gazette, December 21, 1944:

"We wish the subcommittee luck in finding a way between the Scylla of unemployment and the Charybdis of the authoritarian state. * * * The legislation which charts a safe course between these two perils would do a great deal toward straightening out a very greatly confused country—even, one might add, a puzzled and groping world."

International Latex Corporation, of Dover, Del., advertisement appearing in local papers on January 8, 1945:

"The creation of that assurance [of full employment], of that public confidence, is the responsibility of the Federal Government. Whenever the public fails to spend enough to make possible 60,000,000 jobs, Government must first supply incentives for private business spending and private business activity. In adition thereto, Government also must stand ready to provide funds for useful job-making public projects so that the total adds up to 60,000,000 jobs."

Report of Special Committee of the London Chamber of Commerce appraising the British white paper on employment policy, quoted in New York Times, December 23, 1944:

"Budgetary policy can and should be used to control the level of the national income and thence to achieve a high and stable level of employment."

From a summary of an article in the London Banker, December 1944:

"In its main outlines, the Beveridge analysis does not differ basically from the now conventional approach embodied in many recent publications, from the Unilever pamphlet to the Government's white paper on employment policy. The need for maintenance of aggregate demand as a condition of full employment is a doctrine now accepted by all political parties and all schools of economic thought."

World Peace

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the RECORD an editorial which appeared in the Rocky Mountain Herald of March 17, 1945, and which was written by Thomas H. Ferril. Since this editorial deals honestly with the problem of world peace, it is entitled to a place of distinction.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Why don't people have the guts to come out and say what's going on? This time

[3] The preliminary draft of the full employment bill, as it appeared in the Year-End Report of the War Contracts Suocommittee to the Committee on Military Affairs December 18, 1944.

we're trying power for a change—Russian power. American power and where Britain can slip it in, British power. What's more, it may work. It hasn't been tried for a long time and certainly can't fare any worse than the League of Nations, the Kellogg Pact or Locarno. Neither philosophy has anything to do with preventing the disease of war. It's like arguing that to prevent smallpox it's wiser to beat on a hollow oak than a hollow banyan. We're simply repeating the same behavior that's been going on since the days of Agamemnon. Our current approach is, however, a bit novel. We have drifted into a Big Three power situation, but we are going to give lip service to a world-security organization in which the meek and small will be told that they have equal rights. The adroit chore of Mr. Roosevelt and his State Department is to manipulate the San Francisco World's Fair in such a way as to convince the small nations and the United States Senate that their objectives are identical with the objectives which "Russia, Britain, and I" have already decided on. The lions and the lambs are to lie together, with the lions doing most of the lying. Yet it's likely to work out better than if it were on the level. A powerful Russia and a powerful United States may keep some sort of peace going for the next half century, provided, of course, that they don't get to helping each other too much in the Orient only to find out that they're on different sides of the fence.

The Midnight Curfew

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a newspaper report of March 23 containing the results of a Gallup poll on the midnight curfew, which shows that an overwhelming majority of the American people approve without hesitation the midnight curfew as put into effect by Mr. Justice Byrnes.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

MIDNIGHT CURFEW APPROVED BY OVERWHELMING MAJORITY

(By George Gallup)

PRINCETON, N. J., March 23.—Although now the subject of sharp controversy with Mayor LaGuardia's announcement that New York night clubs may remain open until 1 a. m., the Byrnes midnight curfew nevertheless has the approval of a vast majority of people across the Nation.

More than 8 out of every 10 included in a recent survey say they approve of the idea of closing all places of entertainment at 12 o'clock, in line with the Byrnes request. The survey was completed, however, before the LaGuardia announcement.

Even in the great metropolitan centers (cities with a population of 500,000 or more), majority sentiment is in favor of the midnight closing, but it is also notable that the curfew is less popular in these areas than elsewhere.

Taking as a group the large cities where interviewing on the issue was conducted, the institute finds about two-thirds among those interviewed approving the curfew ruling.

In making the survey, field reporters for the institute put this question to a cross-section of the adult population:

The War Mobilization Director has recently requested that all places of entertainment be closed by midnight to conserve fuel and other war resources. Do you approve of this?

The vote of the Nation:	*Percent*
Approve	82
Disapprove	13
Undecided	5

People who have a relative in the armed services are more inclined to favor the idea of the curfew than are those who do not. Women are more inclined to favor the curfew than men.

Moreover, a break-down of the vote in the survey by age groups shows that the older the person interviewed, the more inclined he is to look with approval upon the midnight-closing regulation. This is shown as follows:

By ages	Approved	Disapproved	Undecided
	Percent	*Percent*	*Percent*
21 to 29 years	75	18	7
30 to 49	82	13	5
50 years and over	86	10	4

Balancing of International Exchange

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times of this morning dealing with the possible contribution of foreign travel by Americans to the balancing of our international exchange following the war, and the studies being made on the subject by the Secretary of Commerce, Mr. Wallace.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRADE SPUR SEEN IN TRAVEL ABROAD—WALLACE ENVISAGES POST-WAR SPENDING OF ONE AND ONE-FOURTH BILLION A YEAR AS AIDING OUR EXPORTS

WASHINGTON, March 25.—Secretary Henry A. Wallace, believing funds that will be spent abroad by Americans will become an important factor in our foreign trade, intends to take into account these invisible items in estimating our foreign trade balance.

The Secretary of Commerce has stated that he would make every possible effort to obtain maximum exports and imports on a permanent basis. This program, he said today, would require widespread education of businessmen and others regarding the economic laws concerned.

For example, to have large exports the United States must also have large imports and invisible items such as foreign travel with payment for services rendered by foreigners to United States citizens.

Studies made by the Department of Commerce indicate that, assuming a high level of economic activity and national income in the United States and conditions abroad attractive to tourists, gross expenditures by Americans on foreign travel may be as high as $1,250,000,000 a year, which would supply dollar exchange for a large volume of our exports.

The previous peak in our foreign travel came in 1929, when it reached $693,000,000, including $483,000,000 within foreign countries and $158,000,000 paid to foreign carriers and $42,000,000 to American lines.

It is pointed out that in the 1920's the relationship of travel outlays to national income was dynamic, the former rising much faster than the latter. Since other factors are imponderable, it is assumed that travel outlays in the post-war years will occupy somewhat the same relation to national income as at peak levels in the past.

National income in 1929 was estimated at $83,300,000,000, and gross travel outlay at $693,000,000, a ratio of .83 percent. Projected on the 1929 ratio with national income at, say $150,090,000,000, in the early 1950's gross travel outlays could reach $1,200,000,000.

However, since travel outlays rose more rapidly than national income in the 1920's and since many of the stimulative influences operating then would again come into play, the gross figure may even reach $1,500,000,000 after a period of rehabilitation abroad.

For foreign travel is the most important luxury commodity Americans buy abroad. In 1929 the expenditures for it constituted 70 percent of total payments to foreigners for goods, services, and other current transactions.

It is significant that about a fourth of travel outlays have gone to foreign carriers. The amount of travel money accruing to them after the war will depend in part on the division of traffic between them and American lines, especially on air routes.

My Prayer

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the prayer composed by Mrs. Cora Lou Abart, of Bassett, Nebr., which I send to the desk.

There being no objection, the prayer was ordered to be printed in the RECORD, as follows:

MY PRAYER

Dear God, Father of us all, we humbly come to Thee in prayer; we thank Thee for the landing of our Pilgrim Fathers on American soil.

Seeking right to worship Thee as their conscience might dictate in this loved land without turmoil.

We thank Thee for the blessings of freedom for which they struggled through bitter hardships and won;

And, Father, we pray very earnestly that we may always realize the blessings of achievement at end of day and work well done.

Oh, God, we pray with all our hearts that Thou will lead us, and all other nations of the earth, through these dark days of flaming hell of war to happy years when again the latchstring is out on every neighbor's door.

And please strengthen us to keep on singing the songs of steadfast faith and courage our pioneer parents voiced on a rock-bound shore.

Help us, Father, to heed their call, then, from beyond the mist, to protect our rights to freedom and live according to the constitutional laws which they founded on the Christian way of life as written in Thy Holy Book and bequeathe to us as a precious heritage to keep—a heritage of faith, courage, justice, virtue, truth, and love,

Which bring an award of clear conscience and untroubled rest from Thee above.

We pray that peace may be our constant watchword, that we not seek war but have courage under the banner of righteousness to defend our own.

And may we have that unbounded faith of our fathers which brought their frail ship across mighty waters its only power through lashing foam.

Great God, will Thou drive home with might to all our hearts—our President, Congressmen and Senators, the leaders and soldiers of our armed forces, and to all Thy world of people—the conviction that without Thee as partner and without Thy guidance we can do nothing. Guide us, then, back on the beam of Thy love which bringeth peace to all nations. Now, Father, to Thy glory we pray to attain that "Peace on earth and good will toward men."

We ask in the name of Jesus. Amen.

—*Mrs. Cora Lou Abart.*

BASSETT, NEBR.

Winning the Peace

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "It Isn't Too Late To Win the Peace!" by William Henry Chamberlin, from the Progressive of March 5, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YALTA WAS MR. ROOSEVELT'S MUNICH, BUT—IT ISN'T TOO LATE TO WIN THE PEACE

(By William Henry Chamberlin)

"The more it changes, the more it remains the same," a wise Frenchman once remarked. Between the Munich Conference of September 1938 and the Yalta Conference of February 1945, there was an interval of more than 6 of the most destructive and tragic years the human race has ever known. Millions of human beings perished in frightful agony. Uncounted old cities, with the very breath of civilization in their monuments and buildings and streets, have been reduced to piles of rubble by that most appropriate symbol of twentieth century "civilization," the block-buster bomb. There have been immense changes in the balance of power as between various states.

But one thing has not changed at all. This is the habit of the strong, in international politics, to prey on the weak. As between Munich and Yalta there was a change of scenery and of personalities. There was no change whatever of spirit and methods.

For Hitler read Stalin. For Daladier and Chamberlain read Roosevelt and Churchill. For Czechoslovakia read Poland. The rest of the two stories is identical almost to the last comma. A hard-boiled dictator, holding the trump cards of power politics, got what he wanted. Two democratic statesmen got what consolidation they might derive from the scanty fig-leaf of pious phrases that bear not the slightest relation to the realities of the situation.

In each case a people with an ancient history and a keen sense of newborn freedom was subjected to dismemberment and subjugation to the will of a stronger neighbor without even being accorded the criminal's traditional right to a word in its own defense.

Americans who are gullible, or who wish to be fooled, may take consolation in the setting up of an international commission to help select the new Polish Government and to watch the future election. But the Czechs got exactly the same kind of assurance in the Munich Declaration. And the French and British members of the commission proved completely helpless in resisting Hitler's ever increasing demands.

Nothing is to be gained by shutting our eyes to reality. Our entry into European politics, so long advocated as a guaranty of a just world order by many idealistic Americans, has been inauspiciously marked by acceptance of one of the most unsavory traditions of European power politics, the spoliation and subjugation of Poland.

PURRING PHRASES VERSUS REALITY

This analysis of the situation may be a shock to unsophisticated Americans who have been nourished on such bland and soothing generalities as the following Pollyanna statement of Acting Secretary of State Joseph C. Grew:

"One of the greatest steps forward on the road to victory and to the establishment of enduring peace that has yet been taken in this war. * * *

"The great constructive achievements of the meeting have immeasurably strengthened the unity of purpose and action of the participants and may well gladden the hearts of peace-loving people everywhere."

Such purring phrases may temporarily confuse the minds of Americans who are vague as to east European history, geography, and ethnography. But they will bring little consolation, one may believe, to a Polish soldier who was blinded at Monte Cassino or who lost a leg in Holland, fighting for the United Nations cause, and who now finds his native town handed over to the Soviet Union, the independence of his country stolen away.

Perhaps we should have been prepared for the compromises of Yalta by the Roosevelt administration's preliminary attack on perfectionism. Elmer Davis, Director of the Office of War Information, led the way in a pre-Yalta speech.

People who pronounced the Atlantic Charter a flop, he said, had simply not grown up. And then he struck the plaintive moratorium note:

"Nobody ever said it [the charter] could all be put into effect day after tomorrow, or even at the end of the war."

This same wistful groping for an "out," this same effort to make "perfectionism" the scapegoat for a peace that is being lost even before the war is ended, was reflected in President Roosevelt's message to Congress.

"Perfectionism no less than isolationism or imperialism or power politics may obstruct the paths to international peace," he said.

Coming, as they did, on the eve of the widely promoted Crimean meeting of the Big Three who have assumed a dictatorship over the destinies of the world, these sentences do not sound like a call to the creation of a brave new world under American inspiration and leadership. Instead they accurately forcasted the weary mood of a man who knows that he is going into the conference beaten in advance, forced to accept a whole series of accomplished facts which by no conceivable sophistry can be brought into harmony with the ideals of freedom and self-determination for which America was professedly fighting the war.

There is a fundamental fallacy in the idea of a moratorium on the Atlantic Charter. The same fallacy lies behind the unfortunate adverb "permanently" which Senator VANDENBERG used to qualify his declaration of unwillingness to guarantee the spoils of an unjust peace.

This fallacy lies in the assumption that an unjust territorial settlement may be amended and improved with the passing of time. But not a single unjust frontier line drawn after the last war was changed except by force or threat of force.

Impossible financial exactions may cease when it is found that they cannot be collected. A regime of foreign occupation may be shortened by protests from the folks back home. But a bad territorial settlement is almost certain to stand until it is challenged by force.

President Roosevelt at Yalta signed his name to a document which embodies a number of important features of the post-war settlement. And Director of War Mobilization James F. Byrnes, who was present at the Yalta meeting, specifically credits Mr. Roosevelt with initiating, as well as endorsing the Polish settlement and the "compromise" on voting procedure under the Dumbarton Oaks project of world organization. And on the strength of these two proposals it is easy to understand how the President "got along fine" with Marshal Stalin.

Consider first the Polish settlement. Before the Yalta meeting there were two governments that claimed to represent the Polish people. The Polish Government in London had been recognized and dealt with as the legitimate Polish regime by Great Britain and the United States throughout the war. Until very recently it included representatives of the four strongest parties in pre-war Poland. Two of these were comparatively conservative, the other two, the Socialist and Peasant Parties, were distinctly to the left in their political and social programs, and spoke for large numbers of organized Polish workers and peasants.

A POLISH WHO'S WHO

Communist propaganda has made a systematic effort to smear the Polish Government in London as reactionary, Fascist, anti-Semitic. The best comment on this misrepresentation, which also sometimes took the form of confusing the Government in London with the authoritarian Colonels' Cabinet which ruled Poland before the war, is to note that the former Prime Minister of the Government was the leader of the Peasant Party, Mikolajczyk, that the present Prime Minister is the veteran Polish Socialist, Tomasz Arciszewski, and that 2 Jews have been members of an 11-man cabinet.

The Polish Government in London has been closely linked up with one of the most active and courageous underground movements in Europe. The most dramatically conclusive proof of its popular support was the heroic and amazing uprising in Warsaw, which began last August at the initiative of the London Government when the Red Army was at the gates of the city. Suddenly and mysteriously deserted by the Russians, who stopped their advance for no visible reason, the underground forces in Warsaw fought the powerful German garrison for 2 months, until supplies of food and munitions had been exhausted and Warsaw itself was reduced to a desolate ruin. The independence of this Polish Government was proved by its refusal to bow to the dictation of Roosevelt and Churchill and accept the dismemberment and enslavement of its country.

The authority of the London Government is achnowledged by the Polish forces which are fighting in France and Italy. It is also supported by an overwhelming majority of Poles in this country, who are free to express their opinion and who can be depended on to distinguish patriots from traitors.

WHAT THEY SAID BEFORE

What of the Provisional Government of Poland, the Stalin-sponsored puppet regime, which the Yalta declaration virtually recognizes as legitimate, with a little soothing palaver about reorganizing it on a broader democratic basis?

Its President, Boleslav Bierut, is a notorious agent of the Communist International who spent little of his adult life in Poland. The Minister of War, Michal Rola-Zymierski, was expelled from the army in disgrace and sentenced to 5 years in prison for graft under the pre-war Polish regime. Other members of the government have an equally shady or obscure past.

Churchill, who is often more forthright than Roosevelt in public declaration, let the cat out of the bag in Parliament when he said that the Lublin Committee, in his opinion, would not have come into existence if the London Government had submitted to Stalin's dictation on the border question. Walter Lippmann, who often leans over backward to defend the purity of Stalin's motives and actions, referred once to "the unrepresentative and essentially puppet character" of the Lublin regime. The New York Times, in an editorial which took a very optimistic view of the Yalta settlement, speaks of "the present puppet government set up by Russia's unilateral action."

If there ever was an issue on which America would have stood on firm moral ground it would have been flat, uncompromising refusal to admit the legitimacy of such a crude agency of foreign rule. But the Roosevelt plan for Poland implicitly recognizes the Lublin set-up with the verbal anesthetic that it should be broadened to form "a Polish provisional government of national unity, pledged to the holding of free and unfettered elections as soon as possible on the basis of universal suffrage and secret ballot."

The joker in this plausible suggestion is that the Soviet puppet regime in Poland, with the expert assistance of the Soviet political police, has set up a reign of terror and has been liquidating by deportation or execution every Pole it can lay its hands on who is loyal to the London Government. There is a mass of specific testimony on this point from the Polish underground movement.

Equally unhappy was Mr. Roosevelt's debut in assuming "international responsibility" in the matter of the Polish boundary. Here he meekly accepted Stalin's demand for the annexation of about two-fifths of Poland, with the derisory concession of "5 to 8 kilometers" (3½ to 5 miles) to the east of this line.

Needless to say, this annexation, without any pretense of a free plebiscite, is in complete contravention of the Atlantic Charter, allegiance to which is solemnly reasserted in the Yalta declaration. Equally inconsistent with the Charter is the statement that "Poland should receive substantial accessions of territory in the North and West." For such accessions could only take the form of annexation of solidly German regions in East Prussia, Silesia, and Pomerania.

In the matter of voting procedure in the "Dumbarton Hoax" organization Mr. Roosevelt also made a masterly exchange of substance for shadow. The "compromise" on this point has now been semiofficially revealed. For questions which do not involve punitive sanctions, which are therefore of a secondary nature, Stalin has consented to waive the claim to vote in his own case.

A FIVE-POINT GOAL FOR AMERICA

But in important questions, involving the use of military and economic sanctions, Stalin has won his point that every great power should vote in its own case. And this reduces the proposed world security organization to the hollowest kind of a shell. It is often suggested that the new organization will possess the teeth that were lacking in the League. But if the Dumbarton Oaks type of organization, not the League, had existed in the 1930's, not one act of aggression, neither Japan's seizure of Manchuria nor Italy's onslaught on Ethiopia nor Germany's attack on Poland nor the Soviet invasion of Finland could have been legally checked. For in each case it was a great power that committed the act of aggression. And great powers, under the new voting arrangement, will be above and outside the law.

The final proof that we have less reason to feel secure now than at any time in our history is the President's demand for peacetime compulsory military training, without even a hint that friendly negotiations among the leading victorious powers might lead to an all-around scrapping of this system. Here surely is decisive evidence of the emptiness of the propaganda that no one of the United Nations could conceivably be an aggressor. It would be a pretty low order of intelligence that would assume that peacetime conscription is necessary to protect us against a broken, shattered, and disarmed Germany and Japan.

The Dumbarton Oaks project is so full of loopholes that it will probably not get us into any undesired war. Its greatest danger is that it will convey a false sense of security and will stultify our moral perceptions by making us underwrite what, in the light of what has happened in Poland, the Baltic States, Iran, Bulgaria, Greece, and Italy, is a downright hypocritical lie: "the sovereign equality of all peace-loving states."

America will have to wage the struggle for peace from scratch after the shooting in this conflict is over. I suggest that we hitch our foreign policy to five objectives: Self-determination for all politically conscious peoples, elimination of imperialism, agreed limitation of armaments, equality of economic opportunity for all peoples, and freedom of news reporting and exchange of ideas throughout the world.

Take a look at how these ideals have, or have not, been realized about 1955 and it will be possible to know whether the world is moving toward stable peace or toward the unimaginable horrors of a third world war.

One Munich does not mean a total and irreparable defeat of American foreign policy. The people must take over where the Government has failed. Not only Mr. Roosevelt's honor, but the honor of the American Nation is involved in pressing for the creation of conditions in Poland that will make a genuinely free election possible.

Minimum conditions in this connection will be the release of political prisoners and deportees, the admission to Poland of all Poles who have been fighting abroad for their country's cause, complete freedom of press, and of political organization and agitation, freedom for American correspondents and representatives of Polish-American organizations to travel freely in Poland.

If the people can learn the truth and pierce through official shams, glosses, and propaganda devices, America still possesses enough moral prestige and physical strength to turn diplomatic defeat into victory, as it has already turned military and naval defeat into victory.

Post-war Economic Problems

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, March 26 (legislative day of Friday, March 16), 1945

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington Post dealing with post-war economic problems, and particularly quoting an article from the London Economist, which is discussed by Mr. Leo Wolman, the writer of the article, which seems to me most desirable as a matter of reference.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOSE GRAND PROMISES NOT ENOUGH TO SOLVE FULL UNITED STATES EMPLOYMENT

(By Leo Wolman)

Sooner or later Americans will be forced to move out of the universe of promises and guaranties and address themselves to the conditions required for full, or expanding, or good employment after the war.

Public officials and private authorities on economic policies are doing this country a great and probably lasting disservice by professing to know precisely how full employment, economic expansion, and rising standards of living can be achieved in the future. By assuming this air of omniscience, they are arousing false hopes in the minds of millions of people and they are diverting attention from many basic problems, upon whose wise solution the future of economic welfare of this country depends.

Democratic societies can ill afford to allow their leaders to indulge in grand promises which they are unable to fulfill.

As the close of the war approaches, the English are beginning to think about the numerous detailed economic decisions which taken together, constitute a nation's economic policy. Having undertaken to guarantee everyone a job after the war, the English are now trying to find out how this can be done. The general goal of public policy they stated in their white paper on post-war employment policies, just as we have stated ours in the bill sponsored by Senator MURRAY.

The intellectual foundation of this policy the English find in Sir William Beveridge's latest book, just as we find ours in the writings of American economists during the last decade.

Their post-war problems are intrinsically not unlike ours, much as they may differ in detail and in degree.

EXPORT INCREASE ONLY ROAD TO FULL EMPLOYMENT

For the English at least one element of their future economic policy is clear.

To meet their obligations, to prosper and to furnish satisfactory employment, the British Isles must find the means of increasing their export trade.

What this requirement involves is the subject of an editorial in the London Economist (January 27, 1945) entitled "Export or Die," which everyone concerned with the prosperity of the post-war world should read and ponder.

"The dominant factor (in post-war exports)," the Economist writes, 'will be the price of British goods relative to those of other nations. British costs and prices were high before the war and they are much higher now. British labor has grown accustomed to a standard of living that it was hard to justify by its comparative productivity even before the war. * * * Moreover, British industry has reinforced this tendency by its addiction to restrictive practices and high margins. During the war, ideas about standards of living have perceptibly risen, cartelism has been strengthened and the country's competitive position has worsened."

NO REMEDY FOUND—IT'S GAME MANY CAN PLAY

For this condition the Economist finds no remedy in familiar panaceas or tricks. "Exchange depreciation," it goes on to say, "is a game that many can play. Schachtian

strong-arm tactics, exploiting the attractiveness of the British market to force expensive goods on those countries that sell here, will work only until the victims find means of escaping.

"Open export subsidies would give rise to a world-wide outcry and world-wide retaliation. Indirect subsidies—the cartels recouping their export losses out of higher prices to the British consumer—are even more obnoxious.

"There is only one permanent solution," the editorial concludes, through such a great increase in productive efficiency as will reconcile high wages with low selling prices. * * * But on this, the representatives in the Government of business and of the trade-unions are one in blocking any approach to action, even of the timidest'"

These are mundane considerations of costs, prices, efficiency, and productivity which the Economist urges as the means of attacking the problems of Britain's foreign trade They are far removed from the simple expedients of government spending and government investment. They are relevant to prosperity in domestic as well as in foreign trade.

As such, they deserve some study and discussion in this country.

Establishment of National Cemetery in Arizona

EXTENSION OF REMARKS

OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of the State of Arizona:

Senate Concurrent Memorial 1

Concurrent memorial requesting the establishment of a national cemetery in Arizona

To the SECRETARY OF WAR:

Your memorialist respectfully represents:

The State of Arizona, due to climatic conditions highly beneficial to persons afflicted with certain diseases, has attracted to its borders many war veterans.

Due to this migration into the State, from all parts of the Union, of veterans desirous of receiving the benefits of these favorable condtions, the veteran population is greater, proportionately, than in almost any other State.

For the same reason that the veteran population is high the mortality rate is also high. It has been estimated that prior to the outbreak of the present war the number of deaths of veterans in Arizona, within 14 years, had numbered about four thousand, since which time the number has greately increased, and will increase much more rapidly as the result of the casualty rate of World War No. 2. A large percentage of such veterans will require burial in a national cemetery.

These facts show that a national cemetery is needed in Arizona at the present time, and that it will become more and more a necessity.

Wherefore you memorialist, the Senate of the State of Arizona, the House of Representatives concurring, requests:

1. That the Secretary of War cause a survey to be made of feasible sites for a national cemetery in the State of Arizona, for the purpose of ascertaining the most desirable location therefor.

2. That the results of such investigation be conveyed to the Governor of Arizona, and that steps be taken looking to the establishment of such national cemetery.

Adopted by the senate January 23, 1945, by the following vote: ayes 18, nays 0, not voting 1.

Adopted by the house February 8, 1945, by the following vote: ayes 56, nays 0, absent 0, excused 2.

Filed in the office of secretary of state February 9, 1945.

International Security Conference at San Francisco

REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks, I am glad to call to the attention of the Members of the Congress resolutions demanding that the International Security Conference at San Francisco be open to the public through representatives of the press and radio and that no more secret commitments be made by the President or any other person in authority without the advice and consent of Congress.

These timely resolutions follow:

Whereas a secret agreement, understanding, or treaty by any representatives of the Government of the United States of America with any foreign representative or government has never held a place in our free form of government, and is apt to interfere with the freedom of the people; and

Whereas free access of American citizens to all information on international agreements for open discussion and debate is a fundamental principle of a free republic; and

Whereas the present national administration is now committed to a policy of international cooperation requiring agreements, understandings and treaties with foreign nations; and

Whereas the decision on all final treaties with these foreign nations rests with the Senate of the United States, whose every action is made daily available to the people, the press, and the radio through the published CONGRESSIONAL RECORD; and

Whereas the Constitution of the United States, article 2, section 2, reads, "The President shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur"; and

Whereas the executive branch of our Government has violated the principle of this section of the Constitution by making secret agreements and understandings with the representatives of other governments without the advice and consent of the Senate: Therefore be it

Resolved, First, that the Allen County Republican Club of Fort Wayne, Ind,, sponsor a movement in this and other communities looking toward an amendment to the Constitution of the United States giving all agreements and understandings between this Nation and any other nation the status of international treaties;

Secondly, that a completely detailed report of every agreement, understanding, or treaty by the President or other person in authority be immediately made to the Senate for its advice and consent, and that ratification requires a two-thirds concurring vote by the Senate;

Finally, that such a constitutional amendment would prevent the insidious practice of making agreements whose provisions are kept secret from the American people and would guarantee:

1. The balance of power of the three branches of Government as set forth in our Constitution will be maintained.

2. The people will be promptly informed of all actions on foreign policy taken by their Government, through the CONGRESSIONAL RECORD and the press and radio; and, finally,

3. Assure the people that the sovereignty of the United States of America will be preserved at all times in its relationship to other nations.

Whereas the International Security Conference is to be held in San Francisco during the month of April 1945: Therefore be it

Resolved, That the Allen County Republican Club sponsor a movement in this and other communities urging that all sessions of this Conference be open to the American public through representatives of the press and radio; and be it

Resolved further, That in the event an international governing body be set up at the International Security Conference that a day-to-day record of the complete proceedings of this body, similar to the CONGRESSIONAL RECORD, be published and be made available to the American people, press, and radio as a safeguard to the sovereignty of the United States of America.

NEWS-SENTINEL GIVEN HONOR BY G. O. P. CLUB — RESOLUTION PRAISES FIGHT FOR FREEDOM

Editorial policy of the News-Sentinel in combating un-American doctrines seeking to undermine the foundations of American freedom and constitutional government is praised in a resolution adopted by the Allen County Republican Club at its meeting at the Y. M. C. A. Wednesday. Robert Richey, president of the club, presided at the meeting which was addressed by Victor Jose, attorney and orator of Marion County.

The resolution praising the News-Sentinel's stand against the movement designed to rob Americans of their freedom, is as follows:

"Whereas the Allen County Republican Club of Fort Wayne, Ind., is deeply interested in furthering in every way true Americanism in not only its own community but throughout the entire State and Nation; and

"Whereas the News-Sentinel is outstanding in its featuring of columnists who not only uphold and stand for the finest principles of the real spirit of America but exposes those individuals who attempt to poison the minds of the people with their un-American doctrines: Therefore be it

"*Resolved*, That the club extend its thanks and full appreciation to the News-Sentinel for the most excellent help and cooperation being given us, and for the maintenance of that newspaper's splendid editorial and news policies."

PLEADS FOR AMERICAN FREEDOM

County Attorney Lee J. Hartzell was chairman of the meeting. Cochairmen with him were Deputy Sheriff Ira Summers, Ruth Scott, and Ouina Evans. Mr Hartzell introduced Mr. Jose who reviewed the struggles of the pioneers in developing the country and establishing the American freedom under which the country grew to be great. He said that it was for the express purpose of establishing and developing that freedom that the pioneers came to these shores.

"The present national administration is endeavoring to stifle these freedoms," said

Mr. Jose. "However, there are enough Americans who value this freedom so highly that with the backgrounds of their illustrious ancestors they will defeat the purpose of these defilers of American liberty. The unconquerable spirit of these pioneers who founded the country will rise to restore all these freedoms unimpaired and will wipe out the ulterior influence which the present national administration has left on American life."

BLAMED FOR JUVENILE DELINQUENCY

The speaker blamed the present national administration for being the principal factor contributing toward the "alarming increase in juvenile delinquency in recent years."

"By putting a premium on deception and bad faith in our National Government and by justifying any means to gain a desired end, the leaders of this administration have given our youth a false picture of moral values and code of ethics and the Nation-wide spread of juvenile delinquency has been the natural result.

"Fort Wayne and Indiana is indeed fortunate in having such an aggressive, loyal American organization as the Allen County Republican Club."

"Every American city should have such an organization to help safeguard and restore rights gained for us by our sturdy, heroic ancestors and to help restore the moral values and conceptions of honesty which have been crushed into the dust by those who would irretrievably stifle our American liberties."

The speaker also deplored at length the great waste of the substance and wealth of the country in the "tremendous sums which are being given away to people all over the world by the present administration."

"This waste of the people's money and the Nation's resources is unconscionable," said Jose.

Nazis for Last-Stand Barrier

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lester Allen from the Boston Post of March 11, 1945:

NAZIS FOR LAST STAND BARRIER—HOPE "INNER FORTRESS" IN WILDS OF SOUTH GERMANY WILL HELP THEM TO DELAY FINAL DAY OF DOOM

(By Lester Allen)

High in the cruel terrain of the Apennines in Italy, where American soldiers have been fighting a "forgotten war" against the best remaining troops left to the Germans in a single army unit, the Germans have staged a dress rehearsal of the final stand in the mountain fastnesses of southern Germany, Austria, and the Tyrol.

It has not been noticed, perhaps, in the excitement of the victories of the Cologne plain, that special American mountain troops have been sent into action against the crack German Army kept together in Italy by Von Kesselring. In this army are found no volksturm or volksgrenadier units, no "cannon fodder" scraped up from the bottom of the German manpower barrel. Von Kesselring's men are crafty fighters who know how to sow minefields and cling to mountains.

NAZI "LAST STAND" COMING

There has been much speculation as to the time when the Germans would pull these crack troops out of the Po Valley, out of Italy to the line from Switzerland, through the Tyrol, the Dolomites, and the Carnic Alps. It is virtually certain now that this army will withdraw when the Germans abandon the north German plain before the unbearable squeeze of American and British Armies from the west and the Red Armies from the east.

The German high command has withdrawn and set up headquarters in southern Germany where a succession of mountain chains, covered with heavy forest, gouged by shadowy valleys which are commanded by peaks, make it difficult for modern armies employing tanks and aircraft to maneuver. Bit by bit this mountainous "inner fortress" has been armed and provisioned for the last stand.

During the past 6 months cattle, grain, and canneries have been removed from other parts of the Reich and established in this inner fortress. The Todt organizations have been put to work constructing military defenses of the roads and passes leading to this fortress.

The civilian population dislocated from the cities and towns of the Cologne plain, northern Germany, Silesia, East Prussia, Pomerania, and Saxony has been combed out, and the hardy Nazis of die-hard persuasion have been shipped to the inner fortress, while the remainder have been rejected.

INFORMATION LEAKING OUT

This information has come from Germany piecemeal through neutral foreign countries. A Swiss, making his way home from Holland to Zurich, ordinarily a trip requiring less than 30 hours on the slowest trains, was 5 weeks in passage, for the trains rolling southward were crammed with elite Nazi civilians, bound for the inner fortress. Freight trains bore stocks of live cattle, piled-up bags of grain, guns, and other armament, all rolling down through Wurttemburg away from any of the present fighting fronts.

With our armies on the Rhine in possession of the only feasible bridgeheads where large armies can cross at Arnheim, Cologne, Mayence, Mannheim, and Kohl, the direction of the attack upon Germany is foredestined by the nature of the terrain. General Eisenhower has made so secret in three addresses directed to the German people, the German soldiers, and the German officers that he plans to cut up the German armies in the field.

These statements of the supreme commander are not mere threats, but promises, for it has been the settled policy of the Allied command to say nothing unless it is possible to accomplish what they have set out to do. Thus, cutting up the German armies in the field must be carried out where it is possible to maneuver with great weight and speed.

This plan impels our forces to burst into the north German plain. The best bridgeheads on the Rhine for this undertaking are Arnheim in southern Holland, where the British forces are poised, and Cologne where the Americans are building up and regrouping for the river crossing.

Patton's Third Army is exerting its effort to swing northeastward along the Moselle River to effect the capture of Coblenz. It is possible that Patch's Seventh Army will be left the task of clearing the Rhine left bank from Coblenz to Strasbourg, while the Third, First, and Ninth Armies plunge into Germany across the Rhine.

PROBLEMS FOR EISENHOWER

To halt across the Rhine and attempt to clear the right flank by turning into the Odenwald would send our troops against terrain where they would be stymied for weeks and months by warfare identical with the fighting at the forgotten front in the Apennines, and the purpose of the Rhine crossing would be nullified.

Two problems face General Eisenhower in the Rhine crossing, and neither of them concern the crossing itself, but what happens after the crossing. He must have a strong force on his right flank, now filled by Patton's Third Army to guard against the Germans using any troops from the Italian front in a surprise blow similar to the one by von Rundstedt through the Ardennes in December. And the second problem is the possibility of a defensive position set up by the Germans on the River Weser to impede his incursion into the north German plain to attack and take the great ports of north Germany—Hamburg and Bremen.

If the all-Nazi citadel of mountainous south Germany, Austria, and the Tyrol is to be employed—and every sign points to its use for the last stand, General Eisenhower must plan either to wheel and retrace his course after he has cleaned out the north German plain, and at the same time plan to change the whole character of the fighting from a war of maneuver to a war of position in which mountain troops, infantry, and artillery, fighting much as they did at Cassino and as the forgotten Fifth is now fighting in Italy, inch forward slowly against a fanatical enemy.

It isn't an easy task allocated to American arms in the present set-up of occupation of Germany, for the toughest job has been assigned to the Americans. Virtually all of the almost impregnable positions which the die-hards will defend are in the American occupation zone, and to occupy this zone the Germans must be routed out with all their arms.

EQUIPMENT SENT SOUTH

There are ominous signs, too, that the key workers and all the machinery needed to continue the struggle in the inner fortress have been removed into the fastnesses of the mountainous area, together with all the best locomotives and roling stock looted from Europe. It has been noticed, too, that foreign workers have not been employed in the hidden war factories of south Germany, Austria, and Bohemia for over a year, but these foreigners were shifted to north Germany, the Ruhr, Silesia, and north Saxony, all areas which will be or have been overrun by invading armies.

There is an opportunity to frustrate this Nazi plan, however, by swift and decisive action when the moment is ripe. Any defensive plan the Nazis contemplate for the inner fortress must be implemented by at least 80 divisions of troops at the outset of the withdrawal into the fastnesses of the mountainous country chosen for the last stand.

The withdrawal must be excellently organized, perhaps with the same skill displayed in the retreat from Stalingrad, and must be based upon iron discipline of troops not disheartened by one defeat after another. In the army on the Po, which for so long has conducted a holding against Gen. Mark Clark's Fifth Army, the Germans have 15 divisions of excellent soldiers, not at full strength but kept together as a unit. The kind of defensive warfare they have employed as a specialty is in mountainous terrain with the lavish use of land mines and patrols.

UNITED STATES HAS MOUNTAIN FIGHTERS

In the Fifth and Seventh Armies, one in Italy and one in Alsace-Lorraine, we have two field forces which have learned a great deal about mountain fighting against the Germans. The Seventh has fought in Italy and in the Vosges Mountains in France, and the Fifth has specialized almost entirely in mountain fighting. These two armies must be the nucleus of the force to be employed

in routing the Germans from their last fortress.

No doubt the swift and decisive moves which will be taken when the Nazis seek to retire into the inner fortress will include a dash by the Third Army across the lines of communication of the Wehrmacht as it seeks to retire southward from the north German plain, while both strategic and tactical air forces hammer at the roads and railroads to disrupt and halt the retirement.

The German forces which faced the Russians in Hungary, or at least that portion of the forces saved from the siege of Budapest, have retired into Austria and northern Yugoslavia to hold that defensive position. The German forces around Breslau, holding that flank against Russian attack, will fall back upon the Sudetan Mountains and Bohemia.

Military plans discussed at the Yalta Conference more likely concerned the unified action to minimize and break up this retirement into the inner fortress for the last stand than the concerted pincers attacks of the American, British, and Russian Armies, which were already prepared and in their middle phases when the Yalta Conference was held.

The final chapters of the war in Europe may only be written after Germany has been defeated in the field and the remnants driven into the mountains, for, as long as the Nazis can preserve an army in being, they still can bargain with the hangman.

Patton Rings the Bell Again Amidst Gasps of Admiration

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Capt. Lowell M. Limpus:

PATTON "RINGS THE BELL" AGAIN AMIDST GASPS OF ADMIRATION

(By Capt. Lowell M. Limpus)

"Old Blood and Guts" Patton's latest lunge is carrying him into key territory again, and this time he's ringing up a five-fold achievement which has military men here once more gasping with admiration:

1. He's smashing through the center of the German line and threatening to circle around and outflank four Nazi field armies.

2. He's swinging into another strategic position where he can strike in any one of three different directions and yet pierce the heart of central Germany whichever way he goes.

3. By so doing he now threatens to cut off the expected retreat of Hitler's northern garrisons into the mountains of central Germany.

4. He also automatically endangers three more badly hurt German armies facing two Allied armies to the south.

5. He's threatening another 10,000 square miles of key German territory, which he may add to the 8,000 he helped to knock off during the past 3 weeks.

ONE FOR THE BOOKS

Lieutenant General Patton accomplished all this when he circled around and smashed across the upper Rhine after one of the prettiest samples of military broken-field running that the history books will ever record. And it was this run which carried him into his present position, where he's a looming menace on the flank of the Germans struggling to stop Eisenhower's plunge across the upper Rhine.

Up there two German Army groups, totaling four armies, are trying to check two Anglo-American Army groups with six, while Patton himself makes seven.

The old cavalry veteran lived up to all expectations when he once got loose and his opponents scarcely laid a hand on him, after he broke into the clear. When his Third Army broke through the west wall at Trier he sent his tanks racing northeast for 65 miles, through the hills above the Moselle Valley. At Coblenz, he suddenly spun about and came plunging down the south bank of the Rhine.

He then turned south for 50 miles and crashed into the rear of the Siegfried Line, which was still holding Patch's Seventh Army at bay. Together the two Americans wrecked the second third of the West Wall, but Patton wasn't through yet. He whirled straight east and went plunging across the river to establish our second big bridgehead below Frankfort.

ANY WAY IS GOOD

This performance was more than War Department observers had counted on. They hadn't expected any Rhine crossing just yet.

An extra dividend is his present position, at the edge of the Frankfort plain. Now new opportunities are opening up, labeled Hesse, Thuringia, and Franconia. Each is a logical target for his next plunge, and contains some nice new autobahnen—superduper highways.

One such highway runs northward up a nice valley from Frankfort through Hesse to Kassel, at the edge of the north German plain, right behind Eisenhower's advance; another extends northeastward through a second valley to Fulda and Eisenach in Thuringia. A third valley runs northeast from Stuttgart to Wurtzburg, in Franconia, and it has a superhighway only 60 miles east of Patton now.

All three possibilities are presented to "Smiling Albert" Kesselring, plus the additional one that Patton might turn back and swing up the Rhine toward Cologne. (He isn't apt to, though, because he can do more damage in the other direction.)

Thus the traditional cavalry-style superraids of the Third Army's commander again prove to be a valuable asset for our side.

Today, therefore, finds Patton poised for what may be his third great sweep of the war. The first carried him out of Normandy across France. The second out of France across the Rhineland. The third out of the Rhineland across—where?

Well, that's apt to be "Smiling Albert's" $64 question.

India Aroused at Congress' Action

EXTENSION OF REMARKS

OF

HON. E. H. HEDRICK

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. HEDRICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Releigh Register, Beckley, W. Va.:

INDIA AROUSED AT CONGRESS' ACTION

BOMBAY.—A committee vote in the United States House of Representatives to postpone consideration of the Indian immigration bill aroused a bitter press reaction in India today.

The postponement "comes as a tragic anticlimax to reports which flooded India giving the impression that American opinion was overwhelmingly pro-Indian in this matter," the Free Press Journal declared.

"For this, American news agencies and the United States O. W. I. have to thank themselves," the newspaper asserted, "by cabling lengthy reports of individual opinions they had created a false atmosphere of misplaced faith in American intentions."

The publication said the committee vote "goes to show that, in spite of Roosevelt and Joseph Grew, Under Secretary of State, the Americans are not so idealistically minded that they can look upon even mild reforms with anything but selfish eyes. Is this a foretaste of things to come at San Francisco?"

Indians, it was said, had been looking toward the San Francisco world security conference, April 25, as the possible beginning of consideration of the Asiatics' position in the light of the "four freedoms."

Earlier, Indian Nationalists had reacted sharply against the Indian Government's choice of the viceroy's council members as delegates to San Francisco. They charged in the press and elsewhere that the council members would represent only British authority.

Indians said that the proposed immigration of 100 persons annually carried no threat to the American way of life and that the vote of the House committee reflected only racial antagonism.

The Wilners Make Their Supreme Contribution

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. WEISS. Mr. Speaker, I have frequently inserted into the CONGRESSIONAL RECORD the accomplishments of members of B'nai B'rith and their heroism displayed on the field of battle. Today, I want to pay tribute to a B'nai B'rith father, Joseph A. Wilner, of Washington, D. C., a great American whose two sons, namely, Major Bernard and Captain John, of the United States Army, made the supreme sacrifice. Captain John served with General Patton's Third Army Tank Corps.

I want to pay personal tribute to Joseph Wilner, double gold-star father, who finds some measure of consolation in the fact that his sons died for the noblest of all causes—for their God and country.

As part of my remarks I am pleased to include the editorial comment entitled "The Wilners Make Their Supreme Contribution" which appeared in the current issue of the National Jewish Monthly:

THE WILNERS MAKE THEIR SUPREME CONTRIBUTION

Last night I went to a meeting of my lodge. There were no well-known speakers. There was no entertainment. There was no fine-spun oratory. Yet throughout the evening the program held the audience in rapt and even profound reverence. They had braved the icy weather to come to a B'nai B'rith meeting in order to dedicate a memorial to

two brothers, Maj. Bernard and Capt. John Wilner, of the United States Army, who had made the supreme sacrifice in the service of their country.

It was to be a memorial different from other memorials. It wasn't something carved of bronze or stone. The 30 boys of the new Wilner AZA Chapter represented a living symbol as they were drawn up on the platform to receive their charter denoting their acceptance into the B'nai B'rith Youth Organization. They were faced by Joseph A. Wilner, father of the two heroes. We who knew the boys, both those who had gone before and these fresh-eyed youngsters who were to carry on an honored name, wondered what Joe would say. We wondered whether he could stand up under the strain and how he would take it.

Our fears were soon allayed. With voice firm and strong, Joe told us, in simple and kindly words, of his great love for his sons, which had run together through the years with his love for B'nai B'rith. His sons had not been called. They had gone to war early and voluntarily. Bernard, the eldest, was over draft age; John, the younger, could have stayed on this side because of a physical defect which only an operation could cure. He had insisted upon the operation, and then joined General Patton's Third Army Tank Corps. Both passed to the Great Beyond a few months apart. Joe Wilner, exemplar of B'nai B'rith's devotion to its country and people, spoke of them with the pride of his patriarchal forebears and a true American parent.

He told us how he wanted the new chapter named for them to carry on in the way his own boys would have wished, and in the tradition of B'nai B'rith. He recalled how the B'nai B'rith youth movement had been born when he, as a delegate to the convention in 1925, had voted for the adoption of AZA and the Hillel Foundations by B'nai B'rith. He looked forward to its future growth, when it would express the greatness of our people and help advance human progress even more than at present.

We sat there and our heartache disappeared. Then we knew. We knew why Jews live and live on. We knew that not even the rantings of the paperhanger of Munich, not even the furnace at Lublin to which our innocents had been led, can quench the spiritual fortitude our people can summon in their critical hour.

Joe Wilner, double gold-star father, expressing the spirit of his sons, their mother, their widows, their children, who sat quietly through the ceremony, and the boys of the Wilner AZA chapter who felt profoundly the message given to them—this was B'nai B'rith that spoke out that night at just another lodge meeting.

MAURICE BISGYER.

Telephone Wire on Wing

EXTENSION OF REMARKS

OF

HON. HARRY L. TOWE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. TOWE. Mr. Speaker, under leave to extend my remarks, I wish to insert an article appearing in the Rutherford Republican under date of March 23, dealing with one of the newest developments of particular value in connection with the prosecution of the war—that of laying telephone lines by aircraft.

I am particularly proud of the fact that one of my close friends, from my home town of Rutherford, N. J., Paul W. Blye, played an extremely important part in the development of this method.

This great accomplishment is one of many examples of results obtained when the technical forces of private enterprise join those of our Army and Navy.

The article follows:

TELEPHONE WIRE ON WING—ARMY'S NEWEST—PAUL W. BLYE, RUTHERFORD, BELL LABORATORY TRANSMISSION ENGINEER, ASSISTS IN PERFECTING NEW METHOD

Rutherford citizens who were listening to the March of Time radio program last Friday evening, were thrilled at the report and flight demonstration of laying telephone lines by aircraft.

Participating in the program was a Rutherford man, Borough Councilman Paul W. Blye, of Woodland Avenue, transmission engineer, Bell Telephone laboratories, New York City, who with Army Technical Command officers, developed this new boon for military uses in war.

Mr. Blye was on the air to report the technical phases and accomplishments of the new method, this being the first release to the public.

BELL LAB AND ARMY AIR

Supervising the demonstration were Capt. R. R. Ford, project officer of the Air Technical Service Command Equipment Laboratory, and Mr. Blye.

The wire was laid out from a field laboratory set up at Fort Dix, more than a year ago as the base for continued experiments conducted with the close cooperation of Col. L. T. Jones, commanding officer of the base, and Major K. E. Miller, of the equipment division of the Air Communications Office in Washington.

Maj. Lawrence M. Proctor, Jr., commanding officer of the Four Thousand One Hundred and Forty-ninth Air Base Unit at Fort Dix, who with his men handled the C–47 on the scores of test runs, flew the same airplane in the press demonstration Friday evening.

The demonstration climaxed months of research and experiment. Officials revealed in detail their process of laying up to 16 miles of telephone wire over any type of terrain under battle conditions from a twin-engined C–47 cargo airplane at the Fort Dix Army Air Base.

HOW IT WAS DONE

In a few minutes the C–47, flying at an altitude of only 200 feet and a speed of some 125 miles per hour, threw off a 36-inch parachute carrying one end of the wire ballasted with a 20-pound weight, laid out the wire over a 6-mile course, dropped the other end at a designated point, and a conversation was established over the wire.

During the wire-laying, newspapermen on the airplane were able to talk by telephone with other press representatives on the ground where phone equipment had quickly been hooked on to one terminus of the wire.

A short time ago telephone wire on the wing was unheard of. Before long it can be a commonplace on the battlefield, say the officials.

Its battle applications are endless they say, and they all involve saving precious time and more precious lives. Isolated tanks can be linked with distant operating bases. Previously impenetrable jungles and impassable mountain ranges will be obliterated as communications obstacles by flights of a few minutes to connect operating forces and coordinate the activities of Allied battle units.

ATTAIN MAXIMUM, 16 MILES

The achievement witnessed Friday by newspapermen at Fort Dix of uncoiling wire smoothly without snarls or breaks at speeds exceeding 200 feet per second required considerable study and experiment, including more than 200 test flights at the Fort Dix air base.

Gradually the number of successful runs increased and test lengths mounted from 1 mile to 2 miles and then to 4 and 6. That was run up to 16, the specified maximum, and then success of the development was signalized when 16 miles of the wire were laid over the rough terrain of the Great Smoky Mountains in 6⅔ minutes.

Friday's run was 6 miles and constituted the first time the process had been demonstrated to the press. Soon it will be demonstrated with all its speeding of the art of war and elimination of lost lives, as a commonplace feature of American technique of making war in Asia and the far Pacific, says Mr. Blye.

WINDING THE WIRE

In the airplane Friday night a number of coils of special telephone wire, previously wound by a small automatic machine to look something like a ball of twine at a grocery store, only larger, were lined up across the cargo floor. Cased in wooden boxes, the coils each holding two miles of wire were connected together. The containers were placed one behind the other in a line extending diagonally across the cargo floor from the doorway forward toward the pilot's compartment.

Beginning with the first container at the doorway, wire from the outer turns of the coil were drawn through container openings and spliced to wire in the core of the second coil. Splicing was repeated between succeeding boxes until all coils were spliced together to form a continuous length of wire. In all, the C–47 could quickly have unraveled 10 miles of telephone wire.

STARTING THE RUN

A short tube was thrust out of the doorway and attached to the front opening of the first box.

As the plane approached its target area where the line was to start, the pilot gave a signal and the man moved back to the open doorway. On the next signal, he threw out the parachute and weight with line attached.

The parachute opened and started the wire plying out. The weight dropped the line end quickly to the desired target area and the pay-out process settled down to a steady thrumming of wire leaving the plane.

No modification was required for the plane. Containers were loaded and tied down like any other cargo, except for being placed in line.

From the Record of the A. F. of L.

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. VOORHIS of California. Mr. Speaker, the following selection from an article by William Green in the American Federationist for July 1943 is, in my opinion, decidedly worthy of inclusion in the CONGRESSIONAL RECORD.

For two reasons: First, because it brings out clearly the instinctive foresight which these American workers had, in the years before the war, of the inevitable and disastrous consequences of tyrannical government to the peace of the world; and second, because it expresses so forcibly the determination of labor that another period of mass unemployment, threatening as it certainly

will, free democratic institutions, shall not come upon our country or the world.

[From the American Federationist of July 1943]

AMERICAN LABOR IN WORLD AFFAIRS

(By William Green)

Workers throughout the world are determined to prevent for all time the recurrence of mass unemployment, of industrial depressions, and to forever prevent the rise of totalitarian dictatorship which the resulting mass privation and mass suffering inevitably breed.

The great depression of the thirties swept over the entire world. In one short and disastrous period, it destroyed millions of jobs and rent asunder living standards which organized labor in America and other free nations had built up over generations of struggle for the workers' betterment. In Europe the depression swept away with it the very foundations of the democratic order and gave rise to a wave of fascism which destroyed not only the rights of labor but also the most basic human rights.

In the years of economic disintegration, democratic nations failed to meet the challenge of Fascist dictatorship by failing to act in concert.

It seems prophetic now that the American Federation of Labor took a determined stand years ago in warning the people of democratic nations against the future enemy and in urging that totalitarian nations, governed by tyrants and dictators, be dealt with firmly before it was too late. Ten years ago the American Federation of Labor convention voted a boycott against German goods in protest against the suppression by Hitler of the right of working people to organize into free trade-unions and against the repressive policies of the German Government and its persecution of minority races. This boycott and this protest were made stronger by each succeeding convention of the American Federation of Labor, and Hitler and his Nazi followers grew more aggressive and vicious every year.

The 1934 convention of the A. F. of L. charged the Nazi government with promoting ends which endangered the peace of the world, and enslaving thousands of men and women whose only crime was devotion to liberty.

In 1937, 5 years before Pearl Harbor, the American Federation of Labor declared a boycott against Japan. The convention declared:

"We hereby call upon the people of the United States to condemn the outrageous acts of Japan and to denounce its militarist and conscienceless policy. We recommend that the United States Government prohibit its citizens from selling war material, including scrap, or lending money to Japan until that nation has ceased its barbarous methods of conquest."

* * * And who is there today who does not now wish from the very bottom of his heart that we had refused to sell thousands of tons of scrap to Japan and thus help in the attack upon us; that we had refused to temporize with and appease Fascist dictators until they became strong enough to wage this war on a world scale?

Regulation of Bank Holding Companies

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I desire to insert a letter I have received from Hon. Marriner S. Eccles, Chairman of the Board of Governors of the Federal Reserve System, and a statement in regard to a bill which I have introduced this day entitled "A bill to control and regulate bank holding companies; to control and regulate relationships between insured banks and their affiliates; and for other purposes":

BOARD OF GOVERNORS OF THE
FEDERAL RESERVE SYSTEM,
Washington, March 23, 1945.

Hon. BRENT SPENCE,
Chairman, Committee on Banking and Currency, House of Representatives, Washington, D. C.

DEAR MR. SPENCE: As you know, the Banking Act of 1933 was in part designed to regulate bank holding companies and the Board has had the express responsibility for administering that part of the act. The reasons and need for regulation were fully developed in the extensive hearings and reports at the time and need no restatement.

However, the laws enacted at that time have not proven to be as effective as was intended and the problem continued to be one of serious concern to the Board. This has been true also with respect to the other Federal banking agencies which, while not having the primary responsibility, do have a real interest in the subject matter.

In his message to the Congress on April 29, 1938, the President pointed out the great economic power that might be wielded by a group acquiring domination over banking resources in any considerable area of the country and recommended that the Congress enact legislation that would effectively control the operation of bank-holding companies.

The Board, in is annual report for the year 1943, recommended the enactment of comprehensive legislation designed to correct certain abuses and to achieve certain objectives which, to the Board, seem highly desirable in the public interest. A copy of the report is enclosed and you will find the section dealing with the Board's recommendations on page 34. Since its report numerous individual banks and associations of banks have importuned the Board to offer the precise form of a bill which would carry out the Board's recommendations or to lend its support to other forms of suggested bills. Representatives in Congress have made similar requests. There has been neither improvement nor change in the situation since the report was made which causes the Board to feel any less concern, and the abuses described in the report continue unabated and uncontrolled.

When the board was considering its annual report for 1943, a draft of a bill designed to carry out the recommendations made in the report was prepared by the board's staff. The board has asked that I deliver a copy of this draft to you for your consideration with the hope that such a bill will be introduced by you and will receive favorable consideration by the Congress. It is enclosed herewith. The board will be glad to respond to any request for further information and to assist you and your committee in any appropriate way.

The matter of the introduction of the enclosed bill has already been taken up with the Bureau of the Budget and under date of March 22 the board received a letter from the Bureau in which it was indicated that "there would be no objection to the submission of the proposed legislation to the Congress," although, of course, the Bureau made no commitment as to the relation of the proposed legislation to the program of the President.

I am also enclosing a statement of the purposes of this bill which may be helpful to you if and when you introduce the proposed legislation.

Sincerely yours,

M. S. ECCLES, *Chairman.*

STATEMENT CONCERNING PROPOSED LEGISLATION AFFECTING BANK HOLDING COMPANIES

On April 29, 1944, the Board of Governors of the Federal Reserve System made its annual report to Congress covering operations for the year 1943. Included in this report was a recommendation for immediate legislation to deal with bank holding companies. It is extremely desirable that every Member of Congress who has not already done so should carefully read and study these recommendations. The proposed bill was drafted in the light of the experience of the Board in administering those provisions of the Banking Act of 1933, which dealt with bank holding companies, and to supply the needs recommended by the Board in its 1943 report.

The present bill would incorporate all provisions respecting bank holding companies into one section of the Federal Reserve Act. This section would become section 23A of that act, which now deals with "relations of affiliates" of member banks. Existing laws respecting affiliate relations would be reenacted in the proposed bill and would become section 23B of the Federal Reserve Act. This would not effect any substantial change in the present law on affiliate relationships, except that the law which now covers only member banks would be extended to cover all insured banks.

Section 23A of the Federal Reserve Act, as it would be amended by the bill, would confine the business of a bank holding company to the operation of its subsidiary banks, all other unrelated activities being prohibited. This would be accomplished by a direct prohibition, by requiring bank holding companies within a reasonable time to divest themselves of nonbanking companies which they may now control, and by a prohibition against acquiring stock of nonbanking companies in the future. Provision is made, however, for the retention, under appropriate safeguards, of nonbanking companies which are merely an incident to the holding company's main business, such as, for example, the retention of a safety deposit company.

Bank holding companies would be defined to meet the inadequacies of the present definition and more nearly in the manner in which Congress has defined holding companies operating in other fields.

Bank holding companies would be prohibited from purchasing any more bank stock. However, in order to protect existing minority interests who might otherwise have no market for their bank stock, the prohibition would not apply to a situation where the holding company already owns more than 50 percent of the stock of such bank, provided that the same offer to purchase is made to all minority holders. The bill would require bank holding companies within 2 years after the effective date thereof to divest themselves of bank stock acquired after the beginning of 1943. The expansion of existing bank holding companies would thus be curbed while at the same time the bill would make it unlawful for other companies to become bank holding companies by the purchase of bank stocks.

Finally, the bill would improve the present ineffective controls over the operation of bank holding companies. The deposits of their subsidiary banks in due course would have to become insured. "Upstream" loans and intercompany sales of securities would be prohibited, except as they may be authorized under certain conditions by the Board. Dividends out of other than operating income would be regulated; and exorbitant or unreasonable managerial fees would be prevented. Provision is made for the examination from time to time of bank holding companies and for the submission by them

of reports similar to those required of the banks which they now control. Penalties are set up as well as means of enforcement; but there are also appropriate provisions for court review of all orders which the Board would be authorized to issue. The Board would be required to report back to the Congress before the expiration of 5 years the results of its administration of this act.

The United States Must Be Saved, Too

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include herewith an editorial from the New Orleans Item of Wednesday, March 21, 1945.

THE UNITED STATES MUST BE SAVED, TOO

It is now clearly conceded by the highest New Deal officials that the productive resources of the United States have been already strained to the danger point by mountainous contributions of all sorts which the Government has made to peoples overseas, in lavish outlays and exports through too many unsystematized agencies. It is admitted that these expenditures of money and materials are now threatening the stability of our own economic structure, and will reduce our own people below reasonable standards of living even for wartime—if not rationally checked in order to avert national disaster.

All this abundantly appears in a move by Director of Mobilization Byrnes, our "Assistant President" himself, on March 11. He announced that day that he has set up a committee over the most important of these spending and exporting agencies "to protect our domestic economy and support our war effort" by correlating their scattery operations to put proper checks upon the tremendous overseas floods of our money and goods.

Mr. Byrnes' position has thus been summarized, in part:

Military needs come first; then relief supplies in the wake of battles. All other bids for relief, rehabilitation, and other export goals must then be balanced against "our own minimum essential civilian economy."

His committee is to prevent overcommitments by a number of independent agencies. It is to examine all factors which pertain to our capacity to export things for support of the war, other than direct lend-lease military commitments. * * * It must develop a uniform program for aid to other countries, with full knowledge of all such obligations accepted up to date, and of the needs of our own domestic economy. The following warning is given in his own terms:

"Consideration must be given to commitments which were made in the past, but now appear capable of fulfillment only with serious impact on our own civilian economy. And it may be necessary to reconsider these commitments with the countries to which they have been made."

This is the first sign of realism in a long riot of loose spending and exporting. It is strong medicine and won't be liked abroad; but it needs to be administered. For if our home-economy is threatened with undermining by previous excesses in this way, what must be the blighting effect upon us of the enormous and variegated forms of lavish outlay which are constantly being pressed upon us for the post-war future?

Congress, becoming alarmed, is already about to restrict lend-lease spending rigidly to war purposes, and prohibit it for foreign relief, rehabilitation or anything else, after the war. But within 24 hours after Mr. Byrnes spoke, Director Lehman, of the United Nations Relief and Rehabilitation Administration, made a gloomy statement foreshadowing "the tragic consequences of failure" to make "adequate provision" for relief in the countries already liberated. And never forget that other demands will be made on Uncle Sam, already groggy, for countries that have not yet been liberated.

We don't speak against reasonable aid where needs are worst. But it must be held in check, lest we ruin this country too. America can't give the rest of the suffering world all its people need—to say nothing of all they want. To do that would exhaust our granaries, mines, and money. It would kill the goose that lays the golden eggs, and reduce us to the evils that have overcome most of the warring peoples overseas.

Already we have heard rumors of long-term credit of $9,000,000,000 to Britain, to help rebuild or repair her economic structure and maintain her commerce. And now we are hearing of a bid from Russia for $7,000,000,000 for similar purposes. Nor can there be any doubt that China and France will be in the bidding too. And so will every smaller country that has suffered by the war. We are also invited to assume billions of financial risks for an international bank. And the calls upon us are and will be swollen incalculably by other calls for outright or disguised gifts all over the map.

These bids are sometimes supported by specious assertions that all these other nations are fighting to save the United States from nazidom. Nothing could be more untrue. They are fighting for themselves, in a war which we had nothing to do with starting, which they did nothing to prevent while failing to prepare to fight it. Into that war we were dragged by our sympathy with them. From the direst consequences of it we have saved them by the most titanic investment of blood and treasure that any nation ever undertook in such a case. Yet we were 3,000 miles farther from it than any of them, and were never in such danger from our present enemies as they were.

Let such things be candidly and rationally considered when dire necessity for our own survival requires us to measure how far we can go to ease a whole world's woes.

Mr. Byrnes has sounded a sane note. We hope that enough of his New Deal friends will realize it to save this country from a situation in which it will itself need help which cannot be found.

Lithuania

EXTENSION OF REMARKS

OF

HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. KELLY of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on March 24, 1945:

Speaking for the independence of the Republic of Lithuania, which was established on February 16, 1918, as a modern nation, under a constitutional government.

From the earliest times it had developed its own language, similar to the ancient Aryan language of the Hindus, its own culture, and its own traditions.

Its people are not related to the Slavs, but have been welded together into a distinct nationality, through common interests and ideals.

As early as 1569, Lithuania showed a determination to achieve independence.

During the period of popular representation, 1905 to 1914, Lithuania revived the autonomous movement.

In World War No. 1 Lithuania had to bear hostile invasion and suffered severely, the country being devastated alike by alleged friend and avowed foe.

No people have a stronger claim to the right of self-government and independence than do the 3,000,000 people of Lithuania.

This independence was lost for no other reason than its geographical location.

It is occupied by other nations during World War No. 2 for the same reason that the countries of Belgium and Czechoslovakia are now occupied.

The Republic of Lithuania has maintained friendly relations with its neighbors.

When it asks for independence, it asks only that its national identity, its culture, language, and traditions be preserved.

Americans of Lithuanian descent are mighty proud to be citizens of the United States.

And as Americans they are doing their share in fighting this war.

The records of the Treasury Department in Washington will reveal that Americans of Lithuanian descent have purchased in excess of their quota of War bonds and that they are among the first at the head of the list of nationality groups.

The fact that many of them have only been Americans for one generation or possibly two gives them a stronger appreciation of the blessings of American citizenship.

More so, perhaps, than is the appreciation of many of their fellow citizens whose families have never known another land since the Mayflower established one of its first beachheads on this continent.

It is only natural, though, that they have an affection for the land of their forefathers, just as our fellow Americans are concerned with other lands.

Many have a special concern for China or France, for England or Switzerland.

Americans of Lithuanian descent have a special concern for Lithuania.

As Americans, they are sending their sons and husbands overseas, on all fronts, to fight our enemy, primarily because they do not want them to have to do this same fighting on the shores of America.

They are determined, like all Americans and their allies who are engaged in this world conflict, to rid the world of those who seek to destroy democracy, and to reestablish freedom and independence in those countries whose innocent peoples have been trampled upon.

We are hopeful that Lithuania will remain as an independent nation when peace comes to this world.

And as the Atlantic Charter, proclaimed by President Roosevelt and Prime Minister Churchill on August 14, 1941, sets forth, as one of the principles for which we are fighting the Axis, the right of small nations to self-determination and independence, and I quote:

"Second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned:

"Third, they respect the right of all peoples to choose the form of government under which they will live, and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

In a speech on September 12, 1943, Secretary of State Cordell Hull reaffirmed these principles in declaring—and I quote:

"All peoples who, with a decent respect for the opinions of mankind, have qualified themselves to assume and to discharge the responsibilities of liberty are entitled to its employment.

"Each sovereign nation, large or small, is in law and under law the equal of every other nation.

"All nations, large and small, which respect the rights of others, are entitled to freedom from outside interference in their internal affairs."

Knowing the Americans of Lithuanian descent, I know no great patriotic group of Americans, whether this be the land of their birth or the land of their adoption, who have steadfastly fought for independence.

No man can know a Lithuanian without discovering that a never-dying passion for the independence of his country is eating into his soul.

Out of the depths there comes a cry from this nation which for centuries has been forced to be inarticulate.

It is not a demand for privilege, for territory to which it might have only a historical claim; it is a cry for life, and if we really believe in our own professions if the traditions of 1776 have not been effaced, if the definition of self-determinism with which President Wilson sought to change the evil systems of lust and avarice in Europe and the rest of the world, after the First World War—we Americans must listen to this cry from the core of the hearts of the Lithuanians.

We cannot close our ears to it.

Equal Rights or Unequal Rights?

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, March 24, 1945

Mrs. DOUGLAS of California. Mr. Speaker, in extending my remarks in the CONGRESSIONAL RECORD, I include herein an article entitled "Equal Rights or Unequal Rights?" by Elizabeth S. Magee, general secretary of the National Consumers League, which article appeared in the January 1945 issue of the Woman's Press. The article is as follows:

The professional woman who supports the so-called equal-rights amendment with the expectation that by some abracadabra it will open doors of opportunity for her is doing wishful thinking. If, instead of concentrating on the glittering catch phrases of the proponents, she would read the wording of the proposed amendment, she would see that it is phrased:

"Equality of rights under the law shall not be denied or abridged by the United States or any State on account of sex."

Note that phrase "under the law." There are no laws requiring that women be hired in the same proportion as men any more than there are, or ever could be, laws compelling the public to patronize women physicians or women lawyers. These are matters of tradition and custom and while conditions may change, and indeed have changed, it has not been the result of passing a law.

The amendment would not result in equal pay for equal work for men and women throughout the United States, no matter what extravagant promises its supporters are making for it in that direction. It provides for "equality of rights under the law." In the absence of any law stipulating equal pay for men and women, the amendment would have no effect. Only five States, Michigan, Montana, Washington, Illinois, and, most recently, New York, have laws on their books making statutory equal pay for equal work whether performed by men or women. A united drive, supported by 12 national organizations, is under way to secure the passage of equal pay laws in other States.

The National Consumers League believes that the passage of such equal pay laws would be an effective way of eliminating the double-standard pay roll, and the league is giving its hearty support for such legislation.

The amendment not only would not achieve what certain professional women might hope from it, but would create a genuine disaster for their wage-earning sisters in industry.

There is little need to remind anyone who has been associated with the Industrial Department of the Y. W. C. A. that women are the most easily and most habitually exploited element in the labor market. The reasons for this include the weaker bargaining power of women, the fact that they are not so highly organized into trade unions as men, and the unhappily well-founded theory that "you can hire a woman for less." In depression periods this "less" frequently falls below a subsistence wage.

Thorough investigation and years of unremitting struggle have resulted in a system of laws in the various States to prevent this exploitation. These include statutes covering minimum wages, maximum hours, days of rest and rest periods, dangerous work or night work, or work in places deemed unwholesome to the morals and health of women, inadequate lunch periods, the lifting of excessive weights, provision of seats, separate and adequate sanitary facilities, and exposure to industrial substances and poisons particularly hazardous to women. All these laws were passed because this Nation has recognized, as all nations must if they are to survive, that if the health of its mothers is not protected, the race will be endangered.

The constitutionality of every one of these laws would be thrown into jeopardy, if not actually outlawed, by passage of the equal rights amendment. Douglas B. Maggs, solicitor for the United States Department of Labor, says unequivocally:

"The amendment itself, without the aid of legislation enacted to enforce it, will strike down as unconstitutional and invalid all provisions in existing and future laws which, on the basis of assumed or accepted differences between the sexes, give men or women rights which are not accorded in equal degree to the other sex * * * in seeking to achieve an illusory equality it will result in women losing deserved advantages."

A large proportion of women workers are young women, 18 to 24, who have gone to work in the years preceding marriage and child-bearing. Statistics show that they are more susceptible to tuberculosis than any other group. They must be protected from overlong hours and particularly from extended night work. Reliable scientific research has proved that some occupational diseases, such as lead poisoning, lead to sterility in women. It is inconceivable that a civilized nation should tie its hands constitutionally so that it could not protect its potential mothers from these hazards.

Proponents of the law point out that a number of laws, particularly the Fair Labor Standards Act, have been passed which are applicable to men as well as women. The answer to this argument is double-barreled. First, the Fair Labor Standards Act applies only to workers in interstate commerce and is not applicable to more than half the workers in the United States. Second, it has been found to be very difficult to enact State minimum wage legislation applicable to both sexes. Thus it is both doctrinal and theoretical to suggest that we wait to get protection for those who most need it until we can get it for everyone.

Not only the wage-earning woman but the wife and mother at home would lose some of the genuine rights to which she is entitled if this amendment were to be adopted.

Social workers know that the period of a wife's pregnancy is a favorite time for the husband to desert. The amendment would make it impossible for the law to protect her special rights or to give her preference. In fact, it would make both husband and wife equally responsible for the support of the family—a responsibility that the wife might find a trifle difficult to meet while engaged in her normal child-bearing function.

The old-age insurance paid to wives and the survivors' benefits paid to widows under the Social Security Act would be jeopardized, as would the widows' grant under workmen's compensation laws, a grant now mandatory when the husband is killed in an industrial accident.

For all these reasons and others which space will not permit me to detail, I submit the suggestion that the name of the proposal be changed to the "gold brick" amendment. I am confident that the intelligent and socially minded women of America will not buy it.

Speaking Program of Hall Furlough Clubs' St. Patrick's Day Dance

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses:

SPEECH BY MRS. VIOLET GRASSI, GENERAL CHAIRMAN OF HALL FURLOUGH CLUBS, MARCH 17, 1945

Members of the Hall Furlough Clubs, service men and women, friends, we are gathered here this evening to celebrate, along with St. Patrick's Day, the accomplishments throughout the past year of these patriotic women in the interests of their men in service.

There are now 24 clubs in Broome County and several more outside and in Pennsylvania. They are composed of women of all ages who have either husbands, brothers, or sons fighting for their country.

I want to thank the members of Club 5 for the fine job they did in organizing the party. Recognition should also go to the members of all other clubs in supporting this function.

One of the outstanding jobs our clubs have performed is the canteen work. This was organized in a small way in the baggage room at the Erie station. Since then it has grown through hard work by the members to be known as the favorite stopping place for thousands of soldiers all over the country.

Credit for building up the Hall Furlough Clubs' canteen should go to Mrs. Alice Ervay, canteen chairman, and her committee. I hope all clubs will support Mrs. Ervay in her patriotic work.

Mrs. Mildred Ellsworth, president of Club 7, has started out her club on another venture. She is taking charge of a hospital-visiting program and is doing wonderful work among the wounded men.

We should not forget the editor in chief of the Hall Furlough Canteen, Mrs. Anna

Egan, and praise her for the splendid newspaper she is now editing called the Canteen. She tells me the paper which describes all club activities and is our official news organ is read on all the battle fronts, in all the hospitals, and is distributed among soldiers visiting the Erie canteen. More power to you, Mrs. Egan.

We of the Hall Furlough Clubs urge you people to join with us in making our efforts for the boys really count. The people of our section deserve consideration. Our Congressman, EDWIN ARTHUR HALL, is on the job to see that they get it. We are here to see that he gets the backing he is entitled to.

And now, as general chairman of the Furlough Clubs, it is my pleasure and privilege to call on the man who receives more letters per day than anyone I know of and who answers them just as fast as they come. These letters are not fan mail because they contain some of the most urgent requests that people can possibly make. This man is called upon by at least 50 people from our section every day to help their loved ones in the Army or Navy. This man holds the highest elective office we can give him in this district. He is the soldier's friend in the Congress of the United States Moreover, he is our friend in Congress. We look forward to hearing at this time from the Honorable EDWIN ARTHUR HALL, Representative in Congress from the Thirty-seventh Congressional District.

REMARKS BY HON. EDWIN ARTHUR HALL OF NEW YORK

Mrs. Grassi, members of the Hall Furlough Clubs, soldiers, guests, and friends. Thanks so much for this nice reception. I wish I could attend these parties more often. They give the folks back home, your wives, mothers, sweethearts, and sisters of those who are away a chance to talk over your mutual problems of keeping the home front in order. You are deserving of great praise and I commend you for all you have done to make our great community a better place to live in.

We know many of these who are moved will be slated to be sent against the Japanese. But for my part, I think the boys who have borne the brunt of the battle the longest should be sent home.

I don't know by what method their future will be decided, but I say the military ought to give consideration to all men over 30 who are married and especially those with children. Every effort should be made to bring them home as quickly as possible.

I am now working on legislation which I will soon place before the House to give reasonable furloughs to every American veteran of the European war, after victory in Europe. These furloughs should be administered with more generosity and better eye for justice than is now being shown.

We all realize that America must contribute her share to guarding against the danger of Germany rising again, but after VE-day furloughs and discharges can be distributed and awarded on a vast scale with an eye to the complete return of married men and heads of familiar to their civilian lives.

Articles by Dr. Dilworth Lupton

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. FEIGHAN. Mr. Speaker, among the columnists today who are writing on the international crisis, none has shown a stronger grasp of the moral implications involved than Dr. Dilworth Lupton, columnist for the Cleveland Press. As an indication of this fact, under unanimous consent, I insert in the RECORD three of his columns appearing March 19, 20, and 21 in the Cleveland (Ohio) Press:

[From the Cleveland (Ohio) Press of March 19, 1945]

MAY SWEEP COUNTRY

The Jews, Catholics, and Protestants of Cleveland have an opportunity to inaugurate a peace movement that would be unique and perhaps historic.

Last January, for what I believe to be the first time in the history of the United States, three Congressmen of separate religious affiliations offered in the House of Representatives a concurrent resolution. They were MICHAEL A. FEIGHAN (Democrat), of Ohio, Catholic; CHARLES LAFOLLETTE (Republican), of Indiana, Protestant; and SAMUEL A. WEISS (Democrat) of Pennsylvania, Jew. Through their resolution these gentlemen urge that the House declare itself in favor of basing the future peace of the world upon certain moral principles which 17 months ago were agreed upon jointly in a public declaration by leaders of the three faiths.

These three Congressmen and Father Edward A. Conway, S. J., National Catholic Welfare Conference, will speak about this resolution before the Cleveland Round-table of the National Conference of Christians and Jews at a lunch in the Cleveland Hotel on Wednesday. Then Thursday night at 10:35, they will be heard over Station WTAM.

Passage of this congressional resolution, if supported by millions of Americans, would do much to strengthen our delegates to the San Francisco Conference in their moral determination to create a just peace.

That support could best be brought about through an avalanche of letters and telegrams sent to their Congressmen by individuals. Such a trireligious movement could sweep the country.

Indeed, this possibility that the Feighan-Weiss-La Follette resolution might be a force toward enduring peace is so apparent that every Jew, Catholic, or Protestant should familiarize himself with the religious principles upheld.

Among the Protestant endorsers of this pattern for peace are leaders like Dr. Blanchard, of Cleveland, and Bishops Oxnam and Tucker. Jewish signers include Rabbis Brickner and Silver, of Cleveland, and Rabbi Wise. Among the Catholics are the names of Archbishops Mooney, Curley, and McNicholas.

In condensed form, the principles endorsed are as follows:

1. The moral law must govern world order.
2. The rights of the individual must be assured.
3. The rights of oppressed, weak, or colonial people must be protected.
4. The rights of minorities must be secured.
5. International institutions to maintain peace with justice must be organized.
6. International economic cooperation must be developed.
7. A just social order within each State must be achieved.

These principles in more detailed form can be obtained at the office of the Cleveland Round Table, 864 Union Commerce Building.

Religious people will welcome this opportunity to demand a just peace.

[From the Cleveland (Ohio) Press of March 20, 1945]

PAYING FOR FOLLY

"How did it happen," I asked MICHAEL FEIGHAN, "that you a Catholic, Congressman WEISS a Jew, and Congressman LAFOLLETTE a Protestant came to present that concurrent resolution in Congress last January?—That resolution which would demand that the future world organization be based on the trifaith pattern of peace written jointly by leaders of your three faiths?"

To which the Cleveland Congressman replied: "It seemed to us that no permanent international institution could be established and developed through the coming critical decade except according to certain moral principles taught over the centuries by churches and synagogues.

"Back of any such organization there must be the awareness that it is not only reasonable and practical but that behind it is a moral imperative of justice to all peoples demanded now by the interdependence of the family of nations.

"That trifaith declaration deserves close study and popular and enthusiastic support."

The organization of the United Nations which Roosevelt, Stalin, and Churchill have promised to set up at San Francisco next month will be like a concrete structure. If we are to use it as a permanent defense against a possible war No. 3 (and it's the only one we will have), it must be increasingly strengthened by the reinforcing steel of religious principles. Take, for example, the second point in this trifaith declaration which Congressmen FEIGHAN, WEISS, and LAFOLLETTE are sponsoring in their resolution:

"The dignity of the human person as the image of God must set forth in all its essential implications in an international declaration of rights. * * * States as well as individuals must repudiate racial, religious, or other discrimination in violation of those rights."

In a great conference such as the one to be held in San Francisco, men are likely to forget the dignity of the human individual in the face of gigantic armies and navies and the equally immense forces of human selfishness.

Or consider point 3 in the tri-faith declaration: "The rights of all peoples, large and small, subject to the good of the organized world community, must be safeguarded within the framework of collective security. The progress of undeveloped, colonial or oppressed peoples toward political responsibility must be the object of international concern."

The violation of this principle was one of the prime causes of this present war. When Japan attacked Manchuria, when Italy attacked Ethiopia and when Hitler seized Czechoslovakia, the big nations considered these matters but local affairs and shut their eyes.

For their folly and ours, we have already paid to the extent of over three-quarter million American casualties.

[From the Cleveland (Ohio) Press of March 21, 1945]

VANDENBERG INSISTS

Senator VANDENBERG insists that the projected international organization have in it workable machinery for changing wartime political decisions which might prove unjust. This important demand offers another reason for the Catholics, Protestants, and Jews of America giving full support to their trifaith pattern for peace which is being discussed today at a meeting of the Cleveland Round Table.

You will notice that point 5 of the pattern stresses the necessity of making it possible through collective action for nations to change treaties when injustices are being suffered. Point 5 reads, in part: "An enduring peace requires the organization of international institutions which will develop a body of international law, guarantee the faithful fulfillment of international obligations, and (N. B.) revise them when necessary. * * *"

If Mr. VANDENBERG found that his plea for the moral necessity of such a provision had

the enthusiastic support of millions of individuals, it might immeasurably strengthen his position.

Unless in the international machinery to be set up at San Francisco full provision is devised for peacetime changes, future war will become increasingly probable.

History should teach us that. For example, Hitler might not have come into power if back in the early thirties the Allies had listened to the pleas of Stresemann and Bruening that changes in Germany's status were imperative. But their arguments were unheeded, and before long the desperate Germans were an easy prey to promises of a new-born fatherland. Hitler gained for Germany changes far beyond those asked by Stresemann and Bruening, not through peaceful negotiations or through the existing machinery of the League of Nations but through force and bloodshed.

Scores of similar instances, each paving the way to World War No. 2, are part of the record.

In my columns these past 3 days, I have tried to make clear some of the seven points in the pattern for peace. Others are of equal importance.

Consider them one by one. The signers demand: That "national governments and international organizations must respect and guarantee the right of ethnic, religious, and cultural minorities to economic livelihood."

That the organization of nations "assure collective security by drastic limitation and continuing control of armaments."

That an "international economic collaboration to assist all states to provide an adequate standard of living for their citizens must replace their present economic monopoly and exploitation of natural resources by privileged groups and states."

That "steps must be taken to provide for the security of the family, the collaboration of all groups and classes in the interest of the coming good * * * and participation by labor in decisions affecting its welfare."

From the Shoulder

EXTENSION OF REMARKS

OF

HON. WIRT COURTNEY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Nashville Banner, written by James G. Stahlman:

FROM THE SHOULDER

(By James G. Stahlman)

The Communists—where have I heard of them before?—yes, the Communists are not only organizing industry in Tennessee, but they are now trying to organize the farmers of Tennessee, as well as other States.

Tennessee farmers are usually pretty level headed. Normally they keep their feet on the ground they plow. They don't fall for phonies and charlatans as a rule, so I'm hoping they won't be taken in by the Communists.

The current drive by the Commies is being staged from Highlander Folk School, that hot-bed of radicalism on Monteagle Mountain.

Highlander has been in print many times before. Its red teachings have been aired in most papers in the State, including those in Nashville. So the public, by now, should be fairly well apprised of the character of institution which Highlander actually is.

Representatives from Highlander are now seeking to form a farmers' union, local cooperatives which will work in affiliation with the National Farmers Union. Of course, you know that Aubrey Williams, now before the Senate for confirmation, but certain of rejection, as head of the R. E. A., jumped to the National Farmers Union, when he lost his job after Congress abolished that other reddish outfit, the National Youth Administration.

Aubrey just natchally hankers for things red, radical, and ruinous, so it was no surprise when he affiliated with the National Farmers Union. The members of that organization may not realize that they are playing with the Commies, but that's what they're doing, and no foolin'.

Now, when the Commies send out Highlanders to organize locals in Tennessee to cooperate with the National Farmers Union, it's time the farmers of Tennessee wised up to the fact that they are being asked to join in a movement that will eventually communize the farmers here, just as they've been communized in Russia.

If that's what the farmers want, I don't believe it. The American farmer, the Tennessee farmer, is an independent individual. He usually owns his own land. He makes his own living. He keeps his own books, drives his own car, lives under his own roof, works his own crops, raises his own family, cooperates with his own neighbors, worships his own God, and looks every man squarely in the eye.

Is that the Russian way of life? It is not. Is that the Communist way? Positively not. What is the individual's status under the communal system? That's for farmer, worker, merchant, everybody.

Well, here's how they work it—First they take all your property. Then they turn that property into a common pool. The state (government to you), owns all the property in the pool. The state then tells you where you can work, what you can do, how much you get, what and where you can buy and at what price. The individual is reduced to a common level. That's why they talk so much of the common man. He's in a common pool. He has a common status with everybody else. He can't be his own boss, he can't own anything, he can't accumulate for the future. He's just a common man in a common pool, doing common work, for the common pool.

There are lots of other things he can't do; some that he must do. But the above ought to be enough to convince any sane American farmer, particularly one in Tennessee.

The Marines Hear About a Party

EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. LEWIS. Mr. Speaker, I am today in receipt of a letter from a friend of mine in Ohio asking that I place in the CONGRESSIONAL RECORD the enclosed letter printed in the Chicago Tribune of March 19, 1945. I comply with this request because this letter seems to reflect somewhat the attitude of our boys who are fighting in the far-off places of the earth. The letter is as follows:

THE MARINES HEAR ABOUT A PARTY

SOMEWHERE IN THE PACIFIC, February 28.—Here is a paragraph from a letter received recently, written by one of the thousands of employees at the Dodge Chicago plant, located in the southwest end of Chicago:

"Sure wish you could have been here at the plant the day before Christmas. We celebrated, and what a celebration, liquor and more liquor—bottles kept popping up continuously. From the self-styled Romeos we have for bosses in this division down to the laborers, whisky was brought in, drunk, and enjoyed the whole day long. I think everybody in this Rockwood division will remember the gala, loud, and drunken time we all had for many a year. Most of the girls working here are married, whether they admit it or not, and have husbands overseas, so the drinking was carried on after work in their apartments and homes. Usually these girls have moved from the neighborhood where they and their husbands were known, so all was well."

Some of us have wives working at this plant and a few of us have wives working right in that Rockwood division, much to our sorrow. All we can do is to ask that God, please, please take care of our little sons and of our little daughters whom we entrusted to these female rats. We can fight our yellow enemy out here because we can find and reach him as we do know who and what he is, but you who are our yellow, despicable, and treacherous enemies, who feel so safe and secure, having the knowledge that we cannot reach you, we leave to God. May all his wrath, may all the damnation possible fall upon your filthy, unworthy souls. Now, to those who are truly our friends, carry on. We are proud of you, and it's for you and all you stand for that we are fighting to keep and preserve. We know our Tribune is the only possible chance for any voice back home, so don't let us down there. We will not let you down out here—ever.

A FEW CHICAGO MARINES.

Bretton Woods or What?

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Observer:

BRETTON WOODS OR WHAT?

The Banking Committee of Congress now have before them the question of "Shall the United States become a part of the International Bank that is to stablize the world money market or not?"

There can be no question as to whether we should or not. If the people of the United States want to surrender the military victory that has and will be achieved, then they can listen to the turtle type of isolationists who still screech for this country to once again withdraw into its shell of internationism which was in a measure responsible for World War No. 2.

The Bretton Woods proposal is not something that the world can do without. The recovery from the war damage that has been done to the fighting nations of the world cannot hope to be repaired with what little financial support and raw materials that are now within these countries.

It will take money, backed by sound financial banking to do this job.

There are the regular channels open to these countries, if they wish to shop around after hostilities have ceased, but will have to

pay the rates of interest that these same war mongers have charged in the past to any nation that is willing to pay their price to get hold of the cash or credit to rearm to start another war.

The Bretton Woods set-up would first stop any chance of this happening again.

This in itself would be an assurance of sane rebuilding by these war-torn nations.

If permanent peace is to be more than just a dream, then there must be a financial stop put upon the means of gaining financial support from any source other than that controlled by the nations that are to assure and control that peace set-up.

Had there been an international bank in control of the financial loans given to Hitler, he could not have used this money to rearm Germany.

This lesson in itself should stop all question of the value of this set-up, as a medium of control.

The World Court idea of settling all differences that might arise in the future is not enough to hold the power to overcome the banking interests that will eventually get control over the World Court, unless some solid set-up like the one that has been proposed at Bretton Woods by the representatives of the 44 nations taking part in that Conference.

These national representatives have agreed to the terms laid down at the Conference. Just what chance there is of the Members of Congress, other than some stupid radicals, and that does not mean Communists or that type of radical, but rather those iron-bound minds, who, still after what has happened in the world, which was the real cause of World War No. 2, believe that the United States can exist in the confines of its own borders.

No loan would be made to any nation unless it was approved by the entire group from the different nations that were in control of this bank.

In that way, it would not loan money to any nation that wanted to use said loan for any purpose that would be other than for economic expansion or the building of its trade by industrial plants of commerce.

The nations of the world have been bled white of their food, housing, gold, and other needs to recover from this long war.

If the solvent nations are not willing to help out at a time when these nations are without a government, food or any means of starting life once again, what chance is their of the solvent countries ever being able to trade with these former importers of goods from the solvent nations?

On the other hand, the shadow of bloody revolt is ever ready to raise its head in protest against the lack of food and housing, which will, as in the past, cause the old cry to go up that the winning nations are not friendly and in that way cause these nations to turn back toward nazi-ism and all that Hitler has preached for the past 15 years.

This must not happen, but will, unless the Congress of the United States gets busy and forgets the old cry of the isolationists that we can live in the small world that is within our own borders.

The rationing of half of the things that has made life so hard to endure, during the period after Pearl Harbor, is the results of lack of foresight in being able to kill off these silly notions of self-support and the ability to carry on without the raw materials and other needs that we find so necessary to our everyday life.

Dumbarton Oaks and Bretton Woods are so closely connected that one without the other spells failure to the chances of eliminating the World War No. 3.

Money is the root of all evil, so it is said, but it is also today the medium of controlling all evils that have been responsible for past wars.

Let us have an international bank. Not international bankers, who have in the past been responsible for all our mass killings, in the name of war.

Until the root of all evil is placed under control there can be no assurance of a lasting peace.

The stopping of hostilities will bring to the three great powers the job of feeding the world or having chaos breaking loose with all its fury.

The trained killers who will be loosed upon society will not stand idly by and starve, or see their loved ones in that plight very long. They will turn to the group who suggests the easiest way out.

That is where the Nazi Party hopes to pick up the loose ends of what the United Nations fail to tie up.

This is where the 44 nations who, after careful deliberation, came to the conclusion that the Bretton Woods set-up was the only plan that would be workable and fair to all who wanted to assure the world that life could go on, even if with at reduced budget, less food, and even a hovel for a house, until the money would be forthcoming to guarantee a brighter future than had ever been assured the victors of any war since the beginning of time.

It is the duty of every citizen to read and become familiar with the Bretton Woods set-up so that if Congress should try and break down this set-up, the people of this Nation could demand that favorable action shall be taken and know what they are talking about.

Write your Congressman and see that he supplies you with the information if you have not followed the plans of the Bretton Woods Conference in the past.

Proposed Representation of the Armed Forces at the Peace Table

EXTENSION OF REMARKS

OF

HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the General Assembly of the State of Iowa:

House Concurrent Resolution 18

Whereas it is important that peace of the Allies be a just, firm, practical, and lasting peace; and

Whereas the youth of our Nation has been tested physically, mentally, and morally, and found competent; and

Whereas the youth of our Nation are most concerned because of their age, the age of their families, and the problems confronting them; and

Whereas in every war it is the youth who shoulder the arms and give their blood and lives and know the horrors of war, the beach heads, pill boxes, and sacrifices; and

Whereas these men who have given so much of their lives and time to our public welfare and have the interests of their country and the philosophy of our republican form of representative government at heart: Therefore be it

Resolved by the house (the senate concurring), That the Fifty-first General Assembly of the State of Iowa respectfully requests that the Congress of the United States and the President of the United States immediately take the necessary steps to provide for a qualified representation of the young men and women of the military forces of World War No. 2, who have seen active service on the foreign battlefields, to serve as members of the commission or delegation representing the United States of America at the peace table and that they have an active voice in determining the peace policies of the world. The members of the armed forces have served us all and we know would serve us well in really establishing a just and lasting peace; it is further

Resolved, That the chief clerk of the house be instructed and authorized to send copies of this resolution to the Iowa Representatives and Senators in Congress and to the President of the United States, the Vice President of the United States, and the Speaker of the House of Representatives in Washington, D. C.

HAROLD FELTON,
Speaker of the House.
KENNETH A. EVANS,
President of the Senate.

Dean Arthur L. Stone

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, word has just reached me of the passing of one of Montana's grand old men, Dean Arthur L. Stone, founder and builder of the Montana State University School of Journalism. Words are hard to find to express the admiration, respect, and love of the people of the State of Montana in general and of his colleagues in the newspaper field in particular for Dean Stone. A special word should be said for the many fine students who took their journalism courses under the dean and who in so doing formed friendships which were not only lasting to both the dean and his students but beneficial as well.

His passing leaves a void in the heart of Montana and he will long be remembered for his kindness, his courtesy and his consideration for all who came within the ken of his acquaintanceship. He was one of God's noble men and we will miss him very much.

Mr. Speaker, under unanimous consent, I am including with my remarks editorials taken from various Montana newspapers:

[From the Great Falls (Mont.) Tribune of March 20, 1945]

DEAN STONE

The last leaf of a book has been turned, and the end of life has come to Dean Emeritus Arthur L. Stone, founder and builder of the Montana School of Journalism. Four score years have come and gone in this span of useful service to journalism, and to the civilian progress of the State for which he had such an abiding affection. From the days of his youthful reporting to the quieter and more recent years, with graceful writing and purposeful sincerity, his part in the making of Montana has been as sturdy as the great mountains where he loved to spend his leisure hours.

He was happy with the news of the day. The truthful comment of his editorial pen was always kept within the kindness of a loyal heart, and a soulful sympathy that

could not hurt a friend. The keenest sorrow of this hour will be in the hearts of the family and those who have profited much by his teaching in the school that he founded—who have gone out to help make newspapers in the cities of America. At the working desks of the daily and weekly newspapers of Montana there are those who likewise in their student days learned from him how to write, and knew the fine citizenship he taught and lived.

The passage of years touched Dean Stone lightly. He will always be remembered for the keenness of his wit, for refreshing youthfulness, for quiet understanding, and impressive tolerance. The teaching in his school and the fine life that he lived among the thousands of friends who knew him best will carve the finest monument to the memory of Dean Stone.

O. S. WARDEN, *Publisher.*

[From the Daily Missoulian of March 20, 1945]

ARTHUR L. STONE

Arthur L. Stone, dean emeritus of the school of journalism of the State university and a veteran practical newspaperman of long experience in this State, was one of the writing men who have had great influence on the newspapers of Montana. He had a part in building up the old Anaconda Standard, now the Montana Standard, and the Daily Missoulian, of which he was editor from 1907 to 1914. But, of course, his strongest impression upon the newspapers of Montana came through his teaching at the State university.

Dean Stone built the school of journalism from nothing. Hundreds of the young men and women to whom he taught the craft of newspaper work now represent him in newspaper offices the country over, with, of course, the majority working within the State. He taught them the values of journalism, of living in general, passed on to them his ideals. His influence has been large and good.

[From the Montana Standard of March 21, 1945]

DEAN A. L. STONE

Arthur L. Stone, who was Dean Stone to hundreds of young Montanans on the campus at Missoula, has passed on. Founder of the school of journalism at Montana State University, veteran of Montana's newspaper game in the early part of the century and chronicler of Montana lore, the refreshing little man with flowing Windsor tie, is mourned by many.

It was in 1914 that Montana's journalism school blossomed forth in a borrowed Army tent. Later it was in a little bicycle shed, then in "the shack" near the old Science building, once in tar-paper barracks, and finally in its present fine modern building, the long-time dream of Dean Stone, who presided over the school during all those years of steady progress.

From those journalism buildings young men and young women from all parts of Montana and from other States went forth to enter the newspaper business. Some of them are top-notchers in their profession today, others are routine reporters or desk men, but all left the halls of journalism with the imprint of Dean Stone's fine influence and his kindly counsel, for he understood youth and he knew how to impart the fundamentals of the profession to those who showed an interest and aptitude.

Dean Stone was long prominent as a working newspaper man. An accomplished writer, and later an executive, he was connected with the old Anaconda Standard, and later the Missoulian. In 1914 he founded the school of journalism, where he held forth as a leading educator in his field until 1942, when he retired to become dean emeritus.

Dean Stone had a deep affection for Montana, where he lived for 57 years, an affection that was as abiding as that held for him by the boys and girls who came and went from his school, well tutored for a fling in the field in which his diligent labors and stellar ability brought him well-earned renown.

[From the Helena (Mont.) Independent-Record of March 21, 1945]

DEAN ARTHUR STONE

Death of Dean Arthur L. Stone at the age of 79, closes a career of more than 60 years as chemist, newspaperman, and teacher. The six decades of his active and useful life were spent in Wyoming and Montana, starting in territorial days when venturesome railroad executives were pondering whether to risk tying the West to the East with bands of steel.

Starting his western life as a railroad chemist in Wyoming in 1884, he came to Helena 4 years later to become science instructor in the local high school. His next teaching assignment was in Anaconda, where he started his newspaper work in 1891. It was in 1914 that he founded the school of journalism at the State University at Missoula. As head of that school he was known intimately by hundreds of Montanans.

Like all pioneering projects, establishment of the journalism school was no easy task. Dean Stone literally buit it from the ground up. The quarters assigned to the journalists were distinctly not of the most modern type, even according to the standards of 1914. On cold days the wintry blasts caused much discomfort. On rainy days it seemed that more than the average portion of the moisture fell on and seeped into the journalism building. But, under the dean's directorship the school expanded. His graduates were welcome in all publishing offices. He usually found and exploited some particular attribute in each graduate. And, it was his pleasure to follow through on his recommendations. Much of his vacation time was spent calling on his graduates and their employers to be certain they were doing all right.

Dean Stone was a curious man. He never fully satisfied the desire to blaze new trails, developed in early western days. He felt there were good points in everyone and in everything. This pioneering urge led him into virtually trackless forests along Montana's continental divide. He liked nothing better than to start out with a companion in a car "that can climb trees if necessary," in the hope he would find a new scenic route to recommend to the engineers. Sometimes he would cover a route several times before he accepted or rejected it as worthy of recommendation for expert study. He carried that characteristic bent for thoroughness into his classrooms. When Dean Stone urged something on his pupils, they well knew he had explored all angles.

When historians finally compile all outstanding material on the transition from territorial to modern days, Dean Stone's activities will have a prominent place. His service to others ranged through the period from the advent of railroads to the acceptance of passenger airplanes as routine. He will rank as one of Montana's greatest teachers. Many people can assimilate the lessons of life, but few can interpret and disseminate the wisdom accumulated over several decades. That rare gift was his. All who knew Dean Stone well became better citizens because of that privilege.

[From the Kalispell (Mont.) Times of March 22, 1945]

DEAN STONE PASSES AFTER LONG ILLNESS

The gradual decline of Arthur L. Stone, 79, dean emeritus of the school of journalism at Montana State University, whose death occurred Monday in Missoula, came as a shock to his many friends, although he had been a hospital patient for many weeks. Fifty years ago he was assigned to Missoula by the Anaconda Standard, from where he edited the Sunday edition. Later he took the desk as managing editor of the Daily Missoulian, which he retained for 7 years, when he became dean of the school of journalism when that school was established at the University of Montana. He was a trained and efficient newspaperman and author; some of his sketches of Montana deserved to become famous.

His long association with the youngsters in his school won him lifelong friendships from these boys who grew up to become leaders in journalistic fields of the United States. At one time it was stated that half the editors and reporters in San Francisco bore Dean Stone's kindly brand, and there are lots of strays in the Mississippi Valley, the Atlantic cities, and the Nation's Capital.

Mr. Stone served as dean of the journalism school until about 3 years ago, when he became dean emeritus and retired after nearly 30 years of service. His wife died in 1917. One son, George P., graduated from Montana University, was on the Missoulian staff for several years, served in World War No. 1, and passed away in Chicago, where he edited the Chicago Daily News, in 1926. Another son, Percy N., also a graduate of Montana University, was in the first war and is now on the staff of the New York Herald-Tribune. The younger son, John B., followed the newspaper trail and is now in Washington, D. C., with the O. W. I. There is another son, Dr. Emerson Stone, and a daughter yet alive.

[From the Billings (Mont.) Gazette of March 22, 1945]

DEAN ARTHUR L. STONE

The passing of Arthur L. Stone, dean emeritus of Montana University's school of journalism, is a source of regret among people in and outside the newspaper business in the State. He was responsible for the development of a fine school, the quality of which is attested by the success of not a few of those who received their training at the university and are now engaged in the newspaper business in different parts of the country and in foreign lands.

Dean Stone's devotion to the university will long be remembered by both students and faculty. They will cherish the memory of a personality whose idealism was a stimulus to anyone associated with him. Newspaper folk who started their career under his guidance will reflect, upon his passing, that to have been one of his students was an inspiring experience.

A Dark Chapter in Our Nation's History

EXTENSION OF REMARKS

OF

HON. WIRT COURTNEY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I include the following strong and moving editorial from the Review-Appeal, Franklin, Tenn., written by a close friend of mine, Leonard H. Armistead:

A DARK CHAPTER IN OUR NATION'S HISTORY

(By Leonard H. Armistead)

One of the darkest chapters in this Nation's history was begun when 18-year-old boys were inducted into the Army and sent to the front lines with only some 16 weeks of training. It is horrible enough to draft an

18-year-old for front-line service with the infantry—but to send him over the top with a paltry few weeks of preparation for attack and defense is inconceivable, to say the least.

The Nation cannot retract its steps with regard to those lads who have already been the victims of inexcusable injustice, but it can correct the practice and should do so now.

An 18-year-old is a boy; he is not a man: he has not reached his maturity in physical stamina, mental ability, nor judgment as to how to take care of himself or destroy the enemy. As each week goes by, yea nearly every day, reports from far-flung battlefields bring sorrow not only to the families of lads thus victimized but to hundreds of citizens who did not even know them.

The Government promised these boys a full year of training before they saw active service and has in no sense lived up to that assurance. And to make it worse the Army chiefs now say that for the next 3 months all boys 18 and 19 years old will be placed in the Infantry as soon as inducted.

No man who has seen service in this war, or any other, will say that there is any branch of the Army which is more dangerous or requires more stamina, of mind and body, than the Infantry. There never has been a war, in all history, that the foot soldier did not have to fight his way, with the great and essential aid of all other branches of the service, to most objectives to be taken.

It is beyond our power of conception that the heads of our Army would want, much less even demand, 18-year-old boys, with or without a year's training, for front-line duties.

There are 8,000,000 or more men in the Army. It should not be, and is not, necessary or sensible to use boys in the spot so continuously dangerous and requiring great physical endurance.

In God's name, we ask Congress, Mr. Roosevelt, General Marshall, or all three to correct this horrible practice now.

Wichita Firms Explode Theory That Rural Folk are Poor Plant Workers

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. REES of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including herewith an article that appeared in the Wall Street Journal a few weeks ago and that was reprinted in the Wichita Magazine at Wichita, Kans.

This article is most interesting and informative. It is proof that rural people are among the best plant workers. Wichita war plants are among the highest in record of output in this country. Absenteeism is low and there have been no strikes during the 5 years we have been at war.

I commend this article to you. The people of Wichita and of the State of Kansas have good right to be proud of this record:

A long-accepted presumption that rural folk make unsuitable factory hands has been exploded here at Wichita.

Four years of war production have shown, to the contrary, that help recruited from the farms and villages is definitely superior to the national average.

This should hearten those chamber of commerce executives in Middle Western agricultural trading cities, who for 50 years have been stymied from corralling the industries they sought for their towns because their claims of an available labor supply failed to convince industrialists.

FACTORY HELP JUMPS FROM 8,532 TO 60,000

How much Wichita had to rely for war production on rural help is revealed by the fact that the 1940 census takers counted in the city only 8,532 persons employed in manufacturing, of whom 1,262 were airplane workers. Today the city's factories employ about 60,000 persons, of whom approximately 52,000 are building planes, according to Brig. Gen. Ray G. Harris, commanding general of the midwestern district Air Technical Service Command. Practically all the increase was recruited from Wichita itself and from the towns and farms on the Southwest Great Plains.

These novices, after a mechanical training course in the Wichita schools, varying from 2 or 10 weeks, depending on the type of work they intended to do, were graduated into the factories where they have made an enviable record.

In 5 years not a strike has occurred in a Wichita war plant, according to C. W. Corsaut, Wichita district manager of the United States Employment Service. Every plant is abreast of its war production schedule today.

The employees have won 20 efficiency citations from Army, Navy, and Maritime Commission authorities in the following order: Five Army and Navy E citations for efficiency to the employees of Boeing Airplane Co.; 5 to employees of the Cessna Air-Craft Co.; 4 to the employees of Beech Aircraft Corp.; 2 to Coleman Lamp & Stove Co.; and 4 maritime M citations to Watkins, Inc., employees for efficiency.

ABSENTEEISM FAR BELOW NATIONAL AVERAGE

Records of absentees of the three largest plants for 1944, complied in the office of General Harris and compared with the average of national absentees reveal another claim to superiority. Typical are figures for Cessna. Less than 2.9 percent of its employees were absent, on the average, in the last 7 months of 1944. In June, September, and November this was reduced to only 2 percent, as compared with 6.5 percent, 5.7 percent, and 5.6 percent, the national average of absenteeism for the same 3 months. Cessna's highest absenteeism for 1944 came in February with 4.9 percent, against a national average for that month of 7.8 percent.

This record has resulted despite the fact that it is impossible for Wichita to provide housing for all the workers. Many thousands live in villages and county-seat towns more than 30 miles away, and many hundreds of others travel 50 miles or more to work daily.

Wichita workers have constructed 23,934 warplanes, ranging from the Culver Aircraft Corporation's trig little military plane up in size to the greatest of them all, Boeing's B–29 Superfortress. The Wichita Boeing plant produced the first B–29 and from the initial giant bomber attack on Japan last June 15 to December 1, all Superfortresses to blast Japan were Wichita-built. Since then the production from plants in three other cities has increased the B–29 fleet, but the Wichita plant is still the leader and is hatching each month enough of the giant sky fighter birds to extend 3 miles if flying abreast with their wing tips touching.

Other Wichita production has included 31 percent of all trainers for the Army, 74 percent of all twin-engine trainers, a fleet of gliders, unrevealed thousands of wings for the A–26 Invader, and many other types of war matériel.

SET UP MANPOWER TESTING LABORATORY

This high production interested Dr. I. T. Shultz, professor of psychology at Friends University here. Early in the war, before Wichita had contributed 20,000 men to the armed forces and when factories still could pick and choose their help, the Wichita Chamber of Commerce sponsored the organization of Search-Service, a testing laboratory to weed out the unfit with a view to saving them the expense of taking specialized training.

Dr. Shultz was engaged as consulting psychologist because of his previous experience in industrial research at the University of Pennsylvania. He directed the tests in Wichita of 7,000 persons for mechanical aptitude, employing for this purpose the same nationally accepted quizzes used in eastern industrial cities.

Not until this winter did Mr. Shultz have these classified. He was gratified to find they forecast the production record since attained. The mechanical aptitude of 71 percent of those examined was higher than the average score for eastern industrial cities and 28 percent of the applicants passed the intelligence quiz for foremen. Fifteen percent exceeded the average score for engineering freshmen, and only 4 to 4½ percent were graded as neurotic as compared with a national average on the identical tests of 10 percent neurotic.

INHERITANCE AND GEOGRAPHY FACTORS

Dr. Shultz asserts that a good inheritance from hardy pioneer stock and geography combine to raise the score.

Further, these people live in a highly mechanized agricultural region where, so the census shows, more tractors are owned per hundred Kansas farms than in any other State. Automobile ownership is close to the top, with 91 cars per hundred families in Kansas, compared with 68 for Missouri, 62 for New York, and 49 for West Virginia. Repairs for power farm equipment are made either on the farm where it is in operation or in the nearby village shops.

Geography, so Dr. Shultz asserts, plays an important part. The soil of the Great Plains, he explains, is richer in calcium, phosphorus, magnesium, and other minerals than in the areas to the east, which results in the production of food rich in essential minerals. This, in turn, improves the physique and makes for emotional stability, which, incidentally, is one of the factors in reducing strikes, he argues.

"If other cities in agricultural regions will make a similar showing," comments one Wichita citizen, "the presumption that rural folk do not make good mechanical workers will go the way of the ancient folk tale which has it that the moon is made of green cheese."

Speak Up for Americanism

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Max Van Horn, adjutant, Department of Iowa, Veterans of Foreign Wars, over radio station WHO, March 11, 1945:

Since it was founded in 1899 the Veterans of Foreign Wars of the United States has won the respect of the Nation as a two-fisted, militant, progressive veteran fraternity devoted chiefly to two principal objectives—the national welfare and the welfare of the veteran and his dependents.

As a nonpartisan, nonsectarian, war-veteran association, the V. F. W. has been closely identified with the enactment of every important piece of legislation which has contributed to the welfare of veterans of all wars.

As an organization of veterans—one that is composed exclusively of men with overseas military service—we have been strengthened by the experience of more than two-score years. This is why we believe we are especially qualified, by heritage and tradition to help solve the post-war problem of the men in military service in this war.

I don't think that I have to dwell very long on the value of our achievements in this field to date. Today, mainly because of our efforts, the men who are serving with the armed forces have this definite assurance—they know they can look forward to the sympathetic assistance of the Federal Government when the time comes for them to resume their former places in civilian life. Already definitely assured for the veterans of this war are many benefits which were not available to our comrades of the First World War until just a few years before Pearl Harbor.

Nearly anyone today who wants to be quoted on the subject is happy to tell you what he thinks the veterans of this war will want when they come home. A great many persons—especially many who have never been soldiers, sailors, or marines themselves—are eager to discuss the questions at the drop of a hat. If their advice was inspired by the emotions of personal experience, they would have a real right to demand respect for their opinions. But most of these people were strangers to the whole problem of veteran welfare during the years between 1918 and 1941. As a result, they have no background in veteran affairs on which they can form intelligent conclusions today.

We veterans of the last war find it difficult to take these persons very seriously. We have a pretty good hunch they will disappear from the scene when the demobilization of our armed forces becomes fully effective. Instead of being concerned about the problem of veteran welfare, we predict they will turn their attention to matters of personal interest. In fact, we even suspect they will be the first ones to suggest that the job of looking after returning veterans rightfully belongs to the veteran organizations. And that's where we come in—the Veterans of Foreign Wars of the United States. We think that we are qualified to tackle the job because of several reasons. First, we know something about the thinking process of veterans—and especially overseas veterans. We know considerable about their personal problems and the obstacles which they must overcome. Furthermore, we are familiar with the laws, rules, regulations, and procedure which affect the veteran. For a very good reason, too. We have been responsible for most of the veteran welfare legislation which the Congress has approved—not only for the veteran of other wars but also for the men who will return to their home communities when this war is over

Some day the last shot of this war will be fired. And when its echoes have died away, there will be a great silence—a silence heard around the world. And in that silence, mud-caked American boys will emerge from their foxholes, and lay down their guns, and turn their faces toward home. They will have won the victory, and they will look forward to reaping the fruits of peace.

We here on the home front have done a lot of thinking, and a lot of talking, about the man in uniform. We know that when he comes marching home again he will loom large in the American scene. He and his comrades will number in the millions, and they will receive top priority on the agenda of American affairs. We are already calling this prospect the "veteran problem," and some of the talk we hear is giving this problem a lot more heat than light.

You can hear the discussion wax hot and heavy on street corners, in restaurants and cocktail bars, in the newspapers and on the radio, in the average American home. Practically everyone is saying that nothing is too good for our boys when they return from the wars. In Washington alone, 120 agencies, public and private, have been set up to deal with the so-called veteran problem. We are already prepared to go all-out in terms of mustering-out pay, unemployment insurance, loans, educational opportunities, vocational rehabilitation, etc. There is nothing wrong with any of these things, and the dollars we are going to spend on them will be well spent.

Let me make this point, however. These benefits, in themselves, are not enough. They will not do the job alone and they will not satisfy the veteran. For what your son—and mine—wants above all when they come home again is understanding and an economic system based on full employment.

When the soldier, sailor, or marine is mustered out, he will have to make a transition from Army to civilian life. The mere fact that he takes off his uniform—and dons a business suit or a pair of overalls—will not automatically make him a civilian. He has led a hard life of discipline and danger. It will not be easy to adjust himself to peaceful ways again. It will take every ounce of understanding and cooperation we can give him. We must help him settle down into his job, his club, his church, his school, his community. He must be made to feel welcome, or putting it another way, to be one of us again.

The returning veteran will want employment, not only for himself, but for everyone. He does not want doles or benefits or handouts. He wants the same thing we all want—a chance to work at a lathe, or a desk, for a weekly pay envelope that will give him self-respect as a useful member of society, the wherewithal to support his loved ones, and the opportunity to build for the future. Give the veteran a chance to earn his own living by the skill of his hands, the sweat of his brow, or the ingenuity of his brain, and he'll be happy. In short, give the veteran understanding and a useful productive job, and the so-called "veteran problem" will fade out of the picture.

Here in our own country, some faint-hearted and weak-minded alarmists look upon the homecoming of men in service with foreboding. They are spreading rumors thick and fast. They whisper that there is going to be bitterness between the worker and the returning veterans; that labor and management will fight like cats and dogs; that industry will use the reconversion period as the time to smash the unions; that labor will run wild with strikes—and so on.

These rumors have no foundation in fact, for the fact is that there are no real clashing of interests between the worker and the veteran. Both have the same problem, and both will want the same thing. As Harry A. Millis, chairman of the National Labor Relations Board, puts it:

"Both veterans and war workers face new jobs, wait upon the reconversion plans of industry * * * both want security. Each has served his country in war. Millions will travel back to their homes * * * the soldiers from their fox holes and the migratory workers, clear across the country, from jobs which urgently needed them for war production. Their interests are one and the same."

Here is the truth to remember. The ground on which both worker and veteran stand is common ground. Therefore, it should be fertile ground for unity and cooperation. And it is up to us, here on the home front, to prepare for the homecoming of our men and women in uniform by preparing ourselves first to meet him on that ground.

When the American soldier comes home again, he will bring with him a new viewpoint, and a healthy one. In fox holes, in bombers, in tank destroyers, and on the decks of ships at sea, he has learned the meaning of teamwork. He has seen Americans of every race and creed fight and die beside him. In the white-hot crucible of this experience many of the petty racial, religious, or political prejudices he once knew have melted away. He has learned, the hard way, that men fight a common danger more effectively when they fight together. He has seen this lesson written in red blood on the black mud of many a battle field. And he will come home in this kind of mood, this mood for teamwork. He will expect to find it here. And if he doesn't, he is going to be disillusioned and angered.

It is then that he will be ripe to become the deluded follower of some nationalist or Fascist movement which will seek to glorify him and his comrades as a separate, master-status, special special privilege class. Demagogues who hate democracy will promise to restore his faith in a cause, a faith that he has lost with the passing of his comradeship in arms, and has failed to find at home. Subversive agitators will see in this bitterness a golden opportunity to split the American people into two great masses, veterans and home front people. They will work unceasingly to agitate one group against the other. The end product, of course, would be the destruction of democracy, and the loss of every ideal and principle for which we fought this war.

Turn the pages of history, and you will find that it has happened before. In Italy, Germany, and France disillusioned veterans, angered by what they found at home and misled by self-seeking demagogues, formed such fascist organizations as the Squadristi, the Brown Shirts, and the Cagoulards. Any such movement here would be the greatest tragedy of our time.

The veteran then is going to expect to find the same teamwork here as he found in battle. This is our job, and we cannot betray him. Just as the crisis of war made all of us understand that we must become a great team of Americans working toward the same end, so too, must labor and industry pull together. For the veteran, as I said before, will want a job, and this is the special province of both labor and industry. Labor must understand that all employers are not anti-union. Industry must understand that all union members are not gangsters nor radicals. Labor and industry together must create an economic system of full employment. Jobs for all is the biggest post-war job we face, but we can do it with teamwork. We must do it. We have all the tools—new technologies, new materials, new machines, new consumer needs. Together we must take the road ahead, not the road back to the "good old days," when unemployment was considered a necessary evil.

When the veteran comes home again, he will want understanding on our part, and a useful job to help him recover his identity as a civilian. He will want to find us ready to work together, and therefore with him, not against him. This, and not sympathy or charity, is what our soldiers, sailors, and marines want. And this is the answer to the so-called veteran problem.

Light on Bretton Woods

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. REED of New York. Mr. Speaker, the great propaganda drive is on to crush all criticism of the Bretton Woods program. This is the technique developed by Hitler in dealing with the German people. "No," say the New Dealers, the American citizens must not inquire into the infallibility of the New Deal, or question its proposals. Not so, however, with English officials or of English citizens. They have full permission to call in question any legislation or government proposal which by any stretch of the imagination could violate a vital interest of the British Empire. If the English officials refuse to be bound by the proposed terms of the Bretton Woods agreement, why should the American officials or the people they represent be forced to remain quiet while their country is being misled and betrayed. I refuse to be deprived of free speech. Under leave to extend my remarks I insert an editorial which appeared in the New York Herald Tribune March 22, 1945:

LIGHT ON BRETTON WOODS

The Writers' War Board, a group of writers and radio commentators formed for the purpose of helping to win the war by popular education, has apparently turned its talents to propagandizing the Bretton Woods program. It is now circularizing releases in which criticism of the Treasury plan and isolationism are employed as interchangeable terms. "Urge all who hear or read your words," is the refrain of its messages to columnists and radio broadcasters, "to wire their Congressmen and their Senators demanding passage of Bretton Woods as it stands." Only a handful of Representatives and Senators "know what Bretton Woods is all about," it seems, so this group of outstanding monetary experts—including Clifton Fadiman, Franklin P. Adams, Paul Gallico, Samuel Grafton, and Russel Crouse—have taken on the task of reducing this foreign-exchange business to simple, understandable terms terms which even a Representative or a Senator can grasp.

Did we say task? That was silly of us. It is true that when Lord Keynes began to scrutinize the experts' final report he is reported to have demanded, "What is this, Cherokee?" But Mr. Samuel Grafton, of the Writers' War Board, seems not to have found the document indigestible. (On the contrary, one might say that with him it was virtually predigested.) The Bretton Woods program, Mr. Grafton tells us in his column in the New York Post, is really quite simple. "The nations of the world," he writes, "pledge to keep their currencies at stable value. Is that complicated?"

No, that isn't complicated; and now here is a dispatch from London, under date of January 19:

"Both Sir John Anderson, Chancellor of the Exchequer, and Lord Keynes have declared that the British Government will adjust the value of the pound whenever Whitehall considers it necessary.

"The Chancellor even said that the policy pursued here would be similar to that of 1933. He said that the Government would commit itself only to consult the international monetary fund before changing the value of the pound sterling, reserving its right to persist with its intention should the fund refuse consent."

Summed up, what this means is that Britain hasn't the slightest idea of keeping its currency stable if it finds that such a course interferes with its domestic financial and social policies. That isn't complicated, is it? But now try putting the two together and ask yourself, "Is that simple?"

Somehow Mr. Grafton's approach to the Bretton Woods controversy reminds us of that judge who made a practice of keeping awake while one side was presenting its case and taking a nap when the other side was being presented. Listening to both sides, he explained, always confused him.

The Late Justice John H. Clarke

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. KIRWAN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include therein an editorial from the Youngstown Vindicator, relative to the late Supreme Court Justice, John Hessin Clarke, who passed quietly away in his sleep Thursday, March 22, at San Diego, Calif.

Justice Clarke wrote his own epitaph—a life consecrated to the betterment of his fellow man and an unceasing endeavor to make the world a better place in which to live.

The editorial follows:

JUSTICE JOHN H. CLARKE

"Thou hast embarked thyself with them that love, and seek, and choose, the best things; and number is not weight with thee."

William Penn's brave words to his friend Sydney apply just as well to Justice John H. Clarke, who died quietly in his sleep yesterday in San Diego, Calif. They describe him as he was all his life, for, young and old, he was always the same. His powerful mind, strong character, and cultivated tastes were formed early, and he was essentially the same man when he came to Youngstown in 1880 to practice law and write for the Vindicator as he was in 1916 when President Woodrow Wilson appointed him to the Supreme Court of the United States, and later when he resigned to work for American entrance into the League of Nations.

Justice Clarke knew, and his friends here knew, that he was destined for great things. Besides having unusual ability he had rare strength of purpose. He wasted no time and nothing turned him aside from his goal. Perhaps an early misfortune proved to be a spur to him. His father, a lawyer in Lisbon, had made an investment which turned out badly and died leaving a debt of $10,000. That amount would be equal to $100,000 today, but the son decided that his first earnings must go to pay it off. He spoke long afterward of how little he had lived on in those early years. It may be that he had had good practice in his school and college days, for the institution he attended at Hudson has since been famous as "Hard-scrabble Academy." Boys went there to learn, so that they could make something of themselves, and the lessons Justice Clarke learned at Hudson he never forgot. "Reading maketh a full man, conference a ready man, and writing an exact man," and before he came to Youngstown Justice Clarke had formed the habit of all three. He had a love of great books, particularly Shakespeare, on whose plays he often lectured; the Bible whose words became part of the warp and woof of his mind; "wise old" Ben Franklin, Lowell and the other American writers who had determined the character of their country. Justice Clarke's thought then was on a higher plane than that of ordinary men, and whatever was cheap or trivial was always foreign to him.

Justice Clarke's friends in those early years all looked for him to be President. They did not reckon with the fact that he was a Democrat in a strongly Republican State. He was a Democrat by principle and conviction, because his sympathies were with common men who needed someone uncommon to fight for them. He fought for them in his own party and lost a nomination for United States Senator. He fought for them later as the candidate of his party for the Senate, and was again defeated by the power of great wealth, which in those days could be used without restraint. In time his ability made him wealthy, but his sympathies and his convictions remained the same. On the Supreme Court his views alined him with the great liberals, Holmes and Brandeis; but as the composition of the Court changed he found himself so constantly in the minority and so regularly outvoted by the extreme conservatives whose disregard of the Nation's necessity led later to popular reaction, that he felt he was wasting his time and resigned to devote himself to the cause of world peace on which he had set his heart.

In Youngstown Justice Clarke had two friends, tried and tested, whom he loved above all others: William F. Maag, his associate in the Vindicator, and his law partner, Cecil D. Hine. Always fond of writing, he bought an interest in the Vindicator to indulge his hobby and—more important—to influence local and State affairs. The paper became a power for good. At the risk of all they had, its owners fought bigotry as represented by the American Protective Association—the know-nothings of the 1900's—and the Ku Klux Klan a generation later. It worked for good government when corruption and public indifference were the rule. It fought for the rank and file, the mill men and miners, and all who needed someone to speak for them. It preached the duties of wealthy men. It lent its aid to the preservation and development of Mill Creek Park, when Volney Rogers—the first to see the possibilities of this "bit of Switzerland set down in Ohio"—was considered a visionary. It worked to build up the public library when books were held to be expensive luxuries. It taught the advantages of higher education, and Justice Clarke become the paper's first columnist to offer his weekly observations, Wise and and Otherwise, on men, affairs, and the amenities of the cultivated life.

In broader fields the Vindicator was one of the first to lend its support to civil service, one of its early owners having become the first Civil Service Commissioner of the United States; it opposed the folly of national prohibition; it advocated the short ballot and worked for the enactment of the beginning of social legislation embodied in the workmen's compensation law, so badly needed when so many workmen were injured by the crude machinery of those days and were so rarely able to obtain justice from their employers or the courts.

Cecil D. Hine was head of Youngstown's leading law firm of a generation ago. He was

older than Justice Clarke; a man of fine mind and high character. He was a conservative Republican, whereas Justice Clarke was not only a Democrat but among the well-to-do of the town was looked on as a radical. To his surprise, Mr. Hine invited him to his office one day and asked him to become his partner. What was more, Mr. Hine invited him to come into the firm on equal terms, and further demonstrated his trust and confidence by saying that they would not even bother to sign a contract. The relationship was as ideal as any could be. The two men, so different in their political views, became the firmest of friends. Justice Clarke outlived Mr. Hines by many years, but their association was something he always looked back to with affection, pleasure, and pride.

Later, in Cleveland, Justice Clarke's closest friends were Tom L. Johnson, who, as mayor, gave Ohio and the Nation an example of good city government; and Newton D. Baker, Secretary of War in Woodrow Wilson's Cabinet. When in Washington he came to know Wilson well, his regard for the First World War President approached veneration.

In appearance Justice Clarke stood out in any group. He was tall and powerfully built, his features were strong and clear-cut, and gave every indication of the strength of his mind and character. Even as a young man, his hair was snow white. His gaze was keen and penetrating. He was so distinguished that he seemed like a Roman senator or an early American statesman whose statue is placed in a hall of Congress. As he grew older his manner became courtly and dignified, fitting his high position. His strength showed in his handwriting, which was as clear and firm at the end of his life as it was 50 years ago, when he wrote out his editorials in long hand.

As an example of how methodically Justice Clarke ordered his life: When he decided that his main work was done, he considered where he would spend the rest of his days. First he looked over the east coast of Florida, then the west; he went to New Orleans, Arizona, and New Mexico; and on west to San Francisco. While he was there a friend invited him to San Diego. The city's perfect climate and lovely location so enchanted him that he decided at once that it would be his home. He never regretted his choice. The windows in his apartment, high up in the El Cortez Hotel, overlooked both the broad horseshoe of the bay, which before the war was usually teeming with warships, and the mountain range which protected the city from the heat of the desert. In Youngstown he had begun his days with a walk around Wick Park; he had continued his daily constitutional in Washington, and in San Diego the people could set their clocks by the hour when he set out every morning for beautiful Balboa Park. When he did not appear at his accustomed hour yesterday he was found to have passed away in his sleep.

Like all profound men, Justice Clarke was deeply religious. All his life he was one of those whom Aristotle called the nobler sort of men. His views were larger, his aims loftier and more generous than most. He was a statesman by nature, a patriot by choice and training; and he used his life to the benefit of his country and mankind. Although not a regular churchgoer, he thought more about religion and more deeply about it than most men. The language of the Bible came naturally to him, and it is significant that in almost the last line he wrote he expressed himself in the language of the Psalmist. "I continue," he wrote, "not 'as a strong man to run a race' but surprisingly strong, all things considered." Evidently his strength was the strength which often precedes the end. To all to whom his life was an inspiration and a challenge, the news of his passing must have brought a shock, as if a giant tree had crashed in the forest.

Equal Rights for Indians

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the Washington Post today by Richard L. Neuberger. Mr. Neuberger is a distinguished author and journalist. He has written a number of interesting articles about Alaska. In this article Mr. Neuberger tells of an antidiscrimination bill recently passed by the Alaska Legislature and signed by Gov. Ernest Gruening of Alaska, and refers to the views of the Governor and Delegate BARTLETT, of Alaska, on this legislation. Attention is also called by Mr. Neuberger to the interest of Mr. MUNDT, of South Dakota, in the creation of an Indian Claims Commission.

ALASKA STATUTE—EQUAL RIGHTS FOR INDIANS

(By Richard L. Neuberger)

Negroes have not been the only victims of prejudice and discrimination. The descendants of the original inhabitants of the North American Continent have suffered this treatment, too. Discrimination against Indians is an old and sorry tale in the far West and Alaska. People with a hatred of foreigners still manage to justify intolerance toward men and women whose ancestors saw the first Europeans land in the New World. Because of all this, a law enacted last week by the Legislature of Alaska is a historic event in the relationship between whites and Indians in this hemisphere.

Alaska has a larger percentage of North American natives among its inhabitants than any other place under the Stars and Stripes. Of a civilian population of 72,170 nearly half are natives. Indians, Eskimos, and Aleuts in Alaska number 32,458. Yet despite this high proportion of the populace, natives have consistently been made the object of discrimination. "We do not cater to native trade" has been a familiar sign in many Alaskan restaurants, hotels, inns, theaters, and taverns.

Henceforth such signs will be illegal. Discrimination against natives is no longer within the law.

The statute recently passed by the Territorial Legislature provides that "all citizens of Alaska shall be entitled to the full and equal enjoyment of accommodations, advantages, and facilities" of any public place. The law also stipulates that no person shall "display any printed or written sign indicating a discrimination on racial grounds of such full and equal enjoyment."

Violation of these legislative orders can bring a jail sentence of 3 months and a fine of $250. No longer can the descendants of Alaska's original inhabitants be shoved from taxis and barred from cafes and barber shops.

GRUENING PRESSED PASSAGE

This proposal did not become law in Alaska without prolonged controversy. Many Alaskans, led by Gov. Ernest Gruening, had futilely demanded its passage at previous sessions of the legislature. These people blushed with shame when they saw doors slammed in the faces of men and women whose ancestors had watched Capt. George Vancouver and the Russian explorer, Vitus Bering, land on Alaska's shores in the eighteenth century. But other Alaskans used the same phrases to justify discrimination against Indians and Eskimos as are employed elsewhere to rationalize prejudice toward Negroes, Jews, foreign-born Americans, and Japanese Nisei.

A famous story, perhaps apocryphal, concerns the haughty white storekeeper at Wrangell who pointed to a family of Tlingit Indian salmon fishermen and asked, "Why don't those pests go back where they came from?"

But gradually public opinion in Alaska was mobilized against this point of view. (The Indians and Eskimos held tribal councils and spoke up for themselves. "After all," more than one white was heard to venture, "this is really the homeland of these people we are persecuting." The present session of the Alaska Legislature, now meeting in Juneau includes among its membership two full-blooded Indians. The bill outlawing discrimination passed the House, 19 to 5, and last week went through the Territorial Senate by a vote of 11 to 5.

"This is a milestone in Alaskan history," said Governor Gruening as he signed the measure. E. L. (BOB) BARTLETT, Alaska's Delegate in Congress, believes the measure will do much to unite the population of the Territory. "No prejudice can be justified," said BARTLETT in Washington this week, "yet prejudice against Indians and Eskimos is the most unjustifiable of all. We live in the native land of these people. Can we discriminate against them in their own country? That is certainly adding insult to injury. I am delighted that the Alaska Legislature has taken this great forward step."

BARTLETT also has suggested that the Alaska equal rights bill will have a beneficial effect in Latin America, where millions of natives closely scrutinize the treatment of their fellow natives north of the Rio Grande. Discrimination against Indians and Eskimos has not made the people of South America feel particularly kindly toward the United States, for many South Americans are Indians, too. Thus the success of the recent Pan-American Conference in Mexico may be augmented by a law enacted within the shadow of the Arctic Circle.

COMMISSION TO RIGHT WRONGS

Prejudice toward the natives of North America has not been so conspicuous as that directed against other minorities. Yet it has existed for many years. Representative KARL E. MUNDT, of South Dakota, believes that an Indian Claims Commission, to right old wrongs, is one of the ways to remedy this situation. The Alaska antidiscrimination bill is another step. A third would be drastic measures for improving the health of our Indians and Eskimos, who still are ravaged by tuberculosis.

Few Americans familiar with our own Indians will fail to be enthusiastic over Alaska's new antidiscrimination law. I remember the sunny afternoon that I fished with an old Indian at Celilo Falls on the Columbia River. Late in the day we drove in my car to a tavern above the river. "You can't come in here with that Indian," a man in a greasy apron shouted. I looked at the old fisherman. Tears of humiliation filled his eyes.

"You write for papers," the Indian said to me. "Tell your friends that my grandmother saw Lewis and Clark come from across the mountains. At her knee I learned of this. They were sent by Mr. Jefferson, a man we learned of in our schools. They were great chiefs. My grandmother and her people ate with them beside this river. But now there is no place for us. Let your white friends know of this."

In the glow of the sunset the great river glistened and gleamed. And I thought that no tears of humiliation need fill the old Indian's eyes. It was the white man whom such an incident humiliated and weighted down with shame.

Coal: An Essential to the War Effort

EXTENSION OF REMARKS
OF
HON. EARL R. LEWIS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1945

Mr. LEWIS. Mr. Speaker, coal is such a common article of commercial use that most people do not realize that it is an absolutely essential and basic product not only for the maintenance of civilian life and activity but, even more, it is an absolutely essential and basic product for the continued prosecution of the war. A moment's concentrated thought on the subject will, of course, suggest the multitudinous essential uses for war to which coal is put.

For instance, high explosive chemicals are made in whole or in part from bituminous coal—TNT, picric acid and tetryl for flame throwers, guns, mortars, bombs, and mines, are some of the war uses to which coal is essential. Coal is also the base for 85 percent of all war plastics for gas masks, bomber noses, radio apparatus, telephones, and life rafts. Hundreds of antiseptics, insecticides and drugs, including the life-saving sulphas, synthetic quinine, and aspirin are made from coal. So are chemicals for waterproofing and mildew-proofing clothing; and so are war-useful textiles such as nylon for parachutes and rot-proof mosquito netting. In addition, coal helps make the steel to build the ships, planes, and trucks and to power the trains that transport food, ammunition, and equipment by land and the ships by sea. Thirty-two thousand tons of coal go into the making of every dreadnaught; 50,000 tons into every medium tank; and 18 tons into every 4-ton Army truck. The guns in the hands of our soldiers are made of steel, and a ton and a half of bituminous coal is needed to make every ton of steel. The wartime steel industry alone has to have 1,743,000 tons of bituminous coal every week. Last year, to supply the vital needs of the battle fronts and the home front the coal industry produced 620,000,000 tons, which was more coal than has ever been mined in any year in any country in all history.

The foregoing are some of the uses of coal in the war effort, but coal is no less essential to civilian life and activities. Our houses are warmed by coal. The burning of coal is necessary in the generation of the electricity that lights our streets and factories and is used in multitudinous capacities in the production of civilian goods. Truly the production of coal is essential to the prosecution of the war and to comfortable civilian life as well and coal is one of the basic products of this modern civilization.

Notwithstanding these facts, however, the production of coal is a most hazardous business. It is hazardous for the men who own or operate the coal mines, because coal comes into competition with other fuels; namely, natural gas and oil, and the price for which coal can be sold is conditioned upon the price at which competing fuels are sold. Because at times there has been overproduction of coal and because of the low cost of competing fuels, many coal operators have found themselves unable to produce coal at as low a price as the market paid, and consequently, scores and scores of operators, especially operators of small coal mines, have been forced to the wall and compelled to lose or sell their coal mines.

But the production of coal is also a most hazardous business for coal miners. The dangers attendant upon the mining of coal to the men who do the mining are multitudinous. Few industrial workers face more varied and ever-present dangers than the coal miner. Death rides with him into the darkness of the mine and follows at his heels while he works in the dim light of the lamp on his cap, and sometimes—all too many times—it catches up with him, usually suddenly and without warning. Sometimes it catches him in a blinding flash of light caused by a short circuit from the high-voltage trolley wire strung just below the roof of the entry through which he walks and within reach of his head or hand. Sometimes it catches him with a rumbling string of empty coal cars and leaves his body crushed and dismembered between the rails over which the coal is hauled. Sometimes it suddenly catches him in a narrow place in the entry and crushes his life out between the coal cars and the rib or side of the entry. Or sometimes it crushes him between the clashing steel bumpers of the cars. At other times it may suddenly and without warning drop upon him with crushing weight, as the roof—coal and rock—over his head gives way and buries him under tons of debris; or it creeps upon him stealthily in the air he breathes, loaded with the poisonous gases found in many mines; or sometimes an accidental spark or the backfire from a miner's shot ignites the coal dust and sets off an explosion that may travel hundreds of feet down an entry or haulage way.

When we contemplate these facts concerning the mining of coal, most fair-minded men I think will be willing to say that the prices they have to pay for coal are not unreasonable in view of the hazards which the coal operator in the conduct of his business encounters, and that the wages paid to the men who mine the coal are not commensurate with the risks they take. Most of us who have had no experience in coal mining would feel that the enduring of such hazards cannot be adequately compensated in money. However, as I have heretofore said, the price for which coal can be sold is conditioned by the price for which competing fuels are furnished. This stern economic fact limits the wage of the coal miner and the price for which the coal operator can sell his product. Over a long period of years, in almost unbroken sequence, the men who work in the mines and those who operate the mines have conducted the business upon the basis of written agreements as to wages and conditions of work and employment.

The existing wage contract will expire on March 31 of this year. Already the leading coal operators of the country and representatives of the coal miners, under their great leader, John L. Lewis, are negotiating for the terms of another contract. Only a few more days remain in which these negotiations must be successfully completed in order that the production of this basic and most essential product in the prosecution of the war may continue uninterrupted. The situation calls for statesmanship of the highest order on the part of the representatives of the coal operators and the representatives of the coal miners. These men are faced with the most delicate task of adjusting in the new agreement the legitimate claims of the coal miners and the returns necessary to the coal operators to successfully continue the mining of coal. I am convinced that in this hour of war crisis when our armies and navies on all fronts are winning astonishing victories, and when our enemies are back on their heels with their backs to the wall, and increasing the war effort will shorten the war, the statesmanship of the men in the coal industry, both miners and operators, will be sufficient to solve their difficulties and to write a new contract before the existing contract expires.

The tragic and overwhelming needs of our men in the fighting services on the land, in the sky and on the sea—thousands of whom come from the homes of those who work in the coal mines and from the homes of those who operate the mines as well as those boys of ours who come from other walks of life, but who are like the sons of coal miners and coal operators in our armed forces, are dependent for their safety and success upon the products of the mines—all require that the powers of statesmanship of coal operators and coal miners alike be exerted to the extreme in the formation, before the end of March, of a new contract that will insure a continued output of coal for our armed services. The eyes of the Nation are upon the coal operators and the coal miners in these wage negotiations. They must not, and I am confident they will not, fail us.

Our Merchant Marine's Substantial Aid to the Victorious Progress of Our Navy

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1945

Mr. WELCH. Mr. Speaker, there is probably no man in the United States better qualified to judge the importance of the American merchant marine as an agency of our national defense than Admiral Nimitz.

Under leave to extend and revise my remarks in the CONGRESSIONAL RECORD, I quote the following editorial which recently appeared in the San Francisco Call-Bulletin:

Admiral Nimitz, in recou ting American naval victories over the Japanese Fleet, paid

tribute to our merchant marine, whose great service in this war has not always been generally recognized.

The admiral doesn't want us to overlook the fact that the Navy's substantial progress would not have been possible without the supporting role of the fleet auxiliary, whose duties include the all-important mission of keeping the fighting ships supplied with ammunition, food, and other essentials.

The American merchant marine, as Admiral Nimitz points out, must not only be strong during war but it must be kept strong in time of peace, to insure an adequate national defense. We made the mistake after the last war of disposing of most of our merchant ships. He hopes we won't commit that blunder again.

"This war," Admiral Nimitz says, "has fully confirmed the necessity for a strong and sound merchant marine to be maintained in time of peace so that it may be employed as an auxiliary of the Army and Navy in time of war."

This is a fundamental fact not to be overlooked by the American people and the American Congress. A strong peacetime merchant marine will help to prevent war, and it will enable this country to maintain a commanding position in international trade.

Mr. Speaker, the policy established in the Merchant Marine Act of 1936, predicated on the fact that an adequate merchant marine is a necessary arm of our national defense, has made Admiral Nimitz's commendation of its role in the present conflict possible. His recommendation for a strong and sound merchant marine should be continued in effect. Steps must be taken to change the strangling policy laid on our merchant marine by the action of the Civil Aeronautics Board in denying American ship operators the right to provide air service as an adjunct of their surface overseas shipping. And, further, proper weight should be given the admiral's statement in the consideration of H. R. 1425 now before the Committee on the Merchant Marine and Fisheries providing for the sale of ships of our merchant marine. Every encouragement should be given to American-flag operators to purchase these ships and operate them, instead of, as the bill is now written, giving an unfair advantage to foreign operators to purchase these vessels and remove them entirely from the American merchant marine.

The Seven Points That Dumbarton Oaks Forgot

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. GRANT of Indiana. Mr. Speaker, the following article by former President Herbert Hoover should be read and reread by every American.

THE SEVEN POINTS THAT DUMBARTON OAKS FORGOT

(By Herbert Hoover, former President of the United States)

The most fateful Conference in all American history is that which meets at San Francisco to formulate the proposals at Dumbarton Oaks into a world charter of organization for maintenance of peace. During those fleeting moments the future of mankind may be molded for the next 100 years. A third world war would return the world to the barbarism of the Stone Age. These discoveries of new methods of killings; this shift from wars between men to war against women and children, and the gigantic destruction of men's toil of centuries makes certain the extinction of civilization.

If the charter at San Francisco emerges with a reasonable hope of success, the United States must take its full part in carrying it out. When we in America took up the sword to secure peace, we were committed to join in holding the sword if we would preserve peace as against the inevitable hates and violences of a generation to come.

The modern world has seen these gigantic explosions into World War and revolution before. Each time, from the bitterness of its travail, it has groped for organization to preserve a lasting peace.

The Dumbarton Oaks proposals are in most ways patterned upon the world's last great experiment—the League of Nations. The League was a partial success and its failures present vivid experience which it would be folly to ignore. In the light of these experiences, there are some important additions which should be infused into the Dumbarton Oaks proposals, and thereby greatly strengthen this chart of peace.

I state them at once and I shall in later articles amplify the reasons for them.

1. Positive standards of the political rights of men and nations, and the establishment of a world committee to promote these political rights; this committee to rank with the economic and social committees already proposed in the Dumbarton Oaks plan.

2. Provision for revision of onerous treaties between nations at, say, 10-year intervals, in order to assure that the peace settlements are dynamic and not static.

3. Regional organization of the organization to preserve peace in three areas, Asia, Europe, and the Western Hemisphere; the regional organizations to be subject, of course, to the Security Council.

4. Absolute disarmament of the enemy powers.

5. Immediate relative disarmament of the United Nations and the establishment of maximum limit of armies, navies, and air power among them.

6. While it is probably not a part of the charter itself, when it is adopted by the Congress, the authority to use force should not be given the American delegate on the Security Council, but that power should be delegated to the President of the United States with the provision that he be bound by the majority of the joint Foreign Relations Committees of the Senate and the House as to whether a vote to employ American force shall be submitted to the Congress as a whole.

7. Take enough time in formulating the charter of peace to do it right.

LESSONS OF GRIM EXPERIENCE

There are three general methods by which peace can be preserved:

First, through measures of force to stop aggression.

Second, through pacific methods, the immediate effect of which is to settle controversies between nations by negotiation, arbitration, and judicial decisions.

Third, beyond all this are the moral, spiritual, political, and social forces which either foment conflicts or allay them. If we are to have lasting peace, we cannot rely wholly upon stopping quarrels. We must set in motion these forces which build for peace.

The weakening of the power to stop military aggression in the Dumbarton proposals by the voting formula now agreed renders it even more imperative that the great underlying forces building for peace should be more greatly developed at San Francisco than they appeared at Dumbarton Oaks. The League of Nations proclaimed its base as the maintenance of honor and justice between nations. Even that wholly nebular enunciation of a standard of conduct between nations does not appear in Dumbarton Oaks.

The great principles of political rights of nations and men, the standards of conduct among nations and the curative functions which eliminate the cause of war are wholly absent from Dumbarton Oaks. These forces must underlie not only the whole basis of international law, but of moral and spiritual progress of nations toward peace. We are in danger of setting up a purely mechanistic body without spiritual inspiration or soul.

Delegation of Legislative Power

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, it might be well for the Congressmen of the United States to weigh carefully the meaning of some of these laws when they are passed and to observe with care that they are not abdicating their congressional responsibility.

I urge that every Congressman read the editorial which follows, entitled "What Fools These Congressmen Be":

WHAT FOOLS THESE CONGRESSMEN BE

Never in the history of the Constitution of the United States has the people's governing body, the Congress, been so grossly insulted as it was the other afternoon by a Rooseveltian stooge by the name of Mrs. Ethel Gilbert, head of the O. P. A. Office of Industry Advisory Committees, when she ordered Representatives JIMMY MORRISON, HAROLD EARTHMAN, and JOHN JENNINGS, JR., to leave a meeting between O. P. A. heads and strawberry growers of the South. The growers had requested the presence of MORRISON, a Democrat, from Louisiana; EARTHMAN, Democrat; and JENNINGS, Republican, both of Tennessee, at the meeting for their own protection.

The three Congressmen, acting the roles of chastised school children, accepted this woman's directive to leave the room while members of the Office of Price Administration's price panel "fixed" prices on strawberries.

What fools these two Democrats and one Republican were to permit themselves to be pushed around by a woman who wastes her time and our money sitting around Washington thinking up little rules that exclude Representatives of the people at meetings where she enacts the role of a czarina.

What fools our Congressmen have made of themselves in permitting Franklin Delano Roosevelt to set himself up as lord and master of the O. P. A., which in turn has permitted him to hand down this kind of advice to a woman who flaunts Congress' mistake of giving her and F. D. R. such far-reaching powers.

When Congressman MORRISON demanded the reasons for his exclusion from the meeting he was told in no kindly tones by Mrs. Gilbert that she controlled the policy for these industry advisory meetings and that she would not let Senators and Representatives attend. When the gentleman from Louisiana demanded to know by what au-

thority she exercised this power he was immediately informed by Mrs. Gilbert:

"The authority you Congressmen gave me—believe me, I use it."

Right here is the initial warning to all Congressmen that unless they immediately strip the President of many of his dictatorial powers the Constitution of the United States will find itself classified with the Atlantic Charter—a piece of paper that's not worth the words written on it.

Such things as the chasing of three of our Congressmen from an O. P. A. meeting by a power-crazed skirted dictator must be stamped out the way we would a rattlesnake before it had a chance to strike the second time. Certainly, if she is permitted to get away with barring Congressmen from her secret meetings, there is no reason for us to believe otherwise than she will take advantage of the millions of innocents who are forced to abide by the O. P. A. rules.

The Congress of the United States has been made to appear very foolish in the eyes of the American people and unless it corrects its policy of blind obedience of all Presidential directives it will go down in history as having been inhabited by more fools than any other law-making body in the world.

Sergeant-Technician Colin R. Wise

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. CANFIELD. Mr. Speaker, Sergeant-Technician Colin R. Wise, engineer and tail-gunner on a B-26 Marauder medium bomber, was killed in action on January 11, the War Department announced Friday in a telegram to his parents, Mr. and Mrs. Russell S. Wise of 50 Albion Street, Passaic, N. J.

Sergeant Wise had completed 47 combat missions in the North African and Italian theaters of war before he went to France. At the time of his death he had passed the 50 mark on the western front.

His last letter to his parents was received on January 8, 3 days before he met his death and there was inserted some verse he had penned between missions.

As we now receive the news that several of our armies have crossed the Rhine and victory is definitely in sight, I know the House will be touched by these inspiring words of a great American boy I was privileged to know, one whose dreams of coming back have been denied.

The Army gave me silver wings
To ride the skies so blue,
And e'en as they bear me away
They bear my love to you.

This Christmas for the second time
I'll be across the sea,
But in my heart I'll be with you
As you will be with me.

And as the ones I love so dear,
The chi'dren—grown-ups too—
Meet to feast on Christmas Day,
This boon I ask of you:

At dinner set one empty place,
Turn down one empty glass,
For I'll be there in spirit
To help the Noel pass.

You'll feel my lips caress your cheeks
Beneath the mistletoe,
You'll feel me in the very air
When Christmas candles glow.

You'll know I'm there on every side,
And there I'll be to stay
In spirit, till the time shall come
When war has passed away.

Till weary men can lift their eyes
Lift up their hearts and see
A Christmas blessed by love and peace
Throughout a world that's free.

And then I'll hasten home to you,
As will ten million more,
All hasten home to those who wait,
To those they all adore.

Till then, dear parents, keep my love,
My hopes, my dreams secure,
And I, in turn, will fight my way
Toward Victory's purpose pure.

Investigation of Operation of Veterans' Administration

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial and article from the Washington Daily News of March 26, 1945:

NO WHITEWASH IN VET PROBE

If the House follows the lead of its Rules Committee and ducks a broad inquiry into the operation of the Veterans' Administration it will be taking on a heavy responsibility.

The Rules Committee, which is a sort of traffic manager, sidetracked the Philbin resolution for a wide investigation of the agency and instead recommended the narrow and mild inquiry proposed by Representative RANKIN. Mr. PHILBIN says he wants to investigate reports that wounded veterans are "being treated by third-rate doctors, using outmoded methods." Mr. RANKIN would investigate the efficiency of the Veterans' Administration.

The kind of investigation Mr. RANKIN would conduct was tipped off when he announced, in advance, that "General Hines (Veterans' Administrator) is doing a splendid job under difficult conditions."

Moreover, Mr. RANKIN indicated before the House Rules Committee that he was more interested in investigating those who were criticizing the Veterans' Administration than he was in examining the Administration itself.

Well, if General Hines is doing such a splendid job, why head off a real inquiry?

Congress owes it to the thousands of veterans whose affairs are being handled by the Veterans' Administration to let the country take a look at it; and the broader the look, the better.

If the House refuses to permit a real investigation, then it must accept, together with the Veterans' Administration, responsibility for whatever conditions exist in hospitals operated by the agency. That might turn out to be a heavy load.

PHILBIN FIGHTS "WHITEWASH"

(By Ned Brooks)

The House was given the choice today of voting an independent inquiry into the handling of veterans' affairs or approving a restricted investigation by a committee whose chairman already has assumed the role of defender of the Veterans' Administration.

Chairman JOHN RANKIN (Democrat, Mississippi), of the House Veterans' Committee, was lining up support for his resolution to have the inquiry conducted by his group. The Rankin measure would confine the investigation to matters under direct jurisdiction of the Veterans' Administration.

ANTI-RANKINITES RALLY

Anti-Rankin forces were rallying behind a rival resolution of Representative PHILIP J. PHILBIN (Democrat, Massachusetts) proposing a broader inquiry by a special 11-member committee, including five members of the Veterans' Committee. The Philbin measure would permit an examination into hospitals and other servicemen's facilities operated by the Army, Navy, and other servicemen's facilities operated by the Army, Navy, and other Government branches, as well as the Veterans' Administration.

Representative RANKIN won the first round Saturday when the House Rules Committee by a split vote, reportedly 4 to 3, gave his resolution right-of-way over Representative PHILBIN'S. The House test will come, probably today, when the New Englander attempts to have his measure substituted on the floor.

HE PRAISES HINES

Representative RANKIN has fought for nearly three weeks to head off the full-dress inquiry proposed by Representative PHILBIN. He asserted he saw "no need" for creation of a special committee, and that he believed Brig. Gen. Frank T. Hines, Veterans' Administrator, was "doing a splendid job under difficult conditions."

The Rankin resolution was offered 12 days after Representative PHILBIN introduced his measure and criticized conditions in veterans' hospitals.

Referring to recent published articles describing hospital conditions, Representative RANKIN told the Rules Committee he had been "getting a good deal of information about the complaints and the men making them."

One of the writers, he said, "was mentioned 11 times in the last Dies (un-American activities) committee report as being connected with subversive organizations."

"If this were a civil matter, these charges would make the author liable to criminal prosecution," he asserted.

Representative HOWARD SMITH (Democrat, Virginia) said he "wouldn't like to see the investigation directed at the men who are making the charges," and Representative EARL C. MICHENER, Republican, Michigan, observed that "evidence of guilt sometimes comes from unsavory sources."

Representative RANKIN replied that he could "sense an ulterior motive by some writers who have been interested in a conspiracy to overthrow this Government.

"I think we can show it," he added.

HINES IN DENIAL

Representative RANKIN was accompanied by General Hines, who earlier had told the Veterans' Committee that charges of maladministration in hospitals were "unfounded." He said he "welcomed" an investigation.

Urging the broader inquiry by an independent group, Representative PHILBIN said he had received scores of complaints from veterans and their families about hospital conditions and the administration of various benefit programs.

"If there are no irregularities to uncover, I can't see why anyone should object to a thorough and impartial investigation," he said.

The complaints reaching him, he said, indicated widespread "neglect, mistreatment, disregard, and disrespect for returning veterans." He cited instances of food poisoning, abusive treatment, and incompetence and neglect by doctors and attendants.

Challenge to Liberalism

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Francis Biddle, Attorney General of the United States, at the first annual dinner of the Liberal Party of New York, New York City, March 23, 1945:

Mr. Chairman and members of the Liberal Party; it is a great pleasure for me to be asked to talk to you on the first anniversary of the Liberal Party on the topic—Challenge to liberalism. That is no easy assignment, for although the origin of the liberal movement is clear, its growth has been along lines of experience rather than logic. Has the liberal of today an intellectual link with his past? Does he share the same beliefs, the same fervors? What, in short, is the modern liberal? So many claim the title who are in disagreement about pretty nearly everything. Does any central impulse units their thinking?

Since the liberal approach is dissatisfied with existing social inequalities, difference of opinion is inevitable. Behind liberalism is none of the cohesive unity of the conservative. Discontent with the injustices of our modern industrial society finds outlets in a variety of plans for its amelioration. Almost by definition liberals disagree. Therein lies both the strength and weakness of the liberal tradition—its strength because its growth is fluid, experimental, and creative; its weakness because its organization tends constantly to fall apart and disintegrate. The impulse to change tends to variety and difference. The force is from the center out, not toward the center.

Plato may have had this in mind in his amusing definition of democracy as a charming form of government, full of variety and disorder, and dispensing a kind of equality to equals and unequals alike.

The conservative movement, on the other hand, tends to hold life in orderly and traditional forms, sometimes long after they have ceased to represent the needs of a growing world. Between these two tempers of thinking democracy achieves, in normal times, a balance in the steadiness and yet resilience of its growth.

We must not think of the liberal movement or the conservative movement solely in political terms, or claim that our two great parties can be thus easily cataloged. Historically the Democratic Party has, on the whole, been more hospitable to the liberal than the Republican. Yet there have been periods where the two seemed indistinguishable. The vitality of our political movements and the degree of their interest in social improvement has depended chiefly on the capacity for creative leadership in the men in whose hands power is placed. And we must also count Lincoln and Theodore Roosevelt when we remember Jefferson, Jackson, Cleveland, and Franklin Roosevelt.

Labor's participation in the political arena has been healthy—not only for Republicans but very healthy, too, for us Democrats. All political parties, as they grow in age and tradition, tend at times to fossilize. They become professional in a narrow way, emphasize organization at the expense of policy, and patronage at the cost of efficiency. Labor has brought into our political life a new set of values, has insisted on specific things that needed to be done; has been increasingly positive and vigorous, where in the past the country has often been asked to make choices that were neither clear-cut nor important.

If the price of liberty is eternal vigilance, surely the test of liberalism lies in our capacity for indignation. The mark of the liberal is his vigilance in preserving and protecting human rights.

Liberals will not accept the evils that exist simply because they have always existed—illiteracy, submarginal living standards, unemployment. They will see men's proven capacities for creating a good standard of life and will compare them to what has been accomplished. They will hate intolerance.

Yet they will remember that the present is a part of the past, and continually be conscious of the overlap of history.

When we declared our independence we proudly said that all men were created free and equal, with the right to pursue their own happiness. In our Bill of Rights—our great charter of civil liberties—we wrote into our Constitution guaranties for freedom of worship, for freedom of speech, for trial by jury.

But that was not enough.

Human slavery lived along with these guaranties, which were not universal, until we abolished slavery by war and adopted the three great Civil War amendments to the Constitution.

Now in the midst of another war, fought to preserve and to extend those decent and precious attributes of free democratic men, we have not sacrificed in the pressure and the urgency of battle those same liberties. For even as all our will is bent to the war effort our courts are open, the press is free, and we have not found it necessary to pass any alien or sedition laws. Lord Acton said: "The most certain test by which we judge whether a country is really free is the amount of security enjoyed by minorities." We have met that test, even since the dark days that followed Pearl Harbor.

But that is not enough.

Racial hatreds have not disappeared, and the cruel discriminations of race and color and religion continue here in our own democracy, even as we fight to overthrow a system in Germany based on the exploitation of these discriminations.

Liberals must not lose their capacity for indignation.

There is another freedom that we have not achieved and which is not found in the Bill of Rights. Jefferson, writing from Paris, where he was the American Ambassador, suggested that we should insert in our Constitution a clause outlawing monopolies. Monopoly was the prerogative of the sovereign, and we had cut loose in the Revolution from the will of any sovereign except that of our own people. Almost exactly a hundred years later we wrote Jefferson's suggestion into our law by making unlawful combinations that restrained trade and competition. For we had come to know that freedom in trade—economic freedom—was essential if we were not to be ruled by the great trusts that had developed in our economy—that economic power concentrated in great monopolies was incompatible with the preservation of individual liberty.

The liberal of a hundred years ago, the liberal of the Manchester school in England, and the pioneer liberal in this country believed that the removal of restrictions on trade and commerce would greatly expand production and increase general well-being. The feudal world had been established largely on the restricted plane of monopoly. Privilege to trade was no universal right, but largely a gift of the sovereign. Production was localized, communities largely self-supporting, exchange of goods limited, price-fixing by ordinance not uncommon. Against this system the early liberals revolted. Free trade, individual enterprise, absence from restraint—these were fundamentals to the liberal who followed the teachings of Adam Smith and John Stuart Mill. A revolution in production and distribution followed this revolution in ideas. The nineteenth century was built on the free market, and government restraints were not permitted to interfere with its functioning.

The underlying theory of these liberal economists was that regulation of prices and the distribution of goods could best be achieved by competition. If prices rose above the competitive level automatically cheaper goods were drawn into the market. If prices dropped below a profitable return the business was driven out of existence by the healthy process of bankruptcy, and the fittest survived. This system of laissez faire was flexible, sensitive, and responsive to daily trends. It avoided artificial regulation, and substituted control of the market by the market itself.

But from the beginning the ruthlessness of laissez faire, which sacrificed everything to competition, became apparent. Since human labor was one of the factors in competition its price, like that of goods, was fixed by the market with little consideration for social values. And the system swept children of tender years to work and crawl in the coal mines for 10 or 12 hours a day.

And since the market was not subject to control, industry was free to combine into great organizations of immense power, was free to drive out its competitors from the field or buy them up. Thus monopolies, which as creatures of the sovereign had been driven out of the economy, returned to plague it in the form of private power that actually challenged the very government which permitted them to exist. The free market—the dream of the liberals—was apparently destroying itself.

Liberals saw these evils and took steps to check them. In England the Liberty Party caused the passage of the Factory Code in 1833 and the Public Health Act in 1848. But progress was slow, for laissez faire had moved to the level of a national religion and it was considered impious to interfere with its workings. Trade unions were not legalized until 1871; and such comparatively modern reforms as workmen's compensation and old-age pensions were introduced a few years after the turn of the century, again by the English Liberal Party. So that the name you have adopted has a great and an honorable record.

With us almost from the beginning tariffs protected our new industries and standard of living. In 1886 the Interstate Commerce Act outlawed the rebates that had built up Standard Oil; and 4 years later the antitrust law forbade monopolies and combinations that restrained trade.

The market then has never been wholly free. On the one hand, laws have been passed to protect human beings from its abuses; on the other, statutes enacted to stop its drift in the direction of monopoly and to keep open the opportunity for competition.

The dilemma that has faced the liberal from the beginning, that still faces him today, is the choice between freedom and control. He has seen that one cannot exist without the other—that freedom cannot operate in a vacuum, or without a frame of law, or on the unchecked impulses of men who care solely to follow their personal advantage. For freedom is not only a personal way of life but is part of the life of the community itself.

Today a sector of that choice is presented for decision. The free market has worked pretty well to produce and distribute the good things as well as the necessities of life. The conservative believes that much of the present social and regulatory legislation has interfered with its productive capacity and should be removed. The liberal insists that such legislation is necessary if the free market is to function for the good of men and women and not merely to serve some abstract economic theory. Somewhere between the two views a balance is struck.

But the choice I refer to—the choice that must be made in the post-war years—is whether we really wish to continue with the competitive system of free enterprise. And here both liberals and conservatives are confused and uncertain.

The choice is not obvious or altogether apparent. But we can see how it is beginning to shape up. There is a movement on foot which looks with favor on cartels and advocates the repeal of the Sherman Anti-Trust Act; which would permit the fixing of prices, the allocation of territories, the control of particular markets; which says that monopolies are inevitable and should be regulated by further Government control. We have had a taste of that kind of regulation in our brief but unhappy N. R. A. experience.

I realize that competition is threatened. I know that there are large segments of our industry where it has disappeared. I am conscious that much thinking in Europe is against the competitive theory. Yet I dread what will become of a world where cartelization is accepted; where enormously increased regulation by the government necessarily follows, so that eventually the individual's choice of work, even his choice of where to work, will be directed.

I cannot believe that the liberal will accept such regimentation on the argument that it is inevitable. He has seen the inevitable happen to Germany, but he has not accepted it. He has set his whole energy toward a fuller production, and he will not understand why arrangements to limit that production are desirable. He will not be comfortable in any system that plans to contract rather than to expand the market. The market in our modern world must be considered in its entirety. The pressures for its control are sectional, representing separate segments of industry. In resisting them the terms of the liberal's thinking must be national and even universal. The liberal of today must see the world steadily and see it whole.

Address of Hon. Helen Gahagan Douglas, of California

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. HELEN GAHAGAN DOUGLAS, of California, at Liberal Party dinner, March 23, 1945:

In the President's report to Congress and the Nation upon his return from the Crimea, he said:

"The structure of world peace cannot be the work of one man, or one party, or one nation. It cannot be an American peace, or a British, a Russian, a French, or a Chinese peace. It cannot be a peace of large nations—or of small nations. It must be a peace which rests on the cooperative effort of the whole world."

"It cannot be a structure of complete perfection at first. But it can be a peace—and it will be a peace—based on the sound and just principles of the Atlantic Charter, on the conception of the dignity of the human being, on the guaranties of tolerance and freedom of religious worship."

The task of the liberal is to give leadership in the work of helping to build this structure of world peace. It will take all of us to do the job.

It is the task of the liberal to work to prevent World War No. 3.

When the President gave his quarantine speech in 1935—from that time on liberals began in ever-increasing numbers to rouse the people to the dangers of a Nazi-Fascist dominated world. I was a member of the William Allen White committee and the Fight for Freedom committee. We toured the country. We worked day after day, month after month, trying to awaken people from their lethargy.

From 1935 on, there were two tasks before us. The first task—to make people see the danger that threatened us. The second task to help them to believe that we could combat this danger.

I shall never forget Herbert Agar as he moved across the country telling the same story over and over again—telling it eloquently with his mind and with his heart—pleading with America to wake up before it was too late.

A liberal is one who is free—open minded. One capable of facing facts however disagreeable they may be. One capable of mental reflexes.

For such people there are two tasks clearly defined today. One, to crusade again and make all understand that this half-shattered world cannot survive the shock of another war.

Two, to make all understand that the nations of the world can find a common ground for peace.

The President has said this is a people's peace. The people of the earth must learn now to work together or there will be no people.

Liberals must work for a greater understanding between the peoples of the rest of the earth and the people of our own country.

And like the President, liberals must not for an instant waver in the belief that an agreement to insure world peace and security can be reached.

For if we fail to believe, we perish.

Certain techniques of obstruction threatened us in the pre-war days. Certain techniques of obstruction today stand between us and a free and peaceful world in the future.

One of the techniques of the fearful, the blind, the greedy who revolve in their own personal little world, is the technique of fighting all change by calling it impractical idealism. Every program for the betterment of our people, has been branded by these self-styled realists as impractical, idealistic, a dream of visionaries.

"Peace is impractical. Peace is a passing fancy. Peace is a dream."

Now, when peace is called impossible, impractical, who is doing the dreaming? Is war in the future our dream or is it the private nightmare of those who call us impractical because we insist on preventing it?

The alternative to peace is war. The alternative to the cooperative peace that is being attempted now, is a war of extermination of the human race, or a succession of wars which must mean eventual race suicide.

Is that practical? Shall we listen to these dreamers of nightmares, who run about with their feet in the clouds of battle smoke, as the only authorized counsel to humanity?

Yet that is one of the principal techniques of today's wreckers.

"You can't change human nature," they tell us. "It is human nature to make war. So long as we walk upright on two feet, we shall have wars. Look at history."

They tell us, always, to look backward, never to look ahead. And when they are asked, "Well, what would you do?" what is their answer?

It used to be, "Build a wall. Make America impregnable. Isolate us. Then we can forget the rest of the world."

But they cannot give us that answer any more. Buzz bombs have already changed that story.

So what they are really telling us, these wreckers who read and write the New York Daily News and the Chicago Tribune, is simply this:

We have mastered the air, the land, and the sea, but we can't learn to get along together so we will just have to sit by and watch the peoples of the earth commit suicide.

Hitler's greatest secret weapon was and is the belief that discord can be sown amongst the United Nations. The President reminded us of it again on March 1 when he said:

"It was Hitler's hope that we would not agree—that some slight crack might appear in the solid wall of Allied unity which would give him and his fellow gangsters one last hope of escaping their doom. That is the objective for which his propaganda machine has been working for months."

"But Hitler has failed."

Yes, he has failed up to now, but the poison his gangsters have injected into the blood stream of the world is still working. Disunity can wreck our future as it can still wreck our war effort.

Unity is our strongest shield now. Our greatest hope for the future.

Then there is the second type of wrecker or breeder of World War No. 3—the perfectionist. He, I suppose, is the most deadly. He looks so good.

His is the technique of the "Yes, but" group.

In 1918 when no other way sufficed—when it was known that four out of five Americans wanted the League of Nations—the technique of perfection was used at the end to wreck the hope of the world. And it worked.

Peace is a good thing, the perfectionist will tell us. I am for it, but—

Of course, any instrument that the nations of the world may create to keep the peace will not be perfect to begin with—not as the perfectionist sees it and not as we may see it either. But while we sincerely lay a base and hope to build on it in the future, the perfectionist digs under that base to plant a stick of dynamite.

And when you ask, "Well, what would you do?" what answer do you get?

The answer will vary, but it will always be impossible to put into practical operation. Let me give you a sample.

A substitute peace plan was offered recently on the floor of Congress. It was a perfect example of perfectionist thinking.

The plan called for an immediate division of the world into regions, which would replace national boundaries. Each region was to have its own government, its own money, its own set of laws applying to all the peoples within that area. National entities were to be wiped out in one stroke of the global eraser.

Now, contrast this example of perfectionist thinking, this floundering around in the clouds of conjecture, with the way the representatives of the United Nations have undertaken the job.

We have witnessed a realistic procedure which takes into account the reality of men, of peoples, of nations, of their history, their geography, their economy. The purpose is to improve on the world we have, not to try melting it down to fit a new mold. And that is the only way we can proceed.

They began with what they actually had to work with, knowing that what they would produce would be not perfect, but that it would be working start; that there would be a beginning.

They did not try to ignore the fact that there is a settling of accounts coming out of this war.

The perfectionist wants to skip blithely over that. He wants to let bygones be bygones. He expects concessions from victor and vanquished alike, concessions not necessarily in the real interest of peace and a safer world, but concessions to his own personal idea of peace. And when he doesn't

get these concessions, he starts calling names.

Well, nations just don't work that way. A nation that has been overrun by an invader may want to cooperate 100 percent in preventing another war. But it has not forgotten about the last one. It cannot be expected to do so.

People who have seen their cities laid waste by the aggressor, their families torn apart, their women ravished, and their children murdered—such people know better than we shall ever know, how terribly important it is to stop World War No. 3.

But don't expect them to stick their necks out in the same place where they had them when World War No. 2 broke upon them. If you come to them with a plan to prevent another war, they may welcome you with open arms. But if you tell them that first as a prerequisite to your scheme, they must give up any safeguards they may happen to consider necessary against new conspiracies and new attacks from outside their borders, that even before you yourself can sign up in your own plan, they must stick their necks out once more, your reception may not be as polite as you have liked.

The critics of the Dumbarton Oaks conference and those who have been complaining about what went on at Yalta take none of this into account.

Fortunately, the men at Dumbarton Oaks and the men at Yalta did not take any such unrealistic attitude.

Then, there is still another source of opposition to the Roosevelt peace program—the opposition of very special interests, people who have, or think they have, something to lose in the way of a preferred financial or political position. They are afraid that a lasting peace is going to cost them money.

Their voice is just beginning to be heard, and it's not a nice voice.

This group may well be called peace profiteers. They are no better, they are no less dangerous to our country, than the war profiteers who value dollars over doughboys.

A good example of this peace profiteering is the opposition of certain large eastern banking interests to the proposal of an international fund.

One of the major threats to peace, we all know, is economic unbalance. The equilibrium of world economy requires for its maintenance and protection, a system of checks and balances, a mechanism that will not only keep open the channels of commerce between nations, but will serve as a safeguard against any attempt to wage economic warfare through those channels.

Last June, therefore, the representatives of 44 nations met to set up some kind of working control of the world money market, so that certain international manipulators, racketeers, and gangsters could no longer menace the peace of the world by rigging and manipulating that market as the Nazis did from 1933 to 1939, and so that the flow of finance among nations would be kept free of other obstructions.

The men who were sent to Bretton Woods from all parts of the world were the best qualified to speak for the 44 nations they represented. The plan that was there drawn up and agreed to was no sudden creation of an offhand meeting. These experts had been working on it for 3 long years.

The fact that they were able to reach an agreement was in itself a triumph and a heartening sign of world accord.

The Bretton Woods program is definitely one of controlled and regulated world finance. The control and the regulation is to be exercised in the name of, and for the benefit of, the people—all the people of all the nations.

But what happens? Immediately, there arose a violent protest.

An international stabilization fund and a world bank were proposed at Bretton Woods. Both must come into being if the Bretton Woods plan is to work. The would-be peace profiteers, who don't dare come right out and say they don't like Bretton Woods, endorse the bank but say they don't like the international monetary fund. They know that if they can kill the fund, the Bretton Woods whole program will die a-borning.

What they really dislike is the fact that this fund which is to be used to insure stability of exchange, might abridge their old chances at private profit from speculative ventures in the world market—ventures which have no productive value, no possible benefit to society.

Now, let's nail the very incomplete statement that bankers oppose the Bretton Woods plan as a very complete falsehood.

Bankers do not oppose Bretton Woods. A certain group of eastern bankers, Wall Street bankers, who are more accurately described as speculators in the international market, parasites in the woodwork of our world economic structure, peddlers of unsound foreign bonds to the American public—those particular bankers are opposed to Bretton Woods.

Numerically, a far greater number of American bankers support the Bretton Woods program than oppose it, and have so expressed themselves.

The banker on Main Street is not opposed to Bretton Woods. His organizations have gone on record in favor of the program.

And not all of Wall Street is opposed to it. Bankers in that center of finance also support and insist upon the Bretton Woods program. The objection comes from a single group, small numerically, but powerful financially, and very hungry for continued power, continued profits, let the peace of the world fall where it may.

When the conferees at Bretton Woods proposed an International Bank for Reconstruction and Development and an International Monetary Fund, to be participated in by all the United Nations, what they were really doing was to propose machinery which will insure the world of a new beginning by protecting the post-war world against unstable currencies. They were proposing an agreement not to engage in currency warfare.

When some Wall Street banks oppose Bretton Woods because it might cut into their post-war profits they are really trying to break down that protection. They are inviting currency warfare in the post-war world, and when you invite a war of currencies you are inviting a war of guns and planes and tanks.

Bretton Woods is the economic cornerstone of a "people's peace."

And finally, it is the duty of a liberal to remember at all times that today the United States must assume a very large share of responsibility—even a disproportionate share—in the building of peace.

When this war is over, even with all the strain our people will have endured and the losses they will have suffered, this Nation will still be less tired than our major allies.

Our soil has not been occupied nor has it been a battle ground. Our industries have not been bombed nor have our towns and cities been ravaged.

Our own domestic problems will be simpler. But we must and will solve these problems so that there will be a prosperous and healthy America.

For only a prosperous and healthy America can help secure a world of peace.

A healthy and prosperous America means jobs—people working and producing. Jobs mean happy people—hopeful people.

Just as we have made the struggle against fascism a people's war, just as we are resolved that it shall end in a people's victory, so must we also support and insist upon a people's peace.

That means a cooperative peace. It means an obligation on the part of the American people to back up the President of the United States in the making of such a peace.

It means to support and defend against attack the part of the President's program that was formulated at Dumbarton Oaks, the part that was agreed upon at Bretton Woods, and the negotiations that were made with our allies at Yalta and that will be furthered at San Francisco and in conferences still to be scheduled.

And as the President said: "I am confident that * * * the American people will accept the * * * beginnings of a permanent structure of peace upon which we can begin to build under God that better world into which our children and grandchildren—yours and mine and the children and grandchildren of the whole world—must and can live."

Prospects for Light Metals Production in the Pacific Northwest

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. COFFEE. Mr. Speaker, on Thursday, March 22, 1945, I appeared before the Senate Committee on Small Business and delivered an address in which I discussed the situation affecting light metals now and the prospects for the post bellum exploitation of light metals in the Pacific Northwest.

My speech covers the field rather extensively and encompassed the danger of monopoly control in the aluminum and magnesium field.

It refers to the Aluminum Co. of America and the attitude of that gigantic concern toward the encouragement of competition or the expansion of potential rivals.

The address is as follows:

Mr. Chairman and members of the committee, at the outset, I want to congratulate the distinguished Senator from Montana and the members of his committee for devoting its attention, as part of the great work in which it is engaged, to the question of the future of the light-metals industry. Your consideration of the policies which the Federal Government could best pursue in disposing of the great aluminum and magnesium plants which have been constructed at Government expense to aid the war program is a timely one. Naturally, the Government, I am sure, does not propose to proceed with the disposal of its gigantic investment in light-metals plants until such time as the war has been brought to a successful conclusion—a war that requires, for the manufacture and fabrication of the implements of warfare, quantities of aluminum and magnesium that literally stagger the imagination when compared with the prewar use of these metals. The people and the natural resources of the Pacific Northwest have made a monumental contribution to the production and fabrication of the light-metals products used by our armed forces in conducting the war against the enemy on land, sea, and in the air.

WHAT PROGNOSIS FOR PACIFIC NORTHWEST LIGHT-METALS PRODUCTION?

What is to become of this great new industry in the Northwest, given such impetus by reason of the exigent demands of wartime production? It was no easy battle for us to convince the Federal Government, in

the early days of the war, that we should be given an opportunity to play a large part in the light-metals-production program of the Nation. As one Member of Congress who was happy to play an active role in cooperation with many of my colleagues and business leaders in the Northwest, in breaking down the opposition of those Federal officials charged with responsibility for the production of aluminum, I am frankly apprehensive when it comes to reposing too much responsibility in the hands of these same officials in determining what shall be the future course of light-metals production in the Pacific Northwest. I have sufficient reason for being bluntly dubious about the sincere concern of many Federal officials for the post-war successful continuation of our light-metals production and expansion picture.

THE ATTITUDE OF ALCOA

This committee has already heard expert testimony on the degree to which aluminum production was controlled by a monopoly corporation; namely, the Aluminum Corporation of America, prior to our involvement in World War No. 2. Alcoa has never openly proclaimed its desire to remain a monopoly industry in the aluminum field. But its every action and the every move of certain officials in the Reconstruction Finance Corporation, Metals Reserve Corporation, and the War Production Board, who seemingly acted as agents for Alcoa, was designed to impede, if not block entirely, the initial ventures of other corporations into the aluminum-producing field.

THE SHIPSHAW PROJECT

In support of the foregoing observation, I would like to cite, at the risk of repeating what has been said to the committee before, a number of examples of action taken by Government agencies which bear out my expressed fears:

In 1941 the Metals Reserve Company, a subsidiary of the Reconstruction Finance Corporation, executed a contract with the Aluminum Co. of Canada, a subsidiary of Aluminum, Ltd., whose stock is owned 100 percent by the stockholders of Alcoa, to furnish aluminum to the United States Government from what is now commonly referred to as the Shipshaw project. The R. F. C. loaned the Aluminum Co. of Canada $68,500,000, interest free, to use in paying for the construction of the project. Our Government further arranged to provide working capital to the extent of almost $35,000,000. We agreed to buy this aluminum at fancy prices with an escalator clause in the contract which would safeguard the profits of the Aluminum Co. of Canada, regardless of the course of the war and the subsequent changes that we might make in their delivery schedules. The War Production Board issued high priorities covering the materials and equipment needed to get this plant into operation. Turbines and generators, originally scheduled for power dams in the Northwest, which could then furnish more and cheaper power to light metals plants in our area, were diverted for the use of the Aluminum Co. of Canada Shipshaw operation on the Saguenay River.

SHIPSHAW CONTRASTED WITH TREATMENT OF AMERICAN COMPETITORS

This committee will find no parallel example of such tender and solicitous concern for the welfare of any other company desiring to produce aluminum in the United States, using American materials, American resources, and American manpower for the development of an industry in time of war that bids fair to provide large-scale employment, with its complementary businesses, for American soldiers of World War No. 2 when they return to American soil. On the contrary, this gigantic aluminum monopoly corporation, operating through its Canadian counterpart, expected to use American taxpayers' money in the building of a power project to furnish electric power for an aluminum plant in a remote section of Canada, which plant, in turn, could utilize the extremely cheap power and the cheap labor available in that area to produce aluminum at a figure which would enable them, at the propitious moment, to undersell American competitors in a fashion that might well-nigh threaten the continued existence of financially less powerful aluminum-producing companies who had the temerity to engage in competition with the Aluminum Co. of America and its twin brother in Canada.

MY COMMITTEE OF INVESTIGATION OF SHIPSHAW SHOULD HAVE BEEN AUTHORIZED

Mr. Chairman, in the early part of 1943 I received disturbing rumors about this whole shoddy business. In April of 1943 I introduced House Resolution 212, which provided for the establishment of a five-member committee of the House of Representatives to investigate the effect of these Alcoa, Metals Reserve Company, Reconstruction Finance Corporation, and War Production Board machinations on the power and light metals production of our country, not only in time of war, but in terms of the post-war future of the light-metals industry. I regret to say my resolution never saw the light of day. I presented a voluminous array of facts to support my proposal that a committee of the Congress should look into this obviously odorous manipulation, executed for the most part in a hush-hush manner by some of the highest officials of the Government. From all over the Pacific Northwest came demands from businessmen, granges, public power groups, and others that such a committee be established. I am proud of the fact that most of my colleagues of both parties from Pacific Northwest States joined in support of my pending resolution. But Mr. Jesse Jones, until lately head of the R. F. C., and officials of the War Production Board argued against the approval of this resolution as they vigorously whitewashed their own previous action. To those of us who serve in Congress, this is an old and familiar routine.

MONOPOLY SHOULD NOT PRE-EMPT COMPETITIVE FIELD

Mr. Chairman, I do not propose to burden your committee with a description of the alumina, aluminum, and aluminum-fabricating plants and extrusion facilities which we now have in operation in the States of Washington and Oregon. The maximum potential capacity of the plants in operation is a matter of record in this committee. The potentialities of aluminum and magnesium production in the Pacific Northwest has also been discussed for your benefit. It may seem strange to some, but my colleagues from the Pacific Northwest know only too well what a difficult job we have had in trying to prevent arbitrary close-down orders, affecting our Northwest pot lines, from being used by War Production Board officials. On many occasions, northwest congressional delegations have called on Dr. Arthur Bunker, Light Metals Division Chief of the W. P. B., formerly an official of the Lehman Corporation, financial representatives of Alcoa; and upon Mr. Charles Wilson, head of General Electric Co. and former vice chairman of the W. P. B. (whose company, incidentally, is one of the biggest customers of Alcoa) for the purpose of convincing them there was no justification for closing down our pot lines in the northwest while allowing higher cost plants in the east to continue. I have always felt strangely aware of a certain coincidence between the fact that most of the aluminum plants in the east are owned outright by Alcoa, while most of our plants in the west are owned in the Government and only operated by Alcoa as agents for the Defense Plants Corporation.

Keeping in mind the practices and policies of corporate monopolies, which have run afoul of the antitrust laws, even as Alcoa, it does not require any great stretch of the imagination to realize that such a giant monopoly in any field, whether it be aluminum, copper, or steel, would not shed other than crocodile tears over a damaging blow that might be dealt to new competitors or to potential competitors who might some day utilize the Government-built plants, whose cheap production costs would threaten their monopoly position in our post-war industrial economy.

DOLLAR-A-YEAR MEN PRONE TO ESPOUSE MONOPOLY VIEWPOINT

I have listened closely, gentlemen, each time the Government, through some official of questionable background, from the standpoint of being an impartial, unprejudiced, objective administrator, threatened to close down the pot lines operated by Alcoa in the Pacific Northwest. But my ears have never detected the slightest peep of a protest from Alcoa because it was going to be denied the responsibility of continuing the operation of the Government-owned plants. In the aluminum industry, it is recognized that the stoppage of reduction plants may well result in a plant condition which may make the reopening of that plant an economical impossibility. No, Mr. Chairman, the protests have come from the businessmen, the workers, the farmers, and the plain citizens of my section of the country, who are determined that monopoly groups operating outside of, and covertly inside of, our Government framework shall not be allowed either to ruin or severely handicap the future growth and development of a light-metals industry, which, with all of the collateral small business enterprises that will stem therefrom, seems destined to be one of the industrial mainstays of our Pacific coast.

That Pacific coast, "where nature smiles a thousand miles," has added to its population in this war by tens of hundreds of thousands. We look forward to a permanent emancipation from the colonial economy status in which we have been held, in part, by the inability of our local industrialists to secure a place for themselves in the sun in competition with corporate monopoly industries concentrated in the East. We have a superabundance of available and potential extremely cheap water power. We have astronomical quantities of aluminous-bearing clays from which we can produce alumina. We have now, and at the conclusion of the war, with the return of our soldier and sailor boys from overseas, will have even more skilled, energetic craftsmen to operate our industries. We feel that we have vision. We are alert to the post-war commercial potentialities offered by the market for fabricated goods made from aluminum, magnesium, and we hope some day, steel, offered by the consumer requirements of the populations across the stretches of the Pacific, ranging from Siberia to India.

INDEPENDENT OPERATION SHOULD BE ENCOURAGED

Before this Government proceeds to dispose of its light metals plants in the Pacific Northwest, I think it should be satisfied that sufficient laws, rules, and regulations are in full force and effect as will guarantee that no potential purchaser of any of the Government's plants will be given consideration if there exists even the slightest suspicion the plant will either be shut-down at some future date or operated in such a manner as will redound to the competitive advantage and benefit of monopoly corporations in the same field struggling to maintain or recapture the dominant position they hold or once held in the field of light metals production. Better than have this happen, let

the Government reclaim the plants and contract for their continued operation under satisfactory terms. Somewhere along the Rhine, or in the jungle fastnesses of South Pacific islands, there are young men from Montana, Idaho, Oregon, California, and Washington States who will want to find employment in a growing and expanding light metals industry on the Pacific coast. It can provide them with post-war economic security. This committee is happily dedicating itself to the problem of making a contribution toward the achievement of that objective. I appreciate deeply the opportunity of presenting some comments and information which may be helpful to the Senate Committee on Small Business in its deliberations on the policy which should guide the Federal Government in disposing, if such becomes advisable, of its tremendous investment in light metal industrial plants in the Pacific Northwest.

Farm Agreement

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I include an outline form for a written agreement between a farm tenant and a landlord which has been worked out by the Southern Tenant Farmers Union:

FARM AGREEMENT

This farm agreement made and entered into this the____day of_____19__, by and between_____, landlord and_____, tenant, witnesseth:

The landlord leases to the tenant to occupy and use for farming purposes according to the terms hereinafter specified, the following described property, located in_____ _____county, State of_____:

_____

consisting of_____acres, more or less together with all buildings and improvements thereon.

The landlord agrees that he is the owner of this property and has signed same or if signed by his agent, that Mr._____ is the duly authorized agent of the landlord and has the right to execute this farm agreement and to give tenant possession under this agreement and, will, so long as the agreement remains in effect, warrant and defend tenant's possession against all persons whomsoever.

The life of this farm agreement shall be from the above date to January 1, 19___, and shall continue from year to year unless terminated by 30 days' written notice given by either party.

The crop arrangement, acres, and rent shall be as follows:

Number of acres of crops planned:

_____acres of cotton.
_____acres of corn.
_____acres other crops.
_____acres garden.
_____total acres to be used.

List share or rent on each crop:

_____
_____
_____
_____
_____

The landlord agrees to furnish the tenant $____ per month for_____months, beginning on the____day of_____, 19__. Interest rate per annum of ___ percent is to be charged for use of money advanced. The tenant will furnish all labor necessary for breaking all land, planting, cultivating, and harvesting of the above crop and will perform all labor in a husband-like manner at the proper time.

Seeds, fertilizer, teams, tools, and other necessary implements for the making of the crop shall be supplied as follows: State clearly who will furnish each item:

_____

The crops will be harvested, prepared, and marketed as follows: State clearly all arrangements:

_____

It is mutually agreed by landlord and tenant that the payment of rent or the division of crop proceeds shall take place at the time the crop is harvested and marketed. All accounts shall be submitted in writing on or before November 1, 19___, and shall be settled in full as soon as sufficient crops have been harvested and marketed.

The tenant agrees to care for and protect all buildings, farm implements, livestock, and improvements entrusted to his care by the landlord and at the end of this agreement to return same to the landlord or his agent in as good condition as when delivered to him, ordinary wear, tear, or loss by fire or flood or other causes beyond control of tenant excepted.

In witness whereof, the parties have signed this agreement in duplicate on the date first above written.

_____
Landlord

By _____
Agent

_____
Tenant

Witnesses as to both signatures:

O. P. A. Minimum Price Regulation 580

REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. KEEFE. Mr. Speaker, the O. P. A. has recently issued MPR–580, which is intended to provide for exact pricing rules for some 300,000 of the Nation's retail stores selling clothing, textiles, furniture, and house furnishings. The issuance of this order has caused a storm of protest principally from the independent retail stores of the Nation, because of their inability to file the required reports within the time limited by the order, to wit, April 20.

The retailers of this country, harassed by employment problems, lack of skilled help, and continuous consumer demands for merchandise, find themselves confronted with the task of preparing a price chart upon which they are required to list all of the net-invoice costs which they paid for goods covered by the regulation and offered for sale on March 19, 1945, the base date. Opposite each cost the retailer must also list the price at which the article of merchandise was offered for sale on the base date. Its offering price is his ceiling for an article of that cost. The cost and offering prices must be listed separately by categories of merchandise and with each category the retailer must list the different costs for all articles included in that category and offered for sale on the base date. For different articles having the same cost but offered for sale at more than one price, the retailer must calculate his average mark-up for the different prices in the category.

From the voluminous correspondence which I have had on this subject, the principal objection lies in the fact that the time limitation does not give sufficient notice so that the retailer can comply. Failure to comply and to file with his O. P. A. district office by April 20 makes it illegal for a retailer to sell or deliver any goods covered by the regulation until acknowledgment of his filing has been received from the district O. P. A. office.

I trust that the Administrator of the O. P. A. will recognize the tremendous burden placed upon the retail stores of this country and will extend the time 30 days in which to comply with this order.

O. P. A. Regulation 580

REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. HARNESS of Indiana. Mr. Speaker, I have received in the mail this morning the following letter sent out by the Grant County War Price and Ration Board of Marion, Ind., dated March 21, 1945:

GRANT COUNTY WAR PRICE AND RATION BOARD 31–27.1,
Marion, Ind., March 21, 1945.

You are a retail merchant under the new O. P. A. Regulation 580. Do you want to be in business after April 20?

Then attend a community meeting of all retailers in Grant and surrounding counties at Marion High School auditorium Wednesday night, March 28, at 7 p. m. It is the most important part of your business to learn the real features of this regulation as it pertains to your business.

Mr. Gabriel, of the Indianapolis office of O. P. A., will be here to conduct this meeting and answer any questions you may have concerning this regulation.

James D. Strickland, Indiana O. P. A. district director, pointed out that every apparel, dry goods, and house-furnishings retailer is required to prepare three copies of a pricing chart. This chart is to be based on the costs and selling prices of the goods offered for sale on March 19, 1945 (base date). On or before April 20 each retailer must file two copies of this chart with the O. P. A. district office in Indianapolis. One copy must be kept in the merchant's store.

"In cooperation with retailer's organizations we are making plans for the organization of a merchant's committee in each community to help war price and rationing boards get accurate information about these charts to every retailer," Mr. Strickland said. "Merchants should watch for announcements of the appointment of local committees to provide this assistance.

"By summer more of the clothes in stores will be in low and medium price ranges. Through pricing charts retailers will find the job of figuring ceiling prices greatly simplified."

J. W. TORRANCE.

In other words, if they do not attend the meeting they are going to be put out of business by the O. P. A. on April 20.

Yugoslavia

REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mrs. DOUGLAS of California. Mr. Speaker, in finding the common ground for peace about which the President spoke, we must strengthen the bonds of friendship between ourselves and sister nations. One of the best ways to strengthen the ties between people and nations is to show understanding and appreciation of the contributions which they have made to the community and to the world.

Today, I want to speak of Yugoslavia. March 27 is the fourth anniversary of Yugoslavia's resistance. On March 27, 1941, the Yugoslav people defied Hitler by throwing out the government that had signed a pact with the Nazis, giving them permission to cross Yugoslavia in order to invade Greece. The Yugoslav people refused to be a party to such treachery and chose rather to be invaded themselves. This heroic and spontaneous decision had an important influence on the course of the war. Morally it was of the greatest possible value.

The Yugoslavs flung Hitler's challenge back in his teeth at a time when the Nazi-Fascist power appeared to be invincible. Their defiance inspired all of the subjugated peoples of Europe with hope and courage. Physically, the fact that the Germans had to invade Yugoslavia instead of just marching through, dislocated their time schedule and postponed their projected attack on the Soviet Union.

Although the regular Yugoslav Army was quickly defeated by the Nazi-Fascist invading horde, the Yugoslav people were never defeated.

They developed an entirely new type of warfare and have kept from 15 to 20 enemy divisions fully occupied ever since. The value of this contribution to Allied victory cannot be overestimated.

What would have happened at the battles of Stalingrad and El Alamein if the Germans had had the use of 20 or even 10 extra divisions?

This unrelenting struggle on the part of the Yugoslav people has liberated most of their country, with very little assistance from the Allies, and has, therefore, spared the lives of many American boys. The Yugoslav partisans have saved the lives of hundreds of American aviators who were shot down over Yugoslavia on shuttle-bombing missions. They have never counted the cost.

Partisan men and women protected these brave flyers with their bodies, from German machine-gun bullets. In one instance, 16 partisans gave their lives in order to carry 1 wounded American aviator through the enemy lines to safety. General Eaker has gone to Belgrade in order to thank Marshal Tito personally, on behalf of the American Army Air Forces, for the assistance given to American aviators by the Yugoslav Army of Liberation.

The 27th of March this year marks the culmination of 4 years of heroic and victorious struggle on the part of the Yugoslav people against the enemy. It completes 4 years of steady and fruitful striving toward unity among the south Slavic peoples.

The new Government of Yugoslavia, of which Tito is Prime Minister, has given broad representation to all sections of the country, all national and religious groups, and all democratic political parties. The Yugoslav people have thus been the first to implement the decisions of Yalta by creating a truly democratic federated Yugoslavia. In so doing they are unitedly making an important contribution to the new world of peace which we are all striving to build upon the only possible foundation—that of freedom and justice.

Widespread Approval of My Position Against Abolishing the Two-thirds Rule of Making Treaties

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. LUDLOW. Mr. Speaker, a speech delivered by me in the House on March 2 in opposition to the plan to amend the Constitution so as to substitute a majority vote of both branches of Congress for a two-thirds vote of the Senate in the ratification of treaties has brought immediate reactions throughout the country, and I think it is significant that every letter and every editorial comment that has come to my notice supports the position I have taken.

Running through the letters and editorials I have received, there is a deep-seated conviction that the adoption of this change in treaty-ratification procedure would sell America down the river.

Popular government in America never was at lower ebb than it is today and the adoption of this constitutional amendment would abolish popular government as far as the treaty-making power is concerned.

Our Government is suffering from too much direction from above and not enough direction from below. When I say "from below" I mean from the people. If the centralization of power in the executive establishment is still further increased by the adoption of this amendment, Congress will become a mere rubber stamp in the tremendously important function of ratifying treaties on which the future welfare of our people depends.

The power of the Executive in international matters is such that it would be easy for any President to secure a majority of Congress for a treaty. The only effective congressional check on treaty making is a two-thirds check. Abolish the two-thirds check and you may as well say to the President, "Go ahead and make treaties to your liking."

I am not willing to surrender congressional authority over the making of treaties. To do so would wreck the checks and balances wisely set up in the Constitution. Instead of making itself a rubber stamp in respect to the ratification of treaties I would like to see Congress fight for its rights and recapture many of the other powers it already has unwisely surrendered. Neither the President nor the State Department has asked for this proposed amendment or even intimated in the most remote way that they would like to see the two-thirds rule abolished. Do we, then, as Members of Congress, sworn to uphold the Constitution, seriously propose to voluntarily weaken ourselves and pusillanimously turn over to the Executive the sacred right which Congress now enjoys of being a real factor in the ratification of treaties? I do not think so. I have the highest respect for the gentlemen who are proposing this change but I do not believe they have thought the problem through.

All of the leading papers of Indiana, my home State, have endorsed my position in this matter and I quote their editorials, as follows:

[From the Indianapolis Star of March 7, 1945]

STICK TO FIRST PRINCIPLES

Representative LUDLOW of Indianapolis serves a timely warning when he calls on Members of Congress to stop, look, and listen before proposing to amend the treaty-making provision of the Constitution. It would be a grievious mistake to repeal the present requirement that a vote of two-thirds of the Senate be required to ratify a treaty and give that authority to a majority of both Houses of Congress.

The fundamental fact should be kept in mind that Senators, in passing on a treaty proposal, are acting as spokesmen for their States. Each State has two Senators. Indiana has the same voice as New York, Pennsylvania, Illinois, or California. And Nevada has just as much to say as any of its sister States.

An amendment to put ratification up to a majority of both Houses would nullify the object that the founding fathers had in mind. They did not intend that treaty making should be a popular function. Ratification means the approval of the States, as States. It is intended as a check on Executive authority and has worked well from the beginning.

[From the Indianapolis Times of March 9, 1945]

CONGRESS AND TREATIES

Representative LOUIS LUDLOW is quite correct in his assertion that the proposed constitutional amendment to approve treaties by a simple majority vote of both House and

Senate would further weaken Congress. It would do more. It would also weaken treaties.

There has been much criticism lately of the fact that 33 Senators—one more than one-third of the membership—can prevent the United States from making a treaty with another nation. But the provision didn't get into the Constitution by accident.

A treaty is an obligation of all the people, not just of one party or one administration. It is binding upon succeeding administrations and has to be carried out by them. Unless it is made with the overwhelming support of the people—with endorsement far beyond the momentary whim of a bare majority that may change with any election—it is likely to be repudiated as lightly as it was approved.

The requirement that no treaty can be made until two-thirds of the Senate have approved it is simply a safeguard against binding this Nation to an agreement which does not have the general support of the people. Perhaps it has, in the past 150 years, prevented the making of some treaties that should have been made. It has also almost certainly kept us out of some we wouldn't have liked, over the long haul, even though they looked pretty good at the time they were proposed.

The classic example, and one constantly mentioned by proponents of easier ratification, is, of course, the Wilson proposal at the close of the last war. Under the constitutional amendment now proposed in the House, those treaties would have been approved. Yet the vote at the next national election, with this as the major issue, was overwhelmingly against the proposals. One wonders what would have been the result—in the twenties and the thirties, if we had been bound to a course of action which a large majority of the people of this country vigorously opposed.

The international commitments of this Nation have never been repudiated. Our national word is good—because we have made it good and because we have never given it lightly. Treaties with the United States of America are binding contracts and not scraps of paper or matters of temporary expediency. One of the reasons is that we don't make a treaty until we are sure we all want it and intend to keep it.

[From the Indianapolis News of March 15, 1945]

TREATY RATIFICATION

When proponents of American participation in the movement to set up a world organization for permanent peace were worried about the strength of the so-called isolation vote in the Senate, they started a vigorous propaganda to weaken the possible opposition of this group. They did not work directly on the group with their propaganda, but assumed that it was a fixed obstacle and that it was numerous and strong enough to muster more than enough votes to block the ratification of a world peace organization treaty.

The campaign was directed to amending the Constitution with a view to reducing the effectiveness of the group. The petition was laid before Congress. It calls for a resolution to refer to the people a proposal to amend the Constitution by providing that a treaty must be ratified by a majority vote of both houses, instead, as now provided, by a two-thirds vote of the Senate.

American faith in majority rule, plus the enthusiasm of the proponents of the resolution, won a good reception of the suggestion. It was supported directly by many. Others, who were not fully convinced, but wished to do what seemed to be necessary to assure this country's participation in a world peace movement, supported the proposal on the ground that the people would have an opportunity to vote on the question.

In recent weeks, however, discussion of the proposal has brought out the original reason for the provision and has led a good many pepole to wonder whether the amendment, if accepted, would, in practice, strengthen the treaty-making function of Congress.

The provision was put in originally to protect sections of the country from exploitation by other sections through the making of trade treaties. Now it is being said, notably in a speech by Representative LUDLOW, that most treaties are not peace treaties, but trade treaties which affect the interest of farmers, labor, industries, transportation and communication. Mr. LUDLOW also pointed out that Congress cannot repeal or abolish a treaty. The decision of the Senate is final unless a general policy is changed.

The proponents of the proposed plan have not abated their enthusiasm for it, but they have brought out new phases of opposition and assured a more deliberate discussion of the change than at first seemed likely to develop.

[From the Fort Wayne News Sentinel of March 21, 1945]

STRANGE REASONING

To Congressman LOUIS LUDLOW, Indiana Democrat, goes credit for making some of the most pertinent points yet to be used against the dangerous proposal to eliminate the two-thirds rule for Senate ratification of treaties.

Speaking in the House against the resolution which proposed an amendment to the Constitution providing for this change, Congressman LUDLOW said:

"By a strange process of reasoning, the proponents of the resolution to provide for ratification of treaties by a majority vote of both Houses, instead of by two-thirds of the Senate, say that the purpose of the resolution is to give Congress authority over treaty making. Instead of giving, it takes away. It dilutes toward nothingness the authority which Congress now has over treaties by the operation of the two-thirds rule at the Senate end of the Capitol."

Congressman LUDLOW agrees with most other sincere persons who have made a careful study of the system of checks and balances in the American Republic, that a majority rule for ratifying treaties would remove all congressional control, and open the way for the President—any President—to make treaties at will.

As he says, "If this resolution passes, we shall witness the amazing spectacle of Congress voluntarily offering to surrender its effective authority over treaty making. * * * We shall witness Congress * * * weakening its power still further by removing the only effective barrier against executive usurpation in respect to treaties."

As everyone familiar with the Constitution knows, the provision for treaty ratification by a two-thirds vote of the Senate was written into the original document.

For more than a century and a half there was no serious attack on the logic of that system.

A treaty with one or more foreign countries is an extremely serious matter. Once made and ratified, a treaty should be respected by the United States until or unless one or more signatories abrogate its provisions.

We should be begging for trouble if we eliminated the power of Congress to operate as a balancing wheel for the whims of the Chief Executive, regardless of who he is.

Congressman LUDLOW, rather than weakening the congressional power, would strengthen it by making a two-thirds vote of both Houses necessary to ratify treaties.

Obviously, if any change is to be made in the ratification procedure, the two-thirds rule for both the Senate and the House would be the only logical one. Any removal of Congress' control would be the utmost foolishness. That the institution of a majority rule in both Houses would completely strip Congress of any control, is plain to be seen.

"In view of the fact that it is possible to make a treaty that would fundamentally and radically change our form of Government," Congressman LUDLOW said, "I think it is highly important that Congress should keep its hand on the throttle. We hear it charged on all sides that Congress is breaking down. Let us not, my colleagues, be guilty of breaking ourselves down."

Among the distinguished constitutional authorities who have written to me expressing agreement with my position is Prof. Edwin Borchard, of Yale University.

Armed Services Replacements

REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. VOORHIS of California. Mr. Speaker, a few days ago the House passed a bill to extend the draft law for another year. The fact that this bill was passed without including any limitations on the Army or Navy in their handling of the men in service, represents the willingness of Congress to refrain from interfering with the military conduct of the war.

Congress no doubt has been right in this position.

I know well the need for replacements that exists. I know, too, that there have been many Members of Congress, of whom I am one, who have plead with the Army and Navy to relieve men who have been over long in combat areas. But I cannot refrain Mr. Speaker, from raising my voice to appeal with all the earnestness at my command to the military leaders of this Nation that so far as humanly possible consistent with absolute military needs they do not send young teen-age men into combat only a short time after they have first put on their uniforms.

It is true that no firm commitment was ever made to the effect that every man would have at least a year of training before being sent into combat, but, nonetheless millions of parents throughout the country understood it was to be a year; and while I agree that the speedy winning of the war will be incomparably the one best thing our military leaders could do for the country, and while I know it is the one thing to which they are devoting their every effort, I, nonetheless, cannot refrain from expressing the earnest conviction and heartfelt hope that at least a reasonably long period of training be given to these youngest of our fighting men before they are sent into combat. I do not pose as any expert in such matters, of course, but I cannot feel that 15 weeks is long enough for that purpose.

I do, however, ask consent to include with my remarks a forceful letter on this

problem just received from the Under Secretary of War, since, of course, the position of the War Department and the efforts they have made should be set forth here with my remarks:

MARCH 22, 1945.

Hon. JERRY VOORHIS,
House of Representatives,
Washington, D. C.

DEAR JERRY: I have your letter of March 14 inquiring as to our replacement training program and appreciate this opportunity to discuss with you a matter of such general concern at the present time.

As for the War Department's previous comments on the subject, they unquestionably established our position in opposition to a statutory training limitation. You will recall that General White, then chief of the General Staff Personnel Division, categorically advised the committee concerned that no assurance was possible that soldiers of any age group would receive a minimum of a year's training before proceeding overseas. You may be interested in the attached copy of a letter General Marshall sent Senator Reynolds during the consideration of this problem. General Marshall sent an identical letter at approximately the same time to Hon. JAMES W. WADSWORTH, and the Secretary's statements to the press at the time reflect the same viewpoint. I believe you will find, therefore, that an analysis of our expressions on this subject will reveal that the War Department definitely opposed the restriction to which your correspondence refers.

I have become aware of a general tendency to confuse the length of our training with its adequacy, this misunderstanding giving rise to many inquiries such as you perhaps are receiving. It must be realized that now that our Army has been completely mobilized and, in the main, is overseas, our overwhelming requirement is for replacements—qualified infantry replacements. It should also be kept in mind that these replacements are not formed into new units and sent to battle. Instead, they are filtered into old, experienced units where the leadership from the noncommissioned grades upward is in the hands of veterans. By association with battle-wise men, the uninitiated replacement has the advantage of advice and example and quickly assimilates the knowledge which others have gained by experience. Reports from the battlefields reveal that these men measure up well in combat. General Marshall and his staff are firmly of the conviction, and I agree, that never before in our history have our soldiers been so carefully prepared for battle as is the case at the present time.

I do not believe that the adequacy of the training is properly open to question. (The present 15 weeks' course of training for Infantry replacements has been developed over a long period and reflects knowledge of the needs of combat in the present war.) The training is thorough and meticulously conducted. Intensive methods are employed. A large number of the instructors are themselves battle veterans. You may be interested to know that during the replacement training period, an Infantry rifleman receives 107 hours of training solely with the rifle and carbine; he receives 62 hours with the light machine gun and over 100 hours with other Infantry weapons. He devotes 48 hours to day and night scouting and patrolling, 62 hours to scouting tactics, both offensive and defensive, and over 40 hours to other small-unit tactics. This, of course, is in addition to such subjects as military hygiene, physical training, marches, bivouacs, and the like.

It also is important to realize that during the course of instruction each man is constantly observed, so that when his training is completed the War Department can be assured that he is ready to take his place in the team overseas. Men who fail to qualify, either because they have missed some of the essential instruction or because they assimilate instruction very slowly, are held back for further training.

As the War Department pointed out while this matter was under debate by the Congress, retention of any age group in the Army within the continental limits of the United States for specified periods would be administratively impossible from a military standpoint. Nevertheless, we have made every possible effort consistent with the military situation to hold to a minimum the number of 18-year-olds entering combat. In February of last year, for example, instructions were issued that 18-year-olds with less than 6 months' training would be used as replacements only after all other replacement resources had been exhausted. In the following June orders were also issued that no Infantry or armored force replacements would be sent overseas before they had reached the age of 19.

These policies were rigorously observed and continued until their further observance became impossible for military reasons. These reasons were our urgent needs for Infantry and armored replacements, needs which developed in early fall of last year and could not be deferred without serious effects on our operations overseas. I discussed this matter with the press on December 7, 1944, and I am attaching a copy of my comments for your information.

I am aware of the general concern over this subject and consider it very unfortunate that so much misinformation has been circulated as to occasion unwarranted and unnecessary anxiety on the part of the parents of our men. I hope you and the Congress will feel free to assist us in making it clear to the American people that the training these men are receiving is thorough and—I wish to emphasize this—that our choice in the matter is very limited. Either we must delay our operations in Europe and in the Pacific, thereby greatly increasing the cost in life by prolonging the war and perhaps even jeopardizing its outcome, or we must continue our present procedures. We have no other alternative.

I hope this will serve as an adequate reply to your inquiry.

With kindest regards, I am,
Sincerely yours,
ROBERT P. PATTERSON,
Acting Secretary of War.

S. F. A. W. Is SNAFU

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1945

Mr. GRANT of Indiana. Mr. Speaker, Dr. New Deal has announced how much coal each one of us is going to get next season and is even telling the dealer when it is to be delivered.

B. N. D.—before the New Deal—the dates of deliveries by the coal merchant depended not alone of his supply of coal but also on his available manpower and equipment, on the size of our coal bin, and on whether or not we had the money in the summer to lay up our winter's supply of coal.

But, like the history of so many other things from the "horse and buggy" days, all that is to be changed. Washington-inspired regulations have planned it another way.

"Consumer declarations" must be filed by every consumer of coal and the retailer must vouch for the correctness of the declaration. Fines up to $10,000 or 10 years imprisonment, or both, may be imposed on either consumer or dealer for a false statement.

Whether you operate the most worthy or the most notorious business in the world won't make any difference. You will get 80 percent as much coal as you did last year. So says the Solid Fuels Administration.

Policing and enforcement of such a scheme would require an even greater swarm of policemen than O. P. A. in its balmiest days ever dreamed of. The plan is doomed to failure before it is started.

Following is a letter on the subject addressed to me from the Indiana Coal Merchants Association, together with a statement by the association on that same subject:

INDIANA COAL MERCHANTS
ASSOCIATION, INC.,
Indianapolis, Ind., March 22, 1945.

Hon. ROBERT A. GRANT,
Representative, Third Indiana District,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN GRANT: The Solid Fuels Administration has just issued a series of new regulations which are supposed to regulate distribution of solid fuel for the 1945–46 heating season. For obvious reasons, this association is interested primarily, of course, in the particular regulations which affect retail coal dealers and the solid fuel users of Indiana which our retailers serve.

The enclosed digest of what the Solid Fuels Administration proposes in the new regulations will give you a clear conception of just what both coalmen and the people of Indiana will face in the coming fuel year, if the Solid Fuels Administration is permitted to have its way. The official orders have already been signed, effective April 1, and have appeared in the Federal Register.

The country's leading producers, no less than organizations like ours, seriously question the attitude of the Solid Fuels Administration and other Federal bureaus in regard to coal production. Representative producer organizations like the National Coal Association and Bituminous Coal Institute have condemned the defeatist attitude of S. F. A. W. particularly. Restricted distribution under both the producer and retailer-consumer regulations takes root in a coal shortage as an accepted fact. There is no attempt to increase production; S. F. A. W. merely produces a regimented device for spreading a reduced production around by cutting down the amount producers may ship, or retailers may sell, or consumers accept.

You need no elaboration from us to know how your own townspeople and the folks in your district are going to react to coal rationing—which is what this regulation amounts to with its percentage limitations on deliveries by dealers and permissive receipts by customers. Aggravating the situation, and adding further to public irritation, is the imposition, by this order, of what S. F. A. W. calls consumer declarations. Every delivery is contingent upon the filing of such a declaration by the consumer.

There is, as you have probably read and heard, a paper shortage, although this consumer declaration idea gives no indication that S. F. A. W. officials know about it. The last report we have is that several million consumer declarations are now in process of

being printed by the Government Printing Office on Government post-card stock in a size 5½ by 8½ inches. It will actually require about 25,000,000 of these consumer declarations to cover the retail fuel-users market. Further emphasis on the rationing aspect of the regulation itself lies in the fact that the Solid Fuels Administration intends to distribute these consumer-declaration cards through local war price and rationing boards throughout the country.

If regulation No. 26 is permitted to stand, including the consumer-declaration scheme, it will materially affect the operating cost of retail yards. We believe you are aware that coal dealers have already been compelled to absorb labor and other cost increases under frozen O. P. A. ceilings. The coal retailer is at the end of his rope. If O. P. A. should permit adjustments to cover the increased costs created by S. F. A. W.'s new regulation, the coal-consuming public will become the innocent victims of Solid Fuels Administration efforts at further regimentation, which are palpably nothing more nor less than more regulation merely for the sake of regulation.

We consider it high time that congressional effort be made to stop the parasitic growth of bureaucratic control which is invariably advanced under the guise of a wartime necessity. Instead of complacent acceptance of arbitrary and uncalled-for controls by agencies which were originally delegated only administrative powers, a decision seems to be in order soon between what is sane and what is senseless, between what is necessary and what is a needless imposition. We know that regulation No. 26 will provoke a storm of protest which will grow as the months pass by and the public ire is more and more aroused. If Government is not going to turn a hand to assure larger production and we must ask people to accept 80 percent of their normal requirements, then the sensible solution is to discard all percentage limitations and restrictions on deliveries except as to 80 percent over-all figure, and, by all means, to eliminate the regimentation-inspired consumer-declaration idea, which will only irritate and harass the public and the coal dealer. May we have your help to these ends?

Sincerely yours,

INDIANA COAL MERCHANTS ASSOCIATION,
J. S. WEBER, *Executive Secretary.*

STATEMENT OF FACTS REGARDING FEDERAL RESTRICTIONS ON SOLID FUEL UNDER S. F. A. W. ORDERS NO. 26 AND NO. 27

The Solid Fuels Administration has promulgated the following regulations, effective as of April 1: S. F. A. W. order No. 26 (affecting the retail distribution and consumer purchase of solid fuel), order No. 27 (affecting shipments of bituminous coal to retailers), order No. 28 (affecting anthracite shipments), and order No. 29 (affecting distribution of domestic coke).

Under order No. 27, bituminous coal shipments by suppliers to retail outlets will be restricted to 80 percent of the tonnage shipped to a particular retail outlet in the period April 1, 1943, to March 31, 1944—plus any additional coal supplied to that particular retailer during the 1944–45 heating season on directives or orders of the Solid Fuels Administration.

Under order No. 26, the retailer is prohibited from delivering, and the consumer from accepting, more than 80 percent of the amount of solid fuel which the consumer had used last year. The prohibition applies to all kinds of solid fuel, regardless of the district in which the coal was produced, and including anthracite and coke.

The 80 percent restriction is rooted in the Solid Fuels Administration's "estimate" that the Nation will need 620,000,000 tons of coal next year, and that only 570,000,000 tons can be produced. It disregards the fact that 620,000,000 tons of coal were produced in 1944, and that it is entirely possible to meet such a production figure again with proper governmental cooperation.

The producers of coal contend, and the evidence of past production bears out that contention, that national wartime requirements can be met in full. If the mines are permitted sufficient manpower. If the Government agencies will cooperate in seeing that machinery and parts are available when needed. If adequate transportation can be provided. In other words, adequate production depends not merely upon what the coal industry does but, and equally important, upon what government does to make such production possible. What has government done * * * or what does it propose to do?

Coal mining, now highly mechanized, depends upon machinery as well as men to assure high, sustained production. As a result of War Production Board cutbacks, machinery and parts replacements necessary to uninterrupted production threaten to be wholly inadequate. Railroad requests for steel needed for track replacement, and new freight car requirements for replacement of wornout equipment, as well as expanded facilities needed to carry the wartime load of freight, have suffered equally serious cutbacks at the hands of the War Production Board.

More than 50,000 of the Nation's younger and most productive miners are already in the armed services. Selective Service was preparing to drain 25,000 to 30,000 more lower age-group miners, and this additional manpower loss has been stopped only recently by protests which rocked Washington officialdom into a sense of actuality. Had these protests not been made, anticipated production would have suffered still more.

These are the facts behind the forecasts of a 50-million-ton coal shortage in the 1945–46 fuel year—the facts behind the proposal to cut coal consumption to cover a shortage instead of seeking a cooperative Government-industry plan to make production adequate. The responsibility lies with Federal agencies and boards—and not with the coal industry. It will not be corrected until these same agencies adopt a realistic viewpoint toward the vital necessity of coal to the war machine and to the needs of the Nation, whether in war or in peace.

THE EFFECT OF ORDER NO. 26 ON COAL RETAILERS AND THE PUBLIC

The focal point of S. F. A. W. Order No. 26 is the proviso that prior to September 1, 1945, a dealer may deliver up to 50 percent of the amount of solid fuel to which a consumer is entitled, but that he must deliver 30 percent by October 1, 1945.

The experience of the past winter proves that unrestricted bin-fills must be permitted in summer and early fall to those who are able to accept such deliveries, or servicing of later demands of hand-to-mouth buyers will be virtually impossible with the limited manpower available to retail coal yards. Restrictions as to delivery percentages and time are unworkable. The dealer's ability to deliver is contingent upon his available manpower and equipment. The size of the customer's bin determines whether he can accept 30 percent delivery, 20 percent delivery, or even 10 percent delivery; the customer's financial status also determines whether he can pay for the coal which the dealer has available. No Washington-inspired regulation can provides the pattern which controls the dealer's or the customer's circumstances.

In order to regiment retailers as well as consumers of solid fuel in the mazes of its percentage-reduced planning, the Solid Fuels Administration proposes to control retail delivery and consumer supply by what it calls "consumer declarations." The consumer must indicate on such "declaration" the building to be served, the number of rooms to be heated, the tonnage and kind of fuel ordinarily burned, and the name of the dealer with whom the declaration is filed. The retailer must obtain a signed consumer declaration from the customer prior to any delivery and is required to vouch for the correctness of the consumer's information and also to record in a space provided on the consumer declaration all deliveries made against the 80 percent to which the consumer is entitled.

The consumer declarations provide for a fine up to $10,000 or 10 years' imprisonment, or both, for a false statement or representation by either the customer or the dealer. This is in keeping with the arbitrary custom of purely administrative agencies to prescribe penalties for their regulatory pronouncements.

There is no more reason for consumer declarations in the 1945–46 fuel year than there was in the 1944–45 heating season, when 90-percent limitation rather than 80-percent limitation was the rule. Their imposition upon consumers and retailers is needless and unjustifiable. Coal dealers are already overburdened with filings and reports required by the alphabetical welter of Federal agencies. Consumer declarations are nothing more nor less than a thinly disguised form of rationing—of a type with which the public is unfamiliar, relating to an agency with which the public has had no direct dealing, and promising to be productive of nothing but further public irritation. Policing and enforcement would be a practical impossibility; this is admitted by coal men and even Solid Fuels Administration officials.

The operation of retail coal yards under the 80-percent restrictions means a reduction in the volume of business handled and a consequent increase in the handling cost per ton. To this must be added the extra work and cost of obtaining, checking, and recording consumer declarations. Estimates reveal total increased dealer costs of from 42 to 61 cents per ton—none of which can be absorbed under already reduced margins resulting from frozen price ceilings. Addition of these costs to ceiling prices must either be authorized by O. P. A.—and passed on to the consumer—or retail yards will be compelled to suspend business operations in many localities with paralysis of retail distribution as a result.

Prepared and distributed by membership service department, Indiana Coal Merchants Association, Inc., Indianapolis, Ind.

Schools for Veterans

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of March 27, 1945:

SCHOOLS FOR VETERANS

The post-war educational opportunities promised to veterans in the G. I. bill of rights will require something more than the mere appropriation of funds. It will require the establishment of adequate and appropriate facilities and the training of teachers in the special techniques that must be employed in dealing with students who are mature in years and experience. Because veterans are adults, their education must be adult educa-

tion. Their needs cannot be satisfied by the kind of teaching which is satisfactory for children. They cannot be expected to go back into the classrooms they left when called into service or to feel comfortable and happy in the company of pupils much younger than themselves. In short, they cannot be made to fit into a school system designed for other purposes; the schools must be adapted to fit their needs.

It is estimated that some 15,000,000 men will have been discharged from the armed services when the war is at last completely won. More than half a million will have no more than a fourth-grade education. About 4,000,000 will have had from 4 to 8 grades of schooling, and another 5,000,000 will have had from 8 to 12 grades. The Federal Government will make available to these veterans, if they want it, funds to enable them to take advantage of opportunities for resuming their studies. But the actual opportunities are still to be created. Few American communities possess facilities of the kinds these men will want. Moreover, a majority of the veterans most in need of further education come from rural and small urban communities, where the facilities are poorest and where the difficulties of making additional provision are greatest.

A working conference of educators, called together recently under the auspices of the National Education Association, has come to grips with this problem and has made some recommendations for its solution. These call for action principally at the State and community level. Obviously, there is no time to be lost in putting them into effect. The conference suggests the formation of National, State, and local committees on veterans' education to work with the responsible Federal agencies in coordinating community services for veterans. The challenge here is a very great one. Only through education can the young men of America be equipped to realize the potentialities of the victory they have won in battle.

Prizes for Congressmen

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. VORYS of Ohio. Mr. Speaker, a very fine national magazine has recently announced that it will award $10,000 each to a Senator and a Representative who, in the opinion of a committee of distinguished citizens headed by Owen D. Young, do most for the country this year. The criterion announced will be statesmanship and national service, not party loyalty or "partisan political activity in behalf of some particular section, group, or bloc."

I have no doubt that this prize is offered in the utmost good faith, with the purpose of strengthening Congress, and adding to the prestige and importance of congressional service. After discussing this matter with my colleagues and reviewing the traditions and the laws affecting Congressmen, I am of the opinion that this prize is not in accordance with our best traditions, that its offer or acceptance may possibly be a violation of the law, and that it may establish a very bad precedent which the donors do not contemplate. I have discussed this with members of the committee studying ways of strengthening our legislative machinery. I do not believe that any additional changes in our machinery, our rules, or the laws affecting Congressmen are necessary in order to prevent the offering or acceptance of such prizes.

The American tradition expressed in our present rules and laws, is that no lawmaker should receive any extra financial consideration for doing his duty, or for doing his duty better than his colleagues. Simply because this is so thoroughly imbedded in our thinking, we are prone to forget that Congress itself has written this into laws which affect Congressmen themselves.

United States Code, title 18, section 199, provides for a triple fine, imprisonment and forfeiture of office for any Member of Congress who shall "directly or indirectly, ask, accept, receive, * * * any money, property, or other valuable consideration, * * * (or) gratuity, * * * with the intent to have his action, vote, or decision influenced, on any question, matter, cause, or proceeding, which may at any time be pending in either House of Congress or before any committee thereof, or which by law or under the Constitution may be brought before him in his official capacity." United States Code title 18, section 200 provides a triple fine, imprisonment for whoever offers any "gratuity" or other thing of value for such purpose.

The law makes no distinction as to whether "the influence" of the "gratuity" is good or bad; the purpose is clearly to prohibit any outside financial consideration whatsoever from influencing any action whatsoever by a Congressman. By these laws and others, Congress has attempted to prevent any outside pecuniary influence upon the judgment and action of its Members.

I concede the utter innocence and the high purpose of this magazine and the distinguished committee which has consented to serve in the awarding this $10,000 prize for Congressmen. The fact remains that they are private citizens who will be reviewing the actions of Members of Congress. When they make the award they will no doubt refer to the actions of the recipients which have influenced their decision.

Then suppose the prize is made an annual prize? Human nature being what it is, will Members of Congress utterly ignore the preference of these private citizens and of this great magazine in the type of public officials who have been awarded, their records, their activities? Suppose other organizations and institutions, such as business groups and labor groups, decide to award congressional prizes based solely on statesmanship and national service? Some of these groups could afford to award extremely substantial amounts. They might persuade very distinguished citizens to serve on their prize committees. Does anyone believe that practice could grow and flourish without influencing Members of Congress? The fact that such influence might be with the best intentions is beside the point; these influences would be by private individuals, involving a cash prize for what they considered good law making. It is easy to imagine some very ridiculous, and some very vicious results.

The strain on the human nature of Congressmen is very heavy at present, Devotion to duty and fear of punishment rather than hope of special reward is still the stimulus that keeps us working. The pay we vote ourselves is supposed to be the only substantial reward we receive for our work. We should consider, in the full blaze of public view, whether we are not worth more. I cannot conceive of our voting that some Congressmen are worth more in dollars and cents to the country than others. I hope that no action by Congress will be necessary to dissuade private citizens or groups of citizens from attempting to give prizes to Congressmen. Sound patriotism, good taste and a respect for the laws and traditions of our republic should be all that is necessary.

The men in our armed forces are forbidden to accept prizes for heroic or outstanding action. Some of our great war heroes have refused very substantial prizes in obedience to this regulation. The same rule applies to Congressmen in war, and in peace.

Post-War Employment

EXTENSION OF REMARKS

OF

HON. CHARLES SAVAGE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. SAVAGE. Mr. Speaker, today the farmers have an income of over $20,000,000,000 a year. Their savings, bank accounts, and bonds are the highest in history. During the last 12 years they have come from the poorest financial condition that they had ever been in—from an income of around $5,000,000,000 a year.

At that time they were losing their farms to mortgages and were unable to sell the crops that they did raise. The farmers in Iowa, unable to sell their corn, were using it for fuel for heating houses and cooking meals.

Farmers do not want to go back to those conditions. They are desirous, along with labor and other groups of people in America, of maintaining a high standard of living.

I have long been an advocate of cooperation between farmers and labor to help maintain a high purchasing power in the Nation. If we are able to maintain 60,000,000 jobs after the war, it will make prosperity not only for the workers but it will also create a market for farm products that will maintain prosperity for the farmers. The resulting purchasing power of the workers and farmers will create prosperity for business and manufacturers all the way along the line.

This way we can keep our national income above the $100,000,000,000 a year

mark, which is an absolute minimum in order to maintain prosperity.

Mr. Speaker, I wish to include in the extension of my remarks an editorial written by the master of the State Grange in the State of Washington, appearing in the Grange News of March 24, 1945:

SIXTY MILLION JOBS

One of the first problems to receive the attention of Henry A. Wallace after taking the oath of office as Secretary of Commerce, was a plan for fulfilling his pledge of 60,000,000 jobs for our people in post-war years. In this instance, are we depending on Henry to do it? Are we looking to our economists, industrialists or labor, or are we planning on taking a hand in this tremendous problem ourselves?

It seems that in making these blueprints for post-war planning, a survey of how industry and agriculture could be brought more closely together is worthy of study. There is definite need for linking the farm and the factory together. Surplus urban labor cannot all go back to the farm following the war, and it is not always feasible to establish a factory to process agricultural commodities right in the area in which they are grown. There are instances, however, where this type of location would benefit farmers, laborers, and consumers, as well as industrialists who are handicapped by high city taxes and space limitations.

Just because we can point to some few factories built in agricultural areas as failures, it is not by any means proof that logical planning could not make them highly successful. Quite the contrary it true, for the habitual concentration of all industries in crowded areas has cost the Nation untold wealth in needless freight and handling of the product—shipping the raw material from its source to the factory and then back to the consuming public.

A sensible decentralization of industries for purposes of economy and better living conditions will not likely meet with the approval of large controlling interests already concentrated in certain areas, but if our Nation is to be economically sound and prosperous, there must come a day when we adhere more closely to the theory of the greatest good to the greatest number. Then, perhaps, we will not have to admit shamefully that 10 percent of our population controls 60 percent of our Nation's natural resources.

When we realize that the success of one group of people aids in the success of another, we will have gone a long way in establishing a permanent happy and healthy Nation, and out of this simple basis for doing things will come a job for every ablebodied worker in our country.—H. P. C.

Be Thankful You Are No Member of Congress

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. CRAWFORD. Mr. Speaker, a splendid description of the conflicting problems confronting Members of Congress is contained in the current edition of Washington Backgrounds, a regular service publication prepared by U. V. Wilcox, well-known Washington newspaperman and radio commentator.

He ably states the situation when he says, "Members of Congress constitute the funnel for the conflicting opinions of the Nation."

Recent trend of the administration, however, to withdraw from the tax-box funds with which to propagandize Congress and the Nation for legislation on which all contributors to the tax box are not wholly agreed presents a further complication in the funneling process.

Mr. Wilcox's article entitled "Be Thankful You Are No Member of Congress," follows:

WASHINGTON.—Of all the economic hot spots in these United States, Congress is on that spot. The national legislators have need for all the understanding, appreciation, and sympathetic counsel that can be extended.

This is an unnatural city of pressures. Not only the obvious pressures to vote money, or favor a bill backed either by the Congress of Industrial Organizations, or the National Manufacturers Association, the aviation, shipping, railroad, farm groups, but also the indirect kind. There are always the labor, farm, and capital pressures. But now, something new has been added.

The administration itself has gone into the business of putting on the heat, and is doing it as consistently, as thoroughly, and as relentlessly as any lobbying organization. And it is the taxpayer's money that pays for this kind of pressure.

The differing views now existing among thinking men and women, even among bankers and businessmen, react upon Congress, making for more confusion. Sharp divisions within industries loosens the legislator's moorings.

Food shortages exist. This impinges on foreign policy and also on price control. It makes the ordinary citizen sore and it creates black markets. It is a temptation to weak bureau officials to tell more than they should and personally profit therefrom.

There are surpluses in war goods, in war plants, in land. Any disposal creates friction and trouble and unlawful gains, for someone, but rarely for the ordinary taxpayer, or even for the little businessman, unless he wears the right political button. There is confusion on the inflation battlefront. Shall there be fringe wage raises or shall the stabilization premise be used to prevent it?

There is a very real division of views between groups of bankers over international monetary stabilization. Country bankers want the administration's program, and some city bankers do and some don't. There are charges and countercharges of insincerity and obstructionism. Enemies of banking are making the most of it.

There is a sincere desire to see organized a permanent institution to keep the peace, yet there is deep-seated suspicion of one of the Big Three nations.

Members of Congress constitute the funnel for the conflicting opinions of the Nation. When there is interindustry conflict, Congressmen find the going harder.

So, what would you do if a Congressman? This very questioning at Bretton Woods hearings, when witnesses were asked, "How would you vote if you were in my place?" is something more than a trick question. It is revealing.

Congress is no better than the sum of its averages. It is a cross section of any town or city. But, unlike the average voters in a city, a Member of Congress is held responsible no matter what. Perhaps a little more understanding, a little more encouragement with sane counsel, would help in arriving at compromises. No public question is all right or all wrong.

The Stewart Field Band

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. BENNET of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to speak briefly concerning the Stewart Field Band and its leader, Chief Warrant Officer William D. Carney.

Stewart Field is a part of West Point and of my congressional district. We are proud of the Stewart Field Band and of the fact that it was selected to come to the National Capital to replace the Army Air Forces Band when the latter organization was temporarily sent to Europe.

We, the Americas, a stirring inter-American march, performed its premiere in the appropriate setting of a War-bond ball, March 12, 1945, sponsored by the Latin-American Embassy Daughters and the Senate Daughters.

Composed by Chief Warrant Officer William D. Carney, band leader of the Six Hundred and Sixty-ninth Army Air Forces, Stewart Field, N. Y., temporarily stationed at Bolling Field, the composition was inspired by the recent Inter-American Conference successfully concluded in Mexico City on March 8, 1945.

Mr. Carney composed the words and music for this new march, basing the lyrics on the bonds of unity forged at Mexico City, and mindful of the unremitting work that lies in the years ahead of peace is to be preserved in our hemisphere.

In addition to its debut before the audience at the War-bond ball, We, the Americas was the featured highlight of a short-wave broadcast to Latin-America.

Chief Warrant Officer William D. Carney, son of Mr. and Mrs. George M. Carney, 1607 Holland Avenue, Utica, N. Y., was born at Ilion, N. Y., in 1920. His musical training was started in the public schools of the State. Upon completion of high school, Mr. Carney decided that music was to be his career. His enrollment in the Ithaca College of Music, Ithaca, N. Y., logically followed. It was in the spring of 1942 that Mr. Carney completed his work and received the degree of B. S. in music.

For several months Mr. Carney was associated with Fred Waring and his Pennsylvanians, and in June 1942 he entered into active service for his country.

Following the basic training given all men upon entrance into the Army of the United States, Mr. Carney was assigned, in view of his extensive background in music, to the Army Music School, Fort Myer, Va. Upon completion of his training there, he was, in January 1943, assigned to Stewart Field, Newburgh, N. Y., and charged with the task of organizing the Six Hundred and Sixty-ninth Army Air Forces Band for duty at that air base.

The Six Hundred and Sixty-ninth Army Air Forces Band was temporarily

stationed at Bolling Field, D. C., in the absence of the Army Air Forces Band which is completing a tour of Royal Air Forces bases in England.

Still the Best Fed Nation

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Milwaukee Journal on March 25, 1945, entitled "Still the Best Fed Nation":

STILL THE BEST FED NATION

"Thanks to the extraordinary efforts of our farmers, and in spite of the tremendous food needs of the direct war effort, we remain the best fed Nation of the world, wartime or peacetime."

We ought to paste this statement of Chester Bowles, National Price Administrator, up in our kitchens or our dining rooms—to read when we think we have difficulties. Of course, it isn't as easy for many to prepare tasty, varied meals as it was. But that's about the extent of our food casualties on the home front. On the other hand millions of our fellow countrymen are living better and eating better than they did through the long dreary 1930's.

The discomfort, the inconvenience, the mild murmuring of the average American are being exploited by groups and newspapers which want to gain some kind of advantage. Some of the exaggeration is for political profit, some of it is mere sensationalism. All of it adds up to a reckless disregard of the responsibility every citizen, every official and newspaper holds for keeping the American war effort high through faith and true understanding.

There will be less meat for home consumption during the next quarter, probably during the rest of the year. The Bureau of Agricultural economics estimates that there will be 21 percent less meat consumption this year than last. That is only an estimate, and the estimate at the beginning of last year was greatly exceeded by the actual supply. Still 21 percent is an appreciable difference. But the significant thing is that 21 percent less than 1944 means only 8 percent less than the 5-year average before war broke out.

The food is going to the support of our war effort and the hastening of victory. We are not "feeding the world," as excited headlines suggest. We are not "playing Santa Claus." We are seeing that our men, 10,000,000 of them, have plenty to eat and the assurance that the supply will keep up. Then there is lend-lease, chiefly to Britain and Russia, just as much part of the war as food to our men.

Then there is U. N. R. R. A., whose Director, former Governor Lehman, of New York, has just given us some figures. The United States is asked for 788,000,000 pounds of food. If this seems big, here is what it means, as Mr. Lehman gives it—1 pound for relief of 60,000,000 war-stricken people to 60 pounds left us for civilian consumption. What American grudges 1 pound out of 61 to keep millions of suffering fellow men alive?

There is no hint of actual privation here at home. There isn't even any appreciable tightening of our belts. There is need for a mental adjustment—an adjustment which will be easier to make as soon as we realize that what we are sending abroad is exaggerated by men who put some kind of selfish advantage ahead of pushing the war and keeping up national unity.

We are still the best fed—far and away the best fed—people in the world.

Howdy, Mr. Ambassador

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, I call attention to an editorial appearing in the issue of the Tulsa Tribune of March 21, 1945, on the occasion of the visit of Lord Halifax to Oklahoma, as follows:

HOWDY, MR. AMBASSADOR

We have our share of silly citizens who have an un-American adulation of royalty and fancy panhandles to names that denote title to traditional estates. You will have them crashing the gates to see you. But it is for the real Americans, the genuine Americans, that we venture to speak. And we, Mr. Ambassador, are honored to have England's personal representative in our tidy town. We bid you welcome, sir, a hearty welcome. And with the freedom you yourself exercise, we want to tell you, sir, how the real Americans feel toward your England.

You talk of partnership. That's it, sir. That is exactly what we want. We have played the partner part. It is your England, sir, that has failed. Go home and talk this partnership plan there. Go home and tell them how we feel here. Go home and remind them of all we have done to make a partnership with you.

Your advance man, Lord, tells us you will condescend to dine with a selected 200 of us. Nice of you. We can assure you there will be a lot more who will want to see you.

You stipulate that you want at least 20 percent to be laboring men. Doggone it, Lord, if you aren't democratic. Twenty-percent democratic.

Well, Me Lord, let us tell you that we are all working folks in America. You are class-minded. We are not. Just another difference.

We appear to be a funny people to you Britishers. You have always told us so. Years ago your great novelist, Charles Dickens, came over not to lecture to us, but to lecture us. And he was a riot. We filled his pockets with gate fees to hear him tell us how ridiculous we were. And a few years later your distinguished Rudyard Kipling, after touring our country, dismissed San Francisco with, "It is a city of plug hats and spittoons." And he wrote off Chicago with, "It is a city of butchers, having once seen, may I never see it again."

The fact that both of these cities flowered into great art centers, symphonies, and universities entirely escaped the "observing" British eyes. Just as with you who come to hunt a wolf and see a feathered face.

What about the town that was nothing but plug hats and spittoons? From its harbors today go our ships, and not yours; our ships that sail to save your Pacific empire.

What about that butchers' town, Chicago? Out of its steel furnaces are rolling the weapons that our boys carry to fight your fight. And out of that butchers' town come the beef and the grain that is feeding your armies, and feeding the English people, who cannot feed themselves. And you stole the foodstuffs we sent you to send to Greece. You intercepted and stole the food we sent to starving Europeans.

So, sir, we suggest to you in your goodwill enterprise to observe the altitude of our attainments where the seeds of our creative culture were sown.

I have forgotten which one of our Ambassadors it was, but some years ago when our Ambassador was to be presented to your comic-opera King at his court he was informed that he would have to wear silk stockings, satin breeches, and buckled boots. Our John Winant of that day told you fellows he would go to court in pants—the American way. He did. And why not?

We have always had a liking for old Cassius Clay of Kentucky. He was one of the Boone boys, you know. When he was our Ambassador to Russia, on an occasion a photograph was taken of the diplomats at St. Petersburg with the Czar in the center of the group. All hats were off except the Czar's and Cassius'. Cassius explained that the representative of the American people took his hat off to no man who didn't take his hat off to him. Atta boy!

You see, Mr. Ambassador, we are fundamentally different. And that is why we hope you really look at us rather than the faces that are only feathered for your look. And there are only a few left who will even accommodate with a feather.

When your Lordship comes into New York harbor what is the first spectacle that meets your astonished eye? The Statue of Liberty. Symbol of freedom and human rights such as you British never knew.

And what is the first thing the American is shown in London? The London towers where the ancient beef eaters parade. There are the vaults that are supposed to make secure the jewels of the King's crown. We don't use crowns over here. You take us to see your London towers where your crude, uncouth, and coarse kings severed the necks of little ladies who stood in their matrimonial way.

You British are a parasitic people. We are a benevolent people. You have lived off the people of India, Africa, Anglo-Egypt, the West Indies, Australia, Oceania, Canada, and you tried to live off us, but it didn't work. But you are living off of us plenty right now. And what is this run-around now? Trying to soften us up for another big touch?

We would like to have you tell us, Mr. Ambassador, when did England ever free a people as we did Cuba? We have waged no wars for conquest. We have pillaged no people. Twice we have saved your empire from disaster. Twice you tried to destroy us.

You banned the paintings of Verestchagin from your kingdom and you burned every canvas of his that you could seize because his pictures told of the terrible tortures your English armies of conquest inflicted on the people of Burma, whose sole offense was they loved their land and their liberty.

You are going around, Mr. Ambassador, urging us to be England's partner, as if you English are all eager for it and as though we Americans are not cooperative and must be persuaded. If you mean what you say, Mr. Ambassador, Tulsa is not the place for you to come. Take that plea to London. Sell your own English on the big idea. We have made every generous gesture to go on a partnership basis with England. It is you English who have failed to respect our specific and generous partnership performances.

If you mean what you say, Mr. Ambassador, go tell your own people to at least share with us the Pacific islands you claim and that we perfected as your fortifications.

Like Dickens, you are lecturing us. It is time our State Department in plain United

States told you that we have gone all the way to meet your England on a partnership basis. And you have the impudence, sir, to talk to us as if we hadn't done one thing. It is up to your own John Bull, and not our generous Uncle Sam, to put into performance the partnership you preach.

We are eager, sir, honestly eager, more eager than you know to like you English. We would like to be neighborly, good neighbors, mutually helpful. And God knows, Mr. Ambassador, you need us and you know it. It is time for England to treat with decency the best friend England ever had.

We have more than done our full part to show our friendliness and our friendship. It is now up to you, Mr. Ambassador, to convince us of the sincerity and honesty of the goodwill you exercise your rhetoric to radiate. Friendship, sir, is a two-way affair.

When a good neighbor borrows a cup of sugar, he returns a cup of sugar. That is a little matter of nice behavior you British do not know. England never returned anything. A gentleman, sir, pays his debts. John Bull is not a gentleman. Can you teach him to be one?

And speaking of a cup of sugar, sir, you owe us exactly $6,263,764,782.58 cents in the First World War account and you know bally well that you have no intention of returning that cup of sugar.

Your debt on this World War, sir, is beyond your own arithmetic comprehension. It is more than $20,000,000,000. And you never expect to pay a dime of it. What do you expect? You expect us Americans to go on and pay your bills, lend you all you want. It is time your leisure class went to work and paid your honest debts. That, sir, makes good will.

We know you have suffered, and we sympathize with your suffering. We have suffered some ourselves. We gave you farm implements which we needed for our own soil. You gave those implements to other peoples as your benevolent gift. You sold them and put the cash in your pocket. And there is no Charles Dickens or Rudyard Kipling who can make that performance either pretty or funny. That, sir, was just plain treachery and dishonesty.

Mr. Ambassador, we have been good to your people. We have been very good to your people. It has been our heartfelt wish to be generously good to your people. And if you have one atom of sincerity, one ounce of elemental honesty in your professions of good will, go back and tell all the king's horses and all the king's men that the good will is here but it is not over there.

Tell your Parliament boys to quit calling us "Uncle Shylock," which you fellows rudely did after we pulled you out of the disaster where you could not help yourselves. How appallingly crude, ill-mannered, and uncouth you British are.

We trusted John Bull as a gentleman of honor and we have found him without honor. We have radiated our good will, sir. Our greetings to you, sir. It is not perfunctory. It is honest, it is earnest. We cordially invite you to urge your Government to learn good international manners and be a good neighbor.

Your own Army reports reveal that there are 12 American boys to 1 English boy in the European battle today. Our boys have borne the brunt of your battle while you told Greece what kind of government "free Greece" could have.

Of necessity, sir, we have been united to fight a common, vicious foe. But you will treat our hospitality with boorish rudeness unless you tell the good people of this stanch American town that when the war strain is over you Britishers are going to have the elemental decency to quit insulting us for saving your England's life.

Life magazine characteristically tips us off with Halifax "is a high-minded peer who gets along well with plain Americans." And with all that, Edward Frederick Lindley Wood, First Earl of Halifax, Third Viscount Halifax, First Baron Irwin of Kirbyunderdale, Fifth Baronet, Knight of the Garter, Privy Counselor, Grand Commander of the Star of India, Grand Commander of the Indian Empire, Fellow of All Souls College, Chancellor of Oxford, and Master of Middleton Hunt, is a very pious gentleman. We are told that every day he seeks a consecrated altar before which to pray. But, will he tell us while about town that he prays to have his Empire obey the Golden Rule?

Mr. Speaker, after the editorial was published, his Lordship apparently questioned the veracity of the author of the above editorial, or the authenticity of some of his statements. Thereupon, the editor and publisher of the Tulsa Tribune, under date of March 22, 1945, addressed Lord Halifax and commented editorially again in the issue of March 23, 1945, as follows:

A LINE TO HALIFAX

MARCH 22, 1945.

LORD HALIFAX,
British Embassy, Washington, D. C.

DEAR SIR: Enclosed is the editorial that I addressed to you in public print yesterday. While here in Tulsa you are reported to have said, "That is exactly the kind of stuff some people think worth writing. It pulls away from a statement of truth."

Your British, sir, have lied to us American people long enough. Now I challenge you, sir, to address a communication to the citizens of Tulsa and tell them wherein I departed from the truth in a single syllable of a single word.

Respectfully yours,

RICHARD LLOYD JONES.

YOU CAN'T BEAT THE BRITISH

What we said on this page Wednesday about the parasitic nerve of the British was revealed in the performance of Halifax right here in our own town. He flies into town in a Douglas plane made here. Made by American money, but bearing on it the British insignia. Halifax is England in this country. He fills his plane up with gas at our pumps and charges the supply to the American people.

You can't beat the British for gall and bad manners.

"Kangaroo Courts" Must Go

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I place in the RECORD a statement, issued by the Department of Justice, concerning the King County jail, Seattle, Wash.:

The Department of Justice today announced that Director James V. Bennett of the Federal Bureau of Prisons has disapproved the King County jail at Seattle, Wash., for further housing of Federal prisoners.

Mr. Bennett said that this decision resulted from a careful inspection of jail conditions by Inspector Roy Casey of the Prison Bureau following the fatal beating of John Emberg, a 16-year old prisoner, held in the jail on general charges of delinquency. Emberg, not a Federal prisoner, died on January 16, as a result of torturing and mistreatment by a "kangaroo court" maintained in the jail by the prisoners themselves.

Inspector Casey's report showed that local officials had failed to abolish the kangaroo court following Emberg's death and that the sheriff continued to permit the "court" to prescribe and enforce rules and fine or discipline the prisoners.

According to Director Bennett, the Bureau of Prisons inspection disclosed that administration of the jail was "lax and almost wholly within the hands of the prisoners themselves." Food, sanitation, and medical service, he said, "did not begin to approach acceptable standards."

"Another basis for the action," Mr. Bennett added, "was the fact that the sheriff in charge (Sheriff Callahan) had made little effort to put into effect any of a number of suggestions made to him in writing on February 12 by the Federal jail inspector."

Mr. Bennett said that the United States marshal has been instructed to transfer the 32 Federal prisoners now held in the Seattle jail to other jails in the vicinity.

A copy of the report by Inspector Casey has been filed with United States Attorney J. Charles Dennis and United States Marshal Donald Miller, in Seattle, for such further action and recommendations as they believe pertinent. The report may also be inspected in the office of the Director of the Bureau of Prisons, First Street and Indiana Avenue NW., Washington, D. C.

The Place of the States in Field of Watershed Development

EXTENSION OF REMARKS

OF

HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. McCONNELL. Mr. Speaker, one of the important questions to which the Congress must give consideration this year concerns the procedures under which our river watersheds can be developed effectively. There are several bills before us to provide for the creation of Federal regional watershed authorities patterned after the Tennessee Valley Authority. This method has been suggested for the Missouri River Basin, the Columbia River watershed, and the Arkansas River Valley.

The February issue of State Government, a monthly publication of the Council of State Governments, is devoted entirely to the subject Water Resources—Use and Control. In it is an article by Hon. Ellwood J. Turner, Chairman of the Interstate Commission on the Delaware River Basin, on The Place of the States in the Field of Watershed Development. In addition there are other discussions on the subject, one being by David E. Lilienthal, Chairman of the Tennessee Valley Authority. Inasmuch as Mr. Turner's discussion indicates that there are methods other than those patterned after T. V. A. for the development of our interstate river systems and since Mr. Lilienthal's views already have been published in the Appendix of the CONGRESSIONAL RECORD at page A138. I ask unanimous consent to have a part of

Mr. Turner's very interesting and constructive article also printed in the Appendix of the CONGRESSIONAL RECORD.

In the interest of continuity I should explain that the first part of Mr. Turner's article—which is not to be published—explains the background and circumstances which led to the inclusion of the congressional declaration of policy in the 1944 Flood Control Act and in the 1945 Rivers and Harbors Act just recently approved by Congress to recognize and protect States' interests and their rights and responsibilities in the development of rivers and their watersheds. Designating this accomplishment as a part of the movement to restore an improved balance in the activities of Federal and State governments in water control policies, Mr. Turner's discussion continues as follows:

NEED FOR UNIFIED WATER POLICY PROGRAMS

Of the several things that were brought out by the movement to restore an improved balance in the activities of the Federal and State governments in water-control policies, one was made crystal clear. In the future the development and execution of water problems cannot be done on a disconnected piecemeal basis.

It is now generally agreed that no program for the wise utilization and conservation of the water resources of river systems can be formulated on the basis of that resource alone. Management and control of the use of the land, and of the minerals and the products of the soil, are an integral part of the problem. Land, water, and human requirements—all must be considered together.

Secondly, if the job is to be done right, there must be a single unified plan in which all of the component projects for the utilization and conservation of natural resources and for the betterment of human equities will be properly evaluated, adjusted, and carried out.

In an interstate watershed, to whom shall the duty of envisaging the problem in its entirety and of devising and supervising the execution of the resultant over-all plan to meet it be entrusted? There seem to be but two answers to the question. The problem either must be delegated to an agency which is under the control of Congress, or to one primarily responsible to the States in which the watershed is located. Which of the two methods is better, both for the short- and long-term pull, poses a problem which deserves careful and serious consideration.

FEDERAL REGIONAL AUTHORITIES

The first alternative—control by the national administration—is exemplified by the Tennessee Valley Authority. Much has been written in recent months about the accomplishments which have resulted from this approach. Complimentarily colored, but particularly convincing, is the book T. V. A.—Democracy on the March, by the Authority's Chairman, David E. Lilienthal.

Without question, T. V. A. has done wonderful things for the Tennessee Valley. But there is nothing amazing about this. Except that its soils had become old and barren as the result of years of careless management, and some of its forests were despoiled for the same reason, the region was relatively undeveloped and a fertile area upon which to build a program when the T. V. A. project was started. With the full faith and credit of the National Treasury behind it, with no obligation to make an accounting to public investors, when a large part of the cost could be charged off to navigation of dubious value, it has been no great task to build the grandiose and awe-inspiring structures which make up this huge and complex project.

It seems apparent that the project has been well managed. Whether it actually can be proved a success from the national point of view, if all pertinent factors are properly taken into account, cannot be stated. Its advocates can make a strong case in its favor. But the findings of others, not henchmen of the Power Trust, who have made a thorough study of the project, are startlingly in variance.

T. V. A. TYPE OF ORGANIZATION NOT ALWAYS FEASIBLE

But even though T. V. A. is a success, it does not follow that the method can be repeated with similar results anywhere and everywhere. For example, in the Delaware River Basin, with its long-established municipal developments and industrial enterprises, the application of the same kind of programs would lead to confusion and chaos.

The Interstate Commission on the Delaware River Basin is not opposed to Federal authorities. The commission believes that if the people in a river watershed region want such an agency they should have it. But it strongly feels that there should be no effort on the part of the Federal administration to clothe itself with all-encompassing powers in the over-all control of watershed development until the States directly involved have been afforded a fair opportunity to accept and meet their obligations in this field and have failed to meet that challenge. It recognizes that it may not be possible to bring the States amicably together in certain regions because of wide differences in social policies, political philosophies, and other factors. Where that is the case a Federal authority is probably desirable.

VALIDITY OF FEDERAL AUTHORITIES

But even then, provision for Federal jurisdiction certainly ought to be accomplished in a manner about which there can be no reasonable doubt concerning its constitutionality. This condition cannot be said to apply to the Tennessee Valley Authority. The question as to whether Congress, in creating that authority, was exercising powers not delegated to it by the Constitution was raised but never settled. In a suit brouht by the Tennessee Electric Power Co., decided in 1939, the United States Supreme Court refused to decide the issue. It observed that only the States and local governments could object to the right of Congress to invade fields of action normally reserved to such units and that the governments affected in the Tennessee Valley seemed to support rather than oppose the program.

Although a ruling was avoided, the court's observation in itself is an admission that there are reasonable bases for questioning the validity of Congress' action in creating Federal authorities. In a country which is proud of its democracy, which boasts of its grassroots philosophy, which respects, reveres, and is rightly grateful for its Constitution, that doubt should be clearly dispelled for all time. Though the need for and the benefits of Federal authorities in certain regions may be admitted, it does not follow that their establishment should be accomplished by interpretive rulings or short-cut methods which are subject to questioning.

Our founding fathers who framed the Constitution intended that revisions necessary to meet new and changing conditions should be accomplished by constitutional amendments. This applies particularly when it is obvious that they could not possibly foresee the circumstances which necessitate the change and that any other alternative would be a proper subject of debate. Let Federal authorities be provided under the terms of a constitutional amendment. Done in that way and at the expressed desire of the people of the region affected, they would constitute an inspiring example of democracy on the march.

Legislation creating Federal authorities under a constitutional amendment should include adequate provision for the protection of the interests of the States and of the people of the region, and for participation in the programs. It also should require that such part of the cost of projects constructed primarily for the benefit of the region and not for the Nation as a whole should be borne by the beneficiaries.

REGIONAL CONTROL BY INTERSTATE ACTION

But Incodel is further convinced that the States in most cases can do a better job for and by themselves if banded together cooperatively for the promotion of their common problems and welfare than any Federal agency created for the purpose. Being closer to the people, they can see their problems with greater clarity and with a more healthy and intimate interest and understanding. Democracy at the grass roots starts at home in the region, not at the national Capitol in Washington.

THE INCODEL ORGANIZATIONAL PATTERN

New York, New Jersey, Pennsylvania, and Delaware—slowly, perhaps, but surely—are proving this point in dealing with the Delaware River watershed. In creating the Interstate Commission on the Delaware River Basin in 1936, these four States agreed to act in unison and harmony toward the common goal of envisioning that drainage region in its entirety and of devising, adopting, and supervising programs upon which the valley may be developed to serve present and future generations more advantageously.

In contrast to the organizational pattern of T. V. A., consisting of a 3-man board appointed by the President, and similar to the set-up which is being suggested in the present proposals for other Federal regional authorities, policy determinations concerning the Delaware River watershed rest with the 20 legislative, executive, and administrative officials who make up the membership of the Interstate Commission on the Delaware River Basin. These 5 members from each of the 4 participating States—1 a State Senator, 1 a Member of the House of Representatives, 1 a member of the Governor's cabinet, 1 an official of the State planning board, and 1 a delegate-at-large—are directly responsible to the people of the region. Programs which they develop and sponsor actually—not theoretically or expediently—must incorporate grass-roots policies. Contrary to the Federal method, the policies of Incodel cannot be otherwise.

The interstate cooperation and regional approach as exemplified by Incodel has not involved the creation of a superimposed governmental structure; it has not entailed the addition of a new set of governmental officials; it has not supplanted or superseded any existing governmental agency. It fully utilizes the services of Federal agencies and those of the State's legislative, executive, and administrative officials. No new fields of activity have been created.

The dangers inherent in centralized planning, ownership, and control have been carefully avoided. There has been no interference with the functions of local self-government. Each State, each municipality, is free to determine the details of its own programs. Nor have there been any conflicts with the activities of Federal agencies operating in the region. Every effort has been made to promote cooperation and to help the projects of these and all other agencies to move forward harmoniously. By taking advantage of the Incodel machinery for cooperation, projects of all governmental units are being shaped and adjusted to key into a well-rounded and practical plan for the entire watershed region.

In the Delaware River Basin democracy is really on the march. By coordinating the efforts and programs of existing agencies of Federal, State, and local governments with the people of the region actively participating, Incodel, while perhaps not spectacularly, certainly is carefully and surely framing and causing to be carried out in a truly democratic

way a practical over-all program for the efficient development of the natural and human resources of the Delaware Valley.

FEDERAL AUTHORITY OR INTERSTATE COOPERATION?

Federal authority or interstate cooperation commissions—which method will bring about the most efficient management and development of the natural and human resources of a river watershed? Federal authorities, like totalitarian governments, may bring quicker results But we who devoutly believe in democratic processes of government are convinced that the use of the interstate cooperation method will keep the planning for and control of our river basins from becoming so concentrated at the National Capitol, so distant from the life of ordinary people, as to wither and deaden the average citizen's sense of participation in governmental affairs. "For in this citizen participation lies the vitality of democracy." In determining the vehicle to accomplish our ends we must not lose sight of the human elements in the promises of national benefits

Truly the method of interstate cooperation should not be deserted until the need for a Federal authority in any basin has been clearly demonstrated.

Intolerable Jail Conditions Deserve Public Attention

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. RABAUT. Mr. Speaker, following my intention, as announced on the floor recently, to publicize intolerable conditions in county jails, I submit an editorial from the Washington Post of March 26, 1945:

MARYLAND JAILS

Maryland citizens are manifesting a good deal of concern over the conditions that the Federal Bureau of Prisons has uncovered in their county jails. Governor O'Conor sought the aid of the Bureau last year and a thorough survey of county jails was made by Edgar M. Gerlach, Federal prison inspector, and Richard W. Wickes, probation officer of the circuit court of Baltimore County. On the basis of their report, James V. Bennett, Director of the Federal Bureau of Prisons, drew up a list of recommendations from which proposed corrective legislation has taken shape. The bills are now before the general assembly.

There is good reason for the stir which this report on county jails has produced. A variety of unspeakable conditions were found. As to the county jail at Ellicott City the investigators had this to say: "From the point of view of administration, common decency, sanitation, public neglect, opportunity for immorality and, all in all, the providing of a degrading experience for those incarcerated therein, this jail is about as bad as one could imagine." It was in this jail that a trusty left in charge by the sheriff attacked a 14-year-old girl held for investigation in connection with her application for a marriage license. "Discipline," the investigators found, "was conspicuous by its absence." The mattresses provided to male prisoners were unspeakably filthy. Sanitation facilities were a disgrace to any institution.

Howard County's jail at Ellicott City, moreover, is one of several where the vicious fee system still prevails. The warden collects 75 cents a day for each man committed. If he can feed them for less than that, the saving goes into his pocket. Under such a system it is foolish to expect that the prisoners will be given adequate food. At Ellicott City they were getting two meals a day. At other county jails the investigators found prisoners surviving on meager fare while the sheriff in charge was living on delicacies at their expense.

Aroused by these findings, Governor O'Conor is attempting to push two bills to enactment. One would charge the State Board of Corrections with the inspection of county jails and the setting up of standards for their operation. Should the counties fail to meet those standards, the board could go into court and get an order to transfer the prisoners to some other institution at the county's expense. The second measure is a resolution instructing the legislative council to study the fee system and submit recommendations for legislation 2 years hence. These are mild and unobjectionable reforms. We surmise that public opinion in the Free State is overwhelmingly in favor of their adoption.

Control of Cancer

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Gallup poll from the Washington Post of March 25, 1945:

IGNORANCE ABOUT CANCER SHOWS NEED FOR EDUCATIONAL PROGRAM

(By George Gallup, director, American Institute of Public Opinion)

While much progress has been made in the campaign to control cancer, there is still a startling lack of knowledge about the disease, and misconceptions indicate need for raising millions to promote cancer education.

With April set aside as Cancer Control Month, a Nation-wide survey finds one-fifth of the civilian adult population still thinks cancer is contagious, and another fifth are not sure whether cancer is something you "catch" by exposure. This means about 30,000,000 people are confused as to what cancer really is.

Moreover, about 20,000,000 still think cancer is incurable.

Fewer than half of all the people polled thought they knew the signs of the disease, and the public is to a large extent baffled as to the causes of cancer. Those willing to guess named "injury" or "irritation," although some made guesses, such as too much salt, mental attitudes, horse bite, cooking in porcelain pots, small peas eaten from tin cans, gold teeth.

JOHNSTON HEADS DRIVE

To educate the public and to aid cancer research the American Cancer Society is sponsoring a drive to raise $5,000,000 in April, with Eric Johnston, president of the United States Chamber of Commerce, heading the drive.

The institute's survey was conducted to see how effective recent educational campaigns have been, and what remains to be done.

"Do you think cancer is curable?"

Results today, as compared to a 1940 survey, follow:

	Percent Today	1940
Curable, if caught in time	62	56
Incurable	26	27
Don't know	12	17

The next question was:

"Do you think cancer is contagious (catching)?"

The vote:

	Percent
Yes, it is contagious	21
No, not contagious	59
Don't know	20

An analysis by degree of education shows that among Americans who have attended college, 1 in 10 thinks cancer is contagious.

WOMEN MORE CONFIDENT

"Do you happen to know any of the symptoms of cancer?"

	Percent Today	1940
Yes	43	38
No	57	62

Only 38 percent of men polled said they thought they could recognize a cancer symptom, as against 48 percent of women.

The majority of those claiming to know signs of cancer named one or more of five symptoms generally listed by physicians: (1) persistent lump, particularly in the breast, (2) sore that does not heal normally, (3) irregular bleeding or discharge from any body opening, (4) persistent and unexplained indigestion, (5) sudden change in rate of growth of a mole.

The Global War Veterans

EXTENSION OF REMARKS

OF

HON. WIRT COURTNEY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I include the following article by Thomas H. Chunn, national secretary of the Global War Veterans, national headquarters of which is in my district at Columbia, Tenn.:

The Global War Veterans, the first veterans' organization in America for the veterans of this war, was organized September 8, 1943, by 2 Navy enlisted men, 5 Army veterans, and 1 Navy veteran in Columbia, Tenn. The organizers were William Derryberry, yeoman first class, who saw action in 3 major sea battles in the Pacific, and some 16 minor engagements; Joseph W. Richardson, United States Navy, who was stationed at Great Lakes Naval Training Center, Chicago, Ill.; Harry H. Huckaby, who served with the Army Air Forces; Thomas H. Chunn, who served with the First Armored Division, Fort Knox, Ky.; Cromer A. Colvin, who had served in the United States Navy; Willard A. Hargrove, an Army veteran; J. D. Garner and Thomas Andrew Bryant, also Army veterans.

After forming their local post the idea met with such hearty approval locally, that the group felt that if a veterans' organization of their own was good for Columbia, Tenn., it would be equally good for other veterans of this war in all of the cities throughout the United States.

As a consequence, the newly formed local group set up a tentative national organization and elected Harry H. Huckaby as na-

tional commander; Thomas H. Chunn, national secretary, and a little later, Jacob W. Shapiro was elected as national treasurer; and five members were elected as directors.

In order to get the organization off to an effective start, Thomas H. Chunn, the national secretary, agreed to devote his entire time to the organization. The tentative organization functioned until the first national convention, or conference, which was held in Memphis, Tenn., September 8 and 9, 1944.

At this conference, William L. Allan, of Memphis, Tenn., was elected national commander; Rufus W. Fontenot, of New Orleans, La., national first vice commander; Earl F. Turner, Nashville, Tenn., national second vice commander; and a board of directors composed of the national officers, Kenneth E. Gamble, Russell F. Kamper, Ida R. Benson, Paul A. Rhodes, and Paul Bumpus.

The Memphis conference enabled the Global War Veterans to make their first real bid for national recognition. The delegates took up many matters necessary to set up the machinery to extend the Global War Veterans from coast to coast. In the few months since the organization was formed posts have been set up from coast to coast. These posts and their post commanders are:

Post No. 1, Columbia, Tenn., Samuel E. Erwin, commander, 1812 Highland Avenue, Columbia, Tenn.

Post No. 2, Nashville, Tenn., Earl F. Turner, commander, 412 North Sixteenth Street, Nashville, Tenn.

Post No. 3, Los Angeles, Calif., Irving Markheim, acting commander, 5213½ Stratford Road, Los Angeles, Calif.

Post No. 4, Memphis, Tenn., William O. Butler, commander, 3174 Southern Avenue, Memphis, Tenn.

Post No. 5, St. Louis, Mo., Russell F. Kamper, acting commander, 8521 South Broadway, St. Louis, Mo.

Post No. 6, Columbus, Ohio, Paul A. Rhodes, acting commander, 76 West Starr Avenue, Columbus, Ohio.

Post No. 7, Mount Pleasant, Tenn., James C. Couch, acting commander, South High Street, Mount Pleasant, Tenn.

Post No. 8, Jackson, Tenn., Robert W. Wallin, acting commander, 125 Poplar, Jackson, Tenn.

Post No. 9, Lewisburg, Tenn., James M. Jones, acting commander, Nashville Highway, Lewisburg, Tenn.

Post No. 10, Chattanooga, Tenn., Kenneth E. Gamble, acting commander, 721 East Fourth Street, Chattanooga, Tenn.

Post No. 11, Atlanta, Ga., John J. Conway, acting commander, 87 Harris Street, Atlanta, Ga.

Post No. 12, Hartford, Conn., Winslow G. Place, acting commander, 347 Garden Street, Hartford, Conn.

Post No. 14, New York, N. Y., Arthur G. Rapport, acting commander, 20 Exchange Place, New York 5, N. Y.

Post No. 15, Seattle, Wash., Oliver K. Klemm, acting commander, 1625 East Madison, Apartment 3, Seattle 22, Wash.

Post No. 16, Utica, N. Y., Paul J. DeAngelis, acting commander, 1626 Lansing Street, Utica, N. Y.

Post No. 17, Burlington, Iowa, William L. Stout, acting commander, Morning Sun, Iowa.

The Global War Veterans launched their official publication in 1944. Many names for the "new baby" were discussed and finally it was decided that this was a G. I. war, and that the publication should be a "G. I." magazine. At present the organization is printing and mailing to all the States in the United States, as well as all the battle fronts, some 4,000 copies per issue.

The total membership of Global War Veterans and the various posts is modest as compared with the older established veteran organizations. However, the membership represents veterans and service men and women who live in 23 of the different States of the United States. Plans are being laid for an extensive membership campaign in 1945.

The membership of the Global War Veterans is limited to persons who have served in the armed forces of the United States since July 1, 1940. They must now be serving in one of the several branches of the armed forces, or they must have been discharged, other than dishonorable, in order to be eligible for membership in the Global War Veterans. Probably the organization is the first in the Nation to include women in its membership.

From an organizational standpoint Global War Veterans will follow the same pattern as that of the American Legion, the Veterans of Foreign Wars, and the Disabled American Veterans. The proposed purposes and preamble to the constitution of the Global War Veterans as this time are:

"We, the veterans of the Global War, associate ourselves together for the following purposes:

"To give our unwavering support to the Constitution and laws of the United States and to defend the democratic institutions which they protect; to guard especially the rights of free speech, freedom of worship, and the right of all citizens freely to vote.

"To organize the men and women who serve the United States during this war and to perpetuate throughout our lives the comradeship and ideals which we experienced while serving in the armed forces;

"To perpetuate the memory of our dead, and consideration for their dependents.

"To urge private enterprise and Government to work together toward the goal of stable employment for all veterans and citizens.

"To support a policy of international cooperation embracing all Nations which will at least isolate future outbreaks of violence among nations, and to develop the United Nations into an organization strong enough to suppress would-be aggressors quickly.

"To foster ideas and constructive plans for better government—local, State, and national.

"To work for conditions under which all Americans of every race, creed, or color, can live together in peace.

"To encourage all special interests to be tolerant of the problems of other groups.

"To express to the proper authorities the opinions of global-war veterans on vital questions of public policy; to avoid participation in party politics as an organization, but to promote interest and activity in civic affairs.

"To keep the United States a citadel of freedom in which all groups work together for the common good."

These aims and purposes are still in a fluid stage and may be changed at the next national conference of Global War Veterans which will be held in St. Louis, September 7, 1945. These changes may be made necessary by the changing conditions brought on by the war or by the desires of veterans as more of them return from the fighting fronts.

Most members of the Global War Veterans feel that the United States should participate in an effective world organization to keep the peace. They feel that this is the most significant of all purposes. It is the almost universal feeling among the members that the United States' participation in such an organization is imperative if this country is to remain out of another global conflict.

It has been suggested by some of the men and women fighting this war that veterans of this war should have a representative at the peace table when the Allies and Germany sit down to work out the surrender terms, and also at the peace table when the Allies and Japan sit down to work out the surrender terms. It is felt by many veterans that the mere presence of a man who has seen the blood of his buddies spilled on the field of battle, would be a staying influence on the men who represent the United States, Great Britain, France, China and Russia. Too, some feel that this representative should be an enlisted man of average means. They feel that he should represent an average American.

The Global War Veterans will call a conference of all existing veterans organizations formed for the veterans of this war, at St. Louis. The conference will be held 2 days prior to the Global War Veterans' annual conference which will be held on September 7 and 8. At this conference of all veterans' groups it will be proposed that the delegates select a veteran of this war to sit at the peace table should peace terms be discussed prior to the 1946 conference as proposed above.

The Global War Veterans are made up of men and women who will insist that the organization will carry out a program as determined by the majority of its members. The officers wish to act as representatives of the membership; acting on behalf of its members rather than set up something whereby the leaders run the organization as they see fit, instead of taking into consideration the desires of the majority.

The organization is not backed by any special interest, such as labor, capital, political, religious, or otherwise. The organization is financed primarily by the dues of its members. At this time, all national officers serve without pay. Perhaps in later years, the national officers will be compensated for their services. However, such compensation will be determined by the Board of Directors. There are no affiliations of the Global War Veterans with any other veterans organization now existing. However, there has been a close working agreement, especially with the Disabled American Veterans and other veterans groups. Certainly there should be harmony and understanding between any organization that proposes to represent the interests of veterans. It is the hope of the organization that all veterans groups will work together on matters of mutual interest.

A member of the Global War Veterans is compensated for the money he pays as a member by being afforded the opportunity to enjoy the fellowship of his fellow veterans. Local posts lend assistance to veterans wherever or whenever possible. It is hoped that within a few months that the organization can be recognized by the Veterans' Administration in order that service officers of the Global War Veterans can prosecute claims. At this time no present war veterans' organization has been so recognized. However, there are many services that an organization, such as the Global War Veterans can perform other than that of prosecuting claims. They can, for example, make out muster-out pay applications, as was the case a few months ago. Aid in keeping veterans in contact with suitable employment; cooperate with the various Government agencies; and in assisting a war-worn veteran back to the normal civilian life, etc.

The national commander, William L. Allan, served in the United States Army. Before entering the service Commander Allan practiced law in Memphis. Later, after his discharge, he resumed his practice of law, with offices in the Commerce Title Building in Memphis. On November 18, 1943, Commander Allan was approached by Thomas H.

Chunn, of Columbia, Tenn., and asked if he would serve as acting commander of a local Memphis post. Commander Allan accepted this challenge, along with Thestus F. Steadman, and proceeded to organize an effective local post. After several months of hard work of establishment, the post began to be known throughout the city. Commander Allan through his experience in organizing the local post, is well aware of the problems of a new acting commander. He has demonstrated his sincerity and unselfishness, and although he has not had an opportunity to serve overseas, the organization feels particularly grateful that he has taken on the job as national commander.

Rufus W. Fontenot, first national vice commander, served as director of internal revenue in the State of Louisiana before being asked to take a commission in the Army. He saw duty on General Eisenhower's staff with the rank of major, and stationed in England. During one of the bombing raids a near miss injured Major Fontenot, which resulted in his retirement in 1944. He is now serving with the Internal Revenue Department in Washington, D. C.

Earl F. Turner, national second vice commander, served with the Sea Bees in the United States Navy. He is one of the few men serving in this war to have a son on active duty beside him. Vice Commander Turner received a spinal fracture as a result of concussion while going ashore on Rendova Island in the Pacific. He was hospitalized for about a year and after his discharge became interested in a veterans organization for the veterans of this war and accepted the office of second national vice commander at the Memphis conference in 1944.

National Secretary, Thomas H. Chunn, was ordered to active duty with the First Cavalry at Fort Knox, Ky., July 10, 1940. He saw the birth of the armored forces as we know it today. When ordered to active duty the United States had no armored forces, but the First Cavalry Division had been mechanized, and a few months after his arrival the First Cavalry Regiment was activated into the First Armored Regiment. It was during the fall of 1940 that this newly formed armored force was being taken through its paces by the Army in order to prepare it for inevitable war, although at that time American citizens felt that the United States could remain out of the European conflict. The Army felt that a vigorous training program should be instituted with the least possible delay, and it was during this rigorous training that Secretary Chunn received a spinal injury while the First Armored Division was maneuvering in rough country near Fort Knox. Later he was placed in Walter Reed Hospital, where he spent about a year. During this time he partially recovered, and was later retired as a second lieutenant on December 16, 1941. After returning to Columbia, his original home, he became interested in seeing the veterans of this war have their own organization and offered his services as national secretary of the organization when it was founded September 8, 1943. Since that time he has been devoting his full time to the Global War Veterans.

National Treasurer Jacob W. Shapiro attended Vanderbilt University prior to his entrance into the Army. He also attended officers' candidate school and was commissioned a second lieutenant. He saw active duty with the armored forces. Later he was discharged because of asthma. After returning to his home in Columbia, Tenn., he was asked to serve as treasurer of the Global War Veterans. He accepted this thankless task graciously and has served in that capacity until the present time. Mr. Shapiro is professor of the science department of Columbia High School, Columbia, Tenn. He has devoted much of his time in assisting the national secretary to carry on the work of the Global War Veterans.

Tennessee Valley Compared to Missouri Valley

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an article from the National Union Farmer of March 1, 1945. The writer of the article answers a recent statement of Senator BUTLER, of Nebraska, to the effect that Nebraska does not need a development of the T. V. A. kind. The article is as follows:

United States Senator HUGH BUTLER, of Nebraska, told the Nebraska Reclamation Association recently that the Missouri Valley and Nebraska do not need a Missouri Valley Authority.

The Tennessee Valley Authority is all right in its place, he said, but "it was conceived for an admitted backward region, a region exploited by many private power companies * * * filled with economic distress * * * containing already a great Government project which was lying idle.

"None of these conditions fit the Missouri Valley today * * * it is not poverty-stricken * * * its people do not live in log cabins * * * its electric rates are not exorbitant."

Senator BUTLER thus substituted flattery for fact, to the hurt of his own people.

Comparing the central State of the Tennessee Valley, Tennessee, with Senator BUTLER'S own State of Nebraska, here are the facts:

COMPARISONS

In 1929 Tennessee manufactured $687,000,000 worth of goods; in 1939, $728,000,000, a gain of 6 percent.

In 1929 Nebraska manufactured $351,000,000 worth of goods; in 1939 goods worth $278,000,000, a loss of 23 percent.

In 1929 Tennessee had retail trade of $650,000,000; in 1939 it had $606,000,000. In 1929 Nebraska had retail trade of $600,000,000; by 1939 it had regained only $397,000,000, or two-thirds of that.

In 1929 the people of Tennessee had $906,000,000 in total income; in 1942 they had $1,455,000,000, an increase of $459,000,000.

In 1929 Nebraska people had a total income of $764,000,000; in 1942, of $965,000,000, an increase of $201,000,000.

In 1930 Tennessee had 2,616,000 people; in 1940 she had 2,915,000, an increase of nearly 300,000.

In 1930 Nebraska had 1,377,000 people; in 1940 she had 1,315,000, a loss of 62,000.

NEBRASKA LOST PEOPLE

This loss has continued. By 1943, according to United States Census Bureau estimates, Tennessee had 2,863,000 civilian people, a loss of little less than 2 percent since 1940. Nebraska had 1,198,000 civilians, a loss of 115,000, or nearly 10 percent—and a gross loss of 177,000 since 1930.

In 1929, Tennesseans reported $213,576,000 in personal income to the United States Government. In 1939, they reported $253,495,000, a gain of $40,000,000.

In 1929, Nebraskans reported $171,228,000 personal income to the United States. In 1939, they reported only $148,376,000, a loss of $23,000,000.

Tennesseans employed by industry made $132,000,000 in wages and salaries in 1929. In 1939 they made $137,000,000, a gain of $5,000,000.

In 1929 Nebraskans made $43,000,000 in wages and salaries in industry. In 1939 they made $28,000,000, a loss of $15,000,000.

In 1930, of all Tennessee's farms, 46 percent were run by tenants. In 1940, tenantry had declined to 40 percent.

In 1930, 47 percent of all Nebraska's farms were run by tenants—in a country so rich and pleasant that, according to Senator BUTLER, it needs no progress. By 1940, the proportion of tenantry in Nebraska had risen to 49 percent.

TENANCY DOWN, UP

In 1930 Tennessee had 113,500 tenant-operated farms; in 1940, only 99,735.

In 1940, Nebraska had 61,020 tenant-operated farms; in 1940, it had 63,947.

Now for a few comparisons which reveal some of the reasons why Nebraska economy is stagnating or declining, Tennessee's going ahead.

In 1929, there were 1,307,000,000 kilowatt-hours of electrical energy generated in Tennessee; in 1940 there were 2,453,000,000, a gain of nearly one and one-half times, or 150 percent.

In 1929 there were 575,000,000 kilowatt-hours of electricity generated in Nebraska; in 1940 there were 892,000,000, a gain of about 40 percent.

FARMS ELECTRIFIED

In 1934, 9,544 Nebraska farms were electrified. By 1944, 34,400 had electricity, a gain of 260 percent.

In 1934, 9,927 Tennessee farms had electric service, almost exactly the Nebraska number. But by 1944, 61,700 Tennessee farms were electrified, nearly twice the Nebraska number, and a gain of 534 percent.

RATES COMPARED

Now Senator BUTLER says electric rates in the Missouri Valley are not exorbitant. They may not be from his viewpoint, but in 1942 electric power cost the Missouri Valley's domestic consumers, over-all, an average of 4.11 cents per kilowatt-hour.

In 1942 electric power cost the people of the Tennessee Valley, in contrast, over-all, about 2 cents per kilowatt-hour.

In 1942, electric power cost the industrial and commercial consumers of Tennessee Valley about three-fourths of a cent per kilowatt-hour. In 1942, such power cost the industries and commercial enterprises of the Missouri Valley an average of 1.62 cents.

In 1942 the average cost in Nebraska was 3.86 cents per kilowatt-hour for domestic consumers of electricity, and 2.26 cents for commerce and industry, compared to the T. V. A. rates.

Footsteps on the Pathway to Enduring World Peace

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. DOYLE. Mr. Speaker, to live at peace is the natural way for man to live. Therefore, when man lives the natural way he must live at peace with his neighbors. Yesterday was Palm Sunday. Easter is but 6 days away. The heart of all Christendom will this week be anticipating the observation of the resurrection of the Prince of Peace. As this great legislative body recesses to reconvene after Easter but a few days before

the epochal international peace conference at San Francisco on April 25, I thought it appropriate to remind the Members of the House of certain footsteps on the pathway to peace, each of which footsteps has been taken by us under the leadership of our President.

Our great Nation has already planted its feet firmly in the sands of international cooperation in pathways to peace, by reason of our President, Franklin D. Roosevelt, having personally attended 12 international conferences during his 10 years of office as President of this great Nation. I asked our Congressional Library to supplement my own research in this matter, and for your information I herewith set out the international conferences which I designate as footsteps on the pathway to enduring world peace:

Date convened	Participants	Place	General subject
Dec. 1, 1936	Foreign Ministers of all the pan-American nations.	Buenos Aires	Discussed the strengthening of political, economic, military, and intellectual ties between the American nations.
Aug. 10, 1941	Roosevelt, Churchill	Atlantic Ocean aboard the *Augusta* and *Prince of Wales*.	Atlantic Charter.
Dec. 22, 1941	do	Washington, D. C.	Declaration of the United Nations.
June 18, 1942	do	do	Preparation of strategy for the invasion of north Africa.
Jan. 14, 1943	do	Casablanca, North Africa	Unconditional surrender.
May 11, 1943	do	Washington, D. C.	Talks probably dealt with the war in the Pacific.
Aug. 11, 1943	do	Quebec, Canada	Allied command and strategy.
Nov. 22, 1943	Roosevelt, Churchill, Chiang Kai-shek.	North Africa (announcement made from Cairo).	Pacific war strategy.
Nov. 28, 1943	Roosevelt, Churchill, Stalin.	Teheran, Iran	Allied command and strategy.
Dec. 4, 1943	Roosevelt, Churchill, M. Ismet Inonu.	Cairo, Egypt	Allied strategy with particular reference to British-Turkish alliance.
Sept. 11, 1944	Roosevelt, Churchill	Quebec, Canada	Allied command and strategy mainly concerning the Pacific.
Feb. 5, 1945	Roosevelt, Churchill, Stalin.	Yalta (in the Crimea)	Planned the defeat, occupation, and control of Germany; the Polish-Russian borders; and the policies regarding liberated Europe. Called a United Nations conference and arranged for regular consultation between the Foreign Secretaries of the Big Three.

The very listing of these 12 conferences, personally attended by our President, beginning December 1, 1936, compels us to the proposition that our Nation has now placed its feet firmly on the pathway to enduring world peace and cannot retrace its steps. Certainly, any patriotic American, thinking either in terms of our own national safety or of our world responsibility, desires that we do not turn our footsteps backward. In fact, every reason—geography, self-preservation, common sense, and duty to ourselves and humanity—these all compel us to perform our full share for an enduring world peace.

The life of my own late distinguished son was not more dear to me than the lives of hundreds of thousands of other sons of American parents. Yes; even the sons of our enemies who have died in this hellish, global war were also dear to their parents and to their nations. Wars must cease, and America must keep her feet planted firmly on the pathway to permanent peace.

As we, the Representatives in this great legislative House, return to our respective congressional districts this Eastertide, I challenge your thinking and action to the proposition that we shall disseminate sound, unselfish, constructive thinking, together with reverent and sincere prayer; that out of this peace conference on April 25 at San Francisco there shall evolve in the hearts and minds of all the leaders of all the great nations a good-faith determination and dedication to the proposition that there shall be established a firmly working world order sincerely dedicated to enduring world peace. Gentlemen, I have included in my remarks a reference to sincere and reverent prayer, because prayer is the universal language of all mankind. There can be no firm foundation for enduring peace which does not include a cementing of spiritual force and power. Therefore, I respectfully challenge you to the proposition that as we return to our respective districts we likewise challenge the thinking of our people therein, to the end that they shall renew and restrengthen their determination for world peace, so that as we return here to legislate after the Easter recess, we shall come with our hearts, minds, and spirits strengthened and firmly set in the pathway to enduring world peace. Let us, you and I, individually and as a group, do our utmost to the end that those who have already died in this global conflict shall not have died in vain, and that never again by reason of any lack on our part shall there be global war. This, gentlemen, requires 100-percent dedication on our part, individually and collectively.

Yes, gentlemen, nothing less than this very dedication to an enduring world peace at this Eastertide in connection with the San Francisco Conference, April 25, will be doing our duty by our Nation, by the world, and by our Creator. Our posterity must not be slain in wars by reason of what we fail to do here.

Certainly, never in modern history has a like opportunity existed to initiate a world cooperation for world peace, world understanding, and brotherhood. I am aware that the world machinery foundation at San Francisco will be essentially political, but this, gentlemen, is essentially the foundation of world cooperation in matters of trade, commerce, money, health and other international and related major problems. This world has been catapulted into one world neighborhood, and unless we think and act in such terms, the world civilization cannot survive. Already our Nation has made footsteps on the pathway to international cooperation in matters of trade, commerce, aviation, and money. International commissions and conferences have already mixed a great deal of international understanding, goodwill, and cooperation. These foundations will immediately be built upon after the San Francisco Conference. We have entered a new era. Without shackling or diminishing our own political or economic security we must and shall shoulder our world neighbors' political responsibilities. Nothing less than this permanent footstep in the established pathway to permanent peace by our Nation at San Francisco will endure. Nothing less than unanimity after the San Francisco Conference in support of it by the people of America will make an enduring world peace.

What's Below the Surface?

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. HAND. Mr. Speaker, I supported and voted for the May-Bailey bill when it was before the House, the nurse draft bill, and every measure which had been recommended in aid of the gallant and successful war effort carried on by our armed forces. I cannot, however, support the conference report, which substitutes a completely new bill for the bill heretofore passed by the House.

The bill substituted by the committee of conference was not, so far as I know, recommended by any military authority. The only argument that I have heard seriously advanced in its behalf is that it is better than nothing. It seems to me on the contrary, it is worse than anything that has been proposed to the Congress for some time.

There is not one word in the proposed legislation which will put one slacker to work. According to the pious preamble contained in section 2, every individual, which means men and women of every age, shall have an obligation to serve the Nation in an essential activity. There is nothing in the bill which enforces this provision. It is wholly ineffective for this purpose.

Instead, lurking beneath the cloak of alleged national service, we find a seizure of all industry and all labor, which hereafter will not be controlled by labor and management, which have done such a magnificent job in the prosecution of this war, but will be vested solely in the authority of one man. He may designate the number of workers by age, sex, or occupational qualifications, which may be employed in any area of the United States. All persons are prohibited from working, and workers are prohibited from accepting employment without the blessing of this one man. Whatever employer or employee violates any one of the multitudinous regulations, which are bound to be promulgated under this act,

is subjected to a fine of $10,000 or a year in jail, again because one man says so. Is it argued that the bill provides for an appeal? The appeal tribunals are created and regulated by this same one man.

There is no one living, regardless of his good will or great ability, to whom the United States should be surrendered lock, stock, and barrel.

This measure on the one hand is ineffective, and on the other hand is exceedingly dangerous. I have in the past, and will in the future, support to the limit the prosecution of this war; but under the guise of such support, I cannot be lured into such a drastic concentration of power vested in this or any other administration.

Investigation of Station KFI, Los Angeles, Calif.

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. PATTERSON. Mr. Speaker, there are some things which we in America must protect above all. The right to speak up at any time is one of our most treasured rights. This possession of free speech is still with us in great degree. I do not believe, therefore, that a public-communications facility should abandon, through bias, a policy of presenting all sides of all issues.

In the past year or so we have heard much about certain members of the radio broadcasting industry limiting the right of expression of several news analysts, even though the Federal Communications Commission did not find them objectionable, nor was there a lack of sponsors in these instances. Unless the public was much misinformed, these denials of broadcasting facilities were simply arbitrary decisions on the part of the management of the radio companies involved.

At the moment, we in southern California have a similar problem. It is a sudden, deliberate, and arbitrary denial of broadcasting facilities to commentators whose views did not coincide with those of a station's owner. Six news commentators were put off the air. Five sponsors of the products they advertised were financially affected. Thousands of radio listeners were denied the information they sought on this station.

This action is not, to my mind, serving the public interest. An arbitrary whim, allowing no one else but the station's owner to express his views, cannot be judged as freedom of speech.

It was with this in mind that I, together with my colleagues, drew up the following resolution, asking a reconsideration of its policy, by radio station KFI:

Whereas radio station KFI, in the city of Los Angeles, Calif., has suddenly and arbitrarily denied its facilities to a number of well-known and publicly favored radio news analysts; and

Whereas the public resentment displayed to the undersigned and the Federal Communications Commission has been voluminous; and

Whereas it is felt that this is censorship on a medium of public communication; be it therefore

Resolved, that the undersigned Members of the Congress of the United States urge and advise radio station KFI, that said public facility look into its present policy to determine if this policy is in the public interest.

Ellis E. Patterson, Ned R. Healy, George P. Miller, Franck R. Havenner, Jerry Voorhis, Gordon L. McDonough, Clyde Doyle, Chet Holifield, Helen Gahagan Douglas, John Phillips.

Hoover Says Political Rights Must Be Assured in Charter

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. GRANT of Indiana. Mr. Speaker, following is the second of a series of articles by Herbert Hoover, former President of the United States, on the coming conference at San Francisco:

HOOVER SAYS POLITICAL RIGHTS MUST BE ASSURED IN CHARTER

(By Herbert Hoover)

In the last article I stated that positive standards of political rights of nations and men should be incorporated at San Francisco if we are to mobilize the moral and spiritual forces of the world in the charter of peace.

Some of these principles and ideals are stated in the Declaration of Independence. Mr. Wilson stated part of them in his Fourteen Points. Part of them appear in the Atlantic Charter. Some of them are referred to in the Moscow Declaration and the Yalta Declaration. Many of them are thus accepted by the United Nations, but they are not impressed in any binding treaty. It would not seem unreasonable that they should be codified and specifically stated in the new charter of peace. If so, we may at least have a hope that the day may come when they will prevail.

PRINCIPLES CONDENSED

From these declarations we can condense some of these specific principles and standards of conduct between nations:

1. No aggrandizement or annexations, territorial or other.

2. No territorial changes that do not accord with the freely expressed wishes of the people concerned.

3. The restoration of sovereign rights and self-government to those who have been deprived of them.

4. The right of all peoples to choose their form of government by free and unfettered elections and secret ballot.

5. Equality in trade.

6. Freedom of the seas in peacetime.

7. Disarmament of aggressor nations.

8. Reduction in arms of all nations.

Of equal importance to these standards of conduct between nations, the history of the last 30 years cries out for the establishment of definite rights and protections to individual human beings. These principles have been eloquently proclaimed time and again as elements of peace by the leaders in this war. They include:

9. Protection from execution or imprisonment without fair trial.

10. Prohibitions against compulsory labor or slavery in any disguise.

11. Protections to minorities and backward peoples.

12. The freedom of the press and religion.

And why not again fly those great banners at the masthead of the charter?

13. Renunciation of war as an instrument of national policy.

14. The relations between nations must be founded upon honor and justice.

PROPOSAL OUTLINE

My proposal is therefore, first, that such fundamental principles and ideals shall be set out in the charter itself. The security council would then have standards of conduct upon which to make decisions. And of equal importance, if they be proclaimed to the world, at least public opinion can define, judge, and support. Without them the San Francisco charter will not be a chart of peace. It will be simply another transitory pact or a declaration.

My second proposal arises from the fact that the Dumbarton Oaks plan includes the creation of one world committee to promote economic welfare and another to promote social welfare. Therefore, I propose the creation of a third world committee to promote political rights. It is a more important function than the other two world-wide committees, great as they are.

If we are to delegate any part of our national sovereignty, we have a right to know exactly what the standards of conduct of other nations are to be. If the five great nations are to be above the law through this voting formula, it becomes all the more important that we definitely express the standards of conduct to which they are committed in relation to the smaller nations and ourselves.

Seven Salient Points

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. GRANT of Indiana. Mr. Speaker, the following article by Raymond Moley is a very able evaluation of the contribution that former President Herbert Hoover makes to the success of the San Francisco Conference by the series of articles now appearing over his name.

As Mr. Moley points out, the American delegates to that conference have been assured that they will be free agents, and "thus they are not bound by the stubborn Washington policy of refusing to use the great ability and rich experience of the former President."

Mr. Moley's comments follow:

SEVEN SALIENT POINTS

(By Raymond Moley)

Herbert Hoover's proposed seven additions to the Dumbarton Oaks plan should be one of the bases of the American delegation's contribution at San Francisco. Neither political differences nor the personal antagonism of the administration to Mr. Hoover himself should lead our delegation to ignore suggestions like this. The President assured Senator VANDENBERG that the delegates were to

be free agents, and thus they are not bound by the stubborn Washington policy of refusing to use the great ability and rich experience of the former President.

Two general principles dominate all seven of the Hoover proposals. The first is that peace plans already prepared or to be adopted at San Francisco should recognize that the ultimate building of peace should be evolutionary. Plans should provide room for change and growth. First steps should be cautious, but should be carefully aimed at a long-time goal. In short, the direction, not the length of the step, is important.

In line with this principle, Mr. Hoover proposes a periodic revision of treaties at intervals of, say, 10 years. Provision should also be made for progressive disarmament of the United Nations after the complete disarmament of the enemy has been assured. This would presumably be a slow but progressive process. The final Hoover point on this score is that peacemaking should be slow. The chief reason for this would be to permit the hot passions of war to die away before the shape of the world is fixed.

The second Hoover principle is that we should avoid putting too much weight on a general world organization, at least in the first years of its existence. Hence, his belief in regional organizations to provide means close to each nation to deal with matters which are not of world-wide concern. He would provide regional councils in each great area to deal with matters affecting the nations in that area. Asia, Europe, and the Western Hemisphere might be such regions.

Probably the most original of Mr. Hoover's proposals deals with the controversial issue of whether our delegate on the Security Council should be empowered to authorize the use of force without the approval of Congress. Mr. Hoover would not give such power to our representative but to the President. But he would bind the President by a majority of the Joint Senate and House Foreign Relations Committees on the question whether the final decision should be submitted to Congress. This, in effect, would provide a restraint on the President and at the same time would make prompt action possible in a crisis.

Mr. Hoover's suggestions embody the wisdom of experience.

The Manpower Bill

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. CANFIELD. Mr. Speaker, the powers granted Mr. Byrnes in this new manpower bill are amazing in an America dedicated to the preservation of liberty and most certainly reflect on that private enterprise and free labor that have outstripped the world in production in this war. Every contract, arrangement, undertaking, or relationship under which an individual undertakes to perform a service for another comes under the terms of this bill with its regimentation and jail penalties. I do not want to have Mr. Byrnes or anyone else ring this kind of curfew in the United States and like Representative McDONOUGH, of California, whose five sons are in our armed forces—one with Patton on the road to Berlin and another with our naval forces striking close to the Jap mainland—I do not believe our fighting men want their families back home thus strait-jacketed.

The War Imposes a "Hard" Peace

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor:

THE WAR IMPOSES A HARD PEACE

(By Roscoe Drummond)

WASHINGTON.—Take one German city, Cologne, where Allied troops are now in charge. Or, more accurately, take what is left of it. Cologne had a built-up area of 3,320 acres. Today only 1,320 acres of it remain. Fully 2,000 acres have been utterly destroyed because the Nazis have forced their victims to fight to the bitter end.

Cologne was bombed 167 times altogether. It suffered five times as much damage as Stalingrad. Devastated Cologne is like other German cities which have preceded it to substantial destruction. It is the pattern of destruction to come if Hitler is determined to pull all Germany down with him, as he is showing every sign of doing.

These facts have a political meaning as well as a military meaning. They mean that there is no longer any real argument among the Allies as to whether a hard peace or a soft peace should be imposed on Germany. The military people are certain that the issue is rapidly settling itself.

It is being settled not primarily on the drafting board of the peace-framers, but by the extent of devastation of Allied bombing which the Germans have brought upon their country.

In the condition of Germany today there is little that is like what prevailed in Germany toward the end of World War No. 1. Then, it is true, the inflow of raw materials was cut off by the blockade. Food supplies were running desperately low. Morale, which didn't have Hitler's gun at its back, was fast ebbing.

But there are differences which are more significant than the parallels. At the end of World War No. 1, Germany's industrial plant was left intact. Its ability to recover was largely unimpaired. Today its industrial plant is in the process of being bombed to bits. In his fanatical fight to gain a few more weeks or a few more months, Hitler is acting to throw his whole industrial plant into the fire. At the end of World War No. 1, German territory had hardly felt the singe of battle; the Allies hadn't laid a glove on the German homeland. They have today.

And there are additional reasons why Washington concludes that the issue of a soft versus a hard peace—even as a matter of degree—is now largely foreclosed by the events of the war. They are these:

The air people here, American and British alike, are reporting that the experts who have moved into the Rhineland in the wake of the ground forces are finding more rather than less damage from Allied bombing, and that almost uniformly air reconnaissance had underestimated the destruction. They are finding, according to the evidence reaching Washington, that the devastation is at least 15 percent greater than aerial photographs disclosed. This is true in all the German centers recently occupied and in consequence the experts are increasing their estimates of the damage done to cities still in Nazi hands.

Cologne has not even been the worst. Other cities have already been blasted harder; Berlin, Bremen, Hamburg, and the large industrial centers in the Ruhr have been subjected to comparable, perhaps even harder, bombing. Essen and Dortmund, there is reason to believe, will be found to be as badly off as Cologne when Allied troops move in. The Russians have razed much of the industrial areas of Silesia and are justly appropriating most of what remains.

The military fact is that as the Germans continue to resist, other already hard-hit cities and industrial centers will have to undergo the same but more sustained treatment. If Hitler thinks of defending Berlin to the last German in a prolonged siege, the Reich capital will be virtually wiped out. German manpower has been sapped. German transportation is sagging to the breaking point.

The political conclusion is that the war is already imposing many of the peace terms on the enemy. Of course, Germany can be rebuilt. But not for many years to come. Allied strength will never come from Germany's weakness, but American official opinion is taking the view that German weakness is going to be self-imposed—through the whirlwind she has brought upon herself—for, perhaps, a half century.

Division of Poland Held Mortal Sin

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. MADDEN. Mr. Speaker, the great majority of the people of Indiana's First Congressional District are distressed and disappointed over the Yalta decision regarding Poland. Americans of all nationalities are hoping that the San Francisco Conference will correct the wrong done our ally. Dr. Stojowski has correctly termed Poland's plight in the following statement:

Describing Poland as an outpost of western civilization and a bulwark of Christianity, Dr. Sigismond Stojowski, New York Polish-born pianist, expressed sadness in Denver today over the partitioning of Poland and termed it "The mortal sin of Europe."

Stojowski said Poland was not without its faults, but the division of Poland in the eighteenth century and again in recent days is a mortal sin and an evil that can only engender more evil.

"The world at large is too busy and too shallow-minded to see what is happening," said Stojowski, as he held out little hope that Dumbarton Oaks or the approaching United Nations conference in San Francisco can do anything to promote permanent world peace "if the diplomats perpetuate injustice and dispense with a moral foundation."

"At the risk of displeasing the Communists, who indorse that philosophy only because they don't know its practical applications when it is armed with physical force, the suppression of eastern Poland is like turning the powerful light of Christian civilization

away from the masses yet untutored and in need of Christ.

"As a citizen," Stojowski said, "I am deeply saddened that America's first commitment with what is called the United Nations should be participation in the mortal sin of Europe. In my opinion it is an act of political short-sightedness and moral inequity."

The Fighting One Hundred and Sixty-third

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, I am in receipt of a newspaper article carried in the Great Falls (Mont.) Tribune of March 23. This article portrays the outstanding achievements of the Forty-first Division in the Pacific, and especially the magnificent part performed by Montana's own One Hundred and Sixty-third. It is my privilege to know many of these boys, and their fighting record is on a par with any other outfit and speaks for itself.

The One Hundred and Sixty-third Infantry won the first Presidential citation awarded the Forty-first Division. It is an outfit that we of Montana and the Nation are proud of. We salute the regiment, and the division to which it belongs, for its valor. Our debt to those boys is one we will never forget.

However, Mr. Speaker, the following article states the case of the One Hundred and Sixty-third better than I can, and I ask unanimous consent that it may be included in the RECORD:

ONE HUNDRED AND SIXTY-THIRD REGIMENT FROM MONTANA PART OF OLDEST COMBAT OUTFIT

HELENA, March 22.—Somewhere on Mindanao today doughboys of Uncle Sam's oldest World War No 2 combat division in point of continuous overseas service—the Forty-first—will observe their third anniversary of struggle with the Japanese.

But the doughfoots probably will pass the anniversary as usual—scrapping. Tuesday night they repulsed Jap counterattacks above San Roque on the Philippine Island.

Since March 22, 1942, the division has blazed a trail of accomplishments across the South and Southwest Pacific, sharing honors with the Thirty-second Infantry as the United States Army's first combat outfits to go overseas. The Forty-first is comprised of men from Oregon, Washington, Idaho, and Montana. Men of Michigan and Wisconsin make up the Thirty-second.

Made up of National Guard units, the Forty-first has established itself as one of the outstanding divisions in the Pacific. The organization made the first amphibious landing in the Southwest Pacific when it crashed ashore at Salamaua, setting the pace for many such operations to follow.

SEVERAL CAMPAIGNS

The doughboys of the Northwest division fought through the Buna-Sanananda-Gona campaign; then later smashed the Japs at Aitape, Hollandia, Wakde, and Biak. Most recently they invaded Mindanao at Zamboanga; have proceeded briskly to gain the upper hand over a stubborn foe.

At Salamaua the Forty-first set a record for continuous fighting, slugging it out with the Nipponese for 76 days and nights without relief. When the Forty-first trudged away from that encounter they were acclaimed by their buddies as "the fightingest lugs in the Pacific."

The Forty-first has also been a godsend to Army Intelligence. It had taken more Jap prisoners, prior to the Leyte invasion, than any other division.

Its share of honors has come to the Forty-first. A total of 1,218 awards and decorations have been pinned on doughboys of the division, and three Presidential citations have been bestowed to outstrip every other outfit in the Pacific theater.

MOSTLY MONTANANS

The One Hundred and Sixty-third Infantry Regiment of the Forty-first Division is comprised almost wholly of Montanans, but of late has changed a little through combat replacements. A National Guard unit, the One Hundred and Sixty-third won prominence in the Battle of Sanananda which was fought from January 2 to 23, 1943. For this battle the One Hundred and Sixty-third received the first Presidential citation awarded the Forty-first Division. They killed 1,391 Japs and took 10 prisoners. A single battalion of the One Hundred and Sixty-third captured Wakde.

A perusal of the complement of the One Hundred and Sixty-third would touch practically every community in Montana, including:

Headquarters Company, Helena; band, Bozeman; medical detachment, Whitfish; Service Company, Bozeman; Headquarters Detachment of First Battalion, Whitehall; Companies A, B, C, and D of the First Battalion, Sidney, Poplar, Bozeman, Harlowton, and Whitehall, respectively; Headquarters Detachment, Second Battalion, Bainvile; Companies E, F, G, and H, Culbertson and Wolf Point, Kalispell, Glasgow, and Billings, respectively.

Headquarters Detachment, Third Battalion, Billings; Companies I, K, L, and M, Great Falls, Lewiston, Billings, and Chinook-Bainville-Harlem, respectively.

The One Hundred and Sixteenth Quartermaster Regiment was comprised of National Guard Reserves from Bozeman and Malta, while the One Hundred and Sixteenth Medical Regiment came from Great Falls. The Antitank Platoon in the One Hundred and Sixty-third Infantry Regiment was composed of Livingston residents.

Soviet Secret Police Direct Lublin Group—Miss Cardwell Says Poles Are Subjected to Mock Trials, Then Deported to Asia

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Ann Su Cardwell that appeared in the Detroit News of March 24, 1945:

SOVIET SECRET POLICE DIRECT LUBLIN GROUP—MISS CARDWELL SAYS POLES ARE SUBJECTED TO MOCK TRIALS, THEN DEPORTED TO ASIA

(By Ann Su Cardwell)

In late July 1944, the U. S. S. R. recognized the Lublin Committee of National Liberation, which arose at the call of the Polish patriots in Moscow. Six months later this group was replaced by a provisional government of Poland. To clothe this body with a semblance of decency and legality, mass meetings attended through compulsion and managed by the NKVD (Soviet secret police) were reported to have demanded such a government.

From the character of the men in that Government it is evident that the voice of the people was faked. Bierut, the president, has been a Soviet citizen since 1921; Osupka, the premier, was an employee of cooperative societies in pre-war Poland and had no experience whatever in international affairs or diplomacy—to mention only the leaders.

From Lublin and Moscow broadcasts, from American journalists, from reports of the Polish underground—admitted by Americans who know to be the world's most efficient—and from a few persons who have come out of Poland, it is possible to know what has been happening and what are the conditions of life in that country.

NKVD COLLECTS EVIDENCE

As Germans are driven out of a district the Polish Government, which is in all its aspects controlled by the NKVD, sends representatives to that area to set up local administration and, most important of all, organize tribunals to try immediately traitors, Fascists, and all collaborators.

Under these heads come members of the underground government and all who have given them the slightest assistance; the Polish Home Army, whose one occupation was opposition to the Germans; priests, professors, teachers, peasants who had been friendly to the home army and anybody who had cooperated with it in any way; professional people of all categories, and all others suspected of being enemies of the people, which means disapproving of Soviet ideology. NKVD agents themselves collect the evidence.

Arrests and mock trials result in execution or deportation to Asiatic Russia.

All reports show that what has happened and is happening in Poland since its so-called liberation is a repetition of Soviet procedure in eastern Poland in 1939–40. Trainloads of human cattle again are moving across Polish plains to unknown destinations. Tens of thousands have thus disappeared already. From the little town of Tarnow alone some 800 school children have been deported.

EVERYONE A SUSPECT

No one is above suspicion; during the first 2 months 60 employees of the ministry of the interior were arrested and disappeared. But the home army is first on the list. It has been declared Fascist, and its complete extermination demanded. Yet it was not loose guerrilla bands but an integral part of the Polish armed forces, a national army and so recognized by America and Britain.

In a Red army commander's order—August 24, 1944—that fell into Polish hands, General Bor is called the commander of the Nationalist Polish Army.

That Russian order, let me say in passing, concerned the strict prevention of any aid reaching the Poles in the Warsaw uprising, although during the latter part of July the Moscow radio had continually incited the Poles to rise and on July 30 called Warsaw to arms. August 1, the Red army being at the doors, the Polish home army, with the cooperation of the entire Warsaw population rose. The outlook was excellent.

Immediately Russian fighting on that sector ceased, Moscow and Lublin began accusing the Polish Government in exile and General Bor of ordering a premature uprising and collaboration with the Germans.

Red armies waited at the Vistula while the Germans made rubble of the Polish capital and killed or took prisoner its people. Calumination of General Bor, President Racz-

kiewicz, and General Sosnkowski, then commander in chief of the Polish Army, filled the Moscow and Lublin press and broadcasts. It happens that I know President Raczkiewicz and General Sosnkowski personally; men of the highest character, long public service, and a credit to any nation.

COMMUNISM IN SCHOOLS

Schools function but the teaching is Communist. Announcement is made that 8 universities are open in Lwow, where there was 1 university and 1 engineering school before the war. Libraries, laboratories, and shops were plundered, buildings damaged or destroyed, the 1939 population (320,000) is much reduced, professors and students killed or deported. The idea of 8 universities and 12 technical schools in that war-ravaged community is fantastic.

Rural reform is a major theme with the Lublin group. September 6, 1944, it confiscated without compensation all holdings larger than 125 acres and everything on them; likewise smaller properties belonging to "enemies of the people," some of these peasants, and divided them among the landless, measuring the allotments by stepping them off. Statistics given by the official in charge show an average of 4.5 acres to a man, in certain instances 1 acre.

Dissatisfaction is general among the recipients. In some districts peasants have refused to share in the parcelation, disapproving both of the method and the results.

Agrarian reform implies more than giving a man a few acres. In Poland it should mean parcelation with compensation, consolidation of scattered holdings, so prevalent in eastern Poland under the czars; credit, insurance, price stabilization, agricultural education, and a lot of other things.

ONE HUNDRED FIFTY-THREE THOUSAND AND SIX HUNDRED NEW HOMESTEADS

The pre-war Polish Government had made an excellent beginning, having created 153,600 new homesteads averaging 23 acres and enlarged 503,000 others by an average of 4.9 acres between 1919–38. Consolidation had produced 859,000 profitable holdings. A total of 225,000 acres had been used for model farms and scientific purposes. The work was continuing in 1939; but by 1938 only about 14 percent of Poland's arable land was in holdings exceeding 125 acres.

Great landowners played a wholly insignificant part in pre-war Poland, having practically disappeared from the political scene when Poland was restored in 1919. They did not control wealth. I recall that a school for sons of the aristocracy had to close in the 1930's because parents of the boys could not find cash to pay the very modest fees.

Stabilizing Manpower on the Home Front

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. RANDOPH. Mr. Speaker, earlier today I supported the compromise manpower bill. It is my hope that the Senate will reaffirm what the House has done in connection with the final passage of this legislation. There are some misguided persons, and some individuals who should know better, who attempt to characterize the legislation as anti-labor, or the enslavement of the worker. These expressions, Mr. Speaker, are not true.

It has been my purpose, in keeping with the following editorial from the New York Times, March 10, to support the requests of the President, and the leaders of our armed services, in this matter:

FAILURE IN THE SENATE

The long debate in the Senate over the adoption of a manpower bill has ended with the adoption of a weak and watery measure which will do none of the things that President Roosevelt, General Marshall and Admiral King have asked Congress to do in order to give adequate support to our fighting forces. This is not a work-or-fight bill. It is a duck-the-issue bill. If it should be enacted into law it would not add a single compulsion, either for the purpose of recruiting additional workers for war production or of keeping such workers on their jobs as long as there is a threatened scarcity of manpower to produce the weapons needed by our fighting men. The Senate bill is a surrender to inertia, to complacency and to political expediency. It is instructive to note that among those who voted for it are some of the Senators who have been doing the most and the loudest talking about all-out support for the war effort.

The present situation is not entirely hopeless. The Senate bill now goes to a conference committee representing both branches of Congress, which will have before it not only this weak-kneed thing but a genuine work-or-fight bill, the May-Bailey bill, which was passed by the House of Representatives on February 1. With the President again expressing yesterday his preference for the May-Bailey bill, it is possible that out of the work of the conference committee there will come an acceptable bill patterned more closely on the House version than on the Senate model. If so, something can be salvaged from the long delay of the last 5 weeks. If not, and if the Senate bill wins out, there will not be much point even in having a final vote on the whole business. For the Senate bill would be worse than useless, in the sense that it would merely deceive some people into believing that something effective had been done by Congress to answer the appeals of General Marshall and Admiral King.

In this case the best thing to do about manpower legislation would be to forget the whole thing until such time as the Senate is ready to make good the promise it gave when it helped to declare war on Germany and Japan—the promise which said, "To bring the conflict to a successful termination, all the resources of the country are hereby pledged by Congress."

Mr. Speaker, the manpower compromise, through the processes of give and take between the House and Senate, is now before us for final action. I believe the editorial from the Washington, D. C., Star of last evening is a fair statement of the situation. It follows:

MANPOWER COMPROMISE

Out of a very good House bill and a very poor Senate bill the conferees on manpower legislation have reached a compromise which ought to meet the need for the rest of the war.

Enforced by penalties applicable against both employers and employees guilty of willful violation of regulations to be issued by Director of War Mobilization Byrnes, the effect of the legislation will be to make manpower available in critical areas or plants engaged in production of vital war materials and to freeze employees in their present jobs.

Administration of the legislation presumably will be delegated by Mr. Byrnes to the War Manpower Commission. That administration may be difficult and, judging from past experience in, say, New Bedford, Mass., may cause a resentment from workers which in its practical effect could nullify the intent of the legislation.

But if approved, as it should be, by both Houses of Congress, this program will have a legal standing and a resulting prestige which manpower regulations based on Executive orders have never possessed. There is ample reason to believe that the American people will accept it, when they understand the necessity and the purpose, as they have accepted other reasonable wartime restrictions on their personal liberty of choice.

In that connection, the declaration of policy in the proposed compromise legislation is highly important. That declaration explains that in order "adequately to support the Army and maintain the Navy during the war and to carry into effect the provisions of the declaration of war pledging all the resources of the Nation to bring the conflict to a successful termination, every individual not in the armed forces shall have an obligation, when called upon, to serve the Nation in an activity essential to the war effort."

That declaration of policy is excellent. The only trouble with it is that it is about 3 years late. American production has been one of the marvels of the modern world. But it has been marred by the flaws in utilization of manpower and the waste from voluntarily idle manpower which in the main resulted from a failure, at the outset of this war, to strike some parallel between the obligation of the citizen drafted for service at the front and the obligation of the citizen who is exempt from military service for reasons of sex, age, physical condition, or the nature of his employment.

This legislation makes an attempt to establish that parallel, to the extent that is practicable at this stage of the war. Its compulsion, which will be used only when and where necessary, is not to be compared seriously to the compulsion under which men are fighting against the Germans and the Japanese. But it is suggested. And clothed with the dignity of a law of the land, it is reasonable to believe that the legislation will be accepted by our people in the realization of the pressing necessity not to weaken here at home until Germany's unconditional surrender in Europe has been duplicated by Japan.

Many Poles Vanish in Soviet Fastnesses—Officials Hunt Vainly for Thousands Deported From Red-Occupied Areas

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Ann Su Cardwell, that appeared in the Detroit News of March 23, 1945:

MANY POLES VANISH IN SOVIET FASTNESSES—OFFICIALS HUNT VAINLY FOR THOUSANDS DEPORTED FROM RED-OCCUPIED AREAS

(By Ann Su Cardwell)

A new chapter in international relations was opened when Germany attacked Russia in 1941. For Poland this move had special significance. In 1939–40 Soviet authorities had deported some 1,500,000 Polish citizens

to remote districts of the U. S. S. R. and, disregarding international law, had held elections in Soviet-occupied Poland, as a result of which all that area had been incorporated into the Soviet Republics of the Ukraine and White Russia.

These two actions on the part of the U. S. S. R. and all the attendant results might have been regarded by the Polish Government as sufficient cause for refusing to have anything to do with the Soviet Union until the Government of the latter manifested willingness to atone for past actions, even though Poles and Russians now were fighting a common enemy.

However, General Sikorski's government chose to be magnanimous and in July 1941 signed the Polish-Soviet pact establishing diplomatic relations, providing for the release of Poles held in the U. S. S. R. and the organization of a Polish army in that country.

Theoretically, the outlook seemed promising. Strained relations between Poland and Russia appeared to be easing. Britain and America were pleased and hailed unanimity of purpose—the defeat of Germany.

DEPORTEES SCATTERED

Hopes were not to be fulfilled. Ambassadors were accredited and received, but from the moment of the Polish officials' arrival in the U. S. S. R. obstacles cropped up in the path of everything they tried to do, as I know from conversations with persons who were a part of that establishment. The Polish Embassy was given no assistance in locating the deported, who had been scattered over north Russia, Siberia, and Kazakstan.

In consequence, no more than 620,000 of the deported were located by the Polish delegates. Of these, 271,323 reached Polish headquarters and only 140,000 had been permitted by the Soviet Government to leave Russia before diplomatic relations with the Polish Government were broken, bringing to an end all army recruiting and relief work by Polish Government agencies.

From the time of the Polish officials' arrival in the U. S. S. R. they had sought in vain to locate some 8,300 Polish officers known to have been Soviet prisoners; but Soviet authorities denied all knowledge of them. The Poles traced large numbers of these lost men to certain prisoner-of-war camps and traced their removal, but whether they could not discover. The disappearance of these thousands, plus other groups with them making a 10,000 total, remained a mystery.

In the spring of 1943 the Germans announced the discovery of mass graves in the Katyn Forest, and area they had occupied in the U. S. S. R. A medical commission investigated and issued a statement declaring that the bodies found were those of Polish officers interred not later than the spring of 1940. The date was determined from the condition of the bodies, the scrub birch growth on the graves and the innumerable letters on the murdered men. The number of bodies was estimated at approximately 10,000.

POLES SUPPORT UNITY

This statement is detailed and lengthy. Compared with it the later Soviet attempt to establish German guilt in the matter seems wholly ineffective.

Unwilling to jeopardize the unity among the United Nations, the Poles did nothing further, declaring their readiness to resume friendly relations whenever the Soviets were willing to meet the reasonable terms they asked, chief of which was permission to evacuate the families of Polish soldiers from the U. S. S. R. They would leave the boundary question until after the war.

Meanwhile, the Union of Polish Patriots, sponsored by the Soviets, had come into existence in Moscow, and a Polish army to fight beside the Red Army was being trained by Red Army officers.

HOME ARMY BACKS EXILES

After General Sikorski's tragic death in July 1943, Polish-Soviet relations underwent no change for nearly a year. Premier Mikolajczyk, Sikorski's successor, hoped that the Kremlin would be conciliatory and said and did nothing which might offend. The Polish underground regime loyally backed the London policy. Even when the Lublin Committee for the Liberation of Poland was set up and approved by Moscow, with the prospect of its being transformed into a Soviet-recognized Polish government, Mikolajczyk did not protest.

The Polish Premier's willingness to conciliate and compromise suited Britain and America, which did not want the perennial Polish problem coming into the limelight. They wanted to keep the Russians fighting Germans. Who knew what might happen if the Poles started to make trouble?

When Red armies reached the Polish-Soviet frontiers, driving the Germans back across Poland, the Polish Home Army—the underground—was ordered by the Polish Government to come out in the open in the areas where the Red armies appeared and cooperate with them. This order was obeyed, with the result that while home-army help was accepted as long as the battle was on, immediately thereafter officers were imprisoned, executed, or deported to the U. S. S. R. and their men given the choice of being incorporated into the Red Army or General Zymierski's Polish army.

These occurrences, with dates and names of places and officers and troops involved, were reported to the Polish Government. Yet it still was so desirous of doing nothing to spoil a possible rapprochement or embarrass Britain and America that it ordered a continuation of its policy of cooperation with Soviet troops.

Such was the situation up to the date of the Warsaw uprising of 1944.

Who Is Getting the Food?

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. GAMBLE. Mr. Speaker, under unanimous consent granted me on March 26 to extend my remarks in the CONGRESSIONAL RECORD, I include a very excellent editorial entitled "Who Is Getting the Food?" which appeared in the Reporter Dispatch published at White Plains, N. Y., on March 23, 1945:

WHO IS GETTING THE FOOD?

There is no more generous nation in all history than the United States of America. The record is voluminous with prompt and liberal contributions to any nation which has faced disaster either through war or violence of nature. Even Japan and Germany, our bitter enemies, have been included in the past in the list of recipients of heavy contributions from the American Red Cross as well as from official funds. Wherever ravages of war came or whenever nature struck with hurricane, volcanic eruptions, or floods, America has been quick in sympathetic response.

It is, therefore, in view of this magnificent record, no sense of penury or selfishness which drives many citizens today to ask for information on where goes the foodstuffs which this country is sending abroad. Figures are quoted from Washington to the general effect that 73 percent is being consumed here at home, 17 percent is being sent to our armed forces abroad, while the remainder is sent abroad either on lend-lease arrangements or as succor to those in liberated countries who might otherwise face starvation.

If those figures are correct, there is no reason, either of military secrecy or other cause, why they should not be broken down to show exactly how much food is now stored in the bins and reservoirs of our Allies, how much is being distributed monthly to nations unable to produce sufficient for the needs of their own peoples, and how much is being sent to nations outside the combat zones, and why. In other words, the American people who produce this food, who gladly ration themselves for sake of fairness, have a right to the full facts

If Washington has bungled anywhere that should be publicized, for only through such publicity will there be strong deterrent for future errors; if some of our allies have exaggerated their current needs and have accumulated surpluses which are not entirely essential, we have a right to that knowledge also. For, while America is generous, it wants knowledge of how generous it is—and it distinctly does not wish its generosity utilized as a political bargaining weapon by diplomacy. It is no secret that promises of food to other nations are being dangled over the heads of their emissaries as they approach the peace conference next month at San Francisco.

We want our soldiers and sailors to continue to be the best-fed men in uniform, with delicacies, even, which are denied the American homefront table; we want insofar as is necessary to aid in feeding our allies' armed services; and we are willing to aid any and all nations from starvation of their peoples.

But what America does not like is news of grain rotting in the fields while there are other reports of meat shortages because of lack of grain to feed the cattle. American housewives cannot understand why butter is piled high in their grocery shops but ration points continue so high they cannot afford to buy. It is difficult to understand why lard is now hard to get when it is reported 20,000,000 pounds were permitted to become rancid for lack of proper and prompt distribution facilities.

And, to make it specific, who is getting the steaks? The American family knows it is not; their sons and husbands and fathers write from their service posts that they are not; presumably this would not go to refugees when our own servicemen are denied.

Let's have the facts on the food shortages—all the facts. We are prepared to be extra generous; but we want to know that our food is not being wasted and that it is not being given away extravagantly. No "military secrecy" argument should offset our right to that knowledge.

Which Way Will America Choose?

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. VOORHIS of California. Mr. Speaker, at the request of the People's Lobby, I am inserting herewith with my

remarks a recent statement by that organization, entitled "Which Way Will America Choose?"

Mr. Benjamin C. Marsh, the executive secretary of the People's Lobby, has frequently appeared before congressional committees to testify cn various types of legislation.

WHICH WAY WILL AMERICA CHOOSE?

This war has proved that the United States of America has sufficient farms, experienced farmers, factories, techinicians, mechanics, and natural resources—such as coal, iron, and oil—to supply a good standard of living for all our people.

In spite of having 11,500,000 men and women in our armed forces, our production is such as to enable the majority of our people to enjoy the highest standard of living in the world—and still send goods to our allies, at a time when we are producing enormous quantities of guns, ships, airplanes and munitions.

This is not the result of "private enterprise." Many of our big manufacturing plants would not, or at any rate did not, convert from peace production to war production, until the Government guaranteed them prices to cover all costs, including a lot of wasteful advertising—costing the taxpayers billions of dollars.

Government-planned war production, which is much harder to plan than peace production, because submarines, shifts in the fighting, casualties and the enormous distances goods must be carried, upset calculations.

Government takes all the risks in war.

After this war will we go back to "one-third of our people ill-fed, ill-clad and ill-housed," as we did after World War No. 1?

If we do—World War No. 3 becomes almost inevitable.

America is the one great nation where nobody needs to "go short" if willing to work.

We could be the storehouse of democracy in peace, as we are the arsenal of democracy in war, if we do not return to the system under which we never produced and distributed enough to maintain peace.

From 1922 to 1936, when this war really started in Spain, our productive machine ran one-third short of maximum production, therefore our people ran short.

You can't eat your cake if you can't make it.

America has all the makings of all the cake Americans can eat—and enough to share some with the world.

Big corporations make more money out of scarcity, and the resulting high prices.

That is the reason American trusts and international cartels were started.

When the owners talked about "the law of supply and demand" they meant that they wanted a law that would keep down supply and increase demand—that would increase profits.

About 20 years ago, big corporations got less than half of all profits, now they get about two-thirds and would be willing to have 99½ percent.

Can we block their game?

Yes; if enough Americans like you protest.

Early in the war, the Government spent about $9,000,000,000 on plants to produce airplanes, machine tools, steel, aluminum, synthetic rubber, gasoline, magnesium, etc.

The Government now owns about half the machine tool factory facilities.

The Government owns a tenth of steel productive capacity—and enough of many other plants to control much important production.

The big corporations want these plants.

Private ownership of factories, mines, and other things essential to production gives the owners the right not to produce the things the people need—unless they get the profits they want.

This is a dangerous form of dictatorship.

It would be as bad policy to give up Government plants in peacetime as to give up our ships in war—if we want to ensure full production.

There is only one way to raise the living standard of all Americans.

That is to have full production of everything Americans need, and pay producers enough to buy the products of industry and farm, out of current income—not by general installment buying.

To get this American standard for all—the People's Lobby is trying to get the Government to keep the factories and plants it has built for war production—and convert all possible, to peace production.

Most of them could be converted in from one to six weeks.

They would be operated through public corporations—by production engineers and technicians who have proved that they know their business—as American mechanics have, by their war production records.

What will happen if we don't have all factories, plants, mines, and so on, run to meet America's needs?

The United States Department of Commerce reports that in 1946—

"Even with an average workweek 5 hours shorter than in 1940, there would be more unemployed than the 13,000,000 in 1932."

Aren't 13,000,000 unemployed 13,000,000 too many?

If you want to learn more of what to do to get, and keep, full employment—which American never has had in peace, but always could have, in peace as in war—

Write People's Lobby, Inc., rooms 307-308, 1410 H Street, NW., Washington, D. C.

The People's Lobby is trying to get the Government to adopt the principle of paying as large a part as practical of the costs of war by current taxation, based on ability to pay, exempting income essential to health and well-being, as determined by Government agencies.

It is also working for:

1. Government direction of farm production, and control of processing and distribution of farm products, during the war economy, with direct payments where needed to marginal farmers.

2. Effective Government control of prices and of quality of essential consumer goods.

3. The participation of the United States Government in international arrangements, such as the control of money, credit, trade, natural resources, and cartels.

The Excess-Profits Tax and Its Effect Upon the Expansion of Business

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. COFFEE. Mr. Speaker, Dr. Elgin Groseclose, eminent economist, distinguished author and novelist, is a resident of Washington, D. C. He and his charming wife are the parents of four lovely children. In their pleasant home a remarkable atmosphere of perfect home life prevails. Mrs. Groseclose, as well as her versatile husband, is outstanding in her own right. She is an expert on child welfare and devotes much of her time and talents to recreation and education for the underprivileged.

Dr. Groseclose was formerly a special agent of the United States Department of Commerce, and until recently an economist with the United States Treasury Department.

Not so long ago Dr. Groseclose was guest speaker at the luncheon meeting of the tax group held at the Union League Club in Philadelphia. Among notable guests present were Dr. E. S. Magaw, dean of the Temple University Law School, and A. T. Shuster, collector of internal revenue in Philadelphia. Dr. Groseclose was presented to the tax group by Leighton P. Stradley, who sponsors the tax group's meetings.

Dr. Groseclose's address was entitled "Expanding Business and the Excess Profits Tax." I have known Elgin and Louise Groseclose, his wife, for many years and entertain for him a profound admiration, sincere affection, and deep respect for his intelligence, integrity, and character.

For those concerned with excess-profits tax—and who is not, for everyone is directly or indirectly affected thereby—the speech hereinbefore will prove instructive and illuminating.

Under leave to extend my remarks in the RECORD, Mr. Speaker, I include herewith, by unanimous consent of my colleagues, Dr. Groseclose's address in full:

EXPANDING BUSINESS AND THE EXCESS-PROFITS TAX

When one is wandering lost in a jungle, it is a welcome sight to meet a fellow wanderer, even though the fellow wanderer is also lost and the only advantage of the meeting is to share a common misery. Being one of those who are lost in the maze of the excess-profits tax, and especially in that deepest jungle of it, section 722, I find it very cheering to be here with you today, who, I take it, are equally lost else you would not be here. I am indeed very appreciative of the kind invitation of your chairman, Mr. Stradley, to come here today, and I only hope that I shall not requite his kindness by leading you deeper into the jungle.

Wonderful things have happened in the field of tax administration in recent years that an economist may stand before a gathering of tax lawyers and accountants and discuss the administration and application of a tax. Tax administration, which for many years has embraced the two professions of law and accounting, has now gone, in a big way, into economics. During years in the Bureau of Internal Revenue, when I was the only economist on the pay roll, I often felt very lonely, among so many attorneys and accountants, for an economist in the service was something unheard of and contrary to the traditions of the fathers. Recently, however, the Bureau has recruited a substantial staff of economists to advise and assist in the determination of excess-profits tax.

To those who look for guidance through the wilderness of section 722, I offer the example of Moses, who led the children of Israel through the wilderness of Sinai.

I do not recall, in the story of these wanderings, that Moses engaged the services of cartographers, or surveyors, or scouts, or even economists. As I read the story, the children of Israel did not escape the wilderness until he had given them a moral law in place of the superstitions and witchcraft of Egypt, and if that story has any moral for today's situation, it is that we must look to morals and equity as our guide rather than legal procedures, accounting surveys, or economic formulae.

The essential problem in the excess profits tax, and, its conceptual counterpart, the

Contract Renegotiation Act, is the determination of what is a fair and just profit in the case of an individual business.

The principle of the excess-profits tax is to consecrate, to war purposes, earnings of a corporation that are in excess of the fair and just amount representing normal earnings of the taxpayer. The principle of the Contract Renegotiation Act is to limit the profits on a Government contract to a fair and just profit. Now, in the early days of economics, that is, prior to the eighteenth century, a great deal of thought was given by the economists to considerations of a fair price or a just price, which is in essence the problem of a fair and just profit. Saint Thomas Aquinas and other among the schoolmen, who were the economic thinkers of that day, wrote a great deal on the subject of a fair price. With them the question was essentially a moral question.

The thinking done by those scholars has long since been forgotten and is largely lost. With the advent of Adam Smith and the modern development of economic thought, the question of a just price, or a fair and just profit, was discarded as not belonging within the realm of economics. Prices and profits, it was proposed, were governed by iron-clad economic law functioning inexorably through such principles as the law of the market place, the law of supply and demand, the law of rent, and the like. This viewpoint has been generally accepted for the past 168 years. Except for certain tentative essays in the field, in the case of public utility regulation, in the determination of fair return, economists have given no thought to the question of the essentials of a fair price or a just price or a fair and just profit.

With the bursting upon us of wartime legislation, however, in the contract renegotiation statute, and the excess profits tax, interest has revived in this age-old problem, and renewed demand has been made upon thinkers for light. The solution to these problems must be approached from the viewpoint which the earlier scholars concluded long ago was the only sound viewpoint—that our economic system does not function through an iron wrought mechanism of economic law but in the moral atmosphere of human rights and obligations, and that the question is essentially one of morals and equities, rather than mathematical formulae.

Now, while these basic concepts have been absent from our formal processes of political and economic science, they are still vital in the conscience of the people, and are as a wind moving over the land. In relation to taxation, the essence of these concepts is a regard for equity, justice in the levy of tax, and the avoidance of discriminatory or arbitrary procedures.

The very complexities of our tax laws are testimony both to the validity and virility of these concepts, and recognition of a fact which economists, and I may add many lawyers and accountants, are prone to overlook, namely, that the administration of tax, as well as other phases of government, must be had with a high sensitivity to questions of equity. I, for one, do not look upon the complexities of our tax laws as evidence of bureaucratic incompetence and bungling nor as the result of the influence of privileged classes or the pressure of special interests upon our lawmakers. While it is conceded that a great deal is required in the way of simplification of the act and clarification of the regulations and better drafting of the statutes, the essential fact to be made clear is that these complexities are the result of the earnest efforts of our lawmakers and tax administration to provide for essential equity in the administration of a tax, to assure that the individual taxpayer is taxed not only in accordance with public policy and public necessities but in relation to his relative ability to pay and with reference to the special circumstances of his individual case. This is the view which, I submit, must be held both by the tax administration and by the taxpayer.

The relief section 722 of the Internal Revenue Code is undoubtedly the outstanding example illustrative both of the complexity of the tax determination process and of the sound underlying public policy of equity in taxation. Students of the history and experience of excess profits taxation, both here and abroad, and those who have followed the evolution of the excess profits tax in this country agree that the present statute, for all its apparent complexity, represents a great advance over the 1917 and 1918 acts, and is superior to the British and Canadian statutes, while the relief section 722 constitutes an earnest attempt to alleviate any inequity or discrimination which the act would, but for this section, impose.

The economic necessity for the tax is the need for financing the war with as little resort as possible to the inflationary process of borrowing; the political philosophy of the act is to obtain the needed funds with as little impairment as possible of the essential productive processes of the country; the moral necessity of section 722 is to achieve these objects without discriminatory or arbitrary treatment of taxpayers, and to levy the burden of war as equitably as possible among taxpayers. Certainly it is folly to wage a war to destroy tyranny abroad and root out systems of government that give in the scheme of things sole importance to the state and none to individuals and individual rights, and in the process to destroy at home those very fundamentals upon which a society of free men rests, namely, equity and justice before the law.

There is, it is charged, a disposition on the part of the tax administration to overlook these concepts of public policy written into the statute, and to attempt to reduce the administration of the tax to a formula, such as a set of tables of comparatives. It is, we must realize, a tremendous burden to process the thirty-thousand-odd applications filed under section 722 of the code, not to mention the multitude of tax returns and claims for tax equity. There is a great public outcry against bureaucratic red tape and complicated forms and the like. And there is also a public suspicion of large so-called tax refunds—I say so-called tax refunds since a refund is not a refund tax, but more correctly a repayment of money improperly paid or levied as tax. For these and other reasons the tendency may appear to regard the relief provisions of the excess-profits tax with distrust, and taxpayers who make application for relief under such provisions, with suspicion—in other words, a fear lest section 722 become what is called a gravy train or a Treasury raid. This fear may perhaps be discerned in the regulations and memoranda which have been issued, as well as in the attitude of the examining agents toward section 722 applications.

On the other hand, the fear may equally be expressed that taxpayers do not appreciate the sound values of public policy written into these provisions, and fail to do their part to conserve them, and that this failure may lead to an increase of public distrust and suspicion of the tax levying process, and a demand for more rigid formulae.

If taxpayers are to preserve the great benefits of a tax policy directed to the cure of inequities in a general provision, and maintain public respect of tax agencies, they must likewise approach the problems posed in the excess-profits tax with a sense of their own public responsibilities and trusteeship. They have excellent opportunities to do so. The act sets forth a formula for the computation of the excess-profits tax, but it also provides, in section 722, that where such formula results in an excessive or discriminatory tax, the taxpayer may make application for an adjusted determination. In such applications, the taxpayer is required to show what is, in essence, a fair and just amount of tax. In the 1917 and 1918 acts, the taxpayer had no such privilege. The determination was made by the Commissioner of Internal Revenue. Taxpayers today, therefore, share, as never before, in the tax-administration process. And sharing, they accept certain responsibilities. Applications for relief should therefore be filed in good faith. Claims made should be properly substantiated by a showing of such economic evidence as is available persuasive to a reasonable mind.

Turning now to certain specific aspects of section 722, since it is obviously impossible in the time available to go into a comprehensive discussion of the section, I would like to draw attention to one or two portions of the section which should receive corrective attention either through legislation or regulation.

The first of these is the provision of section 722 of the act prohibiting, with certain exceptions, reference to events or conditions occurring or existing after December 31, 1939. The excess-profits tax, to repeat what you already know, is a confiscatory tax levied upon all earnings in excess of normal earnings, which normal earnings are determined either by reference to a percentage of the average invested capital as defined by the act or the average earnings of the taxpayer for a 4-year base period, roughly the years 1936 through 1939. In the case of most taxpayers the average-earnings method is applicable.

The purpose of section 722 is to afford relief in those cases in which the excess-profits tax computed by the statutory formula results in an excessive and discriminatory tax. In making application for relief, the taxpayer must establish that the tax as computed results in an excessive and discriminatory tax and must also establish, in lieu of the normal earnings as computed by the formula, what would be in the circumstances a fair and just amount representing normal earnings.

Now, it is obvious that in the case of any business, what are normal earnings is something highly conceptual, and that in order to bring this out of the realm of guesswork and theorizing, and to arrive at a figure which may be said to represent normal earnings, all the circumstances that would have any bearing, or shed any light, or offer any guide, should be considered and weighed. This is particularly true in the case of taxpayers who started in business, or made changes in management, capacities, or character of business, during the base-period years. The section, however, prohibits the taxpayer, in presenting such showing, from considering events or conditions affecting the taxpayer, the industry of which it is a member or taxpayers generally occurring or existing after December 31, 1939. Some exceptions are allowed to this rule. The theory behind this prohibition is that all events subsequent to December 31, 1939, are to be regarded as abnormal, affected by war economy, and in consequence defective as a measure of normal earnings.

The Bureau of Internal Revenue takes a strict view toward this prohibition, and no quarrel can properly be taken with the Bureau's attitude since it is plainly written in the statute. The error of many taxpayers, it may be stated, has been to introduce into their relief applications data and statistics derived from business operations subsequent to the date line. "Peeping beyond the curtain" is the phrase that has grown up to characterize the use of post-1939 data.

The problem is especially complicated because of the 2-year push-back provision. This provision, as you know, allows the taxpayer, in presenting his determination, to consider what level of earnings the business would have reached had the changes in the character of the business—which have invalidated the statutory formula as a measure of normal earnings—had the changes been made 2 years earlier than they actually were.

The problem here becomes one of determining, say in the case of a business that brought out a new product in 1939, what level of earnings would have been reached had the product been introduced in 1937. But in doing so the taxpayer is prohibited from any use of sales or earnings data subsequent to December 31, 1939. Especially difficult is the case of a manufacturer who introduced a completely new article, for which no previous market existed. Thousands of such articles, patented articles often, new to the public, for which an instantaneous market may exist, or for which markets have to be developed slowly, are constantly being introduced. Many of these products fall in industries which experienced little or no stimulation from the war until well after 2 years beyond the close of the base period.

Yet in all these cases, the taxpayer is precluded from any reference to data for periods after December 31, 1939.

From the standpoint of the economist, the prohibition is not an insuperable obstacle to the determination of normal earnings As a task in applied economics, it is frequently simpler to operate in the actual statistical climate of the base period than in the statistical climate of the war period, to project a determination of the effect of business changes upon the base of pre-1940 events than it is to attempt to separate from post-1939 data the effects of the war and the normal effects of business changes. Certain procedures are available to the economist by which reasonable and, in many cases, adequate answers can be given to the questions—procedures that have long been in use in practical business affairs in estimating the probable results of a course of action, the reasonable expectancy of return investment, and the like.

Nevertheless, from the standpoint of equity, the prohibition against use of post-1939 data appears to be onerous and in many cases discriminatory. The framers of the section should, I suggest, be more familiar with that admirable treatise on the law of evidence by Wigmore. In equity, no fact possessing authentic evidentiary value should be excluded from the record and to rule out arbitrarily certain classes of evidence is to usurp by legislation what is essentially a judicial function. It should rest with the judicial agencies of the bureau and with The Tax Court, following established principles of evidence, to determine what is and what is not admissible evidence bearing upon the determination of normal earnings in the case of a particular taxpayer.

Not only, however, does this provision appear incorrect and inequitable in principle but because of the exceptions, the application of the provision is full of confusion which is only heightened by the relative regulations. Regulations 112, paragraph 30.722-3 (d) state:

"Events * * * occurring after December 31, 1939, may not be taken into account in determining the constructive average base period net income of the taxpayer which during the base period has * * * changed the character of its business."

Section 722 allows an exception, however. After providing that no regard shall be had to events occurring after December 31, 1939, section 722 (a) adds:

"Except that, in the cases described in the last sentence of section 722 (b) (4) * * *, regard shall be had to the change in character of the business under section 722 (b) (4) * * * to the extent necessary to establish the normal earnings to be used as the constructive average base period net income."

The Regulations, at paragraph 30,722-3 (d) (5), discussing a change in the character of the business deemed to exist on December 31, 1939, that is, cases of changes made after December 31, 1939, as a result of commitments made prior to January 1, 1940, state:

"To the extent necessary to determine the nature of the change in capacity for production or operation, and the extent to which such change has been reflected in the taxpayer's business, regard may be had to facts existing after December 31, 1939. Although no regard shall be had to actual earnings after December 31, 1939, as indicative of the amount of normal earnings attributable to the change, ratios existing between such earnings and earnings from other operations of the taxpayer or of similar taxpayers or an industry of which the taxpayer is a member may be taken into account."

Now, the effect of this is somewhat paradoxical, from the viewpoint of evidence. If a change has been consummated on December 31, 1939, no regard may be had to any data, statistical or otherwise, that dates later than December 31, 1939; but if the change has been consummated on January 1, 1940, or thereafter, a large area of statistical and other data is opened for examination. This appears to give an advantage to those businesses which were fortunate enough not to have consummated changes until after the base period. The cure to this inconsistency is to concede that no data or evidence should be excluded from the record that offers valid indications as to the normal earnings level of a business entitled to relief. Such broadening of the provision would in no way impair the general principle laid down, that the normal earnings level attributable to business changes shall be determined on the assumption of the normality of the base period as an index of normal earnings.

A further aspect of the excess-profits tax which would seem to require legislative correction relates to cases of taxpayers whose businesses were expanding or in the process of change when the war broke out. Two provisions are applicable to such taxpayers. The first is the growth formula of section 713 (f). Section 713 (f) was designed to offer an alternative computation of the excess-profits tax credit in the case of taxpayers whose earnings were expanding, and which in the latter half of the base period exceeded those of the first half. Under this provision, however, the maximum excess-profits tax credit allowable may not exceed that based upon the highest actual net income attained in any year of the base period; that is, the highest earnings attained in the years 1936 through 1939.

The second provision relating to expanding businesses is the relief section 722. Under this section it is provided that where changes have been made in the character of a business such as to qualify the taxpayer for relief under this section, the constructive earnings may be determined by an assumption that the changes were made 2 years before they actually occurred. In the case of the growing business, the effect of this provision is to allow a 2-year projection of normal earnings computed with reference to the effect of the particular changes made.

The purpose of the act is to tax war profits, or excess profits, at one rate and normal profits at another rate. It is obvious that, in the case of a growing or expanding business, normal profits in 1944 would not coincide with normal profits in 1942 or 1939 In the case of many products new in the market, a longer than 2-year period is necessary in order to establish the product on the market at a normal earning level. In many instances the cumulative effects resulting from the introduction of a new product, or of changes in management, or sales methods, and the like, do not manifest themselves in earnings until some years later.

It is a well-known principle of financial management that when an enterprise embarks upon the marketing of a new product or service, or makes large capital investments in the expansion of facilities in anticipation of the development of new markets, financial reserves should be available to meet a possible series of deficits before earnings can be established. The principal cause of business failures in this country, as is well known, is lack of working capital and this lack is especially apparent in the case of businesses embarking in new fields of enterprise. The 2-year limitation upon a consideration of the effects of a given change in the business seems to be unduly restrictive in the determination of a normal earning level for a particular taxpayer qualifying under this provision of the relief section.

Moreover, let us consider the case of a taxpayer that has started a new business during the base period, say a chemical process of cleaning steam boiler tubes. The present method of cleaning boiler tubes is mechanical: that of pushing a vibrator through the tubes which knocks off the scales. This mechanical method takes as long as 2 weeks in the case of a large steam-generating plant, requires the removal of thousands of boiler-tube heads, and is sometimes dangerous to life and limb. The chemical cleanser does the same work in a day, at much less expense, and avoids the loss of idle boiler time. The market for the cleanser is limited only by the number of steam-boiler installations. It may reasonably be expected that within a few years the method will completely supplant the old method.

Now, the development of the normal market for this process is retarded by the war, because of the diversion of chemicals to war uses, and the inability to organize the technical and sales personnel necessary to place the product on the market. Nevertheless, its sales, despite these difficulties, continue to expand. Under normal peacetime conditions, an equal, if not greater, expansion would be a reasonable assumption. Under such assumption, that is, had there been no war and no war economy, sales would have grown during the years 1939 through 1943 in the order, say, of 50, 100, 150, 200, 250.

Yet, because of the limitation of the 2-year prohibition, we must chop off this projection of growth at 150.

Let us assume that because of the large installations of marine boilers the business of the company actually did grow in the following order: 50, 100, 200, 300, 400, but this growth has not occurred in its normal market area of steam generators. We concede, for purposes of illustration, that at the end of the fourth year the earnings are in excess of what would have normally been realized, by 400 over 250. But because of the limitation of the 2-year provision, all earnings above 150 are taxable at the steep excess-profits rates. The effect is to tax at the confiscatory excess-profits rate earnings that would normally be taxable at the normal tax rate. The net result, of course, is to add to the retardation of the normal expansion of the business, resulting from the company's inability to develop its normal market, the further retardation caused by taking away profits which under normal conditions would have been available for market development, and which should be available for post-war market development.

It is a reasonable view, therefore, that in the determination of the normal level of earnings, for excess-profits tax, recognition should be had to the normal dynamics of business, and that the normal earnings of a particular taxpayer be determined with reference to what would have been normal for that taxpayer in the taxable year, under conditions prevailing during a period of normal economy.

Now may I refer for a moment to the interpretation of one vexatious provision of the section, that is, the manner of reconstructing constructive average base period net income in the case of taxpayers which have made changes in the character of the business, and to which the 2-year push-back provision is

applicable. I have discussed this in some detail in an article in the September 1944, issue of the Temple Law Quarterly, and I will here only outline the problem.

Let me state the problem by illustration. Let us assume that a taxpayer has earnings during the base period of the following order: 10, 10, 10, and 15. In 1938 new management had been installed as a result of which the earnings rose from 10 to 15. Let us assume that under normal operations the earnings in the next 2 years would have been 20 and 25. Now, I have seen it stated in several places that the constructive average base period net income is to be determined simply by pushing back this series of earnings with results as follows: 10, 15, 20, and 25, with a resultant average of 17.50.

I do not see how this procedure can be justified under a plain reading of the act and the regulations. The act refers to the "earnings level which it (the business) would have reached" if the taxpayer had made the change 2 years earlier. Now 17.50 does not represent an earnings level attained as a result of the change, which we have assumed to be 25. Furthermore, the regulations, paragraph 30.722–3 (d) state:

"If the business of the taxpayer is considered to have been commenced or changed in character 2 years prior to such event, normal earnings for the entire base period shall be based upon the level of normal operations, and upon the character, nature, and size of the business which would have been developed by the end of the base period if the business had been commenced or changed at such earlier date."

The remaining question is that of adjusting this level of normal earnings, that is, 25, to the relative levels which would have been attained in the several years of the base period under the general business conditions prevailing in those years.

One further comment which I would like to make relates to the administration of the section. Under the code, the determination of the adjusted tax or the amount of relief rests with the Commissioner of Internal Revenue, from whose findings appeal may be had to the Tax Court, but to no other court. Now, since the commissioner's determinations are subject to appeal, such determinations should rest upon facts that can be placed in the record.

There is an observable tendency upon the part of the bureau to make determinations of the normal earnings of an applicant taxpayer by reference to a set of comparatives, following the procedures of the 1917 and 1918 acts. In the bureau files are business records of a host of taxpayers, which records are not available to the applicant taxpayer. The bureau draws out of these records a list of taxpayers which it regards as comparable in character to the applicant taxpayer, averages their earnings, and announces this to the applicant as the amount it will allow. Now, comparatives, as anyone who has worked in this field knows, are quite tricky. Comparability must rest upon a variety of factors, including not only size and earnings ratios, but comparability of management, product, operating methods, and the like. Two farmers growing wheat, a standard product on adjoining fields, may be completely incomparable as relates to their normal earnings.

If the taxpayer asks to examine the comparatives used, he is told, and correctly, that the data are confidential and cannot be revealed. Possibly, if the taxpayer takes the case to the Tax Court, the bureau may have to disclose, for the record, the bases of its determination, and this would be awkward, for the data are still confidential under law. In such cases, probably, the bureau would be compelled to shift its ground of defense.

But the great majority of taxpayers are reluctant to fight a case so far. Many taxpayers, those having small claims, are deterred from seeking such equity by the expenses of litigation. Now, justice should be cheap, not expensive. A great many people, and I am among them, believe that the economic salvation of this country rests upon the restoration of a balance between big business and small business, and departments of this Government are engaged today in consideration of ways and means of stimulating and preserving the small business interests of this country. The one Government agency, however, that touches all businesses, great and small, is the tax administration. It is highly desirable therefore that in this field every effort should be made to assure the small taxpayer the same opportunities for equitable adjustment of excess-profits tax as are enjoyed by the largest taxpayer.

I have in mind a small manufacturer in the Middle West. He had started in business during the base period and had not reached his normal level of operations by the end of 1939. He had an unusual product in his field. The taxpayer sought relief. The amount was small. The field office of the Bureau of Internal Revenue made an examination of its files, found a list of manufacturers which it regarded as comparable, and announced a figure. The attorney handling the case wrote me as follows:

"The Government, of course, has access to the records of earnings of comparable companies and we do not, and have so far been unsuccessful in obtaining such data. The Government is unwilling to disclose to us the names of the companies on the operations of which its figures are based and we do not believe that the companies really are comparable, either because they do not make the same type of product or because their volume is probably less if they are engaged in the same type of business."

He goes on to say:

"I realize that there is a possibility that we may be able to subpena records of other companies but the client is desirous of avoiding litigation. We have now come to the conclusion that the chances of obtaining any information from any comparable competitors is so remote that we have concluded to settle the case."

I have in mind also the recent Bureau release giving a list of 34 industries as to which it has made a tentative determination that such industries were not depressed in the base period. I made request of the Bureau for the data or information, or a summary thereof, upon which such tentative determination was made with respect to a certain industry. The reply which I received to this request stated: "It is not feasible to make available to the public particular data or other information which were considered in making the tentative determination for a specified industrial group."

Now, in the mimeograph, the Bureau, specifically admitted the tentative and inconclusive character of these determinations, and even without this disclaimer any tyro in economics could point out numerous particulars in which the determination is defective.

Now, may I ask what purpose is served first, by issuing the release, and second, by refusing to disclose the bases upon which these tentative determinations were made? The only answer I can see is to deter taxpayers from submitting applications for relief. But what taxpayers will be so deterred? Certainly not the large taxpayers able to engage statisticians to test the determinations. It will be the small taxpayers, with only minor claims for adjustment. The total sums claimed by these small taxpayers can under no hypothesis amount to a Treasury raid. But the processing of such small claims is of course burdensome administratively, and presumably it is in the Bureau's interest to limit its work as much as possible. I fail, however, to see good grounds in the general public interest in what actually amounts to discrimination against the small taxpayer.

Such a policy, of discouraging the little fellow from seeking equity, and, if he dares apply, of treating him arbitrarily, of announcing a determination, but declining to disclose the basis of fact upon which such determination is made, is the essence of bureaucratic tyranny, and governmental dictatorship, repugnant not only to the principle of the excess-profits tax, as laid down by Congress, but contrary to the whole spirit of our institutions, our American concepts of equity and fair dealing, and the well-founded procedures of our administrative and judicial processes.

A question and answer period followed Dr. Groseclose's address. Mr. Stradley announced that next week's speaker would be Edward N. Polisher, member of the Philadelphia bar, author of Estate Planning and Estate Tax Saving, lecturer, and member of the faculty at Dickinson Law School. The subject of Mr. Polisher's address will be Family Partnership Under the Income Tax Law.

The C. E. D. on Bretton Woods

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD I include herewith an editorial which appeared in the New York Times issue of Sunday, March 25, 1945, on the statement issued by the Committee for Economic Development on the Bretton Woods proposals:

THE C. E. D. ON BRETTON WOODS

The research committee of the group of outstanding businessmen known as the Committee for Economic Development has published a statement on the Bretton Woods proposals. This statement reads like a compromise arrived at in order to obtain agreement from all 14 members of the committee. As often happens with such compromises, the position taken lacks clarity and embodies some inner contradictions.

The committee fears, quite properly, that as the agreements stand at present the principal demands upon the international monetary fund will come, not from temporary imbalances of trade, but from the very serious distortions in production and international trade relations caused by the war. It fears that great pressure will be put upon the management of the fund to make what will be in effect long-term loans, to do it whether these loans are likely to be repaid or not, and to do it without having the power even to lay down the conditions under which the loans are made. It suggests, therefore, that establishment of the fund be postponed unless the international bank is given the express power, which it does not have at present, to make loans for long-term and short-term stabilization purposes. If the bank were granted the power, the committee argues, the managers of the fund would be relieved of this pressure, because they could then refer to the bank those transactions for which the fund is not intended, and the bank would be able to require a country to correct unsound policies in return for the loan.

The committee is right in wishing to give the bank this power to make stabilization loans. The American Bankers Association also made this recommendation. But the A. B. A. report, as well as that of the New York State Bankers Association, pointed out that if the proposed international bank were granted this power, the fund would then become unnecessary. It is difficult to understand why the C. E. D. committee recommends retaining the fund, particularly as it is now drawn up, once the international bank has been granted this new power. There would be no important function left for the fund to perform, and it is not drawn up to perform its proposed functions well.

The first requirement of any International monetary fund, if it is to be adopted, is that it should be drawn up on the same basic principle as the proposed International Bank. The managers of the fund should retain the right of discretion at all times. They should be able to insist, whenever they think it necessary, that a nation having access to the resources of the fund should put and keep its own financial house in order—that it should, for example, refrain from discriminatory trade practices, or the imposition of unreasonable barriers on trade, that it stop an inflationary expansion of bank credit or the printing of paper money, or take steps to balance its budget. Unless the fund has the clear authority to insist upon such conditions in return for its loans, its resources will be dissipated to no purpose or to harmful purposes, and it will never accomplish the objects that its advocates hope for from it.

The C. E. D. committee itself lays it down as one of five basic principles that "loans should be truly loans; currency transactions should be currency transactions; and gifts should be gifts. Lack of clarity as between intent and method at this point will produce * * * misunderstanding and bitterness between countries. If a gift cannot be made as a gift, it should not mask behind the facade of a loan." On this principle alone the fund as it is at present drawn is unsatisfactory. But if the proposed International Bank is granted the power to make discretionary long-term or short-term stabilization loans, as the C. E. D. committee recommends, the fund will not be necessary.

A Tribute to Hon. Robert F. Jones, of Ohio

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. JENKINS. Mr. Speaker, I am glad under a privilege to extend my remarks to have printed in the RECORD a newspaper item taken from the Cincinnati Enquirer and written by Charles M. Dean, one of Ohio's most respected newspapermen:

APPROPRIATIONS SLICED BY OHIOAN IN HOUSE COMMITTEE ON POINT OF ORDER RULE—LIMA REPRESENTATIVE SAYS PRESENT GOVERNMENT GROWS LIKE TOPSY

(By Charles M. Dean)

WASHINGTON.—Amid the debate that raged on Capitol Hill concerning manpower, nurses' draft, and the meat and food situation, the House of Representatives worked on the $259,000,000 appropriation bill for Commerce, State, and Justice Departments. It was evident the cost of government was going up all through the procedure. The appropriation for these departments for the fiscal year ending June 30, 1946, is $37,356,808 higher than it was for the fiscal year to end June 30, 1945.

In the House Appropriations Committee, which consists of 25 Democrats and 18 Republicans, various appropriation bills are divided among subcommittees. Representative ROBERT F. JONES, Lima, Ohio, is a member of the subcommittee which considered the current bill. JONES is a Republican and the Republicans have not enough votes to reduce appropriations by amendments. But the Ohioan resorted to a new form of attack. By raising points of order which contended that appropriations were being made in violation of existing laws, he was able to knock several million dollars off the bill. His points of order also eliminated a number of provisions for the transfer of funds because this required legislation in an appropriation bill which House rules do not permit.

JONES and a number of other Congressmen who enlisted in his cause also staged what they called a "keep 'em honest" campaign by eliminating indefinite appropriations and requiring department heads to proceed under the statute which requires receiving bids in making certain purchases. The Ohioan was well satisfied with his work even though he failed to send the bill back to the committee. Certain of the appropriations knocked out may be put back in the Senate, but JONES is convinced that all those who watched the record agreed with his statement that the Government "grows like topsy."

One of the many things that makes it difficult to fight an appropriation bill is that the testimony heard on the appropriation is received in executive sessions of the subcommittee. This testimony in printed form is released when the bill reaches the floor of the House. It is very interesting reading, but it is not likely that any Congressmen read all of the 1,170 pages in four pamphlets of closely-printed matter. Even the printed records of the hearings do not tell the full story in war times, as one frequently comes to a line "off the record." Many Members of Congress agree if there was time to study the record of the appropriation hearings the cost of government might be reduced.

All through the record it is apparent that JONES's contention that the Government "grows like Topsy" is correct. For instance, in the State Department hearings, Representative KARL STEFAN, Nebraska, brought out the fact that in 1933 the department required an appropriation of $16,000,000. The current appropriation for this Department is $78,000,000. In the office of the Secretary there were 858 employees in 1932. Today there are 4,141. In the Foreign Service that year there were only 3,991 persons. Now there are 6,277.

The committee went into a great deal of detail. Archibald MacLeish, Assistant Secretary of State for Public and Cultural Relations, was asked for a complete report on his policy. MacLeish told the committee that cultural cooperation was a most important feature of his work. He said the investment in this work is one that will pay great dividends. "The Germans learned long ago that trade follows the book," he said. "The Germans provided textbooks, the technical and scientific books for all of Europe, and the result was that all Europe bought its laboratory, scientific apparatus, and machinery in Germany."

MacLeish said we have a "golden opportunity" now in the liberated areas of Europe. These people, he said, need the things that we are able to export to them. "We have the printed matter," he said, "the scientific materials, the laboratory materials to help them help themselves." He promised that if we do help them it will increase good will, promote understanding between nations, and produce an increase in trade.

The committee even went into an item of $10,000 needed as traveling expenses for lecturers. The State Department produced biographies of 27 persons who have traveled throughout this country to talk on Dumbarton Oaks. In this list was Charles P. Taft, Cincinnati, with most of his activities since he was born September 20, 1897.

Incidentally, Charles P. Taft was one of the State Department witnesses. He needed $45,500 for the President's War Relief Control Board. He was greeted in much the same manner as he had greeted other officials when a member of the finance committee of the Cincinnati Council. "I notice that you have an increase of $730," the chairman said. But Taft, like many others, did not think it was an increase. The difference was in the matter of paying overtime, he indicated. Nevertheless, Taft produced 10 pages of testimony. Taft received a compliment few others received. Representative JOHN H. KERR, North Carolina, Democrat, dismissed him with thanks and said: "We are deeply impressed with the fine work you and your board are doing." The relief board is only a small part of Taft's assignment in the State Department.

In his addresses on the floor, Congressman JONES' principal criticism of the State Department was concerned with its expenditures in South America for pamphlets and magazines.

The best JONES and his aides could do on the State Department budget was to eliminate certain transfers and require the receiving of bids and reduce the appropriation by $1,466,000 desired for improvement of embassies, legations, and consulates in the Far East. All of this was done by point of order. The point of order on the building plan was that an existing law limits such expenditures to $1,000,000 a year. As a result, there will be a drive in the Senate to put the $1,000,000 back, but JONES' fight prevented, certainly, the expenditure of $466,000.

Another item attacked by JONES in the bill was a $3,000,000 increase in the appropriation for "sample census." The sample census which Congressmen call a Gallup poll census is to be taken annually at a cost of $4,500,000. The Census Bureau insists the annual sample census is needed and they won the battle for the appropriation.

JONES waged a war against Francis Biddle, Attorney General, during the debate. Treatment of Mrs. Earl Browder by the Department came in for special criticism. JONES suggests that all Members of Congress read the testimony concerning the Criminal and Claims Division of the Justice Department and he quoted the Comptroller General as having said the Government stands to lose $50,000,000,000 because of waste, mismanagement, and fraud in the war effort.

JONES demanded that all the appropriations but one be reduced to last year's figures. The exception was the Federal Bureau of Investigation. The committee raised the F. B. I. appropriation after testimony by J. Edgar Hoover to the effect that estimates were made on the supposition that the war in Germany would be over by June 1. Thus expenditures in the original estimate were limited to a one-front war.

JONES' charges concerning laxity in handling war-fraud cases and that the State Department is planning to extend to the entire world our cultural relations with Latin-American countries may have their effect in other bills, but the Ohio Congressman was unable, fighting hard for a week, to prevent the topsy-like growth of the Federal departments, and the taxpayers will have to continue to pay the bills.

Where Is the Money Coming From?

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27 (legislative day of Friday, March 16), 1945

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject, Where Is the Money Coming From? delivered by me on March 25, and broadcast from radio station WIBW.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends of the radio audience, it was a little more or a little less than 5 years ago—I have forgotten exactly which—that the people of the United States were advised officially to "forget the silly old fool dollar sign." During the months of World War No. 2 that have followed, the United States has done just that thing. Under the war emergency, and the decision by this Nation to put everything into the war, we have cast aside every other consideration except winning the war. And that has been proper.

But now we are beginning to be reminded of that dollar sign again. The House has passed, and the Senate will pass—perhaps before this discussion goes out over the air waves by electrical transcription over WIBW and the Kansas network—a bill increasing the statutory debt limit to $300,000,000,000. That is pretty close to the assessed valuation of all the tangible property in the United States. It amounts to a debt of $10,000 each on 30,000,000 families in this Nation. It will require $6,000,000,000 a year in taxes to pay the interest alone.

It has been very easy to forget the "silly old fool dollar sign," to quote the words of President Roosevelt, while we have been borrowing and spending these dollars in billion dollar chunks. But we are going to be reminded of that same dollar sign pretty regularly from now on. Those working for salaries and wages will be reminded every pay day, as nearly one-fifth of the pay check is deducted to take care of the income tax. And the rest of the taxpayers will be reminded at least four times a year, as they meet quarterly income-tax payments.

In connection with the increase in the national debt limitation to $300,000,000,000 (and next year it will have to be raised again; if Japan has to be finally conquered in China it may go to $350,000,000,000 or even $400,000,000,000) Chairman DOUGHTON, of the House Ways and Means Committee, gave the House some interesting figures. But not conducive to the idea that we can keep on forever forgetting the "silly old fool dollar sign." For example, Veterans' Administration costs for the present fiscal year ending next June 30 will be one and one-half billion dollars plus. The next fiscal year it will be two and three-quarters billion dollars. And for the fiscal year 1947 more than $4,000,000,000; is likely to rise steadily thereafter. That means more than $10,000,000,000 for Veterans' Administration and interest on the public debt in the fiscal year 1947.

War expenditures for the next fiscal year—assuming that the German war ends this summer—will be more than $70,000,000,000. And probably will continue at about that figure until the Japanese war ends. That might possibly be in 1946, possibly in 1947, perhaps 1948, or even later. For the immediate post-war years, Chairman DOUGHTON summarizes the probabilities as follows, and I am quoting Chairman DOUGHTON, of the House Ways and Means Committee, a North Carolina Democrat:

"During the first post-war years we probably shall still have large forces of occupation overseas," predicts Chairman DOUGHTON. "War expenditures may amount to something like ten to fifteen billion dollars. Interest on the national debt, six billion to seven billion dollars; veterans—under existing legislation—three to four billion dollars; aids to agriculture, under mandatory price supports and other programs, one and one-half to two billion dollars; social security—under present program—one-half billion dollars; public works, one to one and one-half billion dollars; government, general, one and one-half billion dollars.

"Total expenditures, during the immediate post-war period may therefore amount to from thirty to thirty-five billion dollars," in the opinion of Chairman DOUGHTON, of the House Ways and Means Committee. "When we can withdraw most of our forces of occupation, war expenditures, I hope, can further decline between five and ten billion dollars annually. By that time I think that a total Budget of perhaps $25,000,000,000 can be expected."

Personally I am inclined to believe that Chairman DOUGHTON is on the optimistic side. He makes no allowance for the planners' program of lending five billions or so abroad annually to bolster up world economy and promote world trade. He makes no allowances for larger veterans' benefits, for unemployment and public works programs calling for more billions a year. I hope that his estimate is close to the market, but I fear the Federal Budget will be closer to thirty billions for years to come.

Another measure having to do with dollars is on its way through Congress. This is the bill to authorize the use of close to $6,000,000,000 of United States funds to start the International Monetary Fund and the International Bank for Reconstruction and Development. These are the two institutions proposed in the so-called Bretton Woods agreement, made last year by representatives of 44 nations meeting at Bretton Woods, N. H.

Then we have a number of programs for increasing Government expenditures at home, on a scale never dreamed of until recent years—bills for every conceivable purpose, calling for additional billions of dollars annually to insure full employment, more unemployment compensation, more services to the individual by and from the Federal Government, Federal aid for education at a cost ultimately of at least a billion dollars a year.

Nearly all of these proposals have attractive and worthy objectives. The objectives of Bretton Woods no one can quarrel with. And similarly with many other proposals for increasing Government expenditures. Just the same I propose to, and I think the people of the country who in the long run will be required to foot the bills should, scrutinize the means and methods and costs involved in these proposals. The mere fact that a desirable objective is stated in the preliminary language in a bill authorizing or appropriating billions or tens of billions of dollars should not blind us to the other fact that these billions have to be paid in as well as paid out.

I am well aware that it is unpopular, especially in official government circles, for anyone to suggest caution in expending Government funds, or to suggest a consideration of ways and means to meet future obligations when it is suggested that this group, and that group—ultimately everyone—get a living from the Treasury of the United States.

And especially it is unpopular to suggest that there may also be a limit to what the United States can do in the way of carrying the burdens of the rest of the world, in addition to providing everything for everybody here at home. After all, my friends, there are some 2,000,000,000 of people in the world, and there are only some 140,000,000 of us. Neither our manpower, our resources, nor our economic system utilizing men and resources, is limitless. We have been discovering this in the past few months. Our armed forces need more young men of military age than apparently we are going to be also to furnish without crippling our food production, our war plants, our transportation system, and necessary services.

In the past few weeks we have been warned of food shortages, made necessary by the tasks we have undertaken. Not that we are really in danger of famine in this country, even a meat famine. But just the same, the discovery so suddenly made that we have made commitments to provide more food than perhaps we can deliver, is a warning to America and Americans that there are limits to what we can do.

One reason I am saying this to you this afternoon, my friends, is because there are what might be termed "flying squadrons" covering our entire Nation these days, pointing out a number of objectives that certainly sound desirable, that it is easy to find a lot words to prove are necessary as well as desirable.

And I know also that when anyone raises the question, "How are we going to do this?" someone promptly demands to know, "Are you opposed to this desirable and admittedly necessary objective?"

I say that when you are asked, or I am asked, or the American people are asked, to make a commitment to do something, or get something, or give something that seems desirable, or even can be argued to be necessary, you or I or the American people should be entitled to know how we are going to do it, as well as told what it is we are going to do, and I do not consider it out of order at times even to ask "How much is it going to cost?"

Just look where we have arrived because I happened to think of calling attention to the bill to increase the statutory debt limit to $300,000,000,000.

Now there are some folks who are not in the least afraid of a $300,000,000,000 national debt. In fact some of them even want it to go higher—the higher the national debt figures, the greater the basis of our national credit, these maintain, and add, knowingly, after all, we just owe it to ourselves.

On the supposition that we will have an annual income of $150,000,000,000 after the war, there are those who point out that a $300,000,000,000 debt is only twice the size of the national income. Then they further point out that Great Britain's public debt is not just two times Britain's national income but is two and one-half times the national income.

Well, my friends, if you could hear the arguments and pleas that are being made to us here in Congress that we must take care in the post-war world to see that Britain has shipping, and planes, and opportunities to increase her foreign trade—that unless all these international arrangements we are formulating and getting ready to put into effect take into account the plight of Britain in the post-war world—

I say if you listened to the continuous stream of arguments along this line you might get the idea that the British people do not regard a public debt two and one-half times the national income as being without its drawbacks.

My position on programs for the post-war world, domestic and international, is simply this: America must, and will do everything reasonably possible to promote world peace and prosperity. Also to better the conditions of our own people and all peoples. But I also maintain that before making commitments to do or to give, we certainly should investigate how we are going to meet

the commitment, what we are going to meet it with, how we are going to say these billions, as well as be informed how desirable it is we make the commitment.

Poles Vow Support of Exile Government—London Group Is Neither Landlord Nor Fascist, Miss Cardwell Asserts

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Ann Su Cardwell, that appeared in the Detroit News of March 25, 1945:

POLES VOW SUPPORT OF EXILE GOVERNMENT—LONDON GROUP IS NEITHER LANDLORD NOR FASCIST, MISS CARDWELL ASSERTS

(By Ann Su Cardwell)

Despite Moscow's attitude toward the constitutional Polish Government, Premier Mikolajczyk did not despair of achieving Polish-Soviet cooperation. Yielding to British pressure, he twice visited Moscow in 1944 even though he knew that Stalin disapproved such steps. Soviet recognition of the Lublin Committee of Liberation, agreement with that committee on administration of Polish territory taken from the Germans, editorial comment at the time of Mikolajczyk's arrival that he had come too late and that only Poles agreeing with the Lublin committee would participate in the future Polish Government—all this showed the Soviet attitude.

Lublin committee representatives, arriving August 5, were received with all honors due high foreign officials—Mikolajczyk's party, arriving July 30, had not been—and housed in the Polish Embassy Building.

In a conference with Stalin, previous to their arrival, Mikolajczyk, acting contrary to instructions from his Government, had agreed to meet these men. As hosts they received him at the Polish Embassy, informing him that he was received not as Premier of Poland but as head of the Polish Peasant Party.

Thus Stalin cleverly gave the Polish-Soviet problem the appearance of a Polish factional quarrel.

NEGOTIATIONS STYMIED

By immediately demanding abrogation of the Polish Constitution, on which the legality of Mikolajczyk's premiership depended, the Lublin group made negotiations impossible, and having played their Kremlin-instructed part, attended with all honors left Moscow August 9. Mikolajczyk left the day after, with only humiliation for his pains, although the heroic Soviet-instigated Warsaw uprising, for which he had begged help, was at its height.

Yet when in October Churchill, already in Moscow, summoned him thither, Mikolajczyk went. Osupka arrived the same day.

Mikolajczyk's memorandum, drafted by the Polish Government and approved by the Polish underground, provided that vital questions, except boundaries, which were to await post-war handling, might be discussed. None of these, it appears, were allowed to come up.

Mikolajczyk had been summoned for but one purpose—to get his signature on agreements to Stalin's demands, namely, the so-called Curzon line, with possible changes of a few kilometers in Poland's favor, as the boundary, and the establishment of a Polish government based on the Lublin committee and including a few Poles from outside, himself among the number.

HE COULD NOT AGREE

Obviously Mikolajczyk could not agree. Both the Polish Government and the Polish Nation would have repudiated the action, for it would have meant not only the loss of almost half of Poland but loss of independence as well.

Churchill, in an hour's conversation, brutally pressed the Polish premier to sign, not because he thought it just and right but because Stalin was threatening to cut the British Empire's Mediterranean lifeline unless he got Poland.

Mikolajczyk calmly but stubbornly refused to "sign his own and his country's death sentence" and two days later Churchill apologized for his loss of self-control and the scene he had created.

At Yalta Stalin got from Roosevelt and Churchill what could not be forced from Mikolajczyk at Moscow. Stalin conceded nothing. From the first his policy has been to accept nothing less than capitulation regarding Poland; which does not prevent his acceptance and use of democratic methods as a cover for his own procedures.

The charge that the Polish Government in exile is not representative is not a matter concerning outsiders. It is the legality of the Polish Government that concerns us, and the Polish Government is just as legal, whatever its composition—it is neither "reactionary," "fascist," nor "landlord" but socialist in character—as is our own, and more legal than Stalin's revolutionary Bolshevik government. And it is actively defended and supported by loyal Polish citizens everywhere.

ASSURANCES POUR IN

Cables and letters assuring support to Premier Arciszewski, successor to Mikolajczyk after the latter's compromise policy had failed, have poured in from Polish political and social groups and associations in Britain, France, Iran, Turkey, the Argentine, Australia, east Africa, Egypt, and from Polish Christians and Polish Jews, separately and together, in Palestine.

And from a Pole who has unparalleled opportunities for knowing what the 8,000 interned Polish soldiers in Switzerland are thinking and saying comes word that fully 90 percent of them are for the Polish Government in London.

The character of the many messages is illustrated by these two sentences from that sent by Polish miners and factory workers in a French area:

"We assure the President and the Polish Government, at the head of which stands the tried and heroic fighter for freedom and democracy, Premier Arciszewski, that we continue to follow and obey orders of the legal government of the Republic of Poland. Nobody had the right to decide the fate of the Polish people against their will, which can only be expressed in free, secret, and democratic elections."

As for the Polish Army, now numbering over 200,000, General Anders expressed its attitude in a cable to the Polish president: "In view of the recent Big Three declaration, so tragic for us, I report to you, Mr. President, that the Second Corps will not recognize the decision surrendering Poland and the Polish people as loot to the Bolsheviks. In keeping with our soldier's oath we shall continue to recognize you, Mr. President, as the one and only representative of the sovereign majesty of Poland, and the government appointed by you in London as the only legal government of the Polish State."

ARMY EDITORIAL CITED

And from an editorial in Bialy Orzel (March 4), one of the Army papers, come these passages:

"As long as the war lasts, as long as our country is at war with Germany, as long as Poland does not enjoy real independence, as long as there is an occupant on her lands making unilatera decisions in our affairs and using terror, just so long may we not weaken our effort to regain full national freedom.

"And what does full freedom mean for us? Out of our own experience we know well. No attempts at falsification or criminal misinterpretation of freedom can mislead us. The Polish State will be independent only when a constitutional Polish president assumes authority on Poland soil; when Poland is governed by a government led by that president; when its citizens are subject to laws made by themselves and not imposed upon them by foreigners; when there is neither political nor social serfdom; when a foreign secret police does not control the government; when there is no terror, violence, deportation, or forced labor; when there are no concentration camps and no persecution, and the Polish soldier who for 5½ years has been fighting for freedom is not shot or shamefully treated but is master in his own land. * * * A country to which Polish soldiers taking part in this war cannot return without endangering their lives cannot be called free."

Filipino-American Cooperation

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. STEFAN. Mr. Speaker, as the story of the progressive liberation of the Philippines unfolds new instances are brought to light of the efficiency of American-Filipino guerrilla cooperation.

The accomplishments of the guerrilla army on Mindanao under the leadership of Col. Wendell W. Fertig are examples of the employment of directed force against the Japanese enemy during 3 years of occupation. It was from a Mindanao air base—known by the Japanese, but which they were unable to capture—that American fighters covered the Zamboanga landing. American-Filipino guerrilla cooperation, both in designing and building that field, made possible the saving of hundreds of American lives and the speeding up of American ground progress in that region.

A like situation confronted the American landing force on Panay. Not only did the Filipino guerrillas, under Colonel Marcario Paralta, Jr., aid the American liberating group in the freeing of the capital city of Iloilo, but they had practically cleared the interior and the coastal zones of Japanese before the Americans landed.

While the relationship of American and Filipino fighters as brothers of the battlefield is well known in the United States, Americans have been cheered recently by reports reaching here of the Chinese branch force, composed of Chinese residents of the Philippines, who have kept up unabated warfare against the Japanese enemy since 1942 in Luzon.

The universality of integrated Filipino guerrilla resistance throughout the

Philippines has been one of the outstanding features of this campaign. This comradeship of courage will continue to be called upon until their homeland is free. They have made a contribution to the understanding between Americans and Filipinos which will long endure as a tribute to the selfless sacrifices.

The Manpower Bill

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Tuesday, March 27 (legislative day of Friday, March 16), 1945

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Manpower Bill Seen Embodying Fascism," by David Lawrence, published in today's issue of the Washington Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MANPOWER BILL SEEN EMBODYING FASCISM—THEORY BACK OF UNIVERSAL SERVICE NOT BEING APPLIED, WRITER SAYS

(By David Lawrence)

Fascism abroad, which is a partnership between capitalistic interests and the state, has regimented workers and forced them to work for the private profit of management. That same totalitarian doctrine has been embodied in the new manpower bill which has come from a conference committee of members of the House and Senate.

If passed, this bill means that workers in America will lose their right to quit work and that they must take jobs the Government gives them and work for designated employers.

The theory back of the much-talked-of universal service is not being applied. When a man is ordered into military service, he gets $50 a month and nobody makes any profit out of his service to his country. But now the Government, claiming it is fulfilling a war purpose, orders American workers to serve private employers who make profits. If the workers refuse they are subject to jail penalties.

FREEDOM ISSUE RAISED

This strange development has been fostered by a small group of universal service advocates who think they can spare the profit system from similar treatment. Instead they will bring the kind of controversy that should never have been permitted at this stage of the war. For the issue of freedom versus involuntary servitude is raised and, in effect, the Government is saying that the patriotic efforts of the upward of 50,000,000 men and women who have done the war production job must now be subjected to penalties and intimidation.

Senator O'MAHONEY, of Wyoming, Democrat, of the liberal and progressive school of thought, rightly condemns the proposed legislation as regimentation such as Hitler used and Stalin promulgated to get control of the workers in Germany and Russia, respectively. Organized labor has asked the Congress to defeat the measure.

The proposed legislation is vicious in that it deprives an aggrieved citizen of any court appeal. It offers, to be sure, an administrative or interdepartmental committee to hear complaints but, under recent decisions of the courts, there would appear to be no possibility of review by the courts of decisions made by the bureaus enforcing such legislation. There is certainly no opportunity for relief within the time limits of the bill.

It is fallacious to say that if the Government can order a man into the Army, it can order him into a war plant. Such a position would be consistent if the Government managed all the war plants and there were no private profits involved. The logical sequel of the situation created by the new manpower bill would be to abolish all profits and put all governmental and nongovernmental activities under complete governmental control so that there would not be a single dollar of profit made out of the use of patriotism to force workers to stay on their jobs. Maybe organized labor will soon begin to press for such legislation.

NAZIS MAY WELL SMILE

Opponents of democracy will derive considerable satisfaction out of what is happening. Hitler and the Nazis may well smile at the spectacle of a democracy, which calls itself free, finding that it cannot organize itself on a voluntary basis to win the war but must threaten jail sentences to get the war-production job done. Hitler is losing the war, but apparently his philosophy is winning.

Will the Senate and House acquiesce as did the Reichstag in Nazi Germany and as have parliamentary bodies also at other great moments in history when the steam roller of military necessity rides roughshod over them and demands action? Or will Members of Congress stand on their rights and insist on a truly voluntary plan?

The real reason for the manpower muddle has been inefficiency in the administration, which now seeks a way out by drastic measures that will cover up its mistakes. It is tragic indeed that, as American armies are winning a great victory, this democracy is asked to adopt totalitarian methods. Fascism has always been simpler than democracy, but the American people, up to now at least, have preferred the cumbersomeness of democracy to the efficiency of fascism.

If we were losing the war by our methods it would be different, but we are winning. The administration's idea of reward evidently is to force workers to become part of a strait jacket which deprives them of the oldest right in American history—freedom to work without State-made rules of enforced work or slavery.

Polish Silence

EXTENSION OF REMARKS
OF
HON. JOSEPH F. RYTER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from this morning's Washington Post:

POLISH SILENCE

More than 6 weeks ago President Roosevelt, Prime Minister Churchill, and Marshal Stalin jointly agreed at Yalta that "the provisional government which is now functioning in Poland should be reorganized on a broader democratic basis with the inclusion of democratic leaders from Poland itself and from Poles abroad." The task of supervising this reorganization was entrusted to a commission composed of Foreign Commissar Molotoff and the American and British Ambassadors at Moscow. So far, however, there is not the slightest evidence that this commission has made any progress in the direction of setting up a truly representative Polish regime.

Nor is there any evidence that the Lublin Poles are in the least receptive to the idea of broadening the base of their regime by including such personages as former Premier Stanislaw Mikolajczyk. On the contrary, Mikolajczyk, though regarded with favor both by the British and American Governments, has been the particular object of venomous attack by the Lublinites, whose past record makes it clear that they do not lift a finger or speak a word without the approval of the Kremlin. The time has thus come to raise the question whether Russia has the slightest intention of carrying out the so-called Yalta compromise on Poland. If it has, the pronouncements and activities of its Lublin stooges certainly constitute a peculiar way of showing it.

Time is running out while the conferees are doing dothing. If nothing is done, Poland, the first nation to fight the Nazis, will be left out of the San Francisco conference. That would be a tragedy. To avert that tragedy the administration should leave nothing undone to promote the effectuation of the Yalta pledge.

A Great Leader of Public Opinion Dies—John H. Clarke, Former Associate Supreme Court Justice, and Native of Ohio

EXTENSION OF REMARKS
OF
HON. WILLIAM R. THOM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. THOM. Mr. Speaker, the recent death of former Associate Supreme Court Justice John H. Clarke, a native of the State of Ohio, has taken from us a valiant fighter for democracy, and for the cause of international peace and justice by collective action of the nations of the world.

Justice Clarke was a man of powerful convictions. He believed that the lawyer was expected not only to battle for his clients, but likewise for good government in all its aspects. Clients did not form his opinions. Often he was found espousing principles that seemed in variance with the financial interests of his associates. He thought it not beneath his dignity to spend himself in political campaigns—even to submit himself as candidate for high office.

While a lawyer, he wrote editorials for the Youngstown, Ohio, Vindicator, an outstanding Ohio newspaper in which he held substantial interest. Knowing his point of view, I was always able when reading that newspaper to pick the editorials that came from his pen. They were marked by extreme independence of thought, and the language was full of force and vigor and revealed the wide and varied reading of the author. Wealthy as he was, he considered his opinions his greatest asset.

He resigned from the United States Supreme Court when he was still strong in mind. Its work he considered of less importance than his passionate desire to establish machinery for the preservation of world peace. He was thus a crusader

to the last in a cause that, at his death, seems nearer to achievement than ever before in the world's history.

Under leave to print, I am reproducing herewith an editorial from the New York Times reviewing his life work:

JOHN CLARKE, OF OHIO

It must have been a melancholy satisfaction to former Justice John Hessin Clarke in his declining years to see the American people forced by a second world war, more catastrophic than the first, to turn to a new league of nations as the best hope of future peace. After the death of Woodrow Wilson, John Clarke was perhaps the most fervent and brilliant advocate of American participation in the League. A flaming Liberal of the Ohio school of Newton Baker and Tom L. Johnson, he devoted the prime of his life and his remarkable oratorical gifts to preaching international cooperation as the one safeguard against future wars. He felt so deeply on this issue that in 1922, at the age of 65, he resigned as a member of the Supreme Court of the United States in order to give all his time and energy to the cause he believed in.

This sacrifice of a career to a cause was characteristic of Justice Clarke. He was a kind of major prophet in his day, a prophet justified in his own lifetime by the relentless logic of events. "Those who think the League dead will see it rise again," he said in an address at Harvard in reply to President Coolidge's first message to Congress. "We may confidently predict that the American conscience will refuse to be satisfied until our Government shall leave the wrong side of the road and get on the right side of the greatest moral question which has been presented to the American people since slavery was settled."

The voice of the American Liberal of a generation ago echoes in the speeches the former Justice delivered up and down the country in the complacent twenties. He was a vivid figure in his native Ohio as a lawyer, jurist, antimonopolist, antiprohibitionist, hard-hitting and eloquent political campaigner who packed the memorial halls and the fairgrounds in dozens of lively debates. But the League and the World Court were the causes for which he spent a life that lasted through the full turn of the cycle to end, with a poetic justice that he must have enjoyed, on the eve of a conference initiated by the United States to organize a new society of nations.

Eleven Airplanes Spot Coyotes for Lord Halifax in Oklahoma

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, Lord Halifax has just visited the State of Oklahoma, and while there he was entertained royally. The entertainment in the western part of the State centered around a coyote hunt near Elk City, Okla. The newspapers of March 20 and March 21 described in detail this famous hunt in honor of the Ambassador.

Apparently a few, perhaps 3 or 4, small prairie wolves were turned loose in front of 200 or more dogs from Arkansas, Texas, Kansas, and Oklahoma, said to be the largest assembly of fine, trained hounds in the annals of coyote hunting. Some 60 persons accompanied his Lordship, Lady Halifax, and their son, including the Governor of the State and other notables.

But, Mr. Speaker, perhaps the most spectaclar feature of the hunt was that 11 airplanes were used as spotters to show the hunting party the direction in which the coyotes were traveling in their attempts to evade their pursuers. It is said that it was extremely difficult to hear the baying of the hounds for the noise that was made by the motors of the 11 airplanes overhead. This was unusually spectacular and the subject of much adverse criticism because of the strict rationing of gasoline among the citizens of Oklahoma, many of whom rather indignantly watched and read of the royal hunt. It was probably even more irritating to faithful workers in the war plants and industries of the country who have to beg for their gasoline rations. How will it sound when truly reported to the men in the armed forces?

A Congressional Committee That Woke Us Up

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Honolulu Advertiser of March 24, 1945, summarizing work of a subcommittee of the House Naval Affairs Committee on housing and congested areas at Pearl Harbor and the city of Honolulu. Hearings were held by the Naval Subcommittee for 5 days, beginning on March 15, 1945:

A CONGRESSIONAL COMMITTEE THAT WOKE US UP

The congressional committee investigating congested housing conditions in Honolulu has come and may be gone before these lines are read. The sound and fury has died down. The testimony is in the book to be studied, digested and turned into a set of recommendations for action.

For 4 days public officials, civic leaders, and plain John Citizens joined the parade before a body of probers who brought into the open many matters that for 2 years have bobbed beneath the surface of Honolulu's seething housing shortage.

"Was anything accomplished—will anything come of it?" those who have pinned their faith on one hope after another, only to be let down, want to know.

Yes, something will come of it.

Already two things have happened, and better are to follow.

First. The Army and the Navy through commanding officers, who with a nod can influence civilian economy strongly, have given the nod to full approval of closer and more considerate cooperation with the plain war workers of the island.

Perhaps this consideration could not have been given so fully while Hawaii was a combat area. But the visit of a congressional committee precipitated acknowledgment of the fact that combat area days are over. The forgotten man on the home front is worthy of more attention, after 3 years and 3 months of close adherence to strictly military affairs, it now seems.

Second. A new strength has been found for war weary John Citizen to erect a renewed hope upon. He has learned that there are able men in Congress who are not content to maintain a status quo of indifference, apathy and neglect of community affairs in America's spearhead of the Pacific

He reveled in the pointed remarks that certain ears in the paradise of the Pacific had never before burned to Being an American, J. Citizen is pitifully eager to believe in simple ideas to follow sane but enthusiastic leadership.

He was a bit chagrined that his own home town did not evidence much of this kind of leadership.

He hung his head a little when the officials he has elected and those that have been thrust upon him by appointment, revealed that since December 7 they seem to have advanced not one iota in their ability to think ahead, to plan and to be able to present, at least in public, an appearance that would instill full confidence in important visitors from elsewhere.

Although a united front, in asking for sufficient housing to take care of Honolulu's immediate needs—and a plan to care for those sure to be with us a year from now—was urged when it was known the congressional committee would come here, he saw, or heard, no such united front in action.

Instead, he heard the Governor first say that housing distress was newspaper talk and then declare the need of 10,000 housing units—the Governor's housing executive gives another figure—a civic group another. Nowhere was mention made of a long-range plan that looked beyond today

He heard public officials, who are supposed to know all the ins and outs of obtaining benefits for their city, county, and Territory, admit ignorance of funds and acts that would build schools, provide teaching staffs, widen and repair roads—all as a result of war damage or war-induced causes—and which have been tapped by every progressive American city.

He heard the Congressmen acquaint them with these simple facts of public life.

The local boys evidently had not bothered to inquire were such funds in existence.

The tom-tom beaters for immediate statehood for Hawaii must have blushed in private, if not in public, at the distinctly amateur representations made by local talent.

Instead of presenting a picture of a potential state at war—serious in its intentions of receiving adult privileges of salf government, the Territorial legislature reverted to the lowest ebb in recent years.

When a legislator appeared before the committee and made unfounded and unsupported hearsay charges of collusion between an admiral of the United States Navy and a businessman, a mark of instability, lack of poise, of immatureness and finally of irresponsibility was chalked up against the men we elect to make our laws.

It surely must have been evident to the committee that there has been lack of leadership and civic consciousness at Iolani palace.

The negative state of mind, that influences thinking in Honolulu, was apparent perfectly to the Congressmen. No one came forward and said—"Here is the land upon which we want built the houses to shelter our people." No one came forward and said—"Here is the type of house that has been found best for our climate, our temporary need."

Instead those who came forward, by and large, said—"Here is the reason why we can't do this and that."

The residents of Manoa valley said "No, we do not want your housing project in our sacred precincts—we want it somewhere else." But they did not have a constructive plan for locating it elsewhere.

Do not think these things and others were lost upon this committee.

They were not fooled by leis and hulas and cases of rare Scotches drawn from some hidden caches unknown to old J. Citizen.

They are five men and a woman of astute perception, as shown by their aside remarks.

They have gone back to try to aid a community that has shown it has done little or nothing to aid itself.

Why? Because, if the men chosen as leaders of Hawaii cannot recognize it, they recognize that these islands are more important to the United States than we at home know.

They may look upon us as a delightful island people, who play and sing and have a good time. But they are not going to allow us to neglect ourselves as we while away the days in hula musings, with eyes half shut against the grim realities of a changed world.

Yes, J. Citizen of humble means and origin—something good will come out of the visit of the congressional committee.

It may not be liked in certain quarters, which hate to be disturbed in the lethargy of their years of playing their one-string theme song, "It can't be done."

Have faith—aid is coming from outside.

May it inspire an arousing of a community conscience, that will never again let us down to the level our representatives in public life presented to the malihini investigators, who grew into kamaaina stature overnight, by feeding on the facts of Hawaii's self-neglect.

One Hundred and Twenty-fourth Anniversary of Greek Independence

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, March 27 (legislative day of Friday, March 16), 1945

Mr. O'MAHONEY. Mr. President, on Saturday evening, March 24, I had the privilege of taking part in a radio program arranged by St. Sophia Greek Orthodox Church of Washington, D. C., in commemoration of the one hundred and twenty-fourth anniversary of Greek independence. The Honorable Philon Philon, counselor of the Greek Embassy, and I, were guest speakers. I ask unanimous consent that Mr. Philon's speech and my own may be printed in the Appendix of the RECORD.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

SPEECH OF HON. PHILON PHILON

Tomorrow Greece celebrates the one hundred and twenty-fourth anniversary of its independence and the establishment of the modern Greek state.

Ancient Greece for centuries was the cradle of democracy and gave to the world a rich heritage of liberal ideas and the highest concept of civilization. Later, when the Roman Empire was divided, Greek genius hellenized the eastern part of this empire, and created the Greek Byzantine Empire, which for a thousand years was the bulwark of European civilization and of Christianity against Asiatic invasions, until in the middle of the fifteenth century, when it succumbed to the blows of the rising power of the Turks.

During the four centuries when Greece was under the domination of the invaders, civilization and liberal ideas ceased to exist in southeastern Europe. For this reason, when the Greeks rose in 1821 to regain their independence, the movement was applauded throughout the world as a symbol of the rebirth of liberalism and of democratic ideas. The enthusiastic messages sent to the fighting Greeks by President Monroe, Webster, and so many other freedom-loving Americans, greatly encouraged them, and the inspired poems of Byron and Shelley, extolling their heroism, found a warm spot in American hearts. Since the Philhellenism has been a tradition in this country, and the love and devotion of the Greeks to America have become a national institution in Greece. This devotion of the Greeks to America is founded not on political considerations, but in the unshakable faith which the Greeks have in the lofty democratic ideals and the liberalism which characterize this country in all the manifestations of its national life.

Hence, when in October of 1940 Greece was confronted with the alternative of submitting to the Axis or to be ruined fighting for freedom, she did not hesitate even for a moment, although she knew that the whole of Europe lay prostrate under the blows of the Axis. For 6 whole months Greece stood alone with Britain, fighting for the defense of the common cause. Likewise, when in the spring of 1941, having by this time victoriously repelled the Fascists, she found herself face to face with the combined military might of the two empires of the Axis, again she did not hesitate for a second, but threw herself, united and resolute, into the epic defense of her soil, without any substantial Allied help and well knowing the overwhelming odds against her and the cruel fate awaiting her.

Thus, having waged an unequal struggle and having kept up active and incessant resistance against the invaders during the entire period of enemy occupation, Greece is today bleeding, having lost one-tenth of her total population from hunger and the unspeakable atrocities perpetrated by the Germans, the Italians, and the Bulgarians; her industry and agriculture are totally ruined; her railways destroyed by sabotage by the Greeks themselves, carrying out orders from the Allied command.

Almost the entire Greek merchant marine, which ranked eighth in world shipping, has been sacrificed in the common cause. Out of the more than half a million troops Greece put into this fight, there are hardly sufficient forces left to preserve public security. Thus it was, that the great majority of the Greek people recently found themselves unarmed, at the mercy of certain irresponsible elements many of whom were not even Greeks.

And now, I leave it to you, whether Greece is or is not entitled in asking justice from her great allies. The Greeks do not seek charity. They do, however, rightfully expect from their great allies, who have assumed leadership and responsibilities in this war, justice and assistance to get back on their feet. They ask that they may be helped in the reestablishment of their armed forces, eager to continue their active contribution to the common cause until total victory is achieved. They expect that the peace conference will secure to them the union with Greece of those Greeks who remain under foreign domination in the Dodecanese, in southern Albania, and elsewhere; that is, in those areas, which, after the First World War, had been awarded to Greece, but whose union with the mother country was blocked by the rising Italian imperialism. They ask to be protected against a new threat from the north and wish to see there the establishment of safe boundaries. They simply ask to be free from fear and from want.

On the occasion of the national anniversary of Greece, I ask all Americans of good will to bear in mind the unparalleled sufferings of the Greek people and—dismissing from their minds any possible ill-impressions from recent disturbances—to take a hearty interest in this small nation, which gave everything it possessed in the common cause, and which, by its sacrifices and gallantry, elicited the admiration of the world, and which, while it was fighting triumphantly, was looked upon with admiration as an example worthy of emulation for its fortitude and heroic defense of freedom.

SPEECH OF SENATOR O'MAHONEY

There has been no moment in all recorded history when Grecian valor and intellect have not been recognized as preeminent. In every period of the long history of mankind's advance, the people of Greece have played a glorious role. It was not by error that the poet spoke of the "glory that was Greece;" nor was it merely a graceful compliment. It was an acknowledgment of superlative merit which mankind has recognized in the Greeks from the earliest times.

It is not for me in this brief tribute to the Greek love of independence to call the roll of the Grecian heroes of the past, nor to praise their achievements. I would speak rather of the racial characteristics which have made the Greek contribution to civilization so outstanding.

We commemorate the one hundred and twenty-fourth anniversary of Greek independence. But that is merely the modern manifestation of the unconquerable soul which has always been the proud possession of the Greek people. There never was a time when the Greek did not love freedom. There never was a time when he was not willing to lay down his life in defense of it. It must be a source of deep emotional satisfaction to every Greek wherever he may live in all this world that his people have again demonstrated in this most terrible of all wars that they still possess the flame which made their ancestors, even in the age of myth and fable, transcendent examples of what the free, human spirit can achieve.

The people of Greece have emerged triumphant through every test of fire and sword. They have suffered at the hands of the barbarians of Asia and of Europe, but they have always had a spirit that could never be crushed. Never was this more clearly demonstrated than in the terrible trials they have endured under the heel of Axis tyranny.

It is the glory of Greece that no tyrant has ever succeeded in crushing her. Tonight as we commemorate this modern anniversary of Greek independence we know that no tyrant ever will.

Greece has bequeathed to all the world a heritage of learning, art, and courage. Each of these is an attribute of the individual, not of the state. Each of these is a quality of the individual human soul, not of any organization. That is the reason why Greece may properly be called the birthplace of democracy.

Greece's gift to mankind, therefore, is the demonstration that a people who are sustained by an abiding devotion to the qualities which make individuals noble cannot be kept in servitude, and that the principle of democracy is immortal like the human soul.

An independent Greece has from earliest time held aloft the torch of human freedom to illuminate the path along which civilization as advanced.

I am happy, therefore, tonight to join with our Greek compatriots and with the people of the United States in honoring the undying spirit of the people of Greece. Never did I doubt from the moment this war began that the independence which was won 124 years

ago would be preserved, and that Greece would be reestablished as a free nation.

That independence has now been rewon. A new era of human advancement is about to begin. It requires no prophet to predict that the people of Greek antecedents, free and independent wherever they are, will continue to exemplify the noblest qualities of free men.

The Manpower Bill—Conference Report

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. PLUMLEY. Mr. Speaker, I am no prophet nor son of a prophet, but venture to assert that even when the shooting war across the Rhine is over, our manpower problems will be as great, if not greater than, today, for reasons that are obvious but too often overlooked.

Those who assert to the contrary are indulging in wishful thinking as they construct the straw man of sufficiency of manpower for their defense. There is no such animal.

Unless Japan unconditionally surrenders following and because of the defeat of Germany, we will be confronted by problems such as we have not had to meet, which problems will tax us to the limit in order and to the end that we may as speedily as possible destroy the facilities, and thereby put an end to the potentialities which would enable Japan to prolong the war of fanaticism she fights.

These situations can only be met in the first instance by an overwhelming use of our manpower, which is not today being used, whether we like to admit it or not.

No machine that man can make is greater than the man who makes it and the number of machines of war to be manufactured by us of every type, name, nature, and description, in order to compel the unconditional surrender of Japan, are numerically beyond our comprehension, else why are we appropriating all these new dollars to establish and to rehabilitate plants for the production of those naval and military instruments of war which have proven their worth, as well as for the manufacture of those new instruments of destruction which we will be required to use against Japan because of the nature of the war we must fight against her in order to win?

It is to the credit of all concerned that, though tardily, yet, nevertheless, eventually, we arrived at an appreciation of the fact that our biggest battles lie ahead of us, so, tolerating no optimism and stimulated to action, we will go on to a victory for which we are taking time, in advance, to adequately prepare.

In time of war we might well take a leaf out of anybody's book who has demonstrated how to make manpower work. We Americans have bungled along too long. What we really need is a law with teeth for the duration in order to expedite the end. We are too soft.

People talk as if we could not legislate to repeal any law we enact now to save ourselves, as well as our national self-respect. That is nonsense. Let us straighten out this manpower situation here and now by the use of such force of law as may be necessary and then talk about other things later.

Those who try to scare somebody by asserting this is a bill to enslave us forget that the millions now regimented, fighting and dying for us, are entitled to whatever it takes to make the happy-go-lucky complacent people in this country come to their senses, and now.

As Senator AUSTIN, who drew most of the bill, said yesterday—

> This is not an antistrike bill in any way and cannot be so used. The bill can freeze workers in jobs, or it can penalize a worker who quits a job, but a worker who goes out on a strike has not legally left his job.

The people country-wide are fed up with the inability of Congress to come to some conclusion as to how to supply the manpower the people know we need so desperately; they are in favor of some form of manpower draft bill, and as this compromise is better than the nothing so many wrongfully hoped would be the result of the conference, I am going to vote for the conference report, although I admit I would prefer something else if I could dictate all the terms for compromise.

Labor Draft Bill Bitterly Resented by Workers

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, I have received many protests against any form of labor-draft legislation, and particularly against the so-called compromise draft labor bill which is before the House for action today.

The independent, red-blooded American laborers who want to think for themselves bitterly resent the provisions of the compromise labor-draft bill. Organized labor resents the enslavement that they feel will result. People who cherish the American ideals of free labor and free enterprise resent any such un-American ideas. If the Members of Congress will consult their constituents affected by it they will find an overwhelming resentment against this legislation.

There is danger in such legislation, for it tends to destroy the confidence of the people in their Congress. The following is a copy of a letter I received yesterday from one of my constituents, which is typical of the resentment I have described:

> On January 7, 1945, I wrote you regarding the draft-labor bill and asked you to fight against it, and I notice that you did. I wish to thank you for this work.
>
> Now there comes before the Congress the same bill, only in a different form called a compromise bill, and it is even worse than the first. It will give Byrnes the authority and place us under unjust rules, making it a penalty if we quit our jobs unless the Government tells us we may. Now that is one hell of a note. Just how much of this destroying of our rights are you who are in Congress going to let these aliens get by with before it is stopped? What are you all thinking about, anyway? Our armies fight that Europe may be free, and let these New Dealers enslave us here at home.
>
> This bill will be passed, and we will be slaves of the state now and evermore.
>
> So, therefore, I intend to on March 26, 1945, advise the firm I work for that I have quit, because I refuse to bow to any dictator.
>
> If this kind of dictatorship cannot be stopped by legal steps, then there must be other measures undertaken, for there are lots of us Americans who will not surrender to this foreignism of government.
>
> I wish you would again help defeat this bill.

Tribute to Hon. Henry Ellsworth Barbour

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. REED of New York. Mr. Speaker, there comes a time in life when our old-time friends are taken from us with tragic frequency. We are never prepared for the separation. I learned with profound sorrow and with a sense of deep personal loss of the passing of my former colleague and dear friend, Hon. Henry Ellsworth Barbour, of the State of California.

Few men have entered Congress during my service in this House who, in so short a time, impressed their ability so firmly upon their colleagues as did Representative Henry Ellsworth Barbour. The days when a majority of the congressional families lived in the old Congress Hall Hotel, which stood on the site of the present new House Office Building, was a period of very warm personal friendship between the families of the Representatives. It was in that hospitable atmosphere that intimate and lasting friendships were created. The wives of Members fraternized, congressional children went to school together, grew up together, and developed lifelong friendships.

There was no family among the many families who lived at Congress Hall Hotel which added more to the social life of Congress than did Representative Barbour, his wife, and two children. Henry Ellsworth Barbour, affectionately known as Harry, made a fine contribution to his country while a Member of this legislative body. The many tributes paid to our departed colleague of former days bespeak the fine character of the man. A brave and good man has passed from this life. The heritage he has left surpasses that of all other riches—that of a good name.

I cannot find words to express the depth of my sympathy and that of Mrs. Reed and my children for Mrs. Barbour and her two sons.

Tribute to Hon. James V. Heidinger, of Illinois

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. REED of New York. Mr. Speaker, the death of my dear friend, Hon. James V. Heidinger, of Illinois, came as a very great shock to me. While I knew that he had been ill for some time and that he had gone to Phoenix, Ariz., it was my hope and belief that he had gone to this delightful climate to convalesce, and that he would soon be with us again. I know that every Member of the House held Judge Heidinger in the very highest esteem. This Nation can ill afford to lose men of his fine ability and, above all, a man of his sterling character. The State of Illinois and the Nation have suffered a great loss in the death of a very able representative and statesman.

It is difficult to find words to fully express the sympathy for the loss which his loved ones have suffered. It may be that Mrs. Heidinger and the relatives of her good husband will find comfort in the words "Life is not merely a floating shadow, a momentary spark, a dream that vanishes. Nothing can be grander than a life filled with great and noble thoughts—with brave and honest deeds. Such a life sheds light, and the seeds of truth sown by great and loyal men bear fruit through all the years to be."

Parents Demand 17- to 18-year-old Boys Be Not Forced Into Combat Service Without at Least 1 Year's Training

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, during the past several weeks I have been receiving numerous telegrams and letters from my constituents vehemently protesting against the policies and practices of the War and Navy Departments in dealing with our 18-year-old inductees. The complaints show that these boys are being sent as replacements into actual combat service overseas with only from 13 to 17 weeks' training. The people were led to believe that these boys would not be sent overseas until after they had received at least a year's training. They are not convinced that it is right or necessary for these youngsters to be put into combat duty with so little training. A fair example of these protests is a letter which I received this morning from one of my constituents which reads as follows:

TULSA, OKLA., *March 24, 1945.*

Hon. GEORGE B. SCHWABE,
House of Representatives,
Washington, D. C.:

The Parent-Teachers Association of Tulsa and the Tulsa Federation of Labor, along with many other organizations, are at this time very much concerned about the training programs made available to the 18-year-old inductees. The abusive and overbearing attitude of the Army toward these youngsters is sickening.

If it is true that we have the largest Army and Navy ever assembled, we wonder why you in Congress allow the Army to override all preelection promises of at least 12 months' training for 18-year-olds. They have no one to speak for them but their Representatives. They are not old enough to hide behind the worn-out phrase, "essential occupation."

We believe the Army brass hats should be made to reshuffle their huge reserves of manpower already in the Army and who have had from 1 to 3 years' training and use them as replacements. The very idea of sending high-school seniors with 13 weeks' training into combat is too revolting, and you in Congress have allowed this condition to exist in spite of our already huge Army and our thousands of protests.

The Army "brass hats" will tell you it is necessary to do this. If you will consider their statement carefully, you will know it is untrue, and we maintain that just because these boys are not old enough to vote is no excuse for the shabby treatment they are receiving.

Churchill said, "Give us the tools and we'll save England." This administration not only furnished the food and tools but also 12 American boys to every 1 Englishman. Mr. Roosevelt is more concerned about furnishing everything for England than nations under their own sphere of influence, such as Canada. Canadians now say, "No more men for Europe's wars," but we merrily reach down to our high schools to get American boys to send to the rescue. And for what? Canadians say, "No rationing," but we struggle to feed Europe and squander our own reserves, also, in order to be a good neighbor. We know that the price of being a good neighbor is too high in its terrible toll of American dead. This cannot be flippantly cast aside.

We, therefore, demand that as our representatives you not only give this matter serious consideration but see that we send no more green, untrained 18-year-olds with less than 12 months' training into combat areas. You now are in the position to demand the selective-service law have this amendment, and thousands upon thousands of voters throughout the entire country will be watching your efforts.

In a very short time you will receive petitions of protest on the subject matter of this letter. These petitions can in nowise be interpreted as interfering with the national war effort but are plain, everyday protests from plain, everyday people against the use of untrained 18-year-old inductees in combat and a demand that the promise of a 12-month preparatory course be fulfilled.

Respectfully yours,

L. A. SWAIN.

After having received several of these protests, on February 23, 1945, I transmitted a letter of one of my constituents to the House Committee on Military Affairs, explaining that many parents and Parent-Teachers Association members in my district were protesting against the drafting of 17- and 18-year-old boys into the service and sending them overseas without sufficient training. I asked that the matter be given proper consideration and that I be furnished a report on conditions as they actually existed. I received a reply, dated March 5, 1945, signed by the general counsel of the House Committee on Military Affairs, commenting at considerable length on this question. I quote the following pertinent portion of that letter:

In February 1944 the policy was adopted of not sending men under 19 years of age as replacements for infantry and armored units as long as others were obtainable. This further stiffened in June to bar the sending of any such men. This policy was adhered to as long as military operations permitted. In December 1944, the Army announced a change in policy which permitted the 18-year-old soldier to be sent overseas. This was only one of the actions taken to meet the situation. Another was the withdrawing of some 95,000 physically fit and older men from the Army Air Forces and Army Service Forces for retraining as infantry. The process is in effect overseas as well as in the United States. Overseas commanders are kept fully informed of the amount of training each individual has had before leaving the United States.

Originally, the replacement training period was 13 weeks. After some time, however, we found it was possible to meet our needs and at the same time increase to 17 weeks this training period. This was continued until very recently when our replacement demand became so urgent as to require the reduction of the training period to 15 weeks. Carefully worked out training tests and battle experience have demonstrated that the average soldier in 13 to 17 weeks can be brought to a training level that permits him to fill a vacancy in a trained team. In contrasting the training of units and of replacements, however, it should be understood that a replacement joins a trained organization. He performs acceptably well, and learns quickly in combat. He is flanked by men who are experienced. He follows their lead and is guided by their advice.

The replacement joins a unit made up of experienced soldiers and benefits from their knowledge and skill for his final training on the job.

Replacements are not formed into new units, but are infiltrated into trained, and for the most part, battle-seasoned organizations.

Mr. Speaker, I have transmitted all official information I have received and all explanations offered by the War Department and the House Committee on Military Affairs for the use of the 18-year-old boys in replacement combat duty with only 13 to 17 weeks' training. But this does not begin to satisfy anxious mothers and fathers, and they are protesting more vehemently than ever. A thorough investigation should be made and if conditions do not warrant a continuation of this practice, it should be stopped by a congressional mandate. The public is entitled to know the facts and whether or not the policies now being enforced are justified.

Battle Veterans Air Criticism of Home Front

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks, I wish to insert this article by Don Whitehead, Associated Press correspondent, taken from the Washington Post dated March 27, 1945:

UNITED STATES VISIT OVER, BATTLE VETERANS AIR CRITICISM OF HOME FRONT

(By Don Whitehead)

With the United States First Infantry Division across the Rhine, March 26.—If a lot of people at home could see themselves as they appear to battle veterans after 2½ years of combat they would not be proud of the picture.

But that's how it is. The men told their stories today as they waited in a little room near the front for an officer to escort them back to the Twenty-sixth Regiment, which they left January 12 for home leave.

There were 19 of them. All had been overseas with the First Division from the time it landed in north Africa. Most wore the Purple Heart, and many had decorations for bravery. They were going back into the line with vivid memories of home, but not all of them were happy.

GOOD TO GET HOME, BUT—

Sure it was good to be home again and just sit around and do nothing but listen to the radio and eat home cooking, they agreed. The girls were wonderful and more sympathetic than most of the boys thought they would be. Home was just like it always was, but still:

"Things have changed," said Staff Sgt. Howard Ashby, Martinsburg, W. Va. "Sometimes I didn't think the people thought much of a soldier or the way we acted. Maybe it was just me.

"There were not many of my friends left at home. Most of them are in the Army and there were just a few guys left. Somehow you were disappointed in seeing you didn't really mean anything to a lot of people, even if you had been fighting for more than 2 years. Your family's not that way, of course, but other people are."

"Yeah," said Sgt. Michael Halko, of Stockton, Pa., "some people feel the war, but others don't give a damn. They are making a lot of money and doing all right.

"OTHER PARENTS RESENT RETURN

"Then some people who had sons overseas seemed to resent the fact that I was at home and their boys were not. They would ask me why was I allowed to come home when their boys weren't. All I could say was that I didn't have anything to do about anybody getting home. It wasn't my fault."

Staff Sgt. John Duda, Adah, Pa., said:

"When you tell 'em a story they won't believe it. They say it couldn't be that bad and then most people start talking about their own troubles and how tough it is at home with rationing.

"Old veterans knew what we were talking about. They understand what the score is and don't ask too many questions."

Capt. Linwood Billings, Dover, N. H., said that was the way most of the men felt.

TWENTY-FIVE PERCENT "DON'T GIVE A DAMN"

"Most people don't know what is going on," he said "I would say 75 percent of the people at home are behind the war effort and the other 25 don't give a damn.

"It is different in smaller towns because they feel closer to the war. In Dover people know just about all the boys who are overseas and they are glad to see them when they get home. Most everybody there is doing war work, too, or trying to do something to help."

Lt. Steve Phillips, Jr., of Greenville, S. C., said:

"I felt lost at times with most of my old friends gone. All I wanted to do was stay at home with my wife. I told her I guess she thought I was crazy just sitting and listening to the radio and reading the papers, but she said she was happy and that was all that mattered. That was enough for me."

Three Hundred Million Pounds of Pork Go to Reds

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Howard Rushmore, from the Boston Record of March 25, 1945:

THREE HUNDRED MILLION POUNDS OF PORK GO TO REDS

(By Howard Rushmore)

NEW YORK.—To the harried neighborhood butcher who seeks for new methods to assuage the pangs of his pork-hungry customers we suggest the following:

Tell them about tushonka, that delicious canned pork recipe made of selected lean meat, sprinkled with onions and bay leaves.

It must be good, for 10,000,000 hogs have gone into its manufacture. It's packed under rigid Government supervision in Chicago and more than 300,000,000 pounds of select dressed weight pork a la tushonka were canned in 1944.

And where can you buy it?

Only one place—Soviet Russia.

In fact, the comrades, who are receiving this pork under lend-lease, consider this a great delicacy and prefer it over the pork chop, an old American dish fast becoming extinct.

And because of this vanishing staple of the blue plate special and the at-home diners, Congressmen have been besieged by pork-hungry constituents to investigate why more than 2,200,000,000 pounds of Federal inspected pork have been exported under lend-lease.

According to Wesley Hardenbergh, president of the American Meat Institute, tushonka is packed in Chicago and other meat centers under "exact specifications as propounded by a Russian commission which met with Government food agencies."

Writing in the Breeders' Gazette, Hardenbergh said:

"Tushonka is made from tender pork trimmings and must not contain more than 20 percent fat. There are from two to four pieces in the 12-ounce can, and from three to five chunks in the 16-ounce can.

DOUBLE SPICE, TOO

"These chunks of tender pork, according to specifications, should not be thicker than 2 inches. One bay leaf must be inserted in the bottom of each can."

According to Hardenbergh, the Russians supervising the packing insist that the Ceylon bay leaves be doubled in the 18-ounce and 32-ounce cans.

Figures released by the office of distribution, War Food Administration, show that more than 500,000,000 dressed weight pounds of pork a la tushonka were sent to Russia in 1943–44.

This is a considerable portion of the total of Federal inspected pork exported which amounts to one-quarter of domestic production.

In contrast, the armed forces of the United States in 1944 received only 14 percent of the total of Federal inspected pork production.

One Hundred and Twenty-fourth Anniversary of Greek Independence

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech which I delivered March 25, 1945, in observance of the one hundred and twenty-fourth anniversary of Greek independence in the city of Lynn, Mass.:

War, the world's one major crime, does serve one useful purpose. Its primitive, desperate challenge brings us to the realization of what we are and what we hope to be. It took the shock of Pearl Harbor to sweep away much of our lazy, selfish thinking and make us aware of a unity that many of us had never experienced before. Today, purged by pity and fear, we are better Americans. Common danger has brought us closer together. We know that for the privileges we enjoy we have responsibilities in return. We are free to develop our individual lives because of the over-all guaranties we have written into law, which we observe and respect. As one member of the family, though free in his thought and action, has a responsibility to the family as a whole, so we, as individual Americans, have obligations to the larger family which is named the United States of America.

Too long have we been the "prodigal sons," indifferent to our mutual obligations, neglectful of our heritage, until common danger brought us home again to unite in defense of our American way of life. Through blood and sacrifice on the battlefields; through the labor, the anxieties, and the prayers of those of us on the home front, we are finding our central faith again. Refined and purified at such cost, that faith will help us to build a better nation and a better world in the days to come.

Our enemies have said, "You have liberty, yes; but with it you have had neither peace nor order within your own rich country. Surrender your liberties, and we will provide a world order."

Our answer is: "For all of time the individual man has struggled upward from slavery to freedom. We shall not be seris to tyranny, even though it has the appearance

of order. We believe that freemen, responsible men, can build a fair and peaceful society. We have accomplished much of that in our own country. Much more remains to be done, but we are not going to scrap the building, to begin all over again. For we have built upon firm foundations, upon the brotherhood inspired by religious faith, and upon the reason which we have inherited, to cherish and develop, from the civilization of ancient Greece."

We freely admit that the 1920's and 1930's revealed weaknesses in our social and economic structure which we mean to repair. After generations of peaceful development, during which we did the groundwork in our Nation, we are now suddenly confronted with engineering problems for which there is no ready solution. The remedy lies not in wrecking what we have built so far. Rather we must work to find the answer through reason, through faith, through confidence in curselves and each other, working together to promote the common welfare.

In every civilization the time comes when some of the old techniques must be discarded if our society is to survive. Our American way of life has the flexibility to adjust itself to changing conditions. We shall retain what is good from the past and reject that which stands in the way of progress.

It is time to take inventory of our assets and as we do so we become conscious of the great debt we owe to the Greek mind and the Greek spirit. Here, for the first time in history, we find a government of laws and not of men. No longer did man have to cower before the whims of a personal overlord. Even the humblest Athenian felt secure, protected in his life and property by practical and equitable rules. Solon, the lawmaker, when asked what made a well-balanced and progressive state, replied; "When the people obey the rulers, and the rulers obey the laws." To his legislation, Attica owed the liberation of its farmers from serfdom. He encouraged the independence of the peasant proprietor class whose ownership of the soil gave to the little armies of Athens the will to preserve her liberties for many generations. Under Solon, trade and industry were freed from financial inconveniences and soon developed to the point where Athens was the commercial leader of the Mediterranean. Science and education were stimulated by this free environment and the way was prepared, materially and mentally for the birth of a culture, which, in many respects has never been equalled since.

Athens grew wealthy. To all outward appearances she was prosperous, talented, and happy. It seemed that the golden age has come to stay. But with her wealth came growing tensions and inequalities and the failure, as we have witnessed in our own time, to achieve a more equitable distribution of that wealth. Individualism is stimulating, it is th power which creates wealth, and concentrates it dangerously. More bitter than the war of Greece with Persia, or of Athens with Sparta, is the war of class with class. Young men conscious of ability and frustrated with poverty, point out the contradiction between political equality and the mounting economic inequality. The poor follow communism and the rich embrace fascism.

This happened in ancient Greece over 2,300 years ago. But how close it seems to the challenging problems of our own time. We, who have not found the solution in 1945, would do well to inquire, "What did Athens do about it?"

She did not surrender to either extreme. Being reasonable, she compromised. Athens survived economic civil war because at heart every Athenian, rich or poor, was an individualist. She survived because her government found a practicable medium between socialism and individualism in a moderate regulation of business and wealth. It set a limit upon the size of dowries, the cost of funerals, and the dress of women. It enforced fair weights and measures and honest quality. By keeping a reserve of grain in state-owned storehouses and pouring this upon the market when prices rise too rapidly, the people are guaranteed that the price of bread shall never be exorbitant, that millionaires shall not be created out of the hunger of the people, and that no Athenian shall starve. The state regulates wealth through taxation as we are attempting to do today. At least during the emergency of war, we are trying to provide a fair share for all through the medium of wage and price controls. Under this system of economic individualism balanced by socialistic regulation, wealth accumulated in Athens and spread sufficiently to prevent a radical revolution.

The economic basis of Athenian freedom, enterprise, art, and thought was firmly laid. It could bear every extravagance except the drain of successive wars. From this we can learn much. I believe we have learned much, for never before in the history of the United States have our people been so determined as they are now to cooperate in the establishment of a world agency to outlaw war. For powerful and wealthy as our Nation is, it cannot survive the increasing destructiveness of war. We need a lasting peace in which to work and build and extend democracy to all of our people.

Repeated wars, both civil and foreign, sapped the strength of ancient Athens. She made a final, desperate attempt to unite the quarreling states. Her former subjects and allies had learned the need for a larger security than individual sovereignty. The majority of them combined under her leadership and once more Athens became powerful through her industry and trade.

The change from landed to movable wealth produced a feverish race for money. Goods, services, and persons * * * were increasingly judged in terms of money and property. Fortunes were made and unmade overnight, and were spent in lavish displays that found their counterpart in the United States of the 1920's. Many citizens became poorer in the midst of this plenty and were forced to depend for their existence upon the fees paid for attendance at the assembly. Thousands of others had to be fed by the temples of the state. The middle classes had lost much of their wealth and were no longer able to maintain the balance between rich conservatives and poor progressives. Finally the poorer citizens captured the assembly, and began to vote the property of the rich into the state treasury, for redistribution among the needy and to finance public works that would relieve unemployment. The bitterness of the class war left Greece divided when a neighboring nation attacked her. The corruption of wealth led many rich men to welcome foreign tyranny in preference to domestic reforms. Again we find a parallel in our own times, in prewar France where the wealthy collaborated with Hitler because they were fearful of the social reforms demanded by their own countrymen.

In the midst of greed, luxury, and the concentration of wealth, public virtue languished and Athens, morally weakened, started to decline. The subject states declared a social war of rebellion and won their independence. The greatest city of the ancient world now found herself without allies, without leaders, without funds, and without friends.

I have purposely omitted any detailed reference to the glories of Greek culture which made it the most fruitful period of world history. The shining inspiration of Greek art, science, and philosophy still nourishes all men who value freedom, reason, and beauty.

I have touched upon the causes of her fall as a warning to Americans of today. For the growth of our country, with its strength and its weakness, closely parallels the development of ancient Greece. We form a powerful community of freemen who have yet to achieve a cultural greatness. For as Justice Brandeis of the Supreme Court said: "America is not only a place in which to make money. It is a place in which to make a civilization."

As we seek wisdom from our parent culture, Greece, we are aware at the same time of the weaknesses that undermined her triumphs. We know that constant wars and corrupt individualism were the first signs of decay. These might have been cured in time but they were not, and ancient Greece died because of her tragic failure to unite liberty with order and peace.

Today we, as Americans, are faced with the same problem. To protect the freedom of the individual; to provide economic opportunity for all and to achieve a durable peace as a basis for security, this is the challenge. If we fail in this, we shall be convicted before history as men who were not only blind to the lessons of the past, but as men who surrendered their future.

This afternoon we gather to do honor to the independence of modern Greece. We are on the verge of winning a world-shaking struggle against modern tyranny, a tyranny every bit as cruel and devouring as the one your ancestors fought against at Marathon and Salamis. The Greeks of today have fought with brilliant courage and ability. They decisively defeated the large and well-equipped Fascist army that invaded their homeland. They were overwhelmed only when the Nazi steamroller came to the aid of the retreating Fascists. Even then the Greeks did not submit. From the mountains they fought on in guerrilla warfare that plagued the enemy and forced him to maintain large occupational units to hold his uneasy conquest.

This infuriated the Nazis. Finding that brute force and treacherous propaganda could not conquer the Greek spirit, they resorted to deliberate starvation of the people. Greeks died in the streets from hunger and disease, but Greece fought on.

Th long, grim night was ended. The tyrant has been beaten back and Greece is free. But the struggle has left deep and grievous wounds which still throb and pain, and which time alone can heal.

The civil strife which broke out in Greece after her liberation shocked a world which longed for peace. It seemed to indicate a future filled with violence and anarchy. Happily, such was not the case. Fighting has ceased. But Greece, like every other country which has suffered from this, the greatest disaster ever to befall mankind, faces a long road back to freedom, order, and progress.

The brief flare-up of civil war is a sign of Greek vitality. It is proof that the spirit and energy of your people has not been dulled by oppression. It is a warning to all that the people, released from slavery to a foreign power, are determined to remake their nation in a new mold, to free themselves from domestic tyranny and develop a Greek Nation where even the humblest has security and opportunity.

In this, I am confident that she will succeed. As a member of the family of free nations she will go forward with us to achieve economic statesmanship. Greece of today, drawing from the wisdom of her ancient past, can help us to win the high goal which the Greeks of that time aspired to the security in which culture may flourish.

Ancient Greece fathered freedom. Modern Greece will help to extend it so that this time the world may be free.

Conditions in Veterans' Hospitals

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ST. LOUIS, MO., *March 15, 1945.*
COSMOPOLITAN—FRANCES WHITING,
Editor, Hearst Magazines, Inc.,
New York, N. Y.

DEAR EDITOR: In your March issue you say that Albert Maisel (the author), "spent months collecting the facts," and that in this article he presented them "fully documented and with a sincerity learned on two battle fronts." With this introduction you sponsor to the public Third Rate Medicine for First Rate Men. Maybe the Veterans' Administration can be helped by an investigation, but such articles can be only harmful. I have studied the entire article, and await the April issue.

I wish to comment only on one instance (the Schwiebert case), as the journalistic technique employed in this case is typical of the whole article. If the Schwiebert instance is a sample of "fully documented facts," and "a sincerity learned on two battle fronts," is is a sad reflection on editorial integrity and reportorial capacity.

What was the date of the letter written presumably to Dr. H. H. Brueckner (superintendent of the District Tuberculosis Hospital at Lima, Ohio) and quoted (omitting date) in Dr Brueckner's letter of June 29, 1944, to Louis I. Dublin, Ph. D.? You disclose that "Louis I. Dublin, Ph. D., last year resigned from the Veterans' Administration Medical Advisory Council, where his efforts at reform have been met with the utmost cynicism by the Veterans' Administrator, Brig. Gen. Frank T. Hines, and his underlings in the central office."

Did Dr. Brueckner ever answer the letter received from Harold W. C. Schwiebert?

Schwiebert wrote this letter to Dr. Brueckner presumably before June 29, and Schwiebert died July 2, according to Dr. H. H. Brueckner's follow-up letter of July 6 to Louis I. Dublin, Ph. D.

Did Dr. Brueckner see the deceased Schwiebert during the last few weeks of his life?

Was an autopsy performed on Schwiebert?

How does Dr. H. H. Brueckner know that there was an "effusion in the deceased man's chest, which caused death on July 2 of apparently cardiac failure and a cardiac embarrassment, probably because of severe mediastinal shift caused by effusion"?

Such a diagnosis in the absence of an autopsy, and by a person who had not examined the patient and his clinical record in life, is pure assumption, and worthless.

There is nothing in Schwiebert's own account of his condition and treatment to indicate anything except that he was dissatisfied with the treatment and results; and that he was bewildered. Who would not be bewildered after nearly a year of invalidism? He was naturally discouraged; but this does not indicate that there was any improper treatment or neglect in his case. If there was effusion in the deceased man's chest, its removal on June 29 might have been as effective as it seems to have been abroad and in July and August 1943. It may be that there was no fluid or effusion present when "nothing was done but being fluoroscoped and X-rayed once in a while."

About a year ago a veterans' hospital patient phoned me that he had left the institution in disgust, and his reasons were: "Those doctors don't know anything" and "They told me I had tuberculosis, and you know, Doctor, that is silly for a man of my age to have tuberculosis." He had left the hospital against medical advice. I advised him to return immediately and to observe the advice and recommendations of the veterans' hospital. He refused, however, and I lost sight of him for a while. A few months later I located him in a municipal hospital dying of tuberculosis. He complained that he was being neglected and getting no benefit, and asked me to get him back into the veterans' hospital, where he could get "proper scientific investigation and up-to-date treatment." As a physician I recognized that he was approaching death, and took steps to have him reinstated into veterans' hospital. In the short delay that was necessary to effect his transfer he died of tuberculosis.

I had friendly relations with another patient that I met when I was a patient at veterans' hospital. He told me his whole story and what they had done for him. He was sent to the veterans' hospital at Hines, Chicago, Ill., and wrote to me of the successful operation by an expert at Hines who had removed a cancer of the bowel in the appendix region. The diagnosis had been correctly made at the first institution and verified at operation and in the laboratory. Some months after I saw this patient at his work, and he looked like a cured case. He may yet die of cancer, but he was given the best treatment possible, and appreciated it.

I have had frequent contact with the Veterans' Administration at various times since its start. I have been a patient in one of the facilities and am familiar with the high-class medical service that the patients receive in these institutions. There are well over 60,000 patients in the institutions and the capacity is pushed to the limit. I'm satisfied that most of these patients receive a much higher grade of medical service than they are capable of acquiring in their own communities through private facilities. I am also convinced that no group of 60,000 patients in any group of hospitals receive attention from any more capable and devoted staff of physicians, technicians, specialists, nurses, and attendants than does the group in the Veterans' Administration facilities.

Your comparison of statistics would be more valuable if it were possible to state how much the percentage of "recovery, improvement, and so forth", was influenced by the number of veterans treated or discharged in nonveteran facilities, private and public. Lacking this comparison the statistics quoted are not illuminating.

This date, two years ago, I was taken to the veterans' hospital, Jefferson Barracks, Mo., in an ambulance, helpless, and weighing 75 pounds. I was thought to be hopeless, and about to die. I desired to die. I had general arthritis, and was unable to feed myself, and felt generally miserable, useless, and unhappy. I was not a case that any doctor would clamor for, but was not made to feel unwelcome. I was handled excellently at home and at private hospitals by my fine professional brothers for over a year, before complete disability forced me to give up. Every help was available at the veterans' hospital, and was generously extended me. On November 25, 1943, Thanksgiving day, I was discharged under my own power, weighing 170 pounds, and have practically recovered, and have continued to improve to a point where I have been active enough to be able to pay on this income tax day a considerable sum on my earnings during 1944.

During my recovery in the open sunshine at veterans' hospital on the Mississippi, I mingled much with the patients, and became a sort of "curbstone consultant" to many bewildered patients. In discussing their cases I heard many humorous stories, and derived much satisfaction from clearing their misunderstandings concerning medical terms and procedures.

My experience has been duplicated by many who have received the fine services of the Veterans' Administration doctors and nurses. I sought no favors, and received none not available to all, and with most of the Veterans' Hospital patient group, I am grateful for the high type of medical and humanitarian service extended to the worthy and unworthy alike. I look back on my hospitalization at Jefferson Barracks, Mo., from March 15 to November 25, 1943 (8 months and 10 days), with the utmost satisfaction and gratitude—a happy interlude in my life.

I reach my estimate of veterans' hospital services, not through gratitude alone, for in my professional life I am not unfamiliar nor inexperienced in all phases of hospitalization—planning, administering, appointing professional and nonprofessional personnel—serving. Since dictating the above paragraphs, I have again carefully read Third Rate Medicine for First Rate Men, and in no less degree than at the first reading, I have the impression of a skunk-like aroma pervading the whole article.

Is there nothing good or fine about the Veterans' Administration? The passion of the American people for fair play and honesty will compel them to accept your unfair and untrue charges at the very low face value so apparent in Third Rate Medicine for First Rate Men. Any informed hospital authority will recognize the great work of Brig. Gen. Frank T. Hines, and his underlings at the central office. The accomplishments are evident to those who would see. This is not to imply that no improvements could be progressively made in the future, as in the past. I do believe, however, that the central office gang are more pragmatically idealistic and ambitious for progress than many of their incapable and inexperienced critics.

There are reasonable and valid explanations for all irregularities which do and must occur in all large organizations. These should not be condoned, if avoidable or correctable. The corrective measures recommended in the article are amateurish. If carried out they would effect a change, but not necessarily an improvement. It cannot be assumed that the present Veterans' Administration has a large pool of experts and specialists to draw from. Neither would its successors. Any Veterans' Administration would have to adjust itself to war conditions with the dearth of personnel of all types.

The present Veterans' Administration has done a magnificent job, and is entitled to all the constructive, honest help and encouragement the American people, through their Congress and administration, can effect. Pardon my lengthy comment.

Very truly yours,

JOHN C. MORFIT, M. D.

Mood of Practicality Seen Sweeping Nation

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article from the Washington Evening Star of March 26, 1945:

MOOD OF PRACTICALITY SEEN SWEEPING NATION—OBSERVER ASKS IF RETURNING SOLDIER WON'T SEE THROUGH SHAM

(By David Lawrence)

A strange mood of "practicality" is sweeping the United States at the moment. It is one of the phenomena of the war most difficult to explain. It extolls "compromise" and looks askance at those who insist on adherence to "principle."

One wonders what the soldiers and sailors will think of it when they come home—whether they, too, will join the ranks of the so-called "practical" who says "principle" is theoretical or idealistic. One wonders, on the other hand, whether the servicemen will not see through the sham of the "practical" philosophy and ask some searching questions.

For if it is right to be "practical" in 1945, why wasn't it right, they may ask, to have been "practical" in 1939? The records show that Russia, for instance, was negotiating with Great Britain early in 1939 and wanted assurances concerning certain Polish territory, but the British felt that adherence to the pledges which guaranteed the territorial integrity of Poland was paramount. If Britain had been more "practical," would Stalin have signed the alliance in 1939 with Hitler which gave the Nazis their hoped-for assurance of a one-front operation and which enabled Germany to start the war?

LESSON OF APPEASEMENT

There's another question, too, which will have to be answered by the school of thought which espouses the "practical." Hitler wanted the city of Danzig. He argued that the Polish Corridor set up by the Treaty of Versailles really bisected German territory. In the case of the Suedeten section of Czechoslovakia populated by Germany, the Munich Conference of 1938, which was governed wholly by practical philosophy, gave Hitler distinct encouragement.

If the British and French statesmen had been practical in 1939 and had given Hitler his Danzig and revised the Polish Corridor set-up as simply a mistake of 1919, just as Mr. Stalin now argues that the failure to grant the Curzon line to Russia was a mistake of the Versailles Conference, would not such appeasement in 1939 have kept Europe at peace as it did in 1938?

If a small matter of European territory, thousands of miles away from us, is unimportant—as so many of the "practical" folks are saying about the partition of Poland—then why was the European war permitted to break out in September 1939? If weak nations like Poland are to be carved up in 1945 why couldn't they have been carved up in 1939 and saved the millions of lives and the maiming of millions more in this war that now has gone 5½ years?

The "practical" folks may not be able to answer those questions without revealing their own inconsistency and their own lack of logic. The adherents to principle, who are sometimes called perfectionists, can, however, answer those questions unhesitatingly and can face the returning servicemen without equivocation. For the idealist believes implicitly that this war was begun and will be fought to the end to secure respect for "principle," to maintain the pledged word of states, and to revive morality among states. The basic "principle" behind the worth-while sacrifices being made today in this war is a belief in fundamental justice. Along with that belief goes a condemnation of evil, no matter whether it rears its head on the side of an ally or a foe.

REASON FOR THIS WAR

The believer in "principle" cannot condone in an ally any behavior that emulates that of the totalitarian enemies now being brushed by the sword. The reason for this was, as the defenders of "principle" see it, is that neither Hitler nor any other totalitarian ruler can be trusted to keep the peace no matter what concessions are given. Appeasement and compromise never pay in dealing with the selfish or with those greedy for power or with those who exclude the "four freedoms" from their people.

Fortunately, in the democracies, public discussion of these issues is still permitted though some of the "practical" school of thought think that criticism of an ally for failure to adhere to the "four freedoms" should be suppressed. It would appear that fears of disunity have been widely exaggerated. Practically speaking, Russia and the United States and Britain are bound together by a common aim to defeat Germany aided by our manpower and supplies.

Despite the criticisms of Russia, for instance, it appears that her armies are proceeding vigorously and so are the armies of Britain and France and America. Evidently nothing that has been said in this country by the minority of believers in "principle" has given Goebbels enough ammunition to bolster his armies to defeat ours. The Allies seem to be making wonderful progress across the Rhine anyway.

The sooner the victory is won, the sooner discussion on fundamental issues can be carried on without the hysterical cry that to speak the truth about ourselves is to aid the enemy.

Fascism in America Not Dead—Sneak Devastating Attack Being Made on Constitution of United States by Fascist Group Representing Most Sinister Lobby Ever Organized to Make Rich Richer and Poor Poorer

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. PATMAN. Mr. Speaker, while our 12,000,000 fine, brave, American boys are all over the world, upon 55 battle fronts, fighting and dying for our country, there has been, and is now, a comparatively small group of greedy, selfish men and women who are trying to change our form of government in order that they may escape their just and fair share of the burden of taxation which will be necessary to pay the enormous war debt.

It is said that our doughboys are entitled to the greatest credit because of the extra hazards of warfare and the unusual hardships which must be faced by them. Without in any way minimizing the importance of any branch of our armed forces, it can be said that the man on foot with the rifle and the grenades, in the end, actually wins the battle and conquers the foe.

THE "DOUGH BOYS" HERE AT HOME

While our doughboys on the battle field are fighting it out with the enemy at close range, oftentimes in hand-to-hand fighting with bayonets, the greedy, selfish group to which I have referred is trying to do something for the "dough boys" here at home—but in this case, many of the "dough boys" are those who have made so much money by reason of the country's misery and misfortunes caused by this war. These "dough boys" want to protect what in common parlance is referred to as their "dough"; among them are the new crop of "dough boys" of World War No. 2.

THE SCHEME

Their scheme, hatched up at the beginning of this war, is to repeal the sixteenth amendment to our United States Constitution, which permits Congress to levy taxes on incomes and inheritances.

They recognize that an open fight would not get them anything. Their plot could not stand the light of day, so therefore their efforts must be concealed and conducted in the dark. They know that any success must of necessity be the result of a campaign of deceit, misrepresentation, treachery, and fraud.

So this group began to operate. First, they prepared a resolution petitioning Congress to call a convention for the purpose of repealing the sixteenth amendment to our United States Constitution and substitute a proposed twenty-second amendment, which would limit the amount of taxes that could ever be levied upon incomes, estates, and inheritances to 25 percent.

FEW FAMILIES WOULD SOON OWN ALL THE WEALTH

This would mean that one who was fortunate enough to have, for instance, a patent right or monopoly right or a great inheritance which would permit him to receive millions of dollars of income per year, would never have to pay more than 25 percent taxes. It would also mean that this person, when he died, could pass the fortune on with no more than 25 percent inheritance tax. This would enable a few families in a comparatively short period of time to acquire practically all the wealth of our Nation.

Such resolutions were introduced one after another in the respective State legislatures. There was no publicity given and very few people in the country knew that such a proposal was pending.

Under the fifth article of the United States Constitution, it is contended that when 32 States—two-thirds of the total number of States—petition Congress to call a convention that Congress has no other recourse and will be compelled to call a convention for the purpose stated in the petitions of the 32 State legislatures. This is a new approach to slip through an amendment.

JOB HALF FINISHED BEFORE DISCOVERED

Before I knew it, and before it was generally known, 14 State legislatures had adopted such a resolution and soon thereafter 3 more adopted it. This meant that if 15 more States had adopted such a resolution, the Congress would have been compelled to call a convention, and while our 12,000,000 fighting men were away, this great question would have been passed upon with the possibility of our Constitution being amended overnight to shift the burden of war taxation from the rich to the backs of the fighting men who had saved our country upon the battlefields of the earth.

This is the most sinister plot that has ever been known in American history. It is referred to as the millionaires' amendment and is also known as the tax-dodging amendment.

FASCIST GROUP

The sponsors of this vicious plot are a group masquerading under the name of the Committee for Constitutional Government. The mainsprings in this Committee for Constitutional Government are the following: America's No. 1 Fascist, Samuel Pettengill, a former Member of the House of Representatives, who is now devoting his talents at oratory and writing to concocting misleading and vicious propaganda for the group. We also have at the head of the group the millionaire publisher, Frank Gannett, who has a string of newspapers which he utilizes to spread Pettengill's propaganda. Mr. Gannett was once a Republican candidate for the Presidency. Also, one of the brains behind the vicious movement is Edward A. Rumely, who was convicted after the last war and sentenced to and served in the Federal penitentiary for acting as an agent for the German Government. The fourth member of this unholy quartet is Fascist instructor, Samuel McClure, who absorbed a little too much of fascistic teachings.

SO-CALLED CHRISTIAN AMERICAN GROUP

There are other groups throughout the Nation that could well be considered subsidiaries of the above organization. Among these we find a group with the audacity to call themselves the Christian Americans. I have in my possession a confidential report addressed to friends of the Christian American movement, and dated November 20, 1942, in which we find the following:

> The Alabama Legislature met Monday of this week and adjourned Friday, considering only the six subjects included in the Governor's call for the session. Labor legislation and taxation were not included.
>
> During our visit here we have made contact with the influential leaders, and we are assured that the session early in 1943 the following measures, sponsored by the Christian American organization, will be introduced and favorably acted upon:
>
> (1) A memorial to Congress to submit an amendment to the Federal Constitution limiting the taxing powers of Congress to a maximum rate of 25 percent on individual and corporate incomes, gifts, and inheritances.
>
> Respectfully submitted.
>
> VANCE MUSE,
> *Secretary-Treasurer, The Christian American, Houston, Tex.*

This organization is one of many organized by Vance Muse. He is also associated with the Committee for Constitutional Government. Doubtless other Southern States were similarly propagandized by Muse.

I do not know how this resolution reached the Alabama Legislature. I am not impugning the motives or questioning the integrity of any member of that great legislative body but I venture to say that the members did not have all the facts on this resolution or it would not have been endorsed.

My information discloses that the resolution was introduced in the Alabama Legislature on June 22, 1943—House Joint Resolution 66. It passed the house, it passed the senate, and it was adopted on July 8, 1943.

I cite Alabama just as an example to show what kind of support the resolution had—what organizations were behind it. Other States have passed a similar resolution. In fact, 17 States have passed it to my knowledge; they are as follows, and I include the year of passage for your information:

Alabama, 1943; Arkansas, 1943; Delaware, 1943; Illinois, 1943; Indiana, 1943; Iowa, 1941; Kentucky, 1944; Maine, 1941; Massachusetts, 1941; Michigan, 1941; Mississippi, 1940; New Hampshire, 1943; New Jersey, 1944; Pennsylvania, 1943; Rhode Island, 1940; Wisconsin, 1943; Wyoming, 1939.

STOPPED IN THEIR TRACKS

However, since our fight was instituted to expose the vicious nature of the proposal and show just who was behind it, not one single State has come out in favor of the resolution. In fact, the sponsoring group has suffered a severe reverse by having 4 of the abovementioned States refute their endorsement by passing rescinding resolutions. These 4 States are Arkansas, Wisconsin, Iowa, and Illinois. This brings the score down to 13 endorsing States instead of 17. Other States are also considering similar rescinding resolutions.

ENDORSING STATES SHOULD RESCIND

I wish to call your attention to the fact, however, that even though all of the necessary 32 States did not pass the resolutions during a single year, it does not mean that the action of the endorsing States is nullified by adjournment of the respective legislatures. Once a State has passed an endorsing resolution, that action is effective for year after year; the only way to get those names off the endorsing list is to have them pass a rescinding resolution, and to keep those States which have not already passed an endorsing resolution from doing so.

STAKES HIGH

Remember that the stakes in this game are the highest; they involve the incomes, estates, inheritances, and gifts of the millionaires. They can readily afford to spend terrific sums and fight a concentrated fight in one State at a time if they feel it will be to their advantage. If they could secure the endorsement of 1 State a year for the next 19 years and none of the 13 already endorsing did not rescind, their mission would be accomplished. They would have the 32 States necessary and which they are striving with every crooked, sordid campaign which they can devise.

Just to show you that their activities are still a threat, here is a sentence taken from a New York newspaper clipping of February 20 of this year:

> By a vote of 24 to 24, a concurrent resolution memorializing Congress to propose a constitutional amendment limiting taxes on incomes, inheritances, and gifts was declared lost today in the Senate.

Fortified with the near-success as expressed by the tie vote, the proponents evidently launched a new campaign in that State. The result is evidenced by this clipping of March 21, 1945:

> The senate today approved a resolution asking Congress to clear the way for a constitutional amendment limiting estate and personal income taxes to 25 percent. The vote was 30 to 22.

Unfortunately for the proponents, the New York Legislature adjourned before they could make their attempt to get the concurrence of the house.

FARMERS AFFECTED

In analyzing the devastating effects which the adoption of the proposed Gannett-Pettengill twenty-second amendment to the Constitution would have upon the various groups in our Nation, too little thought has been given to the calamitous results this proposal would have on the farmer and his annual income.

It is gratifying to note that those of our farm States which have learned the true facts about this vicious proposal have acted quickly through their State legislatures to rescind the actions of former legislatures which, for lack of sufficient information, endorsed the measure as being in their best interests. As I have noted, Iowa, Wisconsin, Arkansas, and Illinois have adopted rescinding resolutions which cancel out their former legislatures' precipitate actions. The selfish millionaires who have tried to dupe the agricultural interests of the Nation for their own personal gain have learned in 1945 that the farmer can quickly repel attack on his pocketbook once the truth is told him about the real motives and purposes behind this sinister proposal.

These millionaires who hope to double and triple their own net incomes after taxes through the adoption of this amendment are not the ones who provide the big market for farm products. They are only a handful of greedy money grabbers who are willing to see the small farmer burdened with a permanent peacetime burden of 25 percent Federal taxation upon his personal income, instead of his normal 10 or 12 percent tax, in order that they—the selfish few—may be saved the millions in Federal taxes which the Government normally collects from the wealthy few who are possessed of idle funds.

These millionaires would not devote their surplus funds to improving the lot of the farmer. They would only use them for luxury-investment purposes or for industrial investment which could not directly benefit the farmer to any degree.

As I have stated many times before, this vicious "millionaires' amendment" would result in the following if it should become part of our Constitution:

First. The principle of "ability to pay" in Federal taxation will be discarded.

Second. Small business will be wrecked because big business will be able to keep so much of the huge profits that they make that little business will be unable to compete and will be quickly and easily crushed and destroyed.

Third. The Government will be unable to collect sufficient money under the restriction to provide for more than the payment of the interest on the national debt when the war is over. It is estimated that our national debt will be around three hundred billion when the war is over. If the interest rate is kept down to 2½ percent, the carrying charges will be $7,500,000,000 per annum. Therefore, it is very doubtful that the Government can raise more than enough to carry this enormous carrying charge on the national debt with this 25-percent restriction.

Fourth. Dependents of those who gave their lives for their country in this and other wars will no longer be able to receive relief from the Federal Government.

Fifth. There will be nothing left for the Federal Government to provide for those who can no longer carry on due to injuries and wounds received in battle while protecting our country in this and other wars.

Sixth. The aid for old-age assistance will have to be discontinued and much of the social-security program generally will be wrecked.

Seventh. There can be no soil-conservation payments to farmers.

Eighth. There can be no help by the Federal Government for construction of highways and roads; nor for the improvement of our rivers and harbors.

These are just a few of the benefits that will have to be stopped immediately if this amendment becomes effective.

LITTLE TAXPAYERS WOULD BE HARMED

In practice the 49,200,000 taxpayers in the lower brackets will not only not have their taxes reduced under this amendment, but their taxes will actually have to be increased to make up for the savings that will be granted to the few who now own and control so much of the wealth of the country.

FARMERS SHOULD DEMAND DEATH OF PROPOSAL

The fight against this sinister lobby is far from won. The farmers have a vital interest in this campaign for the protection of their own personal interests. I sincerely hope that the agricultural groups in every State in the Nation will take cognizance of the activities of Committee for Constitutional Government and will advise their accredited representatives in the various State legislatures just where they stand on this vital question.

The term "full employment" would be meaningless if the twenty-second amendment to the Constitution should be adopted as proposed by these selfish interests. Unless the farmers maintain a vigilant watch on their various State legislatures, the fine actions already taken in Iowa, Wisconsin, Arkansas, and Illinois, may be of no avail.

This selfish group believes it is all right for Congress to be allowed the privilege of taking all a citizen has, in time of war, if he only has a life to give; but if it is money, property, or income, the citizen is asked to contribute, there should be a limit of 25 percent. No wonder they want to operate in the dark.

Pollution Is a Menace to America

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. MUNDT. Mr. Speaker, it is hoped and expected that one of the challenges which will be met by the Seventy-ninth Congress soon after it resumes regular sessions after Easter is the matter of stream pollution. In that connection, I desire to take this opportunity of calling to the attention of the Congress and the country an editorial published in the February 28, 1945, issue of the Knoxville Journal, of Knoxville, Tenn.:

CONGRESS BILL TO CURB STREAM POLLUTION IN UNITED STATES SHOULD GET SUPPORT OF CONSERVATION-MINDED

United States Representative KARL MUNDT has introduced a bill, H. R. 519, which deserves the support of citizens throughout the country who recognize the threat of continued and unending stream pollution to the health, money, and recreation possibilities of the Nation.

Several times reference has been made here to a bill now before the Tennessee Legislature backed by the Conservation Commission, which would constitute at least a step toward curbing stream pollution in our State.

Which consideration leads to a conclusion long held by experienced conservationists that no ultimately effective clearing of our streams is possible without a national antipollution law. This is what the Mundt bill will be, if enacted.

As the readers of this family journal have probably suspected, the Knoxville Journal is extremely jealous of the rights of the individual States in their relationship to the Washington Government. These have been so reduced and weakened under the Roosevelt regime that such few as we have left become precious indeed.

But on this matter of stream pollution we are ready to concede that only the Federal Government can act as a last recourse in the fight we hope the people are going to make to reclaim their streams. Happily, it is as a last recourse that the Mundt bill is drawn. Section 5 of it states:

"It is hereby declared to be the policy of Congress in the administration of this act to encourage State and interstate compact agencies to exercise their statutory authority in prevention and abatement of pollution and that action by the Federal Board will be taken only after such existing authorities have been given an opportunity to act, and 6 months after written notice by the Board have failed to do so."

Thus it is seen that the bill in question is so drawn as to mesh perfectly with whatever effective State legislation there exists to combat stream pollution.

As was pointed out here yesterday, most of us have become so accustomed to the tragedy of seeing the value of our streams for recreational purposes destroyed; of seeing them become menaces to public health and breeders of economic waste, that we fall into the conviction that there is nothing we can do about it. Because we recognize that doing something about it will take much more than our lifetimes, we pass it by for accomplishments that may be perfected within a year or a decade.

We believe, however, that the time is ripe for conservation-minded people all over the country to form themselves into an unpaid lobby to really get antipollution work going. Nor is a campaign to get the Mundt bill enacted out of place even in wartimes. These streams and lakes that raw sewage and industrial waste are now depreciating in value belong, especially, to the younger generation that comprises our armed forces. This fight started now will pay big dividends to them when they are as old as we.

The reader is urged to write his Congressman and his Senators asking support of the Mundt bill. The number, again, is H. R. 519.

Treaty With Mexico

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 28 (legislative day of Friday, March 16), 1945

Mr. TOBEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an able editorial entitled "Better Go Slow," written by James M. Langley, editor of the Concord Monitor, under date of March 27. The editorial relates to the Mexican treaty, and in view of the current discussion of the treaty, I think it is most timely and cogent.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BETTER GO SLOW

There is agitation to get the treaty with Mexico through before the world meeting at San Francisco. The treaty would establish what amounts to an international T. V. A., a regional river valley (the Rio Grande and its tributaries) authority operating in two countries.

This is a new venture in international affairs. Under the proposal the waters of the great watershed would be divided between Mexico and the United States. In both the ultimate use of these waters to their maximum will help convert arid areas to conditions of fertility. Several States are interested on this side of the border, but under the treaty there would be a greater authority than their own and they would lose whatever sovereign rights they now possess individually, though they would have a minority representation in the Government of the United States, which would be a party to the treaty.

This sort of treaty is not something to be entered with haste. The proposal has been before the Congress for some time, but now that it is slated for action there should be deliberate consideration and debate. For the Rio Grande is not the only watershed which might become involved in international treaties. In this part of the continent the watershed of the St. Lawrence is even greater and more important. The pattern set with Mexico might become the formula adopted concerning the St. Lawrence.

The theory advanced by those who would hasten consideration of and action upon the treaty with Mexico is that its approval now would help to bring the nations of the western hemisphere to San Francisco with a show of good neighborliness. Once more Uncle Sam would be cast as a good Samaritan. This time he would be giving

the much smaller and weaker nation to the south a generous share of the waters of the Rio Grande, most of which originate within the United States.

The theory is not sound. It gets the United States nothing to be perpetually presented in such a role. In the first place to be so presented doesn't impress anyone with our sense of justice. It only makes the United States appear to be profligate. It is right for us to be fair, but when we slop over and go beyond mere fairness and distribute our wealth, natural or otherwise, to all comers we are merely exhibiting poor sense in the judgment of even those who benefit. We do not win their respect. In fact, we lose it, if we ever had it.

Mexico has within herself the great natural resources upon which she could, if she would, build a great civilization. The United States, her neighbor, has developed civilized skills which she can observe and copy, if she will. If Mexico is a poor relative, it is because she has not yet chosen to change from an essentially agrarian character to an industrial nation. To grow greater she must make the decision herself and attain industrialization by her own efforts. If we give Mexico partial industrialization and development, we not only do not win her respect, but she will not attain the self-respect necessary to sustain civilized advancement.

In our good-neighbor policy there is a superficial show of treating the smaller nations to the south of us as equals. But somehow we do not manage to impress them with our sincerity, for we aren't sincere the way we go about it. We don't really feel they are equals, and they suspect as much. We seem to think, like a lot of individual Americans do, that everything can be bought for a price, including good will. International amity is not for sale for so many dollars, in either goods or services. It can be attained only through mutual self-respect.

If to procure a treaty with Mexico we give up water rights we now possess, though we have future need of them, we are making a mistake. Yet this is virtually what we seem to be doing under the proposed treaty. The Rio Grande is fed by great rivers which flow entirely within the United States, and the Colorado River, also involved, is also mostly within the United States.

The States within which these rivers flow have or had rights to them. But now the Nation considers these rights hers, rather than rights of the States. Even under the newer concept, they are still rights of the United States. Now some of these rights are to be handed to an international authority by agreement with another nation. That is a sufficiently important step to warrant anything but the haste now sought in bringing the agreement into being within a few days.

Training of 18-Year-Old Soldiers

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. HOPE. Mr. Speaker, every Member of Congress has received protests against the current policy of the Army with reference to the use of 18-year-old boys as infantry replacements in combat service after having been given only 13 to 17 weeks' training. I have received a number of letters from the parents of such boys and it has been brought to my attention that in a number of cases 18-year-old boys have become casualties soon after being sent in as replacements at the front.

I have brought to the attention of the War Department the fact that American fathers and mothers were given the impression at the time the draft age was lowered that their young sons would not be sent into service without a year's training. I do not know of any specific assurances which the War Department gave to this effect, but undoubtedly the War Department, like everyone else, knew that this impression prevailed and it is unfortunate that nothing was done to correctly advise the public, especially the fathers and mothers, of the facts. I have made specific inquiry of General Marshall as to the character of training which is given before our young boys are sent as replacements to the front lines and shall include his reply as a part of these remarks. It is my understanding that these young boys have not been sent to the front lines without further training overseas except in cases where there was a lack of trained troops in a crisis like the battle of the Ardennes. Now that the situation has become less critical I hope that it will be the policy of the Army to see that these young soldiers are given a longer period of training before being rushed into combat.

I think it is only fair to the Army to say that no army in all history has given as much concern to saving the lives of its men through the use of superior equipment, unexcelled medical and hospital care, and sound and brilliant leadership as our Army has done during this war. I feel that our losses have been kept at the minimum considering the number of men involved and the size and character of our operations.

The letter from General Marshall to which reference has been made is as follows:

MARCH 9, 1945.

Hon. CLIFFORD R. HOPE,
House of Representatives,
Washington, D. C.

DEAR MR. HOPE: I have your letter inquiring as to the training our infantry replacements receive before they enter combat. The following is the information you requested.

Infantry replacements are sent overseas under completion of their replacement training. Subject to changes in military needs, they receive additional training in the theater. Because of military emergencies, such as the recent German attack in the Ardennes Forest, some of these men may arrive in the front lines with no training other than the replacement training they received in the United States.

I am concerned over the current tendency to confuse both the time required for the training of units with that of individual replacements and also the length of training with its adequacy. As for the former, a unit such as a division requires a year or more to train, but the individual soldier who is to be placed in a seasoned, veteran unit can be properly trained in much less time. As for the adequacy of our training, it is based upon extensive military experience relating specifically to the present war, and the training is largely in the hands of men who have had recent combat experience. I have personally inspected camp after camp to make certain that this work is being conducted in the most efficient manner practicable. It should be kept in mind that all of these men, after their replacement training is completed, are assigned to units with long combat experience where the leadership from the noncommissioned grades upward is in the hands of veterans. Our reports from the battlefields reveal that these men measure up well in combat, and I am firmly of the conviction that never before in our history have our soldiers been so carefully prepared for battle as is the case at the present time. Attached are the comments of Mr. Stimson to the press which explain this situation and our efforts to meet it.

I hope that you and the Congress will feel free to assist us in making it clear to the American people that our choice in the matter is this: Either we must delay our operations in Europe and in the Pacific, thereby greatly increasing the loss of life by prolonging the war, or we must continue our present procedures. There is no other course in view of the present manpower situation and the fact that we have already thoroughly combed the forces here and in noncombat areas overseas to insure that men suitable for infantry replacements are retrained in the infantry and assigned to combat units.

Faithfully yours,

G. C. MARSHALL.

Mexican Treaty Constitutes Repudiation of Solemn Pledge Given War Veterans by the Federal Government

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. ENGLE of California. Mr. Speaker, I call attention of my colleagues in the House to the fact that the Committee on Irrigation and Reclamation has just reported favorably on a bill giving the same preference to veterans of World War No. 2 as was extended to veterans of World War No. 1 in the settlement of newly irrigated lands in southwest Arizona and southern California.

It may interest the Members of the House to know that the passage of the Mexican treaty will make impossible the utilization, by the veterans of this war, of the benefits conferred under this bill, and will constitute an ignoble repudiation of a solemn pledge given to the war veterans of the First World War by the Federal Government.

Several hundred thousand acres of public and potentially productive land located along the lower Colorado River in southwestern United States for some 16 years have been held in trust for war veterans. Up until the building of Boulder Dam the land appeared to be only a useless desert waste, because there was no dependable water supply to irrigate these acres.

When Boulder Dam was built it made possible the regulation of the Colorado River and the conservation of its floodwaters. When Congress adopted the Boulder Canyon Project Act in 1928 it

was generally believed by the people of America that the water salvaged by the great dam would be made available for use within the United States, for the benefit of citizens of the United States.

In fact, the Boulder Act, in section 1, contains the explicit provision that the water salvaged and stored by Boulder Dam is to be made available for use "exclusively within the United States."

But Congress in adopting the act went even further. It provided, in section 9—the section which is amended by H. R. 2742 and just reported as mentioned before by the Committee on Irrigation and Reclamation—that all public land that could ultimately be irrigated by water from Boulder Dam was to be withdrawn from entry, and reopened for entry as and when facilities for irrigating the land were brought into existence. And it was further provided that when such land was reopened for entry, United States war veterans were to be given preference in the settlement of this land. Now, during the past few years, the All-American Canal, watering the Imperial Valley of California, has been constructed and placed in operation. From this canal it will now be possible—if the water is there—to irrigate some 150,000 acres of public land. This is a part of the total acreage of similar public land that was withdrawn from entry back in 1928. Much of this particular area is part of the Imperial Valley, the irrigated portion of which is one of the most productive areas in the entire United States—reclaimed from desert wasteland by the application of water from the Colorado River. These additional areas, reserved for veterans, can become equally productive, if the water Congress has dedicated to their use is not given to Mexico, as the treaty proposes, and provide a large number of homes for returning war veterans.

In the Gila Valley in Arizona an even larger area, over 500,000 acres, was similarly withdrawn for the aid of veterans and included, by section 11 of the act, in a project to be investigated by the Secretary of the Interior. The United States Government by solemn legislative enactment back in 1928 promised its war veterans that they should have the first right to take up and settle upon these public lands.

Now, we find that this pledge will be ignobly broken and cast aside if the proposed Mexican water treaty is ratified by the Senate. This is true because, after the Colorado River water guaranteed to Mexican landowners by the treaty is sent on down below the international border, there will not be sufficient water available in future years to assure a dependable supply of water for much of this public land. The land, of course, is worthless unless it is assured and actually gets a dependable supply of water. It can only get that water from the Colorado River.

The head of the Veterans' Administration has said that all of these withdrawn lands will be needed for returning veterans.

Engineering studies, I understand, clearly reveal that many hundred thousand acres of potentially fertile land in the southwestern part of the United States cannot be reclaimed and developed if Mexican landowners are to be given a guarantee in perpetuity of 1,500,000 acre-feet of Colorado River water annually. Included in the American land that is thus doomed to remain forever a desert, by the terms of the proposed treaty, are thousands of acres of land that have been held in trust for our war veterans.

The veterans of World War No. 1 have not forgotten the pledge that has been made by the Federal Government to give ex-servicemen a chance to establish homes on land made usable by water from the Colorado River. During the long years when forward looking Americans were seeking to bring about the adoption of the Boulder Canyon Project Act, one of the strongest and most consistent sources of support for Boulder Dam came from the American Legion and the Veterans of Foreign Wars. Year after year at their national conventions, starting as early as 1921 and going on through until the Boulder bill was adopted in 1928, these great organizations of American war veterans adopted resolutions supporting the Boulder project. One of the authors of the Boulder Project Act was Congressman Phil D. Swing, a veteran of World War No. 1.

The veterans of the World War strongly supported the Boulder Dam project because they knew it was an essential development project for the benefit of the entire country. They also saw in this project an honorable and worth-while plan to give thousands of ex-servicemen opportunities to establish homes—and support their families by their own labors—on land that, they thought, would be made productive by the application of Colorado River water conserved by Boulder Dam.

Representatives of the national veteran organizations came to Washington and appeared before the Foreign Relations Committee of the Senate and protested the ratification of the Mexican Treaty because they saw in that treaty an instrument that would make it impossible to reclaim much of the land which has thus far been held in trust for returning war veterans.

One of those who appeared before the Foreign Relations Committee was John R. Quinn, who has been a member of the national executive committee of the American Legion for the past 18 years, and is also a former national commander of the Legion.

To the pleas that have come from ex-servicemen, it appears the State Department and a majority of the Foreign Relations Committee has turned a deaf ear. They have ignored these pleas in continuing to support the Mexican Treaty.

I say the veterans of World War No. 1 have not forgotten the pledge which their Government made to give ex-servicemen the opportunity to settle upon and develop thousands of acres of potentially productive land with Colorado River water. The act by the House Committee on Irrigation and Reclamation extending the benefits of this law to the veterans of this conflict is a further sham and delusion unless the Mexican Water Treaty is defeated.

Let Justice Be Our Creed

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a copy of a letter written by a former patient in the Veterans' Administration Tuberculosis Hospital at Oteen, N. C., with enclosure, which every Member of Congress should read and reread.

The letter follows:

THE AMERICAN LEGION,
DEPARTMENT OF NORTH CAROLINA,
Oteen, N. C., March 27, 1945.

Hon. JOHN E. RANKIN,
Chairman, Committee on Veterans' Affairs,
House of Representatives,
Washington, D. C.

DEAR MR. RANKIN: I am enclosing an article headed "Let justice be our creed," published in our Sunday morning paper and which is self-explanatory. It deals with the article published in the Cosmopolitan magazine. The writer of this enclosed article was a patient in this institution twenty-odd years ago when, as you know, I myself was a patient for 4 years. He is a veteran of two wars and is a close student of hospital technique, especially in the field of tuberculosis.

For your information, the criticism of conditions alleged existing in veterans' hospitals by the author of the article appearing in the Cosmopolitan is unwarranted and they do not exist in any veterans' hospital in this State. We have one of the finest hospitals for the treatment of tuberculosis in the country here at Oteen. It is well staffed and is headed by Dr. Frank B. Brewer who has twenty-odd years experience as manager in veterans' hospitals.

The writer of the enclosed article and I, who as I stated have been treated in this hospital in the early twenties when it covered a 100-acre field and old Army barracks were used for wards compared with the present magnificent fireproof buildings which are equipped with the very best clinics and staffed with physicians trained in the treatment of tuberculosis, wonder just what kind of mysterious and better treatment this critic can advocate for the patients in veterans' hospitals of this type.

I was sorry we did not have our annual meeting of the rehabilitation committee this year as in the past and at which time it is always a pleasure to call on you, but I hope everything is well with you and I know you are carrying on for the veterans as you have in the past. The RECORD tells the story. I always like to read of your skirmishes in the Halls of Congress. I know no one is more sincere in what he advocates than you; it is sound Americanism in every respect.

With kindest regards and best wishes, I am,
Sincerely,

C. A. PENNINGTON.

The enclosure to which he refers was written by another former patient at Oteen and reads as follows:

LET JUSTICE BE OUR CREED

EDITOR OF THE CITIZEN-TIMES:

The gentleman who is making himself notorious by his present venomous campaign against our veterans' hospitals and their professional personnel, should be challenged on account of the direct harm he is doing to the

patients in these hospitals. In giving vent to his highly stimulated imagination he is, by false assertions and inferences, creating unrest among heretofore perfectly satisfied and contented patients thereby disturbing their rest, which is so essential to their recovery, and also increasing the labors of the already overworked doctors and nurses. And, worse yet, he is torturing the minds of families who have loved ones in the veterans' hospitals. Though the patients, as is well known to all that have daily contact with them, are receiving the very best of attention and care, their families are falsely led to think they are being neglected. How could man commit a more dastardly crime? Further yet, in his anxiety to condemn our hospitals, he gleefully quotes figures on those leaving the hospitals against medical advice and, to support his venomous tirade, manufactures the false reason of dissatisfaction with the hospital. But, he seems not to realize that his own ravings about neglect are giving those who want to leave anyhow not a reason but an excuse to leave. He is, in reality, creating what he is complaining about.

He tells the public about these men leaving the hospitals, which a certain percentage has always done, but what he does not tell is that every one of them will, in time, be back, and many on stretchers, too far gone to save. Those of us who have gone through the process of obtaining an arrested case and have been put on our feet, through the years, have seen them come and go. Through this experience and observation we well know that if a case of tuberculosis, in its early stages, can be put to bed and treated with comfortable rest, a cure is almost certain and in a much shorter time. It takes years to learn all there is concerning the relation of a patient's behavior to his recovery; yet, this gentleman running from hospital to hospital, filling his little bucket of slandermud from anyone who cared to contribute, not only has gotten so much of this mud in his own eyes that he can see no good at all but has learned more about the treatment of tuberculosis than those with years of experience. What a wonderful man. I venture to say there is not a thinking patient, in any hospital, who has read this man's condemning accusations, that has not come to the clear conclusion that he is very, very ignorant of his subject.

To belittle the accomplishments of the Government's tubercular hospitals he makes some, apparently, startling comparisons of figures on cures and deaths in Government hospitals and in State hospitals, which are, as we will see, absolutely meaningless. He makes these contrasts to show us, he thinks conclusively, that State hospitals have a different and better treatment for tuberculosis than our veterans' hospitals. Assuming that the State figures he gives are truthful, they still mean nothing. But, as we will see, the common human behavior that created these figures does tell us the truth.

The underlying causes of a State's more favorable figure is not in a difference in treatment, as he implies, but in a better behavior of the patient. For these patients are admitted through charitable reasons and have no money to create the desire of a good time, as the so-inclined veteran has; therefore they are obedient to medical regulations from the time of admission until discharge. They do not have patients leaving against medical advice and coming back later in a developed condition that makes recovery impossible, but the veterans' hospital has.

In contrast to this, upon which the Government must rest its case, is that a certain percentage of veteran patients abuse the privilege of liberty, however obtained, by getting drunk and indulging in all the detrimental conduct that is common to a man in this state. Public records and hospital disciplinary records furnish undeniable proof how some veterans, who might otherwise get well, destroy their chances of recovery. It is not pleasant to have to mention these regrettable things but the good doctors and nurses, who are working their heads off to help us to our feet, richly deserve protection from the present abuses that are being so unjustly heaped upon their defenseless shoulders. Besides, honest, open-minded truth is the only thing that will destroy these condemnations which are founded upon falsity.

There are, regrettably, many patients who have left the hospital against medical advice to return in a broken-down state with the odds for recovery decidedly against them. The Government cannot, as State hospitals do, put into effect regulations preventing these suicidal behaviors. And, even if it had the power to do so, it could not do it without bringing unjust hardships upon the vast majority of patients who are sincerely trying to get well and who do not abuse liberty.

From the entire absence of any of these detrimental behaviors among the patients in State hospitals, it may be readily seen why they should have a higher percentage of cures and a lower death rate. If this is not true, then it is absolutely proven that debauchery does not injure a tubercular patient.

Some careless, and some headstrong, patients who refuse to be guided by medical advice provided for them are perfectly willing to listen after they have destroyed their chances of recovery. But, then it is too late and, unfortunately, the records must show another death.

Might it now be asked, in justice to our doctors and nurses and to the Veterans' Bureau, in what way can they be held accountable for the result of human behavior over which they have no control?

Withal we must see, in comparing the two sets of statistics, that the truth is in the behavior of the individuals that created the figures and not in the figures themselves at all.

Let justice be our creed.

HERRMAN M. KNAUTH.

OTEEN, N. C.

Employment Service Agencies

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, at the very inception of the employment service agencies administration was vested in the several States. By and large the work was carried on successfully on a State level. There has been a continued effort on the part of the Federal Government to federalize this service. This has been accelerated by the war, and they have exercised the opportunity afforded by the war to place this service under the War Manpower Commission.

Now we find that the deficiency appropriation bill was passed with an item $2,295,557 for veterans placement, also under Federal jurisdiction. This is another device used by the Federal administration to bring under its control the employment of returning veterans.

This case is parallel with the administration of farm security, and all adds up to the Federal bureaucracy reaching further each day for ever-increasing control of the lives of the American people. It is time for the Congress of the United States to view this movement with great alarm, and start reversing itself. The issue is as serious on the Democratic side as it is on the Republican side.

Mr. Speaker, under leave to extend my remarks, I include in the RECORD a letter on this subject from William M. Schantz, Director of the North Dakota Unemployment Compensation Division, which states in understandable language the trend of events, and the disapproval of the States of the appropriation recently passed for veterans placement:

UNEMPLOYMENT COMPENSATION DIVISION
Bismarck, N. Dak., March 23, 1945.

Hon. CHARLES R. ROBERTSON,
Representative in Congress,
Washington, D. C.

DEAR CONGRESSMAN ROBERTSON: There is submitted herewith a mimeographed copy of letter to Mr. Ray R. Adams, Chief of the Readjustment Allowance Division, Veterans' Administration, Washington, D. C. This letter relates to a requested deficiency appropriation of $5,500,000 to be made available to the Chairman of the Veterans' Placement Service Board. In our opinion, this requested deficiency appropriation is not urgently needed and we have set forth our viewpoints in the matter to Mr. Adams. We cannot help but feel that, despite the many previous unsuccessful efforts to extend federalization over the 51 separate Employment Service agencies, the efforts of the Federal bureaus are not being relaxed. We continue to stand on the proposition that employment-security problems can be more intelligently solved at the State level as against a federalized system.

Your attention is directed to the fact that at the request of the President of the United States, acquiesced in by each of the Governors of the several States, and for the war emergency, the Employment Service offices were placed on a loan basis to the Federal Government. When the lending arrangement was made the President definitely acknowledged that the loan was on a temporary basis and that after the war emergency reversion to the prior status would occur. We observe many attempts to depart from this arrangement.

Your attention is directed to Senate Resolution No. 7, adopted by the 1945 North Dakota Legislative Assembly, memorializing Congress with respect to "leaving administration of the provisions of the unemployment-compensation law in the hands of the States" and "limiting the activities of the Federal Social Security Administration to advisory matters as against regulation of State laws." While we did not become acquainted with this resolution until after its passage, we cannot feel other than that this resolution is in good order and well timed. It also supports the resolutions adopted by the Hershey (Pa.) Governors' Conference.

The administrators of the several State employment security agencies are justifiably proud of the fact that the States' record is good and that in the more than 8 years of operations no problems became so serious as to invite Federal control or supervision. It is our sincere belief that State administrators are much better acquainted with the local problems and by that token frequently reduce a condition before the same becomes alarming. We hold that the Federal processes are too slow, too involved, and too cumbersome. Therefore, we recommend that instead of expanding Federal control efforts should be made to speedily reduce such control. To that end we recommend that instead of approving increased appropriations to Federal agencies that consideration be given to making such increased appropriations available, in part at least, for the more

efficient operations of the several State agencies.

Thanking you for your thoughtful consideration.

Respectfully yours,

WILLIAM M. SCHANTZ, *Director.*

The Dumbarton Oaks Proposal

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. HARE. Mr. Speaker, practically every public speech we hear today is prefaced by the statement that we are confronted with two great pressing problems. One is to win the war at the earliest possible date, and the second is to provide for a just and lasting peace.

Our military leaders, with the cooperation of our armed forces, seem to be doing everything possible to solve the first problem for us and our civilian leaders have not been idle in devising plans designed to solve the second problem.

A few months ago we had a conference of civilian leaders representing the various Allied Nations in this war. The leaders met at our seat of Government in a conference from the latter part of August until the early part of October 1944, the deliberations being held at what is known as Dumbarton Oaks, a former residence of John C. Calhoun, of South Carolina. Matters agreed upon for submission to the people of the conferring nations have recently been publicized, and it has been agreed that another conference will be held on April 25 of this year with the hope that a definite program with permanent peace as its objective can be definitely submitted to the people of the conferring nations for ratification, and it is hoped in the meantime the American people will give full and free expression of their feelings as to the wisdom of the suggestions embodied in the Dumbarton Oaks proposals.

I have not seen an explanation or analysis of any kind of these proposals, and I would, therefore, not feel justified in undertaking to explain any of them further than to give an expression of my personal interpretation of the proposals as they appear in the report, and what I shall say should not be intended or considered as a criticism but more in the nature of an inquiry for a better explanation of such proposals. It is agreed that the people of all civilized nations generally are in favor of permanent peace, and a great majority of them are prepared to subscribe to any reasonable program that would insure a fair and permanent peace. A tentative formula is incorporated in the Dumbarton Oaks proposals, and the problem now before the Congress and the American people is whether we shall accept them in toto. The matter is of more significance than any submitted since the writing and ratification of the Constitution of the United States. It will be recalled the Constitution was not written and ratified within a few days, a few weeks, or even a few months, but was carefully studied and analyzed for a few years, and I am venturing the guess the people as a whole understood and were better advised as to what was contemplated in the Constitution at the time of its ratification than any generation of our people since that time. It will be recalled that it was not supported unanimously, and it was supported by many with some apprehensions and misgivings as to whether it would be successful, but for the past 100 years the American people have been practically unanimous in their support and loyalty to this great charter of liberty and freedom.

It is not only appropriate but highly important that we carefully study and attempt to interpret these proposals in the light of history and experience for a great international organization is to be created primarily or mainly with the hope it may provide for a just and lasting peace. It should be made clear that this is the only purpose for which the organization is created, and it should not be empowered with any additional authority or powers, because we are not ready for a federation of the world or a universal empire, although such a state has been the vision of poets and the dream of geniuses for centuries.

After a most careful study I am convinced that if the proposals are accepted in the spirit of cooperation in which they are prepared the organization will be able to obviate the possibility of war for many generations. However, it seems that chapter 9 of the proposals, providing for the creation of an economic commission, social commission, and a humanitarian agency, might prove to be entering a field much larger than contemplated by many of us. It appears that if these agencies were to function in accordance with the language used they would sooner or later be establishing economic, social, and humanitarian standards of life and business in the several member states and if the organization should have power to make them regulatory, I can vision the day when the member states would lose their identity and become incorporated into what may be known as the United States of the World. We do not have to go far back in history to find an illustration and justification of this conclusion. Every student knows that in the creation of our Government of the United States the powers and functions of the several States were generously guaranteed when they undertook to form a more perfect union, and every well-advised person knows what has taken place in this century and a half, and today there are apprehensions, serious apprehensions, on the part of many that the original functions and powers of the States have been completely absorbed by the Government of the United States created at the beginning with limited powers but which has grown and developed to a point where it exercises practically unlimited powers, not only over the States but over the individual population. Therefore, in order that the people of my district may read for themselves and know just what is involved or contemplated in the organization to be created with the idea of guaranteeing a permanent and just peace I am asking, Mr. Speaker, the Dumbarton Oaks proposals may be incorporated in my remarks at this point:

PROPOSALS FOR THE ESTABLISHMENT OF A GENERAL INTERNATIONAL ORGANIZATION

There should be established an international organization under the title of The United Nations, the Charter of which should contain provisions necessary to give effect to the proposals which follow.

CHAPTER I. PURPOSES

The purposes of the Organization should be:

1. To maintain international peace and security; and to that end to take effective collective measures for the prevention and removal of threats to the peace and the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means adjustment or settlement of international disputes which may lead to a breach of the peace;

2. To develop friendly relations among nations and to take other appropriate measures to strengthen universal peace;

3. To achieve international cooperation in the solution of international economic, social and other humanitarian problems; and

4. To afford a center for harmonizing the actions of nations in the achievement of these common ends.

CHAPTER II. PRINCIPLES

In pursuit of the purposes mentioned in chapter I the Organization and its members should act in accordance with the following principles:

1. The Organization is based on the principle of the sovereign equality of all peace-loving states.

2. All members of the organization undertake in order to ensure to all of them the rights and benefits resulting from membership in the Organization, to fulfill the obligations assumed by them in accordance with the Charter.

3. All members of the Organization shall settle their disputes by peaceful means in such a manner that international peace and security are not endangered.

4. All members of the Organization shall refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the Organization.

5. All members of the Organization shall give every assistance to the Organization in any action undertaken by it in accordance with the provisions of the Charter.

6. All members of the Organization shall refrain from giving assistance to any state against which preventive or enforcement action is being undertaken by the Organization.

The Organization should ensure that states not members of the Organization act in accordance with these principles so far as may be necessary for the maintenance of international peace and security.

CHAPTER III. MEMBERSHIP

1. Membership of the Organization should be open to all peace-loving states.

CHAPTER IV. PRINCIPAL ORGANS

1. The Organization should have as its principal organs:

a. A General Assembly;
b. A Security Council;
c. An International Court of Justice; and
d. A Secretariat.

2. The Organization should have such subsidiary agencies as may be found necessary.

CHAPTER V. THE GENERAL ASSEMBLY

Section A. Composition

All members of the Organization should be members of the General Assembly and

should have a number of representatives to be specified in the Charter.

Section B. Functions and powers

1. The General Assembly should have the right to consider the general principles of cooperation in the maintenance of international peace and security, including the principles governing disarmament and the regulation of armaments; to discuss any questions relating to the maintenance of international peace and security brought before it by any member or members of the Organization or by the Security Council; and to make recommendations with regard to any such principles or questions. Any such questions on which action is necessary should be referred to the Security Council by the General Assembly either before or after discussion. The General Assembly should not on its own initiative make recommendations on any matter relating to the maintenance of international peace and security which is being dealt with by the Security Council.

2. The General Assembly should be empowered to admit new members to the Organization upon recommendation of the Security Council.

3. The General Assembly should, upon recommendation of the Security Council, be empowered to suspend from the exercise of any rights or privileges of membership any member of the Organization against which preventive or enforcement action shall have been taken by the Security Council. The exercise of the rights and privileges thus suspended may be restored by decision of the Security Council. The General Assembly should be empowered, upon recommendation of the Security Council, to expel from the Organization any member of the Organization which persistently violates the principles contained in the Charter.

4. The General Assembly should elect the non-permanent members of the Security Council and the members of the Economic and Social Council provided for in Chapter IX. It should be empowered to elect, upon recommendation of the Security Council, the Secretary-General of the Organization. It should perform such functions in relation to the election of the judges of the international court of justice as may be conferred upon it by the statute of the court.

5. The General Assembly should apportion the expenses among the members of the Organization and should be empowered to approve the budgets of the Organization.

6. The General Assembly should initiate studies and make recommendations for the purpose of promoting international cooperation in political, economic and social fields and of adjusting situations likely to impair the general welfare.

7. The General Assembly should make recommendations for the coordination of the policies of international economic, social, and other specialized agencies brought into relation with the Organization in accordance with agreements between such agencies and the Organization.

8. The General Assembly should receive and consider annual and special reports from the Security Council and reports from other bodies of the Organization.

Section C. Voting

1. Each member of the Organization should have one vote in the General Assembly.

2. Important decisions of the General Assembly, including recommendations with respect to the maintenance of international peace and security; election of members of the Security Council; election of members of the Economic and Social Council; admission of members, suspension of the exercise of the rights and privileges of members, and expulsion of members; and budgetary questions, should be made by a two-thirds majority of those present and voting. On other questions, including the determination of additional categories of questions to be decided by a two-thirds majority, the decisions of the General Assembly should be made by a simple majority vote.

Section D. Procedure

1. The General Assembly should meet in regular annual sessions and in such special sessions as occasion may require.

2. The General Assembly should adopt its own rules of procedure and elect its President for each session.

3. The General Assembly should be empowered to set up such bodies and agencies as it may deem necessary for the performance of its functions.

CHAPTER VI. THE SECURITY COUNCIL

Section A. Composition

The Security Council should consist of one representative of each of eleven members of the Organization. Representatives of the United States of America, the United Kingdom of Great Britain and Northern Ireland, the Union of Soviet Socialist Republics, the Republic of China, and, in due course, France, should have permanent seats. The General Assembly should elect six states to fill the non-permanent seats. These six states should be elected for a term of two years, three retiring each year. They should not be immediately eligible for reelection. In the first election of the non-permanent members three should be chosen by the General Assembly for one-year terms and three for two-year terms.

Section B. Principal functions and powers

1. In order to ensure prompt and effective action by the Organization, members of the Organization should by the Charter confer on the Security Council primary responsibility for the maintenance of international peace and security and should agree that in carrying out these duties under this responsibility it should act on their behalf.

2. In discharging these duties the Security Council should act in accordance with the purposes and principles of the Organization.

3. The specific powers conferred on the Security Council in order to carry out these duties are laid down in Chapter VIII.

4. All members of the Organization should obligate themselves to accept the decisions of the Security Council and to carry them out in accordance with the provisions of the Charter.

5. In order to promote the establishment and maintenance of international peace and security with the least diversion of the world's human and economic resources for armaments, the Security Council, with the assistance of the Military Staff Committee referred to in Chapter VIII, Section B, paragraph 9, should have the responsibility for formulating plans for the establishment of a system of regulation of armaments for submission to the members of the Organization.

Section C. Voting

(NOTE.—The question of voting procedure in the Security Council is still under consideration.)

Section D. Procedure

1. The Security Council should be so organized as to be able to function continuously and each state member of the Security Council should be permanently represented at the headquarters of the Organization. It may hold meetings at such other places as in its judgment may best facilitate its work. There should be periodic meetings at which each state member of the Security Council could if it so desired be represented by a member of the government or some other special representative.

2. The Security Council should be empowered to set up such bodies or agencies as it may deem necessary for the performance of its functions including regional subcommittees of the Military Staff Committee.

3. The Security Council should adopt its own rules of procedure, including the method of selecting its President.

4. Any member of the Organization should participate in the discussion of any question brought before the Security Council whenever the Security Council considers that the interests of that member of the Organization are specially affected.

5. Any member of the Organization not having a seat on the Security Council and any state not a member of the Organization, if it is a party to a dispute under consideration by the Security Council, should be invited to participate in the discussion relating to the dispute.

CHAPTER VII. AN INTERNATIONAL COURT OF JUSTICE

1. There should be an international court of justice which should constitute the principal judicial organ of the Organization.

2. The court should be constituted and should function in accordance with a statute which should be annexed to and be a part of the Charter of the Organization.

3. The statute of the court of international justice should be either (a) the Statute of the Permanent Court of International Justice, continued in force with such modifications as may be desirable or (b) a new statute in the preparation of which the Statute of the Permanent Court of International Justice should be used as a basis.

4. All members of the Organization should ipso facto be parties to the statute of the international court of justice.

5. Conditions under which states not members of the Organization may become parties to the statute of the international court of justice should be determined in each case by the General Assembly upon recommendation of the Security Council.

CHAPTER VIII. ARRANGEMENTS FOR THE MAINTENANCE OF INTERNATIONAL PEACE AND SECURITY, INCLUDING PREVENTION AND SUPPRESSION OF AGGRESSION

Section A. Pacific settlement of disputes

1. The Security Council should be empowered to investigate any dispute, or any situation which may lead to international friction or give rise to a dispute, in order to determine whether its continuance is likely to endanger the maintenance of international peace and security.

2. Any state, whether member of the organization or not, may bring any such dispute or situation to the attention of the general assembly or of the security Council.

3. The parties to any dispute the continuance of which is likely to endanger the maintenance of international peace and security should obligate themselves, first of all, to seek a solution by negotiation, mediation, conciliation, arbitration, or judicial settlement, or other peaceful means of their own choice. The Security Council should call upon the parties to settle their dispute by such means.

4. If, nevertheless, parties to a dispute of the nature referred to in paragraph 3 above fail to settle it by the means indicated in that paragraph, they should obligate themselves to refer it to the Security Council. The Security Council should in each case decide whether or not the continuance of the particular dispute is in fact likely to endanger the maintenance of international peace and security and, accordingly, whether the Security Council should deal with the dispute, and, if so, whether it should take action under paragraph 5.

5. The Security Council should be empowered, at any stage of a dispute of the nature referred to in paragraph 3 above, to recommend appropriate procedures or methods of adjustment.

6. Justiciable disputes should normally be referred to the International Court of Justice. The Security Council should be empowered to refer to the Court, for advice, legal questions connected with other disputes.

7. The provisions of paragraph 1 to 6 of Section A should not apply to situations or disputes arising out of matters which by international law are solely within the domestic jurisdiction of the state concerned.

Section B. Determination of threats to the peace or acts of aggression and action with respect thereto

1. Should the Security Council deem that a failure to settle a dispute in accordance with procedures indicated in paragraph 3 of Section A, or in accordance with its recommendations made under paragraph 5 of Section A, constitutes a threat to the maintenance of international peace and security, it should take any measures necessary for the maintenance of international peace and security in accordance with the purposes and principles of the Organization.

2. In general the Security Council should determine the existence of any threat to the peace, breach of the peace, or act of aggression and should make recommendations or decide upon the measures to be taken to maintain or restore peace and security.

3. The Security Council should be empowered to determine what diplomatic, economic, or other measures not involving the use of armed force should be employed to give effect to its decisions, and to call upon members of the Organization to apply such measures. Such measures may include complete or partial interruption of rail, sea, air, postal, telegraphic, radio, and other means of communication and the severance of diplomatic and economic relations.

4. Should the Security Council consider such measures to be inadequate, it should be empowered to take such action by air, naval, or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea, or land forces of members of the Organization.

5. In order that all members of the Organization should contribute to the maintenance of international peace and security, they should undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements concluded among themselves, armed forces, facilities and assistance necessary for the purpose of maintaining international peace and security. Such agreement or agreements should govern the numbers and types of forces and the nature of the facilities and assistance to be provided. The special agreement or agreements should be negotiated as soon as possible and should in each case be subject to approval by the Security Council and to ratification by the signatory states in accordance with their constitutional processes.

6. In order to enable urgent military measures to be taken by the Organization there should be held immediately available by the members of the Organization national air force contingents for combined international enforcement action. The strength and degree of readiness of these contingents and plans for their combined action should be determined by the Security Council with the assistance of the Military Staff Committee within the limits laid down in the special agreement or agreements referred to in paragraph 5 above.

7. The action required to carry out the decisions of the Security Council for the maintenance of international peace and security should be taken by all the members of the Organization in cooperation or by some of them as the Security Council may determine. This undertaking should be carried out by the members of the Organization by their own action and through action of the appropriate specialized organizations and agencies of which they are members.

8. Plans for the application of armed force should be made by the Security Council with the assistance of the Military Staff Committee referred to in paragraph 9 below.

9. There should be established a Military Staff Committee the functions of which should be to advise and assist the Security Council on all questions relating to the Security Council's military requirements for the maintenance of international peace and security, to the employment and command of forces placed at its disposal, to the regulation of armaments, and to possible disarmament. It should be responsible under the Security Council for the strategic direction of any armed forces placed at the disposal of the Security Council. The Committee should be composed of the Chiefs of Staff of the permanent members of the Security Council or their representatives. Any member of the Organization not permanently represented on the Committee should be invited by the Committee to be associated with it when the efficient discharge of the Committee's responsibilities requires that such a state should participate in its work. Questions of command of forces should be worked out subsequently.

10. The members of the Organization should join in affording mutual assistance in carrying out the measures decided upon by the Security Council.

11. Any state, whether a member of the Organization or not, which finds itself confronted with special economic problems arising from the carrying out of measures which have been decided upon by the Security Council should have the right to consult the Security Council in regard to a solution of those problems.

Section C. Regional arrangements

1. Nothing in the Charter should preclude the existence of regional arrangements or agencies for dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action, provided such arrangements or agencies and their activities are consistent with the purposes and principles of the Organization. The Security Council should encourage settlement of local disputes through such regional arrangements or by such regional agencies, either on the initiative of the states concerned or by reference from the Security Council.

2. The Security Council should, where appropriate, utilize such arrangements or agencies for enforcement action under its authority, but no enforcement action should be taken under regional arrangements or by regional agencies without the authorization of the Security Council.

3. The Security Council should at all times be kept fully informed of activities undertaken or in contemplation under regional arrangements or by regional agencies for the maintenance of international peace and security.

CHAPTER IX. ARRANGEMENTS FOR INTERNATIONAL ECONOMIC AND SOCIAL COOPERATION

Section A. Purpose and relationships

1. With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among nations, the Organization should facilitate solutions of international economic, social and other humanitarian problems and promote respect for human rights and fundamental freedoms. Responsibility for the discharge of this function should be vested in the General Assembly and, under the authority of the General Assembly, in an Economic and Social Council.

2. The various specialized economic, social, and other organizations and agencies would have responsibilities in their respective fields as defined in their statutes. Each such organization or agency should be brought into relationship with the Organization on terms to be determined by agreement between the Economic and Social Council and the appropriate authorities of the specialized organization or agency, subject to approval by the General Assembly.

Section B. Composition and voting

The Economic and Social Council should consist of representatives of 18 members of the Organizations. The states to be represented for this purpose should be elected by the General Assembly for terms of 3 years. Each such state should have one representative, who should have one vote. Decisions of the Economic and Social Council should be taken by simple majority vote of those present and voting.

Section C. Functions and powers of the Economic and Social Council

1. The Economic and Social Council should be empowered:

a. to carry out, within the scope of its functions, recommendations of the General Assembly;

b. to make recommendations, on its own initiative, with respect to international economic, social, and other humanitarian matters;

c. to receive and consider reports from the economic, social, and other organizations or agencies brought into relationship with the organization, and to coordinate their activities through consultations with, and recommendations to, such organizations or agencies;

d. to examine the administrative budgets of such specialized organizations or agencies with a view to making recommendations to the organizations or agencies concerned;

e. to enable the Secretary-General to provide information to the Security Council;

f. to assist the Security Council upon its request; and

g. to perform such other functions within the general scope of its competence as may be assigned to it by the General Assembly.

Section D. Organization and procedure

1. The Economic and Social Council should set up an economic commission, a social commission, and such other commissions as may be required. These commissions should consist of experts. There should be a permanent staff which should constitute a part of the secretariat of the organization.

2. The Economic and Social Council should make suitable arrangements for representatives of the specialized organizations or agencies to participate without vote in its deliberations and in those of the commissions established by it.

3. The Economic and Social Council should adopt its own rules of procedure and the method of selecting its President.

CHAPTER X. THE SECRETARIAT

1. There should be a Secretariat comprising a Secretary-General and such staff as may be required. The Secretary-General should be the chief administrative officer of the Organization. He should be elected by the General Assembly, on recommendation of the Security Council, for such term and under such conditions as are specified in the Charter.

2. The Secretary-General should act in that capacity in all meetings of the General Assembly, of the Security Council, and of the Economic and Social Council and should make an annual report to the General Assembly on the work of the Organization.

3. The Secretary-General should have the right to bring to the attention of the Security Council any matter which in his opinion may threaten international peace and security.

CHAPTER XI. AMENDMENTS

Amendments should come into force for all members of the Organization, when they have been adopted by a vote of two-thirds of the members of the General Assembly and

ratified in accordance with their respective constitutional processes by the members of the Organization having permanent membership on the Security Council and by a majority of the other members of the Organization.

CHAPTER XII. TRANSITIONAL ARRANGEMENTS

1. Pending the coming into force of the special agreement or agreements referred to in Chapter VIII, Section B, paragraph 5, and in accordance with the provisions of paragraph 5 of the Four-Nation Declaration, signed at Moscow, October 30, 1943, the states parties to that Declaration should consult with one another and as occasion arises with other members of the Organization with a view to such joint action on behalf of the Organization as may be necessary for the purpose of maintaining international peace and security.

2. No provision of the Charter should preclude action taken or authorized in relation to enemy states as a result of the present war by the Governments having responsibility for such action.

NOTE

In addition to the question of voting procedure in the Security Council referred to in Chaptel VI, several other questions are still under consideration.

WASHINGTON, D. C., *October 7, 1944.*

The Racket of Petrillo and Lewis

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. MILLER of Nebraska. Mr. Speaker, I have introduced a bill which will curb the activities of such men as Petrillo and John L. Lewis and other organizations who might want to collect a royalty from giving service to the American people. Mr. Petrillo, the music king, has defied the United States Government. He has coerced workers into becoming members of his union. He collects a royalty on every music record which he makes. Radio stations are blackmailed into paying tribute if they expect to use any music made by members of the musicians union.

Many of the powers now exercised by Mr. Petrillo and which Mr. Lewis seeks to use were conferred upon them by acts of Congress as interpreted by the Supreme Court. Congress has made it illegal for employers to discourage membership in a labor union but has refused to make it illegal for unions to coerce workers into membership. According to the Supreme Court, labor unions have sweeping privileges under the antitrust act and under the antiracketeering acts. Congress never intended that labor unions should get the green light to commit acts that would be illegal if committed by anyone else. Mr. Petrillo and John L. Lewis or any other racketeers who decide to take advantage of the provisions of the law may exact a bounty and tax from every individual in the United States. The telephone union is now giving consideration to the charging of the 5-cent tax or toll on every long-distance telephone call. Unions might well demand a royalty on every plane that is manufactured or every radio.

Unions in the steel industry could follow Mr. Petrillo's or John L. Lewis' example and demand royalty for the steel they produce. This was never intended by Congress and should be corrected by law. It is the worst type of slavery the common man and the public has ever had to endure from organized union racketeers. Such tactics, if continued, will destroy unions. As long as the situation exists, we will find other Petrillos and Lewises proceeding to extort payment from the public through thea media of the law which now permits such acts of racketeering. It will take legislative action to curb the racket of Petrillo and Lewis.

Address by Paul J. Raver, Administrator, Bonneville Power Administration

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I am pleased to include a copy of a speech by Dr. Paul J. Raver, delivered at San Antonio, Tex., in January.

Many views exist as to matters of policy that will affect the future of electrical development and expansion.

I feel that this body, and all of the people of the areas directly affected, are entitled to every information available. I feel that Dr. Raver's speech is definitely informative and urge you to read it notwithstanding what particular view you may hold.

Gathered here in this auditorium today are people from all parts of this country. Each of us here represents in most particulars the thinking which is peculiar to his own region, conditioned by geographical, climatic, or social conditions of that region. But because our broad problems are exactly the same, it is good for us to be able to come together in this way for an exchange of ideas and an interchange of the knowledge and experience each of us has gained through meeting his special problems.

I have been asked to talk to you today about the outlook for the development of the Pacific Northwest from the point of view of the Bonneville Power Administration. Most everyone here, I imagine, is familiar with the origin and functions of this Administration, but for the benefit of those of you who have some confusion as to just where Bonneville fits into the Northwest scheme, I would like to say a few words about how the Bonneville Power Administration came into being.

In 1937 the Seventy-fifth Congress drew up an act the purpose of which was to provide a marketing agency for the power generated at Bonneville Dam. Basically, the Bonneville Power Administration was established in the Department of the Interior to provide the transmission facilities and the marketing organization necessary to encourage the widest possible use of all the electric energy that can be generated and marketed, and to prevent monopolization by limited groups of the power developed in the Northwest by the Federal Government.

The act also provided that the Bonneville administrator, in disposing of electric energy, is to give preference and priority to public bodies and cooperatives. This provision was placed in the act for the specific purpose of insuring that the facilities for generation of power at the Bonneville project shall be operated for the benefit of the general public and particularly of domestic and rural consumers.

In August 1940, by Executive order of the President, the Bonneville Power Administrator was directed to make the same disposition of the energy generated at Grand Coulee Dam.

Although I shall make some mention of it later on, I would like you to take special note of the fact that the same policies which governed the writing of the Bonneville Act have been supported by the Congress in succeeding bills, including the flood-control bill which was signed by the President only a few weeks ago, the rivers and harbors bill and the defeat of the Bailey amendment.

Just how the Bonneville Power Administration has progressed is well summarized in a year-end report recently released by my office. The release states that more than 50 percent of all electric energy consumed during 1944 in the five Northwest States of Oregon, Washington, Idaho, Montana, and Utah was supplied by the hydroelectric power plants at Bonneville and Grand Coulee Dams. During the past 12 months, the Bonneville Power Administration delivered approximately 9,000,000,000 kilowatt-hours to Pacific Northwest war industries, military establishments, public distribution agencies, and private utility systems. This represents an increase of 30 percent over 1943 deliveries and brings our total sales for the first 6 years of operation to nearly 22,000,000,000 kilowatt-hours.

Gross revenues from the sale of Bonneville-Grand Coulee power during 1944 totaled approximately $22,200,000, an increase of 36 percent over 1943 revenues. Our gross revenues since the first sale of power in 1938 reached $52,000,000 with the close of 1944 business.

Despite the loss of approximately 300,000 kilowatts of load through cutbacks in Pacific northwest light metals production, power demands have continued to increase. In fact, on January 2 the system supplied a record peak load of 1,411,000 kilowatts. Rated capacity of both Columbia River plants is 1,316,000 kilowatts.

One of the largest contributing factors to the 1944 record output from the Bonneville-Grand Coulee system was the steadily increasing demand for power by other Northwest utility systems. As the year 1944 drew to a close, other public and private utility systems in the Northwest power pool, which is comprised of the major utility systems in Oregon, Washington, Idaho, Montana, and Utah, were taking as high as 600,000 kilowatts of Bonneville-Grand Coulee power to help meet their peak loads without consuming critical supplies of hog fuel and oil.

Use of Bonneville-Coulee hydroelectric energy for displacing oil-fired steam energy saved more than 3,750,000 barrels of oil during 1944 in the Seattle and Portland areas alone.

War industries continued to take a major share of all power generated at the Bonneville and Grand Coulee plants. During 1944 the Bonneville administration delivered more than 6,000,000,000 kilowatt-hours to Pacific Northwest war plants and military establishments. Deliveries to other B. P. A. customers included 822,000,000 kilowatt-hours to publicly owned utilities, and 1,932,000,000 kilowatt-hours to private utility systems.

Although Northwest aluminum production was cut back during the year, the region's five reduction plants utilized sufficient Bonneville-Coulee power to turn out approximately 500,000,000 pounds of this vital war metal—about one-third of the Nation's total.

Columbia River hydroelectric energy also was a major factor in the Pacific Northwest's record production of ships during 1944. Two of the region's largest shipyards, Oregon Shipbuilding Corporation and Kaiser's Vancouver yard, used Bonneville-Coulee power in the production of 138 vessels, including 30 transports, 32 Victory cargo ships, 11 Liberty ships, 31 escort carriers, 31 AP5 transports and three C–4 type transports.

In addition, a large percentage of the output from other shipyards in the Portland-Vancouver and Puget Sound areas must be credited indirectly to Bonneville-Coulee power, because the Bonneville Power Administration supplied large blocks of power throughout the year to the public and private utility systems serving these plants.

Other vital war materials produced in Pacific Northwest plants during 1944 through use of Columbia River power included approximately 17,000,000 pounds of magnesium and large quantities of calcium carbide, ferro-alloys and other critical war metals and chemicals.

In the 5 short years since our first transmission line was energized in December 1939, the Bonneville-Grand Coulee transmission grid has mushroomed into a region-wide network of more than 2,700 miles of high voltage lines. Today, 55 substations, with transformer capacity of more than 2,000,000 kilovolt-amperes, deliver power to vital war loads throughout the Northwest.

To enable us to carry out the policies laid down by Congress in the Bonneville Act to the fullest possible degree, we have set for ourselves certain objectives. Although the demands of war have to some extent limited us in carrying out these objectives, we still hold them before us as a guide in the interest of securing the greatest possible benefit from the resources of the region for the greatest number of people.

Our first objective is to make power a tool for the development of wealth. In other words, to make the chief and abundant electric power of the region the means of opening new opportunities for investment, enterprise, and employment—for agriculture, for new industries, for small business, and for the individual.

Secondly, we believe that increasingly large quantities of power at constantly decreasing rates should be provided in order to create new opportunities for free enterprise. In industry and agriculture, the key to the whole power question is price and whether this tool—hydroelectric power—is to be used for turning the wheels in a mill or pumping irrigation water for operating a farm freezing unit, cost to the consumer will determine finally the extent of its use.

A third objective is to make low-cost hydroelectric power provide new sources for tax revenues. New farms and new industries mean taxpaying population. New industries attracted to the region as a result of the availability of cheap power are providing a broader tax base and increased wealth for the entire Northwest.

Fourth, we believe that the hydroelectric resources of the Northwest should be the means of providing asset-building jobs for returning servicemen and war workers who will have to look elsewhere for employment with the return of peace.

A final objective is to return to the people of the United States their investment in the Federal power facilities of the Northwest. That this can be done at the lowest wholesale rate for power in America—$17.50 per kilowatt-year—has been demonstrated. By the end of the calendar year 1944, our net revenues, after payment of all power costs, operation and maintenance expenses, and depreciation and interest on the Federal investment in the Bonneville-Grand Coulee transmission system and power facilities at the two Columbia River plants, amounted to more than $12,000,000. All we have to do is keep the generators in use.

I might add at this point that final determination of the cost allocation for the construction and operation of Coulee Dam has been made, and revenues from the sale of power will meet $633,960,585 of the total reimbursable cost of $781,304,085. This includes all construction costs, interest on the portion allocated to power, replacement costs over the repayment period, and operation and maintenance expenses.

In other words, revenues from the sale of power developed at Grand Coulee Dam will repay to the Federal Treasury not only all investment in the power facilities at the dam, plus interest on the power investment, but also a very substantial part of the investment in the irrigation facilities.

As a result of the careful allocation and repayment studies which we have completed in cooperation with the Bureau of Reclamation, it has been determined that at present rates revenues from Bonneville-Grand Coulee power will be more than sufficient to meet all financial requirements and assure repayment to the Federal Government of the full investment in the Grand Coulee project. Not only does power pay a major part of the cost of irrigation but the low rates attract new industries to support an increased population, which, in turn, provides new markets for the products of the newly irrigated land. Thus, power and irrigation are not opposing developments but rather complementary.

Toward the accomplishment of the objectives which I have mentioned, the Bonneville Power Administration has set up a program for research into all phases of present and potential power utilization coupled with investigations into other lines of development which would be adjunctive to the growth of new power-consuming industry as well as to the over-all development of the resources of the region. This program depends considerably upon the cooperation of other Federal and State agencies within the region. It might be even broader, were funds available with which to enlist the assistance of the various universities and research organizations in the region through grants and fellowships.

Considerable work has already been started in the direction of analyzing the potentialities of the region and the possibilities for future development. We have, for instance, prepared a number of county-wide surveys in the States of Washington and Oregon, with the help of the various chambers of commerce, industrialists, and local agencies within those counties. These economic surveys are in increasing demands but their production has been somewhat limited by lack of manpower.

In addition, during this past year, Bonneville produced the Pacific Northwest Opportunities report, with which some of you may be familiar. This report, which presents a comprehensive analysis of the various possibilities for industry, agriculture, and other forms of resources utilization and development, has become widely known and just as widely acclaimed as a blueprint pattern for the development of the region. We are continuing our special investigations into additional load-building possibilities, such as railroad electrification, electric-steam generation with accompanying studies in steam processing, and electric house heating.

A very considerable portion of our investigations is being carried on in the field of farm utilization and farm service. The opportunities in this field are so many and so varied that I can only touch on a few of the ways in which farmers can increase their production and decrease operating costs through expanded use of electric power. Here are a few:

Electric dehydration units; farm freezer boxes; larger scale electric soil-sterilization units; electric greenhouses, using no glass, completely air conditioned, with fluorescent lights and ultra-violet and infra-red lamps; electric sterilizers for the dairy industry, using germicidal lamps in places of present chlorine compounds; sun lamps for poultry houses; portable electric heating units for drying fruits, nuts, and vegetables, and for preventing freezing in storage cellars and warehouses; large heating units for the large-scale drying of forage or other crops; a portable electric-power unit for the small farm; new types of farm-home appliances, such as low-priced electric ranges, with or without kitchen-heating units; small distilling plants for the salvage of waste farm products. All these things are possible. Many of them have already been proved successful. All of them will provide a power market for Columbia River electricity, providing this electricity is sold at a price reflecting its low cost.

I would like to cite a couple of highly interesting accomplishments in our effort to assist our public distributors in the development of a new loads:

One of these had to do with the installation of a milk-drying plant in McMinnville, Oreg. The development of this plant was carried out by our industrial engineers working in close cooperation with members of the engineering staff of the McMinnville, Oreg., city lighting department. This plant, which will soon be in full operation, will yield dollars and cents benefits to its operators and at the same time will add some 600 to 1,200 kilowatts of load to the municipal plant.

In the same city our engineers cooperated in the development of a potato dehydration plant which has added another 400 kilowatts of load for the municipality. The potato dehydrator has been in very successful operation for nearly 3 months.

Our studies have gone into various aspects of soil treatment, heating and sterilization, and into expanding use of electricity for profitable poultry and dairy farming. Our findings will unquestionably be reflected in considerable eventual load building for the various rural electric cooperatives throughout the region.

Consistent with the Bonneville Power Administration policy of building in advance of the market, plans are already in readiness for expansion of a number of lines in rural areas, construction of which will begin as soon as the availability of material and manpower will permit. This expansion will make low-cost power available in new areas, thereby stimulating increased use. As a result, revenues will be increased and distributors will be able to finance construction of three-phase lines to replace present single-phase lines, bringing to outlying areas the benefits of power now enjoyed by urban and suburban areas.

I would like to give you some idea of what low-cost Columbia River power already has meant in savings to our cooperative customers. Power costs of 11 Northwest cooperatives dropped from $179,500 to $67,250, a saving of $112,250 when they began using Bonneville-Coulee power. Since then we have reduced our power rates to cooperatives by 20 percent, and our cooperative distributors now are saving 70 percent on their power bills as compared with rates charged by the private utilities from whom they formerly purchased their power supply.

By passing these savings on to their customers, the cooperatives are helping us carry out the mandate of the Bonneville Act—that low-cost power be distributed as widely as possible throughout the region for the benefit of the general public and particularly for domestic and rural consumers.

Another instance of broad cooperation, still leading toward the accomplishment of our objectives, has been our experience with the Northwest States Development Association. This association, which is composed of the

Governors of the five Northwest States and their advisory committee, has done much to further the programing of balanced and integrated development of the Pacific Northwest and the Columbia Basin.

The special interest of the association is in maximum utilization of the water resources of the region through irrigation, improved navigation, hydroelectric power development and flood control. This planning body, presenting a truly grass-roots approach to the problem of the development of the region, suggests a course at once sound, practical, and entirely feasible.

The association, in its initial report on the Columbia Basin program, states: "It is believed that the rapid advance in Northwest development and production must continue. This advancement must be supported by a progressive and dynamic national and regional post-war reconstruction program. The basic development projects of the Pacific Northwest—begun before the war—have paid tremendous dividends in the war effort. They will continue to pay dividends after the war."

The program set forth by the association involves a total expenditure of approximately $600,000,000 for projects, including numerous irrigation, navigation, and flood-control improvements in the five States. Several of these projects have already been authorized by Congress for post-war construction.

Gearing its own plans to the multipurpose projects outlined in the five State Governors' report, the Bonneville Power Administration has set up an advanced construction program involving approximately $100,000,000 in new transmission lines and substations designed to coordinate existing and proposed dams and load centers in a region-wide transmission grid system.

In round figures, the combined programs outlined by the Northwest States Development Association and the Bonneville Power Administration will add about 1,000,000 acres to the 3,500,000 acres of land now under irrigation in the region, and will provide improved water supplies for several hundred thousand more. This is in addition to the 1,000,000 acres to be irrigated in the Columbia Basin project. It will increase regional power capacity by about 2,000,000 kilowatts—adding about 60 percent to the total regional capacity through new plants and up-stream storage. The combined effects of the program will be broader and more diverse development, new uses for power on the farm, including sprinkler irrigation, the establishment of new industries, new opportunities for employment—for business—for private and public enterprise and for investment.

In addition to increasing materially the real wealth of the region and the Nation, the program will have the effect of bringing about a greater maturity in the Northwest regional economy, particularly through a more advanced development and use of resources, as well as supplying a base for substantially larger population. It follows that public investment will induce at least as much more wealth—in land, improvements, plant, and communities—a prospective increase of some one and a half billion dollars.

The immediate post-war program of asset-building, self-liquidating public works will produce some 50,000 construction jobs for returning servicemen and demobilized war workers. In operation the program will produce more than 100,000 continuing new jobs in agriculture, industry, and service, with an accompanying increase of some $200,000,000 in annual income for the region. A program of the kind suggested will conceivably provide, if continued during the next 2 decades, a base for new regional population of at least 2,000,000. This will mean, averaging 4 persons to the farm home, 200,000 people on 50,000 new farms; 800,000 people dependent upon 250,000 new industrial jobs and approximately 1,000,000 people dependent upon 350,000 new service jobs.

The importance of such a balanced and unified program of development in the Columbia River drainage basin as one of the major factors in providing for maximum post-war employment in the Pacific Northwest is obvious. It suggests, however, the evident need and value of a single agency to integrate and coordinate a program of such expansive proportions.

The question then arises, What type of agency and what method of procedure will best accomplish these purposes? The idea of some type of Columbia Valley Authority has been suggested by the President, and many people are probing the possibilities in this direction. I have summed up my basic views in a statement for the United States News, which I would like to quote:

"Regional agencies to integrate physical resource planning and Federal development work should be established in many, if not all, of the major river basins. What powers they should be given, and necessarily how they should be organized should depend upon the special physical, social, and governmental characteristics of each region. These vary greatly. But if due allowance for significant differences is made, it would be a great forward step to give each region a Federal entity endowed with authority and funds to give responsible leadership in the effort to attain maximum sustained use of regional resources to stimulate private and public investment and enterprise, and to work toward the highest practicable standards of living.

"I am inclined to believe that such an entity could be set up in such a way as to recognize the interests of the people of the region and responsibilities of the States and to retain the advantages of the departmentalized and specialized development of agencies of the Federal Government."

I have purposely raised this point at this time because to me it has a direct bearing on the relationships, both present and future, of all governmental agencies whether Federal, State, or local. The associations of the Rural Electrification Administration and the Bonneville Power Administration as Federal agencies, in cooperation with such organizations as the National Rural Electric Cooperative Association, have been particularly favorable and harmonious. That they can continue to be so during periods of wide expansion has been evidenced thoroughly in the operations of the T. V. A. It follows, however, that in the national interest, from a point of view of economy and in the regional interest from the viewpoint of speedy and consistent progress, there must be an integrating force to eliminate duplication of effort and guarantee the necessary cooperation between all Federal, State, and local organizations in carrying out an over-all plan for regional development.

Let me summarize this for you in the following way:

First, the national picture. To maintain economic prosperity in the United States after the war the following conditions (in very approximate but realistic terms) must prevail:

1. Gross national product—a total output in goods and services—worth $175,000,000,000 a year.

2. National income—net output of goods and services produced, or returns in wages, salaries, and business income—of $125,000,000,000 a year.

3. Fifty-seven million jobs.

To make these three conditions possible there must be a total investment, both public and private, of about $35,000,000,000 a year.

In the past, private investment has never totaled more than about $20,000,000,000 a year. During much of the time it has fallen far below that level. Investment must be stepped up to give full employment, and private enterprisers claim they can do it, given the proper "climate."

If private investment in plant, machinery, business, transportation, housing, etc., can reach $25,000,000,000 per year a public investment (Federal, State and local) of $10,000,000,000 a year will bring us to our goal.

Whenever private investment climbs above $25,000,000,000, public investment can be cut accordingly.

Whenever private investment drops below $25,000,000,000 annually, public investment must be stepped up accordingly.

It is probably safe to assume that in the years immediately following the war a public capital investment of at least $15,000,000,000 a year would be required.

If these figures are sound—and many leading economists believe they are—some governmental entity with power to integrate the problem of Federal investments, should be created. Regional authorities may be one solution to this problem.

What is the share of the Northwest in this?

The five States of the Pacific Northwest region comprise something like three percent of the total United States population, but the region is underdeveloped and very large in area. It should be an intensively developing and growing phase after the war. It would need an annual capital investment in a larger proportion than some other regions of the United States, and in some ways its needs and possibilities are more suitable for public investment than for private investment.

Thus, to maintain its share of the national prosperity, the Northwest would require:

1. Regional gross production in goods and services worth seven to eight billion dollars a year.

2. Regional income in wages, salaries, dividends, etc., of about $5,000,000,000 a year.

3. About two and a quarter million jobs.

To make these three conditions possible in the Northwest region, there must be a total annual investment, both public and private, of something like $1,400,000,000 annually.

Feasible private investment in the Northwest might be very roughly estimated on the order of $700,000,000 to $900,000,000 a year, leaving a necessary public investment of something like $500,000,000 to $700,000,000, which must be supplied by Federal, State, and local governments.

Of this total public investment the five States and subdivisions and local governments can probably undertake an estimated share of $100,000,000 to $200,000,000 a year. This money would be spent in all kinds of capital improvements such as State and municipal institutions, roads, plant, facilities and other public works.

This would leave an annual public investment of from four hundred million to five hundred million dollars per year to be provided in the five Northwest States by the Federal Government for all of its programs.

Just how this program is to be set up and accomplished is one of the major problems facing the region in its post-war development. Intelligent students of the problem are turning their attention to a regional authority as a possible solution.

At present there is no sure way in which this outline plan can be carried out.

At present there is no way in which this program can be expanded to include on an integral and sound basis not only the major flood control, power, and land developments, but broad conservation and development in soil, forest, range, park, fishery, mineral, transport, and other vital fields.

The plan is good as far as it goes, but it is not wide enough in scope or concrete enough to do the job required.

There is no one agency upon which responsibility for its unified development and execution can be fixed.

There is no one agency which can program the plan in detail, budget it, hold it together, and carry it through in full cooperation with local and State agencies.

Its success is endangered by the pulling and hauling of special interest. Groups interested in navigation, groups interested in reclamation, and groups interested in airways, roads, and other developments tend to work against each other for the promotion of their special interests.

These groups have small tendency to see the problem of development as a whole.

As things now stand, these groups will undertake to carry out small portions of the program on a piecemeal basis; yet, investments on a necessary scale for full employment over a period of years cannot be made effectively if they are undertaken piecemeal.

Piecemeal development will result in essential parts of the entire program being left out.

The program will fall short of its goal and it will be impossible to fix responsibility for the failure.

Cooperation, however willing, is not enough. It is passive. Dynamic, objective, creative, over-all leadership and control are essential.

What is true of the region is true on a national scale. Therefore, the problem has stirred national interest.

But, because the problem is so far reaching, it has also set the forces of opposition in motion. We would do well to bear in mind constantly the concerted plotting on the part of various selfish elements to forestall a logical, coordinated regional development program. One of the most obvious moves in this direction has been the desperate effort by the private interests to preempt the great hydroelectric resources of our rivers from the people and monopolize them for private gain. This attempt was plainly evident in the unsuccessful attempts to write amendments into the recently passed flood-control bill which would have prevented the construction of the transmission lines from Federal dams and required the sale of power at the bus bars.

Similar efforts were made to alter the river and harbor bill. Although this bill was not passed, it was not because of any change of policy on the part of Congress regarding the construction of the transmission lines but an attempt to include in the bill an amendment which had no bearing whatsoever upon the purpose for which the bill was originally written. All phases of the bill dealing with the sale of power and the construction of transmission lines were supported by the Congress, and especially by the Northwest delegation.

Approval of Federal construction of transmission lines was even made a portion of the platforms upon which the successful congressional delegates from the Northwest ran for office. The defeat of the Bailey amendment is another indication of congressional policy.

To my mind the attitude of Congress is exceptionally well expressed in a speech made by Senator LISTER HILL, of Alabama, on the floor of the Senate during the discussions on the river and harbor bill. The Senator said:

"It is good government to provide for the multiple purpose development of our rivers so that they may carry the commerce of our Nation through their navigation works, so that they may no longer waste the lives and property of our people through destructive floods, so that they may irrigate our arid lands, and so that their falling waters may produce power for the benefit of our people. It is good government to see that all of these benefits are widely spread among our people and that none of them is made the possession of the few. It is good government to see that Federal power is made available throughout the area of its economic transmission—to lower the cost of farming, to lower the cost of running the home, and to lower the cost of making goods and providing services in industry and business."

In concluding his remarks, Senator HILL said:

"Because it is good business and good government to sell federally produced power in a manner that will prevent its monopolization and that will spread its benefits widely among the people, I am opposed to any amendment that would restrict sales of power to the site of the dams. I favor giving preference to municipalities, public agencies, and farmer cooperatives. Where it is necessary for the Government to construct transmission lines for such preference to be enjoyed, I strongly favor such construction by the Government."

That, I think, presents a clear picture of the prevailing attitude of Congress. Such an attitude well merits the support of each one of us who has at heart the interest of the fullest and most equitable development of his particular region. No more effective means could be found for evidencing support of such a meritorious congressional policy than the concerted effort of such groups as the National Rural Electric Cooperative Association to challenge every move on the part of the monopolistic interests which seek to detract from the perpetuation of these policies.

Everyone here agrees on the desirability of full development of our resources and the fullest possible use of electric power on the farm and in homes and industry.

Special interests are continually trying to divide our people—to discredit the R. E. A., the Bonneville Power Administration, the idea of an authority—in short, these interests are doing everything in their power to discredit the idea of public power.

The grave problem of post-war jobs is one issue that transcends all of the efforts of these private interests to defeat our program. The stark necessity of realistically meeting the challenge of providing 60,000,000 jobs for our people in the post-war years requires intelligent leadership and the cooperation of all interests. Unleasing of the great tools of production—power, water, and land—offer one vital contribution. We must work together to accomplish that end.

The Closed Shop

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. MILLER of Nebraska. Mr. Speaker, today I have introduced a bill to make it unlawful for labor unions to maintain an absolute closed shop. The bill will make it possible for an individual, particularly a returned soldier, to work in vital industries without belonging to a union. He may join a union or not. The decision will be up to the individual.

It is my opinion that the labor unions have been wrong in the past in demanding that anyone who works in industry must belong to a union. Personally, I believe in unions—would belong to one if I were laboring in industry. I do feel, however, that it is an individual's given right to make a decision as to whether he cares to belong to any particular union.

Some labor leaders have the childish notion that when you criticize them on any labor policy you are antilabor. This is a sign of emotional immaturity. It is an undemocratic idea. Democracy thrives on the clash of opinion. Critical observations are not always unfriendly.

Some unions have grown too large for the public good. Unions should remain the servant of the member who joins and not the master. We have had the same condition in government where bureaus want to be the master and not the servant of the people. It is an evil of a growing bureaucracy. Unions should serve the members they represent. There are too many union leaders and racketeers who make huge profits off of their members. Not many years ago the railroads thought they were larger than the public. They had to be put in their place. A few years ago big business was dominating everything in America. It, too, had to be dissolved. The unions are ruled by men who have selfish desires. There are too many arrogant and supermen drunk with power that now control unions.

Labor unions, if they seek to be the big boss in local, State, and National politics, will soon run into the opposition of public opinion which will eventually overwhelm them. It is a form of extortion and blackmail which the public will not long endure.

I believe that the forced maintenance of union membership in order to hold a job is not in the interests of the public. It makes slaves out of the individual member who must join a union or starve. He must remain a member throughout the life of the contract. If he ceases to be a member by failing to pay dues or other departure from union rules and discipline, the employer must discharge him. In some instances the head of the union informs an employer that a worker has ceased to be a union member through violation of union rules and must therefore be discharged. The maintenance of membership is much the same as a closed shop. The worker must remain a member of the union or lose his job. The check-off system is also an evil which goes with the closed-shop provision. This means that the employer must deduct union dues from the workers' wages and pay the dues directly into the union treasury.

It is my opinion that the rank and file of union members want their unions to be their servants and not their masters. If the union leaders persist in being the masters, it will eventually lead to the destruction of free unions. It will destroy that sacred principle of the individual man—his right to work, his right to say who shall represent him. Unions should not be a vehicle which union leaders may use to advance their own personal powers.

Threat to Oil Development

EXTENSION OF REMARKS

OF

HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. DOMENGEAUX. Mr. Speaker, because of the tremendous development of

the oil-producing industry in Louisiana, Mississippi, and other Southern States, I am gravely concerned over the recent decision of the United States Circuit Court of Appeals for the Fifth Circuit, which ruled against permitting producers to continue the long-established practice of charging either to expense or to capital account the intangible cost items in connection with drilling operations.

Such a decision, if permitted to stand, will paralyze oil production throughout the country. Its effect on the war effort especially and on domestic petroleum needs can be quickly realized.

The court action is a drastic blow to the smaller operators whose courage, initiative, and industry in developing new sources of oil were responsible in a large measure for the fact that the United States had such large and vital oil reserves ready for use when the war began.

Despite the fact that through all these years the intangible-costs option regulation has been in effect and has come to be recognized as part and parcel of the tax structure of the oil-producing industry, the Treasury Department has expressed opposition. This became evident in 1942 when the Department attempted to have Congress adopt a statutory declaration against the regulation. Hearings were conducted by committees of both the Senate and House, and representatives of the Treasury Department and of the petroleum interests were heard. Both committees were convinced there should be no change in the law, but the move against the regulation by the Treasury continued. Finally the matter got into the courts, when the Bureau of Internal Revenue disallowed the deductions of such option to two independent operators in Texas. The operators appealed to The Tax Court of the United States and lost. They then carried their fight to the circuit court, where they again lost.

It is interesting to note that the Treasury Department is apparently not altogether convinced of the justice of its opposition. The court, in its decision, revealed that the "legislative mind" of the Department feels the option should be continued, while the "administrative mind" is "bent on whittling it away."

The time has come for Congress to decide this matter promptly and decisively and I am greatly interested in legislation designed for that purpose. The immediate need is for the amending of the Internal Revenue Code in order to expressly provide that the intangible expenditures for wages, fuel, repairs, hauling, supplies—all of the items incident to the drilling of wells and their preparation for production of oil or gas—can, at the option of the taxpayer, be deducted from gross income as expense or charged to capital account. Similar provision should be made so that the cost of drilling nonproductive wells can be deducted from gross income for the year in which the taxpayer completes such well or be charged to capital account.

This is a matter of national importance, affecting the welfare of not only the oil industry but the protection and welfare of all our citizens, who are dependent to such a great extent upon the development of our natural resources, particularly our great oil reserves.

Labor's Stake in International Cooperation

EXTENSION OF REMARKS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. PATTERSON. Mr. Speaker, the brotherhood of man is today more than merely desirable. It is an absolute necessity if man is to survive. This is the meaning of our present era. Men and nations of men must join hands for their mutual security and prosperity.

Labor understands this better than any other segment of our population, for the workingman's struggle to join with his fellow workers in order to find strength and security in collective action has finally resulted in a revolutionary emancipation and dignity for the worker. The necessity of collective action for achievement of security has been underscored in the workingman's blood and tears too often for him to forget its importance.

The nations of the world are now organizing, are forming a union of democratic countries. Dumbarton Oaks and Bretton Woods are the first clauses in the constitution of this international brotherhood. American labor will support the union wherever it exists. And in a union of democratic nations labor has a greater stake than ever before.

What does labor, what does the workingman, want in the post-war world? For what is he fighting so magnificently the battles of the war front and the production front? He wants the right and the opportunity to useful and regular employment at a fair annual wage, under provisions for safety and health protection. He wants adequate programs of nutrition, child welfare, medical care, and education. He wants minimum standards to prevent exploitation of workers. He wants assurance of a regular flow of income to all those whose employment is interrupted by sickness or injury, by old age or lack of employment opportunity. He wants recognition of the right of freedom of association in collective bargaining and facilities for the training and transfer of labor.

These objectives are implicit in the Atlantic Charter, affirmed in the United Nations' declaration, strengthened by Yalta and the forthcoming San Francisco Conference, and dependent upon United States support of the first clauses of the constitution of the international brotherhood, Bretton Woods and Dumbarton Oaks.

A minimum of 5,000,000 of the 60,000,000 job goal—jobs for those returning from the battle fronts as well as for those now on the production lines—depends on foreign trade. For trade between nations is the only way in which this country can take full advantage of its productive capacity. We must sell at least $15,000,000,000 abroad to sustain at home the full employment in peace that we have attained in war.

World markets must be recreated and expanded, for only a prosperous world can purchase from us. A large part of the materials needed for restoration and expansion will be purchased here, since this is the only major country which will have sufficient men and machines to produce them. These purchases will mean jobs and weekly pay checks for us. The much-feared gap between war production and production of peacetime goods will be bridged to some extent in this way.

Bretton Woods is the key to this necessary expanding foreign trade. It is a guarantee of profits and protection for the American businessman, markets for the American farmer, and jobs for the American worker. The monetary fund will primarily stabilize currency and exchange rates between nations, thus facilitating financial transactions and eliminating the old competitive barter system. It will also make short-term loans for immediate revivification of trade. The bank will be primarily concerned with long-term loans for reconstruction and development, particularly of economically backward countries, guaranteeing private loans and selling stock.

Much of the world engaged in war is now financially prostrate. She must have the loans that the fund and the bank can supply in order to have the means of payment for what we sell her. If she does not get them, economic, political, and finally military warfare is again inevitable. For nations will be forced to begin again the dog-eat-dog system of discriminatory trade practices, restrictive exchange controls, competitive depreciation of currencies, and other forms of economic warfare that have always in the past led to force of arms.

The prosperous nation is the peaceful nation. It was the partial break-down of foreign trade which helped lead to the severe depression of the thirties, to economic chaos, to unemployed men and hungry children. Hitler's influence in Germany grew, in the beginning, directly in proportion to the number of unemployed. The maintenance of peace is assured only insofar as is the ability of nations to guarantee their workers useful regular employment at living wages. Inadequacy of economic policies and international economic cooperation has always been a prime cause of war.

In the development of economically backward countries, the creation of new markets, lies another source of prosperity for the American workingman. More money in the hands of the Chinese, for instance, put there as a result of economic development aided by Bretton Woods, means greater ability on the part of the Chinese to purchase the products of the American worker's labors. To raise the standard of living of the whole

world, means to insure the economic security of every individual nation, and every individual worker.

Dumbarton Oaks—

Says the President—

may be regarded as the keystone of the arch. * * * It represents a major objective for which this war is being fought * * * the maintenance of peace and security and the creation of conditions that make for peace.

These conditions include creation of an international organization of the United Nations to solve social, economic, and humanitarian problems.

Implicit in the Dumbarton Oaks proposals lie those rights for which the American soldier and the American worker fight: Freedom of speech, religion, press, assembly, political association, and organization of labor unions. The right of downtrodden countries to form governments which have the support of their peoples. The right of prostrate countries to be provided with food, medical supplies, and raw materials to meet their needs, in order to help them fully utilize their manpower and productive facilities.

The international scene affects American labor, both industrial and agricultural, as much as does the domestic, for in the shrunken world of today, national and foreign affairs are inseparable. Labor's desires and needs can only be satisfied in a democratic world, in a world at peace, where the dignity of work and of the workingman is fully respected. Labor has always been one of the first victims of fascism and of war. Therefore labor's stake in democracy and peace is greater than that of almost any other group.

The strongest bond of human sympathy—

Said Abraham Lincoln—

outside of the family relationship, should be one uniting all working people of all nations and tongues and kindreds.

Labor, industrial and agricultural, has understood this brotherhood of the workingman. Now labor in America, in California, in every town, city, and county of California, must lend its vast experience and strong support to an organizing job more vast and crucial than ever before: The United Nations must be organized into a brotherhood to insure peace and guarantee justice between nations.

Only a Strong Poland Can Realize Security—Miss Cardwell Suggests It Become Nucleus of an Eastern Federation

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Ann Su Cardwell, that appeared in the Detroit News of March 27, 1945:

ONLY A STRONG POLAND CAN REALIZE SECURITY—MISS CARDWELL SUGGESTS IT BECOME NUCLEUS OF AN EASTERN FEDERATION

(By Ann Su Cardwell)

It requires no special study to realize that if there is to be a free and secure Poland it must also be a strong Poland. Otherwise it is a source of constant temptation to powerful neighbors.

As the largest of the eastern European countries it is the nucleus around which an advantageous federation could be built; for the fate of all its smaller neighbors, as this war has demonstrated, is closely linked with Poland, "the keystone of the arch."

For Russia, Poland is the gateway to Europe. Through it Russia can enter the western cultural and economic world on the roads of peace and greatly enrich itself; or if Poland is weak, it can take the path of disguised conquest, ending in hate, destruction, and finally, if history teaches anything, in its own downfall.

Which of these roads Russia chooses is of vital importance to us, since, say what we will, European war means world war.

A strong Poland is a Poland able to play the role geography has thrust upon it; a free Poland is one that governs itself without outside interference and is nobody's sphere of influence or protectorate. The Poles are not a homeless people for whom a country must be found.

They have occupied the lands within the 1919–39 frontiers for over a thousand years.

The very fact that compensation for loss of their eastern territories is spoken of as a necessity acknowledges Polish rights to those territories which, insofar as they had not always been Polish, were not won by conquest or robbery but by cultural penetration, or added through mutual consent.

NOT A BOUNDARY ISSUE

However, the present question is not primarily one of boundaries. Why should the territory of an ally, first to defend its rights, come into question at all?

The British were not thinking of giving away Polish lands when they signed the agreement to aid in their defense, of giving them to a government that had signed a pact with Hitler and later shared with him in partitioning Poland.

During the 18 years between the signing of the Riga Treaty (1921), fixing the Polish-Soviet boundary, and the Soviet 1939 invasion, the Soviet Union had never complained of boundary injustice.

On the contrary, in the Great Soviet Encyclopaedia and the history of the all-union Communist Party, they wrote of the victory of the Red Army in the Polish-Bolshevik War, and of the Poles being forced to accept conditions favorable to the Soviets because of the exhaustion of Polish troops.

But the real threat to Poland in the Yalta decisions concerns its independence. The Lublin group is to be the dominating element in the promised provisional government. That element, now in control of Poland for over 6 months, has shown the course it will follow, which is nothing less than sovietization.

How fair can be the elections promised at Yalta, even if we were credulous enough to think that Americans and British supervising them in Poland will have the least understanding of what is going on?

We are all familiar with "No taxation without representation," and "Give me liberty or give me death." What is the difference between those proud American slogans and the Polish "nothing about us without us"? Yet we presume to settle matters most vital to Polish national life without one Pole being invited to the conference table.

WHO IS THE ENEMY?

A peace attained by appeasement, if it be attained, is an unjust peace. We have had it dinned in our ears from the day the war began that an unjust peace will never endure. Thus the President himself and many of our officials have spoken.

To quote Senator VANDENBERG, "In my opinion, no permanent peace is possible without a constant, conscious mandate to seek and maintain justice as the basis of peace."

At Yalta, Poland, the ally, received worse treatment than did Germany, the enemy.

Germany is to be administered by a commission from all four of the United Nations. This the Polish Government had previously asked for Poland until such time as a permanent Polish government could be established, and been refused.

POLAND HAD TO ACCEPT SOVIET OCCUPATION ALONE

According to Yalta, Germany, the aggressor, may or may not lose 12 to 15 percent of its territory, as the determination of Poland's western frontier is left for the peace conference.

Poland, defender of liberty, is to surrender 42 percent of her lands immediately.

German prisoners of war of the allies will be safe, well fed, clothed, and housed. Polish soldiers fighting alongside British, American, and French, will be unable to return to their homeland, yet no provision whatever is made for them.

WHAT AMERICA CAN DO

To quiet our consciences we are told that perfectionism is unattainable and must not be expected. That is not an excuse for abandoning ideals, rather an incentive to strive toward them.

America can insist upon the Soviet Union changing its policy toward Poland and other neighbor nations. If the Soviets refuse, then we can refuse them further aid.

Then we would have problems indeed. How could American agriculture and industry ever hope to compete with Russia in world markets? What would then happen to American wages and living standards?

The Polish-Soviet problem ceased to be Polish-Soviet at Tehran and became American-British-Soviet. In striving to save the integrity and independence of Poland, Americans are not being romantic, impossibly idealistic, or even altruistic, but actually acting in defense of their own country's future.

Great patience, skill, understanding and resoluteness, particularly resoluteness, will be required, but it is America's duty, even for selfish reasons, to convince the Soviet Union that friendly neighbors are a much greater asset than hostile subjects, in peace or war.

Remarks by the Honorable Leo Healy at the Ninety-sixth Annual Dinner of the St. Patrick Society of Brooklyn

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of the Honorable Leo Healy at the ninety-sixth annual dinner of the St. Patrick Society of Brooklyn on Saturday, March

17, 1945, at the Hotel St. George, Brooklyn, N. Y.:

All men are by nature hero worshipers. Surely there is not one of us who has not at sometime said, "This is my own, my native land." Nor is there one of us whose better nature fails to respond to the silent call of those great men, now dead, who made this country what it is today. Their memory is not permitted to wither and die but is kept fresh and green in the hearts of a patriotic posterity. By feast and by festival the recurring anniversaries of our national heroes are fittingly celebrated for the pride of a nation is in its past and the glory of a people in its illustrious forebears who have bequeathed to their progeny the precious legacy of merited honor and deserved dignity.

And we have gathered again tonight to once more pay our tribute of respect and admiration to a great saint and hero who is revered throughout the world and especially so here in America.

America has no ancestry, properly speaking, unless it be the copper-hued Indians, and they are virtually extinct. She has drawn her force, her strength, and her quality, in a large measure, however, from the sons and daughters of Ireland, the little green isle set in the sea.

St. Patrick's Day is, indeed, a great day for Irishmen and yet it should not be exclusively so. America owes a debt of gratitude to these exiled sons of Erin. They have rushed to her protecting patronage and America has folded them to her breast as adopted children. They have raised their right hands in solemn oath of fealty to America and her institutions but at the same time they have clasped tightly to their hearts the recollection of their trials and persecutions of the past. America pays a price of considerate sympathy for this feeling in exchange for their devotion and loyalty to their new-found haven.

They have framed our laws, regulated our commerce, exercised in a worthy and commendable manner the duties of American citizenship. Would that time would permit me tonight to review the names of Irish men and Irish women who have gained and deserved a place of prominence in our country in the arts, the sciences, and the professions.

But it cannot be gainsaid that they have sealed their loyalty to America by their unstinted patriotism. We have so many people in our country today who have suddenly become patriotic now that war is upon us. So many, whose patriotism only a few years ago was, to be charitable, at least, dormant or perhaps slumbering. Perhaps it might be refreshing to look back for the moment to the record of patriotism manifested by the sons of Ireland throughout the years of our national existence. For instance, that memorable charge of the Irish Brigade at St. Mary's Heights at Fredericksburg should be immortalized in song and story. It was only when the tide of battle had turned hopelessly against the Union forces that the order rang out, "Send up that Irish brigade." And up they went. In solid surried ranks, 1,200 noble Irish lads of the purest Irish stock. In the soldier cap of each there was a sprig of Irish green. In the soldier heart of each there was a drop of Irish fighting blood, and in the soldier eye of each there glistened an Irish tear as the strains of the Wearing of the Green, played by their own fife and drum corps, fell upon the ears of those noble Irish heroes marching to death beneath the fluttering folds of the Stars and Stripes of freedom.

But 200 of them returned to tell the story of the awful slaughter and carnage that met their approach. One thousand of their comrades were left behind on that southern hillside, far from the land of their birth, willing sacrifice to the land of their adoption.

And this is but one chapter out of the enormous volume that records the story of the bravery and the courage of the sons of Erin. Were you to walk the most famous battlefields of the world and read the inscriptions on the tiny tombstones erected to the memory of the soldiers' hearts that lie silent beneath, the Irish names of Irish heroes would meet your gaze at every turn. At Landers and Cremona, at Blenheim and Ramilles, at Fontenoy and Austerlitz, at Vimy Ridge, and at the Marne, at Iwo Jima and Corregidor, at Aachen and Cologne the exiled sons of Erin fought, bled, and died with a reckless valor and courage that has never been equaled in the world.

If it is true that the sun never sets upon the English flag, it is a thousand times more true that the sun shall never cease to shine upon the grave of an Irish hero.

All honor and glory to this love of freedom and liberty on the part of the sons of St. Patrick.

Let our eyes dance with joy and let our cheeks flush with pride as we celebrate his anniversary today and proudly proclaim to the world that we are sons of Erin, the grandest country on God's green earth, and citizens of America, the noblest country under God's blue canopy.

Drew Pearson

EXTENSION OF REMARKS

OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials and newspaper article and also two letters:

[From the Seymour (Ind.) Daily Tribune of March 16, 1945]

WILSON'S SPEECH FROM FLOOR OF HOUSE AT COLUMNIST, SPEAKER GETS ATTENTION

BULLETIN

WASHINGTON, March 16.—Representative WILSON (Republican of Indiana) protested today because less than 30 Democrats were in their seats when the House met—and brought from Democratic Leader MCCORMACK (Massachusetts) the retort: "There's nothing to stop a man making a damned fool of himself if he wants to."

It was the second consecutive day that WILSON had raised a point of no quorum when the House met. This action automatically forces a roll call requiring 30 minutes or more.

Ninth District Representative EARL WILSON, of Huron, former principal of the Vallonia High School, jumped into the national news again today when from the floor of the House Thursday, he struck out against either Columnist Drew Pearson or House Speaker SAM RAYBURN in a "personal privilege" speech.

Reports of the speech differed. A Washington, D. C., Associated Press dispatch today said, "Representative WILSON (Republican of Indiana) called Columnist Drew Pearson a 'liar' on the floor of the House Thursday because Pearson accused him of 'hogging' the handball courts of the House gymnasium." WILSON added, "I can honestly say I've never seen a handball."

In a story published in the Indianapolis Star from its Washington bureau, WILSON is said to have "quoted six statesmen as calling Pearson variegated kinds of a liar." "But the Indianan did not call the columnist a liar," the Star story continues. "He did not say that if Mr. Pearson was not a liar, then it was true, as Pearson alleged in his column yesterday, that the Texan (Speaker RAYBURN) had in fact urged Representative JERRY VOORHIS of California to leave the floor so that WILSON would be the only Member left in the House."

The Associated Press story said "WILSON said Pearson was 'a ruthless, diabolical, double-barreled liar' about the handball courts and he added that he didn't believe Pearson's story about RAYBURN and VOORHIS either. "Pearson was not available for comment."

The Star said WILSON said that if RAYBURN had actually accorded him the treatment Pearson had reported, "Why don't you gentlemen in the name of common decency and respect for this body bring in a resolution expelling me from the House of Representatives. I beg of you to do that."

A moment later, Representative JOHN ROBSION of Kentucky, asked, "Has there been any proof that the Speaker did that thing."

WILSON replied, "There has not. I have only Drew Pearson's statement that he did. I am assuming that the Speaker did not do that, and if he in turn calls Drew Pearson a liar, that will make it unanimous."

Speaker RAYBURN said nothing. Members of both parties came to WILSON to offer congratulations.

Representative WILSON said he did not blame the Congressmen who left the House, the Associated Press said.

WILSON noted in the CONGRESSIONAL RECORD that the Associated Press had sent out a 60-word story last Friday reporting the fact that he spoke alone.

"Now that is all right," WILSON said. "I am not criticizing the Members of Congress. I have an editorial from my State paper, the Indianapolis Star, which defends me and to some extent takes Congress over the coals and says it is uncomplimentary of Congress to have business transacted with only two Members on the floor of the House."

In defense of the Members, WILSON noted his remarks came at the close of the legislative day, and said:

"It is not unusual for the membership of this House to leave as early as they can at the conclusion of the regular business of the day and go to their offices and do the work that they have to do. * * *

"I am going to defend them for leaving the floor of the House."

A well-filled Chamber listened to WILSON's remarks Thursday.

[From the Madison (Ind.) Courier of March 20, 1945]

WILSON VERSUS PEARSON

Representative EARL WILSON, attacked without cause by Drew Pearson in his Washington Merry-Go-Round column, has warded off the blows successfully and called attention of the people to a woeful lack of efficiency in Capital departments and even in Congress itself.

The occasion of the attack was a speech WILSON made in the House several days ago. Pearson called attention to the fact that but one or two Members were present when the talk began and that one of them and a page boy left the Chamber during the speech.

Not content with this, Pearson must add a few uncalled-for remarks which proved to be without foundation, and this was shown by WILSON the following day.

The result of the encounter of the Representative and the columnist has been a better attendance at sittings of the House and, it is to be hoped, more efficiency in the departments will follow.

The plea of WILSON for more attention to duty and to the waste in the Capital comes at a very opportune time.

The great boasts of the preelection days have turned into weeping and wailing and pleas for manpower, talk of drafting nurses, threats of food shortages, and admissions that the administration has erred in this and

that, and that while things are going well on the western front and in the far Pacific there is all confusion at home.

More Representatives who will stir up the powers that be and get Washington onto the job of winning the war would be a blessing to the Nation and the Allied cause.

WILSON SLAMS DREW PEARSON—CONGRESSMAN FIRES VERBAL BARRAGE BACK AT COLUMNIST

EARL WILSON, Ninth District Representative in Congress, has fired a verbal barrage in the House of Representatives against either Columnist Drew Pearson or Speaker SAM RAYBURN in a personal-privilege speech which quoted six statesmen as calling Pearson variegated kinds of a liar.

WILSON'S reply to Pearson's charges made in his newspaper column Thursday was broadcast over the networks Thursday night and carried in newspapers today.

Pearson stated in his column:

"Strait-laced Representative 'CURFEW EARL' WILSON, Indiana Republican, is best known to the public for having urged a curfew for Government girls and complaining because they take a few minutes out for coffee or a soft drink. To his congressional colleagues, however, he is best known as a hogger of the handball courts in the House gymnasium. They don't like him."

DOESN'T PLAY HANDBALL

Lowell Thomas commented in his newscast Thursday night WILSON had struck back at Pearson with the support of some of his colleagues, that he didn't even know how to play handball.

In his column Pearson went on to report that the House was vacated the other day while WILSON was delivering a long tirade against the Veterans' Administration.

In his reply to the columnist, WILSON did not call him a liar. He did say that if Pearson were not a liar, then it was true, as Pearson alleged in his column Friday, that Speaker RAYBURN had in fact urged JERRY VOORHIS, of California to leave the floor so that WILSON would be the only Member left in the House.

WILSON said that if RAYBURN had actually accorded him the treatment Pearson had reported, "why don't you gentlemen in the name of common decency and respect for this body bring in a resolution expelling me from the House of Representatives. I beg of you to do that."

A moment later, Representative JOHN ROBSION of Kentucky, asked, "Has there been any proof that the Speaker did that thing?"

WILSON replied, "There has not. I have only Drew Pearson's statement that he did. I am assuming that the Speaker did not do that, and if he in turn calls Drew Pearson a liar, that will make it unanimous."

Speaker RAYBURN said nothing. Members of both parties came to WILSON to offer congratulations.

CALLS RAYBURN PEARSON ALLY IN SMEAR ARTICLE—INDIANAN ASSAILS SPEAKER FOR ABETTING RIDICULE

(By Willard Edwards)

WASHINGTON, D. C., March 15.—Speaker RAYBURN, of Texas, remained silent today after he had been named in the House as having contributed by his actions to a smear attack upon an Indiana Republican.

The Speaker sat in his chair on the rostrum pretending to read a newspaper as Representative WILSON, Republican, aired the circumstances leading up to a quarter-column of ridicule against him written by Drew Pearson, syndicated gossip.

WILSON, at one point, obviously paused to permit RAYBURN to deny the implications of his account, but the Speaker ignored the opportunity.

READS PEARSON STORY

The Associated Press also lent itself to the smear upon WILSON, he declared, sending out a short story which noted that the Indianan addressed the House recently with only two Members present. Such a small attendance is a frequent occurrence late in the day when Members deliver prepared speeches and WILSON wanted to know why he was singled out for abuse by the press association.

WILSON read the Pearson story to the House. It referred to him as "Curfew Earl," best known to the public for having urged a curfew for Government girls and complaining because they take a few minutes out for coffee or a soft drink. He was also labeled "a hogger of the handball courts in the House gymnasium."

QUOTES RAYBURN

Pearson then asserted that the Speaker recently noted that Representative VOORHIS (Democrat, of California) was the only Member present when WILSON recently was delivering "a long tirade against the Veterans' Administration." He quoted RAYBURN as calling VOORHIS to him and suggesting that he leave the Chamber so that "WILSON won't have anyone listening." VOORHIS obeyed, and "WILSON ranted on for 5 or 10 minutes, talking to no one," Pearson wrote.

More than 300 Members were present this time as WILSON obtained the floor on a question of personal privilege.

"Everybody has called Pearson a liar, from President Roosevelt on down," remarked WILSON. "He has been termed in Senate and House debate as a character assassin, a skunk, a polecat of journalism, an ignorant ass.

"I don't know whether the Speaker is guilty of what Pearson charges, of asking that the floor be vacated so that unfavorable publicity could go out concerning a Member addressing the House on the care of the veterans of our wars. If I did wrong by that, then I beg of you to bring in a resolution impeaching me.

"If the Speaker will now call Pearson a liar, that will make it unanimous."

RAYBURN IGNORES CHARGE

RAYBURN paid no attention as WILSON paused. The Indianan then remarked that the charge of "hogging the handball court" was typical of Pearson's petty falsehoods. He said he had never played nor seen a handball game in his life, and would pay $1,000 to anyone who could say he had played one.

Noting that Pearson's radio sponsor, manufacturers of Serutan, a laxative, had been recently ordered by the Federal Trade Commission to cease false advertising, WILSON concluded:

"One of the Commission's findings was that Serutan was an intestinal irritant. I wonder if Pearson has been taking too much of his own medicine and the consequent irritation is responsible for his printed product."

SEYMOUR, IND., *March 24, 1945.*

Mr. DREW PEARSON,
Washington, D. C.

DEAR MR. PEARSON: Although I think your column contains a good deal of nonsense, it can now be revealed—in fact, has been revealed—that you are sometimes on the beam.

Your recent reference to "Curfew" WILSON was a topic happily chosen and well handled from several viewpoints. Mary and Jane, who go to work down in Washington at the middle of the forenoon, spend part of the afternoon in the rest room and at the coffee shop, and the evenings at the high spots about town, will like what you say about "Curfew." Pa and ma, who work down here in the sticks 12 hours a day, and are naturally a little solicitous about the girls, like the "curfew" idea rather well, too; incidentally, pa and ma do the voting. It is unfortunate that the other Congressmen may not be inclined toward supporting WILSON, but he has managed to be elected, and reelected, with the biggest majorities ever given a Congressman in this district, although he is a Republican in a section that has been traditionally Democratic for 100 years. It may be that "Curfew" will win even if they all vote against him—there being but 435 or so of them. I ran against WILSON myself for the office a few years back; I like this curfew business so well that I, and I expect nearly all of my relations, are going to vote for him when he runs again.

This is a great piece of work you have done for him—publicity he couldn't buy for money—and the kind of stuff that tickles the ears and the hearts of the curfew contingent down this way.

Yours truly,

J. A. SHIELDS.

WAYNE COUNTY
REPUBLICAN CENTRAL COMMITTEE,
RICHMOND, IND., *March 19, 1945.*

Hon. EARL WILSON,
Member of Congress, House Office Building, Washington, D. C.

DEAR EARL: It is now 5:30 o'clock and I have just come in from trying a nasty case that will go on and on during this week.

I had read that you were on the floor last Thursday in reference to Mr. Drew Pearson. I therefore began to go through my CONGRESSIONAL RECORD and I have just finished reading your remarks and those to whom you yielded.

My comment is to the effect that you very, very soundly smacked the living hell out of Pearson's carcass in such a manner that I doubt if you hear from the guy again.

The only time I ever knew you to be a hog was when it came to getting votes against your opponent in your district.

Keep on punchin'.

Sincerely,

You are busy and this letter does not call for an answer. What th' hell. I don't live in your district and I'm a Springer man from A to Z but I still admire you.

E. K.

The Meat Shortage

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks, I include an editorial from the March 31 issue of the Prairie Farmer which discusses two important reasons for the current meat shortage. There have been and will continue to be many explanations offered for the shortage of meat and other foods, but one fact bears repeated and emphatic statement—farmers cannot produce without help, and unless draft boards stop taking essential workers off the farms we can expect far more serious food shortages than now exist.

PRAIRIE FARMER SAYS: FADING HELP AND BAD MARKETS SPELL MORE MEAT SHORTAGE

On March 16, 18 young men from Mason County, Ill., were in the Prairie Farmer Building. They had come to Chicago to take their physicals, under orders from their draft board. They came in a bunch to our building to listen to Dinnerbell program on WLS.

Because they represent a typical situation of what is happening all through prairie farmer land, we are giving their names and the number of acres in the farms on which they worked. Paul Root, 400 acres; Stanley Nieder, 400; John Montgomery, 280; Dick Stone, 520; Charles Lippert, 700; Harold Kieth, 480; Donald Zich, 160; Porter Garrison, Jr., 420; Paul Behrends, 780; Eldon Frye, 360; Alvin Hackman, 500; Harold Kastendick, 278; Rollan D. Becker, 640; Henry Kendall, 160; John Schafer, 160; Walter Grim, 240; Harold Griffin, 520; William Wendt, 320.

Add these, and you have 7,318 acres which may be deprived of at least one-third to one-half of their labor at the very outset of the spring planting. The average size of farms is 406.5 acres.

NO MEAT WITHOUT FARM HELP

We have held back recently from talking about stripping highly productive farms of their last vestige of young, able men who have had an active part in doing the physical work and the management planning, because it seemed to us inevitable that what is happening, would happen.

It will still continue to happen, and more young men will go from more highly productive farms. We are not talking in behalf of the rights or privileges of these young men, for they have none other than all young men engaged in worth-while work and subject to the call to arms.

But we will continue to talk loud and emphatically about the person who riots in a grocery store in order to get a piece of meat or chicken for Sunday dinner or week-day supper, and who, because of the shortage of food, bitterly berates farmers for not producing all that everyone can wish. Agriculture has a right to be proud of what has been produced in the face of ever-shortening supplies, labor, machinery, and pushing around in the markets when they have sent in their hogs and cattle.

We disagree with the American Meat Institute, which seeks to lay the blame for meat shortages in retail shops, upon growers selling in the black market, and to Government bungling in fixing ceiling and floor prices.

The meat packers have a tremendous load of responsibility for the present short numbers of hogs. They literally pounded the profits to growers out of the biggest production of hogs this country has ever seen, the 1943 crop. Far from paying ceiling prices, they evaded paying legitimate floor prices for hogs. They tried to get away with the idea that the floor was put there to establish what the hog was worth. That, however, was the price at which Government said it would step in to keep the producer from going broke. And when the floor prices were evaded and the bulk of hogs bought at ruinous prices, growers just were forced out of the business.

When the packers realized last fall that the honeymoon in hogs was over and they would have to pay up for the limited numbers of 194 hogs available, the market prices have been right around ceiling all the time. Now packers lament that hogs and cattle are not coming to the big market places but are going into food lockers and into the hands of small packers. Hog growers were pushed in the face so hard when trying to market their 1943 hog crop in the large market places that their noses are still sore and their eyes black.

The public is generally fair when it sees all sides of the story. Here are a couple of sides which are told all too infrequently to the people who live out of grocery stores and meat markets.

Let them all know that the farmer has done his job and has done it well. His help is gone. He has been mistreated in the market places. Government rules have been handicaps. But he enters the spring crop season with courage and determination to do what can be done. All he asks is that the public, his fellow Americans, understand his side of the circumstances, and turn not their wrath upon him when they find a few things missing on the food counters and meat blocks.

Shortage of Freight Cars in the Northwest

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, in all sections of the Northwest great distress prevails because the railroads in the East seem to find themselves unable to route into the Northwest badly needed empty cars for the movement of important products, many of which are for war purposes and many for lend-lease.

Although this condition was aggravated by the heavy snowstorms in the New England area, it would seem reasonable now that ample time has passed in order that this bottleneck of freight cars could be removed. Unless some specific effort is expended in this direction the conditions of badly needed farm crops will grow progressively worse daily until in the end loss must be the result, and at the same time, products now manufactured and in storage ready for lend-lease must remain in storage because of the shortage of cars in the Northwest section of the United States.

Under unanimous consent, I include herewith an important telegram received from Mr. R. M. Stangler, general manager of the North Dakota Mill and Elevator at Grand Forks, N. Dak., which tells in understandable language the seriousness of the Northwest situation:

GRAND FORKS, N. DAK., *March 27, 1945.*

HON. CHAS. R. ROBERTSON,

Member of Congress, Washington, D. C.:

Many farmers unable to clean grain for seed because granaries are filled, and they are unable to move grain to elevators because they are plugged and unable to get grain cars to make shipments. We have great amount grain bought from large number elevators who are unable to ship us grain and we in turn have sold large amount flour for Army for export, also under lend-lease, and with critical car shortage we cannot make deliveries. I notice recently in the newspapers it stated hundreds of cars were delivered to western lines daily at Chicago and Peoria. To date there has been very little or no improvement in the car situation in this territory. Of the few cars that are received many are in deplorable condition and only percentage suitable for either grain or flour. We also have sold large amounts durum flour and semolina to macaroni companies, who in return have contracts with the Government and they are pressing us for shipments. Our grain stocks, the same as other mills, are getting less and less and to a point where we will not be able to operate. It is of utmost importance you get this information to the proper authorities with a view of getting reasonable amount of cars for Northwest for grain and flour shipments.

R. M. STANGLER, *General Manager,*
North Dakota Mill and Elevator.

Production Let-down Held Dangerous

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. RANDOLPH. Mr. Speaker, as one who supported the compromise manpower bill, and as a believer in the necessity for stabilized production until final victory, I include the following portion of an article by Richard E. Saunders, Washington editor of Aero Digest. It appeared in the March 1, 1945, issue:

If all the prophets of an easy victory could be laid end to end—and kept in that position—it would be a good thing for the country. At least this is the way high military leaders feel about it. And from all indications, the men at the fighting fronts feel the same way, only more so.

The point that both the War and Navy Departments are trying to get across to Congress, and to the heads of civil agencies, too, is that the moment of partial victory is not the time to let down in the war effort; that, on the contrary, it is just the occasion to put all our energy behind a final wallop. While it may seem paradoxical, the truth is that we need to tighten up and not relax controls as we wind up the war in Europe and prepare for new and more powerful thrusts at the Japanese.

Several times before we have seen what a premature rush toward reconversion can do. Workers leave essential war industries in the quest of safer if less lucrative peacetime jobs. Basic materials are diverted from the plants that need them. In short, there is a general disorganization of the war production program.

With Germany folding up, a let-down in effort would be even more serious than it was last year. It is for this reason that Secretary Forrestal of the Navy and Secretary of War Stimson have asked Congress to take some action to guard against shifts of labor. They have endorsed the general principle of the "work-or-else" bill, but are not insistent as to the particular terms.

But the enactment of a measure giving the Government the authority to direct workers to go where they are needed most is only part of the anti-slump program. It is important to build up defenses against propaganda for immediate resumption of regular production which might absorb materials and transportation equipment needed to maintain war production. We simply cannot lick Japan with one hand tied behind our back. It will be safe to let down in production when the final shot is fired, not before.

One War at a Time for China

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. ROWAN. Mr. Speaker, Chiang Kai-shek has found that two wars at a time are too much for his nation. It

was necessary to make a choice between fighting communism at home and the Japanese enemy storming its gates. Chiang Kai-shek listened to Lt. Gen. Alvin Wedemeyer and decided to whip the Japanese first; then, if necessary, he could turn his attention to the Communist forces within China. This historical event is related by Drew Pearson in his column of Sunday, March 25, 1945, printed in the Washington Post.

The following excerpt is from Drew Pearson's column:

It is now possible to reveal just how close the Japanese came to capturing the Chinese capital of Chungking last November.

While Lt. Gen. Alvin Wedemeyer was en route to Chungking to replace General Stilwell, the Japanese were driving on Kunming, gateway to Chungking. It looked as if they would capture it.

By December 22, the Japanese radio was boasting that Wedemeyer would eat his Christmas dinner in New Delhi if he ate it at all. Wedemeyer knew the situation was grave, arranged a conference with Chiang Kai-shek soon after he arrived.

"I need 90,000 men in a hurry," Wedemeyer told Chiang. "And they have got to be good men. Can you give them to me?"

Chiang wanted to know how Wedemeyer would get the men to the front if he could find them.

"I've got 87 big Army transports lying around here and I can move 100,000 men in a few days if I can find them."

Chiang asked what men Wedemeyer wanted. The American general told him he wanted 50,000 crack Chinese troops which had been trained and equipped by his predecessor, General Stilwell, and who were fighting in Burma. Chiang agreed. Then Wedemeyer asked the $64 question.

"I also want about 60,000 of your best men who have been fighting the Chinese Communists in the north. Your Excellency," said Wedemeyer nervously. "I think it is more important that these Chinese troops be fighting the Japanese than that they oppose each other."

Chiang never batted an eye, swiftly gave his approval and Wedemeyer ordered his air transports into action. In 4 days he had enough men at the Kunming fighting line to slow up the Japs. In 4 weeks he had the Nipponese drive stopped cold south of Kunming.

NOTE.—Wedemeyer is doing as complete a reorganization job on the Chinese Army as he can, seems to be getting results.

How Can We Keep the Peace?

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. ANGELL. Mr. Speaker, a most interesting discussion appeared in the magazine Look dated April 3, 1945, now on the newsstands, on How Can We Keep the Peace? The article is by TOM CONNALLY, with marginal notes by Senator ARTHUR H. VANDENBERG, both of whom will fill important roles as delegates to the San Francisco meeting to be held in April by representatives from the Allied Nations to provide the blueprints and agreements by which it is hoped we may provide a durable and lasting peace when the war shall end. The article is as follows:

HOW CAN WE KEEP THE PEACE?

(By Senator TOM CONNALLY, with marginal notes by Senator ARTHUR H. VANDENBERG)

As the friend of peace and the enemy of war, the United States of America is given the tremendous opportunity of leading the world in the establishment of international peace machinery to chain the lawless aggressor nations and to chart the future along the ways of peace. The hour is here. Events are forcing the issue. The challenge must be met now and the next step in the development of world order must be taken.

(Says VANDENBERG: Senator CONNALLY and I are in total agreement regarding this objective. We are working together. This is no quarrel.)

The United States has not delayed until the end of the war to begin its preparation for peace. The sessions of the Dumbarton Oaks Conference, called at our invitation, have been fruitful, and many of the issues have been clarified.

The tentative draft of organization worked out there, and the understandings reached at Yalta, contemplate an assembly of all peace-loving nations, and an executive council to be the administrative and executive authority of the assembly.

The great powers will be permanent members of the executive council, with additional members to be elected to it by the assembly for stated terms. It is planned that the international organization shall employ conciliation, arbitration, and the channels of diplomacy to settle differences between nations, and an international court is to be maintained to settle issues between nations through judicial processes.

(Says VANDENBERG: It may not have "delayed." But it has been far too silent and too mysterious, about too many things. We are not called upon to be the only silent partner in the grand alliance.)

FORCE MAY BE NEEDED

Yet if peaceful measures are defied, force may be invoked to prevent armed aggression. We have learned full well that gentle words are sometimes not enough. The international organization must be endowed with armed power.

(Says VANDENBERG: "Final 'force' must always be in sight. But these primary peaceful mechanisms—to prevent a dispute from needing the use of force—are the true genius of this great adventure. I think the 'force' argument is overemphasized.")

Differences of opinion begin to appear only when the question of how force is to be used is raised. We agree force must be used if it be required to keep the peace. But there has not yet been a full meeting of minds on what the instrument of force shall be, or upon how it will be decided whether and when force shall or shall not be employed.

(Says VANDENBERG: "These differences will be far less if we first sign a treaty, backed by peremptory force, to keep Germany and Japan demilitarized. After that, we shall be dealing only with our friends. It is far less necessary to have a shotgun in the corner of the dining room when our dinner guests are our own blood relatives—and that ought to describe the United Nations.")

There is some "disagreement" within the United Nations and within the Senate of the United States as to whether or not there shall be military forces under the control of the executive council, how such forces shall be formed, and how they shall be sent into action against an aggressor convicted by the council.

(Says VANDENBERG: "This disagreement should not be allowed to jeopardize the whole, great adventure. Let not league zealots strive for what the President calls 'perfectionism'—at the hazard of defeating everything. That's what defeated Woodrow Wilson 25 years ago.")

Reconciling these differences about how we shall take the next logical step toward world peace is no easy task.

(Says VANDENBERG: "These differences must be reconciled. The American people are not likely to approve an abandonment of the constitutional requirement that only Congress can declare war. It is not necessary. For 150 years the Constitution has also recognized the right of the President to use the armed forces for 'national defense' without prior consultation of Congress. He should still be allowed to continue to do so within these precedents. Our need is to reduce this rule of conduct to writing. But we should agree now that force to keep the Axis demilitarized shall always be available without any further reference to Congress. That is just the lengthened shadow of the present war.")

THREE STEPS TO PEACE

First. Agreement must be reached between the nations to be represented at San Francisco upon questions that still remain in controversy.

Second. The great wartime alliance must perfect means of avoiding the development of misunderstandings over problems arising between now and a future time when an international organization can assume its full functions.

Third. The charter of the organization must win treaty approval from the United States Senate, and the law under which we will be represented in its assembly and on its council must be passed.

The American, British, and Russian chiefs of state agreed at Yalta upon a solution to the controversy that developed at Dumbarton Oaks over the veto power to be exercised by permanent members of the Executive Council of the United Nations.

There is substantial reason to believe the San Francisco conference will find this solution acceptable. By requiring unanimity of permanent members only upon certain kinds of questions, differences heretofore existing may be resolved. Certainly the wisdom and the fairness of both the great and the small powers are sufficient for them to be able to reach conclusions on this issue.

(Says VANDENBERG: I think that it would be immoral for one of the great powers to use its veto against its own conviction as an aggressor. I hope a practical formula may be devised to avoid it.)

Meanwhile it should not be overlooked in this country that possession of a veto power by each of the permanent members of the Council is the strongest guaranty that force will not be used in any international quarrel except with the acquiescence of the representative of the United States.

I have advocated the immediate formation of an Interim Council of the United Nations to take responsibility for the adjustment of problems arising before the permanent Executive Council can begin to function. Such an Interim Council could make certain that immediate problems are handled to the joint satisfaction of the great and small powers, and establish joint responsibility for what is done.

(Says VANDENBERG: I have no objection to an Interim Council.' Certainly all of these preliminary decisions that are being made by our allies should be made by common consent, including us. That has not been the case. Yet, by default, we seem to let our silence give our consent. We have not exercised an authority commensurate with our stake in the war and in the peace.)

Individual powers would, thereby, be relieved of the necessity of taking individual action, and the suspicions that have been generated by criticism of unilateral action might be avoided and allayed.

ALL MUST APPROVE

It is my own view that matters of boundaries, transfer of territories, and similar questions, whatever temporary settlements may be made, must be submitted to all the United Nations and incorporated in the final peace terms. The arrangements for concert and consultation in reaching temporary settlements made at Yalta will be helpful, but all the United Nations have fought the war together, and we have got to make the peace together.

(Says VANDENBERG: O. K. This isn't being done. Perhaps some of these problems cannot escape interim decisions. But the decisions should be temporary. All should be subject to subsequent league review.)

There is considerable misunderstanding about what kind of "policing force" the International Organization is expected to have. Opponents of establishment of an independent military force under the direction of the Executive Council should know that none is planned, unless it be some air units of limited size.

(Says VANDENBERG: Again I say that this "policing" problem is infinitely simplified when once we have permanently demilitarized the Axis. There is no need for an "international standing army." In any event, I agree that it would be utterly impracticable. Potential "force" is sufficient.)

In crises calling for military or naval force the League would call on member nations for troops in accordance with numbers or percentage proportions already predetermined. If a crisis were distinctly local or regional, only the forces of adjacent member nations might be called upon to take action under the direction of the Executive Council.

(Says VANDENBERG: This regional idea is sound. America would never hesitate to join in "regional" responsibility, for example, for peace in the Western Hemisphere. We should have more emphasis upon the "regional" idea.)

The insuperable difficulty with having a separate military force in constant readiness under the command of the Council is that this force would have to be quartered somewhere during times of peace. Experience shows that friction does develop between alien forces and the people with whom they must live from day to day.

Upon the question of empowering the United States' representative on the Executive Council to vote without prior specific reference to Congress, there cannot, in my opinion, be any valid objection to his acting within the scope of the statute authorizing his appointment and specifying his exact powers.

DEBATE CAN BE DANGEROUS

In a case arising before the Council in which an aggressor, thoroughly armed, was ready to strike in defiance of the peace organization, to require that before the Council could take action the matter should be referred to the Congress of the United States, would measurably strike down the usefulness of the Council. It is well known that debate and consideration in the Senate would consume considerable time. An armed aggressor would wreak his vengeance upon his defenseless victim while the lengthy debate was taking place.

(Says VANDENBERG: If we first permanently demilitarize the Axis, this new aggressor, I repeat, is one of our present friends. To be specific, it probably will be either Britain or Russia. If Britain, Russia, and America ever reach an impasse where "force" must be used against one of them as an aggressor, the situation will be so serious that neither our representatives on the Council nor the President himself would think of committing us to force without knowing Congress and the country approve. It would be war. Therefore I think the subject is largely academic.

I think the fear of congressional "delay" is exaggerated. Congress never hesitates in the face of crisis. The Senate declared war on Japan in 13 minutes and on Germany in 5.)

The United States Congress will no doubt enact legislation providing for the selection of a United States representative on the Council. In that act his authority can be defined and delimited, if necessary.

No representative of the United States on the Council would dare to defy the opinion of the President of the United States or of the Congress. I have little fear that our representative would not honorably and diligently and conscientiously reflect the attitude of the American people on any question upon which he should vote in the Council.

FORCE CAN PREVENT WAR

It must be borne in mind that the use of force under the conditions contemplated is not an act of war. It is an act to prevent war. It is essentially a peace measure. The history of international law is full of examples of the use of the display of force, in the protection of the rights of nationals and the defense of property and to repel aggression on the high seas, which did not actually result in war.

(Says VANDENBERG: If our only, or chief, reliance in charting a better world is force, it is not going to be a happy prospectus. I agree that force must always be in sight. I have no illusions that tomorrow's aggressor would respond to anything else. But I think it is entirely possible to discourage or to stop tomorrow's aggression before it starts. I want my emphasis put upon the necessity for a just peace as a starter, and then upon investigation and conciliation and mediation and arbitration and international law (and even economic sanctions) thereafter. I want a peace league and not a war league, in fact as well as name.)

In any case, with the unanimous vote of the great powers who are permanent members of the Council and by a majority vote of the entire Council, no nation would dare to challenge the decisions of the international organization, and no nation would dare to employ armed forces in a campaign of aggression.

ARMIES STRENGTHEN DECREES

The decision of the Council would not only carry the moral influence of world opinion, but the might and strength of the armed forces of the members would overawe and compel the acquiescence of a recalcitrant or a stubborn nation that might contemplate conquest.

Opposition to world peace organization and to American participation comes not so much from those who are against any and all attempts to take this next great step, as from those who staunchly assert they support world organization but "I am for Dumbarton Oaks," these supporters say, "but I can't accept this and I can't vote for that."

I would say to those who are straining to find some defect that it must be remembered that we are building this organization out on the frontier; we are building it in land where no traveler has ever left his foot prints.

(Says VANDENBERG: At this point, I do not think my good friend, Senator CONNALLY, is talking about me. I think my fidelity to the ideal of collective security is fairly well beyond challenge. And I hope he is not trying to discourage perfectly frank and general discussion. This adventure, so freighted with the hope of civilization, must win the approval of the American mass conscience or our participation in it will be a mere empty fiction. I agree that we cannot expect perfectionism. I agree that we are endangered by extremists at both ends of the argument. But let's have the full free argument so that the American decision will be validated by the whole American people.)

We cannot expect to have an international organization that in every particular and detail meets the views of every individual Senator. If we did we should have a score of different plans. We must take the completed work approved by the United Nations, or leave it. We must either have an organization for international peace, or we must reject it.

(Says VANDENBERG: Senator CONNALLY means what he says. He is a deeply devoted friend of world peace. I want to add that in his capacity as chairman of the Senate Foreign Relations Committee he is doing a superb nonpartisan job in seeking to keep this problem "out of politics" and on the high plane which its desperate importance to civilization demands.)

It is my earnest hope that the Conference of all the United Nations soon to meet in San Francisco will succeed in drafting in clear terms a treaty to establish an international organization to preserve the peace of the world and to prevent any further armed aggression.

Such a treaty will be the only practicable plan before the world. Its rejection would plunge us again into the uncertainties and dark disaster that at any time may bring about another terrible war.

Let us have peace.

(Says VANDENBERG: Amen.)

Justice for Mailman

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial entitled "Justice for Mailman," which appeared in the March 27, 1945, edition of the Boston (Mass.) Daily Record:

JUSTICE FOR MAILMAN

In thousands of communities and rural areas the mail carrier is one of the most familiar figures.

Throughout the years, in all kinds of weather—to paraphrase the famous line from Herodotus which is the motto of the Postal Service—he goes his "appointed rounds."

Nowadays, when millions of men and boys are away from home with the colors, his visits may be as comforting to anxious households as those of the family doctor.

And in these war years his task has been as endless, and his burdens often have been heavier, than in the times of peace.

For the Postal Service has had to break all records in the volume of mail delivered, and it has had to do this with the most serious manpower shortage the Department has ever known, so that every employee in the Postal Service has had to work harder than ever before.

Their salaries are fixed by law and, because the law is obsolete, the salaries are grossly unfair and inadequate—which is doubly unjust since at this very time the monetary receipts of the Post Office Department are the highest in its history.

This inequity will be corrected if Congress passes the Burch bill which is now under consideration.

The bill will make a complete reclassification of postal employees, the first in 20 years; it will grant an immediate increase of $400 in the annual basic pay, with honest overtime of time and a half for more than 40 hours of work a week; and it will provide for annual increases over a limited term of years as an incentive to keep men in the Service.

In an appearance before the Post Roads Committee of the House of Representatives, Mr. William C. Doherty, president of the National Association of Letter Carriers, warned Congress that the future of the Postal Service will be determined by its action on the Burch bill.

Speaking hopefully for the letter carriers, he said:

"It would appear that at long last the carrier will be given an equal opportunity with his fellow American to share in a decent standard of living."

The country can well afford this act of justice, which has been too long withheld.

The mail carrier and the postal clerk are essential workers in war or in peace.

They should be respected and rewarded as such.

Whites and Negroes Fight Side by Side

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the following item which appeared in the March 20, 1945, issue of the Washington Evening Star.

WHITES AND NEGROES FIGHT SIDE BY SIDE

PARIS, March 20.—For the first time in United States Army history, Negro and white troops now are fighting side by side in the same outfits in both the First and Seventh Armies, according to Stars and Stripes.

The Army newspaper, in a dispatch from the First Army front, said Negro platoons had been assigned to rifle companies in both armies in response to repeated requests from the Negroes themselves for a chance to fight for their country as well as work for it.

The Negroes were chosen from thousands who answered a special appeal from the communications zone commander, Lt. Gen. John C. H. Lee, to service troops in his command.

From one company of Negro engineers, 171 men out of 186 volunteered. In a quartermaster laundry company 100 out of 260 volunteered, but only 36 were allowed to go.

Stars and Stripes said about 2,500 volunteers in all had been accepted. Two platoons were in one company which crossed the Roer and helped take Duren.

Ratification of Treaties

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, it gives me great pleasure to include a most able address on the subject of treaty ratification delivered by my colleague, Hon. JAMES C. AUCHINCLOSS, Member of Congress, Third New Jersey District, before the Women's Republican Club of Monmouth County, N. J., on March 16, 1945. This is a timely speech, since in the near future the House will vote on House Joint Resolution 60, which contains a proposed amendment to the Constitution permitting both Houses of Congress to ratify treaties by a majority vote. The speech by Congressman AUCHINCLOSS is a scholarly, logical, and convincing presentation of this most fundamental issue. I commend him highly for this splendid effort. The address is as follows:

Perhaps the greatest question of the day, in a day when there are many great questions is, how can we achieve a lasting peace? It is a matter that concerns every one of us in America, and indeed in all the countries of the earth. The statesmen of the world in almost every utterance they make, pledge themselves to the making of a lasting peace, even if it is necessary to use force to enforce it, and people everywhere answer with a loud "Amen." The people of the whole world want a lasting peace at the end of this awful war and are ready to make almost any sacrifice to achieve it. They are determined not to permit the same mistakes that were made after 1918 and will not tolerate those in public office who lack the vision to appreciate our country's great responsibilities to the generations yet to come. Citizens of the United States never again want a few to block the way of the many in determining the destinies of our country. The world has grown at such a pace and our national relationship and responsibilities have become so great and involved that it is not right that a small band of willful men shall have the power to block the will of a larger band of equally willful men in solving the future international relationships of the United States. The need today is for realistic statesmen with the knowledge that our country has to concern itself with world affairs if we are to achieve the peace of our desires.

Under our present system of government we are no better off than we were after the last war. The Constitution of the United States still provides that one more than one-third of the Members of the Senate present may prevent ratification of any treaty which the balance of that body may consider to be wise and for the best interests of our country. Let us examine this situation and by looking the facts in the face, study the evils and seek out the remedy. Let us see if the people of the country, through their duly elected representatives, really do have a voice in the destiny of their country and whether the thoughts and wishes of all the people are given due consideration. If their will can be thwarted by a minority in the all-important matter of making peace or any treaty with the other nations of the earth, it is time for a reorganization of our Government machinery.

In the first place, who declares war? Who has the authority under our Constitution to commit our Nation to fight to the death against any other nation? Who has the constitutional right to order our sons and daughters to become soldiers, sailors, marines, and aviators, ready to lay down their lives for their country? We all know what an awful power that is. We all know how war disrupts our homes and our way of life. We all know the seriousness and tragedies of war, and we know of its cost and senseless destruction and waste. We all abhor it and everything connected with it. But under our form of government, only the Congress of the United States—all the duly elected representatives of the people—Senators and Congressmen—by a majority vote of those present can commit us to fight a war. The President does not declare war, but it is his duty to report the state of affairs to the Congress and he may recommend the declaration of war. These powers are well defined in our Constitution and it might aid in our consideration of the matter if we refreshed our memory on what the powers of Congress are. In abbreviated form these powers, as provided in the Constitution (article I, sec. 8) are:

1. To lay and collect taxes.
2. To borrow money on the credit of the United States.
3. To regulate commerce with foreign nations.
4. To establish uniform rules on naturalization.
5. To coin money and regulate the value thereof.
6. To provide for the punishment of counterfeiting.
7. To establish post offices and post roads.
8. To promote the progress of science and the useful arts.
9. To constitute tribunals inferior to the Supreme Court.
10. To define and punish piracy and felonies on the high seas.
11. To declare war.
12. To raise and support armies.
13. To provide and maintain a navy.
14. To make rules for the government and regulation of the land and naval forces.
15. To provide for calling forth of militia.
16. To provide for organizing, arming, and disciplining the militia, etc.
17. To exercise exclusive legislation over the District of Columbia.
18. To make all laws * * * for execution of foregoing powers and powers vested in it by the Constitution of the United States.

One can readily appreciate that Congress has a great deal of authority and responsibility and it must be remembered that the enactment of all laws and resolutions is done by a majority vote of those present of both the Senate and House of Representatives. It should also be noted, however, that nothing is said here in the Constitution about making treaties—the making of the peace treaties. That important matter is considered in article II section 2 and reads as follows: "He (sic, the President) shall have power by and with the advice and consent of the Senate to make treaties, provided two thirds of the Senators present concur" and so forth. No mention is made of the House of Representatives and although it must vote to put the Nation into war, it is not permitted a voice in the making of peace.

We have seen who has the power to declare war, now let us see who carries on war. Under the Constitution, all revenue for the use of the Government which has to be raised by taxation, must originate in the House of Representatives. We all remember the old battle cry "No taxation without representation" and that philosophy is just as sound today as it was in the days of yore. Members of the House of Representatives, being elected every 2 years, are closer to the people, so it is most fitting that they should be charged with the responsibility of imposing taxes. It follows therefore that the House of Representatives must originate the appropriation bills that provide for the carrying on of war. Vast sums of money are needed not only for the purchase of guns, tanks, airplanes, ships, and ammunition, but also to provide for the operation of such agencies as Lend-Lease, U. N. R. R. A., Office of Price Administration, War Food Administration, and all the other agencies of government, necessary for victory. The House of Representatives must study all these matters and vote on the appropriation of unbelievably vast sums of money to provide the necessities of war.

The House too must pass on legislation covering the draft of our men and women not only for the armed forces but also for the production of goods for war. That the Members of the House have fulfilled their responsibilities in these matters during the pres-

ent emergency there can be no question; is there any doubt that they are equally capable of determining the policies involving treaty making, especially peace treaties? They well know what the cost of war is and they are equally well qualified to know the price of peace.

Who makes the peace? As has been pointed out, the Constitution provides that the President with the advice and consent of two thirds of the Senate present shall make treaties. How was this two-thirds formula arrived at? Let us go back at bit in the history of our country and examine the situation that prompted this provision. The Articles of Confederation in 1787 provided for the ratification of treaties by a vote of 9 out of the thirteen original States. At that time it was doubtful whether 9 of the Original States would join the Union, but it was agreed that if 9 did, the Articles of Confederation would become binding on them. If our original thirteen States had been only 9, there would have been only 18 Senators and two-thirds of the Senate would have been 12 Senators. If a majority vote had been permitted it would have left the all-important matter of treaty making in the hands of 10 Senators with the President and that would have represented only 5 States out of the 9. It would not have been an attractive proposition for the other States to submit to the wishes of only 5 and so the two-thirds rule was adopted. The founders of our country planned well but they never dreamed of the huge success of their undertaking and that some day there would be 96 Senators, representing 48 States, and 435 Members of the House of Representatives. These members of the Constitutional Convention of 1787 never were in favor of minority control, but that is just what has developed. With the growth of the country, every reason for the two-thirds rule has disappeared and it should be changed so the wishes of the majority of the representatives of the people should be strengthened and prevail. Today the United States of America stands alone as the only great Nation to employ this cumbersome, obstructive, and senseless two-thirds requirement.

A fundamental principle of democracy is rule by the majority but in treaty making the minority has the power of negating the majority. For example, under our present system, Senators from 17 States voting against any treaty can cause its defeat. Taking the figures of the 1940 census, if these Senators are from States of small population, then a treaty approved by Senators representing 120,000,000 people could be overruled by Senators representing only 10,500,000 people. Furthermore if only a quorum of the Senate were present, then 17 votes of Senators from the smaller States representing about 3,500,000 would overrule the wishes of 32 Senators representing States with a population of over 88,000,000 people. It is admitted that this is an extreme example of what might happen, but it can happen and in the past pretty nearly has happened. The very possibility of its happening should be eliminated—the stakes are too great. On the other hand, if a majority vote of both the Houses of Congress was required, and a bare quorum was present at the time of voting, 25 Senators and 110 Members of the House would be necessary to block ratification of a treaty.

To enlarge further on this point, under the present circumstances the vote of a Senator from Nevada is worth twice as much as that of a Senator from New York, or in other words the power of a single voter in Nevada is the equivalent of 120 votes in New York. Pennsylvania has a population of 9,900,180; the vote of the two Senators from Nevada with a population of 110,247 can override the 4 votes of the Senators from both New York and Pennsylvania, with a combined population of 23,379,322. Such a state of affairs is undemocratic, it is unfair, it does not make sense, and is eloquent testimony why the proposed amendment to the Constitution should be adopted without delay.

The proposed amendment, introduced by Congressman MERROW, of New Hampshire, reads as follows:

"SECTION 1. The President shall have power, by and with the advice and consent of the Congress, to make treaties, provided a majority of the Members present in each House concur."

In the last Congress a similar amendment was favorably considered by the Judiciary Committee but was not called up by the majority party for the consideration of the House. In the present Congress favorable action has already been taken by both the Judiciary Committee and the Rules Committee of the House; therefore it is expected that it will come up for consideration in the near future. It seems to be the general opinion that the House will act favorably on it, and it will then go to the Senate for its approval or rejection. What will happen to it there is a matter of conjecture. The Senate is loath to give up any of its rights and prerogatives, but there is some hope that the progressive and farsighted point of view of the newer Senators will have a strong bearing on the Senate's attitude. If the Senate agrees to it it will then be submitted to the legislatures of the various States for consideration. In this connection it is well to remember that over 40 of our States' legislatures are convening this year and if 36 of these legislatures concur in the amendment, it will become a part of the Constitution of the United States. So there need be no long delay over having this matter corrected, but we must all go to work if action is to be secured. Everyone should write his Congressman and especially his Senator and urge the favorable consideration of this measure promptly. Also the State legislatures should be urged to favorable action.

An aroused public opinion can correct this weakness in our Constitution and it is most desirable that it should be done. We must put an end to making treaties with foreign nations and calling them agreements. This has become the method used to get around this present provision of the Constitution. In the American way of doing things let us bring about this change; let us amend our precious Constitution and conduct our Government as George Washington advised us in his farewell address:

"If in the opinion of the people the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil any partial or transient benefit which the use can at any time yield."

Air Routes to Latin America

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks I include the following resolution adopted by the City Council of the City of Chicago on March 13, 1945:

AUTHORIZATION FOR INTERVENTION ON BEHALF OF CITY OF CHICAGO IN PROCEEDINGS BEFORE THE CIVIL AERONAUTICS BOARD CONCERNING PROPOSED NEW AIR ROUTES TO LATIN AMERICA

Whereas national policies respecting air transportation among the various countries of the world are now in the making and international air routes are being laid out, and the ports of entry into and exit from this country are being selected for air transportation; and

Whereas air routes between various countries of the world should be as direct and noncircuitous as the convenience and necessity of all peoples concerned will permit, and the selection for air transportation of ports of entry into and exit from this country, should be made to the end that such ports shall, as far as operating conditions and facilities will permit, further the principles of direct and noncircuitous flight; and

Whereas there is now pending before the Civil Aeronautics Board (Federal) applications for certificates of public convenience and necessity authorizing additional air service in Mexico, Central and South America, and the Caribbean area under section 401 of the Civil Aeronautics Act of 1936, as amended, and known as Docket 525 et al.; and

Whereas the center of United States industry rests squarely in and around Chicago; and

Whereas Chicago's present population is estimated at 3,450,000, and 7,000,000 people live within a 100-mile radius of this city, and 10,000,000 live within a 150-mile radius, and 42,000,000 within a 500-mile radius, roughly an overnight train ride from Chicago, and within this same 500-mile radius are 72 of America's cities having a population of 50,000 or more, and 17 percent of the Nation's 33 major industrial areas, as compared to 8 major industrial areas on the east coast, 3 on the west coast, and 5 scattered throughout the remainder of the Nation; and

Whereas the Chicago metropolitan area alone has approximately 10,000 industrial establishments which normally produce 7½ percent of the Nation's total of factory-made goods, and Cook County, Chicago's own county, ranks first in industrial production among all the counties of the United States, and Chicago alone has approximately 8,000 wholesale concerns and 47,000 retailers; and

Whereas Chicago is the center of the Nation's railway network, with 21 trunk-line railroads, and has 45,000 daily transient rail passengers, and Chicago's switching district daily handles approximately 46,000 freight cars, or more than New York City and St. Louis combined; and

Whereas Chicago is justly proud of its municipal airport, with its eight major commercial air-line users and dual runways in each direction, which handled 679,083 passengers and 12,600,000 pounds of mail and 340,170 express shipments in the year 1943 and had 21,139 plane arrivals and 21,286 departures; and

Whereas Chicago is the world's fourth largest city and is situated almost at the exact geographical center of North America, and is nearer representative points in Central and South America than is New York City, as follows:

Chicago:	
Canal Zone	2,353
Santiago	5,420
Buenos Aires	5,775
New York:	
Canal Zone	2,394
Santiago	5,461
Buenos Aires	5,816

Whereas the city of Chicago, Ill., is a municipal corporation created under the laws of the State of Illinois; and

Whereas it owns the airport adjacent to it, and which is served as a duly authorized stop on regularly routed and scheduled commercial air service; and

Whereas commercial air services already authorized for the city of Chicago have close relationship to the services proposed in the instant proceedings, because of the community of interest and convenience and density of the city of Chicago; and

Whereas the city of Chicago has a property interest in the instant proceeding, and said interest will not be represented by other parties therein; and

Whereas the public convenience and necessity require direct air service between the city of Chicago and cities in Latin America and the Caribbean area under consideration in this proceeding; and

Whereas this body feels that Chicago's vital interest in obtaining direct and unbroken air service connecting it and said Latin America and Caribbean cities will be passed upon and disposed of in this proceeding and the city of Chicago may not have another opportunity to present its claim for said needed service; and

Whereas the granting of leave for the city of Chicago to intervene herein will not lengthen the proceeding or unduly broaden the issue: Now, therefore, be it

Resolved:

1. That the city of Chicago, by its mayor, should intervene and become a party to this proceeding, and to any and all other proceedings and hearings, both for international and domestic air routes in which the city's interests may be affected, and file briefs and otherwise participate, that Chicago's interests may be protected and promoted.

2. That the corporation counsel is hereby ordered and directed to take any and all steps deemed necessary to obtain the objective of the next preceding paragraph.

3. That a copy of this resolution be sent to the President of the United States, the Secretary of State of the United States, the Civil Aeronautics Board, the Members from this State of the United States Senate, and the Members from this State of the United States House of Representatives.

Watching the Murder of 1776

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, the following is a copy of an editorial appearing in the Tulsa Daily Tribune of March 24, 1945:

WATCHING THE MURDER OF 1776

(By Richard Lloyd Jones)

What has become of the spirit of 1776? Is there nothing left of that but a stirring picture of three men with drum and fife and flag? Have we lost all the courage and character that caused this country to be? Are we such a craven or stupid lot that we will allow ingenious forms of corruption to bribe us into citizenship imbecility? It is done in cleverly subtle ways.

Congress is being asked to investigate our bomber plant out here on the edge of town. And it is high time. There is waste of men and money there. It is a private enterprise, operating in a mammoth shop that the taxpayers built. The contractor gets a percentage of the cost of production. The more he can make it cost, the more he gets. Hence excessive wages and more workers than work. And this goes on all over the country. What do we do about it? Nothing, just pay the bill.

Up in Kansas City, while we were rushing income tax checks to the post office to get under the date deadline, one A. C. Utterback, one of the three supervising examiners for the Farm Credit Administration, sat as usual at his empty desk in the basement of the municipal auditorium doing nothing, nothing, and drawing $702 a month from the Government for doing nothing. His is not an isolated case. It is a sample.

And we, who are no longer Americans, who have lost the spirit of 1776, uncomplainingly condone these pilfering practices which would hurl to jail the manager of any private industry who so filched from his stockholders.

Look in your Tulsa telephone book and count them yourself. Listed under the United States Government, exempting the post office, which does an exceedingly efficient job with a genuine shortage of manpower, the agencies of the Government tax absorbers list 49 telephones. More telephones than the city of Tulsa and the State of Oklahoma combined. And all the Federal business that is done in this town could be more efficiently handled if put in the hands of a few efficient men.

Were the "spirit of 1776" still alive the Americans today would not permit their grafting Government to establish one rule for itself and completely opposite rules for private business and citizens.

The Government that we, by election, chose to have is the biggest waster of manpower in these months of desperate war need. And if there be a shortage of manpower that hampers the war effort, then the Government itself comes pretty close to the threshold of sabotage.

For the last year and a half Senator HARRY F. BYRD, of Virginia, has been insistently demanding that Paul V. McNutt, the War Manpower Commissioner, deliver to the Senate of the United States factual records of the need of more than 4,000,000 Federal employees at a cost to the taxpayers of more than $700,000,000 a year.

McNutt refuses to be bothered by the Senate of the United States. In short, McNutt doesn't want to be bothered with the people. What he does with the people's money is none of the people's business. That, in essence, is what McNutt says. There was a time when the "spirit of 1776" dominated the council chambers of our Congress and a McNutt would have found himself out on his neck. But what do we do about it? Not a thing. The "spirit of 1776" is dead.

It is impossible for a private enterprise to raise the wages of an efficient white-collar worker. He may be worth the raise that his company wishes to pay him. But some little two-spot of a Federal official who himself never ran a business, who knows nothing about business, autocratically says, "You cannot raise these wages. But we on the inside, we Federal boys, we can raise our wages because we don't give a whoop what we do with the tax money we make you pay. We are on our gay college-concocted economic jag. Hoopey with the Federal funds."

We are being schooled to accept the leadership that is definitely taking us into a communistic state. Dr. Morley, the president of Haverford College, and Dr. Byrd, president of the University of Maryland, have within recent weeks declared that we are vacating the American principles and practices to accept a socialized state. We are leaving America to go Russian. It is a tragic truth. The "spirit of 1776" today is nothing more than a picture of three men with drum and fife and flag.

Senator BYRD reports a still further alarming fact which confirms the indictment of our Government by these two alert, intelligent, and patriotic college heads.

Senator BYRD reports that a careful review of inquiries reveals "the amazing fact that nearly all the bureaucratic agencies plan to increase rather than decrease their personnel in the post-war era." That means an un-American nation.

What do we do? Nothing. Just take the tax bill and get it postmarked before the deadline. We Americans have become a lot of sheep.

In his investigation Senator BYRD has harvested a crop of letters of digust and indignation written by bureaucratic employees who are magnificently paid for idleness. Picking out some at random he calls attention to such attitudes as this:

One young man, drawn to a lucrative Federal job in Washington, writes: "For days after I arrived in Washington I sat and looked out of the window. Finally I couldn't stand the waste, disorganization, and idleness and resigned. When I did so the head of the department said, 'You are a fool. You might as well have some of this money. If you don't take it someone else will.'" And the majority of the American citizens have voted to maintain this kind of economic rascality and indecency.

In a Federal office outside of Washington there is a lawyer who gives practically his entire time to his private practice, but who, being on the Federal pay roll for $6,500 a year, drops into the Government office to report "present" and collect his political pay. And we, the taxpayers, pay for his pilfering.

Senator BYRD tells Congress that there are over 6,000,000 on the public pay roll now. One person for every two persons in the armed forces of our country is drawing a parasitic pay beyond the worth of the kind of work they could do, if there were work for them to do, while our boys who are bearing the brunt of battle receive a paltry pay, with no right to strike and no regulation of the hours they are willing to put on their job.

The once proud America, the Republic of our songs, our legends, and our literature, is gone. Once every American was inspired by the gospel of the Bill of Rights. The Bill of Rights is gone. "Sweet land of liberty" is no longer a sweet land of song. The American people are no longer American, they have become a bunch of spineless saps. And the day will come when this bureaucracy will have no taxable people left to plunder. Then we will be Russian. And that is definitely what this administration is leading us to.

And we, the once strong, self-reliant, proud Americans, stand by to see the "spirit of 1776" murdered. And who murdered the "spirit of 1776"? We ourselves did.

Savings Effected by the Bureau of the Budget

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. COCHRAN. Mr. Speaker, under the permission granted me, I include as part of my remarks a letter addressed to me by Hon. Harold D. Smith, Director of the Bureau of the Budget, concerning mimeographed releases. I am sure this letter will prove interesting. It follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., March 24, 1945.

Hon. JOHN J. COCHRAN,
House of Representatives,
Washington, D. C.

MY DEAR MR. COCHRAN: Reference is made to your letter of February 12, 1945, concern-

ing a press release and surplus property report of the Reconstruction Finance Corporation. You also raised a question as to the extent Government agencies are issuing mimeographed releases.

A member of my staff has made a personal inquiry concerning the Recanstruction Finance Corporation release. In view of the facts determined as a result of your suggestion, I have recommended that such releases, which appear to be necessary to the Reconstruction Finance Corporation's function as a surplus-property-disposal agency, be reproduced on both sides of the paper. This should result in a substantial savings.

With respect to your general inquiry regarding the extent that Government agencies are issuing mimeographed releases, may I report as follows:

I have assigned staff to develop good practices in the entire field of reproduction, conservation, and salvage of paper. This includes continuous liaison with the Government Printing Office, War Production Board, Office of War Information, and other Government agencies, to determine controls and standards which should be established for the further conservation of paper and for proper design of printed materials and use of printing facilities. To date this program has resulted in the issuance of several instructions and regulations to all Federal agencies of the executive branch of the Government. A few specific examples of economies effected are enumerated in the following paragraphs:

During the period July 1, 1941, through September 25, 1942, a joint review of dated periodicals by this Bureau and the agencies resulted in the elimination of 239 publications and in the reduced distribution of 284 more.

The issuance of Budget Circulars A–17 and A–20 reduced the annual use of 7,500,000 pounds of paper valued at $1,250,000.

The Bureau of the Budget and the Government Printing Office estimated that compliance with regulation No. 4 will save 8,500,000 pounds of paper annually.

The above results, and untold numbers of others not listed, although impressive and noteworthy, do not in any way tell the full story. For instance, our Circular A–35 outlines, in detail, essentials of administrative control of these fields for use by all agencies. Savings which are resulting therefrom cannot be estimated.

In addition, this Bureau is required by the Federal Reports Act of 1942 to review all forms to be used for the collection of information by Federal agencies. During the 2-year period, January 1, 1943, to December 31, 1944, there were 1,526 forms disapproved out of a total of 15,347 forms submitted, a reduction of approximately 10 percent. Of the number approved, substantial modifications were made in the number of respondents, number of copies, and format. For example, a recent action involved the printing of 40,000,000 copies. As a result of Bureau initiative, the size of the form was reduced to about one-half resulting in a saving of approximately 80 tons of paper. Also, because of this control by the Bureau, agencies consult with the Bureau and screen their forms more carefully prior to submission for approval which results in large savings which cannot be accurately measured.

The Bureau was also instrumental in setting up, in the Office of War Information, the Inter-Agency Publications Committee which screens the informational publications of the executive branch of the Federal Government. The following savings on informational publications have been reported by that committee:

As a result of the establishment of publication review services in agencies, 42,317,000 copies of publications and press releases were eliminated and mailing lists reduced 3,000,000 more copies per year. This has meant a total reduction of approximately 45,000,000 copies annually.

Paper consumed:	*Tons*
Calendar year 1943	40,000
Calendar year 1944 (estimated)	24,600
Reduction, 38.5 percent	15,400
Periodicals published (500 or more in circulation):	
Number published in 1942	1,100
Number published at present	324
Reduction, 70.5 percent	776
Weight of paper used (base: 1,000 sheets size 25" x 38"):	
Average weight in 1942	120
Average weight at present	80
Reduction, 33.3 percent	40
Orders for clearance received:	
Average number received March 1943	70
Average number received March 1945	14.5
Reduction, 79.3 percent	55.5

In addition to conservation measures, the Bureau of the Budget has initiated an intensive paper salvage program. Since the initiation of this program in July 1943, the paper salvage by the Federal agencies has increased from 12,300 tons per month to 42,100 tons per month in December 1944, an increase of over 340 percent.

As indicated above, this Bureau has stressed the conservation and salvage of paper and reduction of cost which includes determination of the proper method of reproduction of forms and publications. In many cases where a small number of copies are required, mimeographing or other processing has been determined to be the cheapest method of reproduction. Available figures show that during fiscal year 1944, 17,267 processed documents and 19,667 printed documents were reproduced by the executive and legislative branches of the Federal Government. However, processing is recommended only where it is the most economical method.

Your interest in this matter is appreciated and my staff will continue its active interest in this field and will investigate any similar instances you may wish to call to our attention.

Very truly yours,

HAROLD D. SMITH,
Director.

Fallacy of Cost-Plus-Fee War Contracts

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, many of my constituents who are employees in some of the defense industries, and particularly of the Douglas Aircraft Co.'s bomber assembly plant at Tulsa, have written me their experiences and detailed numerous specific instances of a waste of manpower in these plants. The public, in my district and elsewhere, has sensed this situation long ago. They think and say that it is due to the administration's policy of handling these operations on the cost-plus-fee basis. Many consider that this policy will be pointed to as perhaps the No. 1 post-war scandal for investigation.

Mr. Speaker, my constituents either write me anonymously or request me not to use their names for fear of losing their jobs or of suffering reprisals. However, they are patriotic citizens and want their Representatives in Congress to know that conditions are not right. Many Members of this House have addressed themselves in this House to this subject, and it must be admitted that the break-down of the policy is due to come before long.

I think the following letter from a worker in the Douglas plant at Tulsa, Okla., is illustrative of my point:

I want to add another person is tired of seeing so many workers in an airplane factory and their orders are to act busy. A short time back a shut-down of the assembly line was made, and about 500 persons were told to act busy, and for 1 whole week they did not turn a screw nor tap. They were told to hide out so the main officials or the Army personnel couldn't see them, so they hid down under the platforms that are built under the planes. They are for the planes before they are put on wheels, and a lot hid inside these planes and some even went to sleep.

Every day there is more time wasted. There are lots that all the work they do could be done in 30 minutes' time.

There is too much time spent in the leadmen hugging and wrestling with the girls.

It is Douglas policy if a boy is eligible for the draft he is promoted at once and a deferment is asked, and I have noticed ever since I have been working out there. I am an inspector out there, and the other day I was asked to try a part on the ship, and the leadman was wrestling with one of the girls until he couldn't stamp it out if he had to do that before I could try it. They won't let me work as I want to. If I step over what they call my position, I am given a reprimand. * * * I could do all I have to do in 3 hours, and the rest of the time I have to make out like I am busy. Here awhile back I would slip over on other places and buy out things when I see a red light on and no one answers it. I can't keep from going over, and I did that until I got sick and was off, so then the supervisor found out then how much I was doing, so when I come back I was given my orders, so they put in more girls, and there is a man that is supposed to go to the Army. He has taken his physical, but Douglas is trying to get him a deferment. He is a married man, but all he does is play with a young girl, and sometimes he is gone out of his position for 1 hour and sometimes longer, and I just can't hardly stand it because I can't answer his light. But that is all right. He is a man, and he is of draft age, so he can do anything. There are lots of men out there that is being exempted that they are not needed at all. There are plenty of older men can take his place. Also an inspector, my supervisor, brags how he sends to Missouri and gets his cigarettes and do not pay State tax and hasn't for some time. It makes my blood boil to hear him boast and brag. * * *

I wish someone would come into the plant and just see how time and labor is wasted.

Please do not print my name, as if they should see it I would lose my job or be blackballed out at the plant.

But I sure want something done.

P. S.—This is in response to the clipping I read in the Tulsa (Okla.) World.

John O'Donnell, of Davenport, Iowa

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. MARTIN of Iowa. Mr. Speaker, under permission to extend my remarks, I am very glad, indeed, to call the attention of Congress to the outstanding service rendered by John O'Donnell, of Davenport, Iowa, in behalf of our men serving in the armed forces. Mr. O'Donnell has conducted a weekly letter in the Davenport (Iowa) Democrat, under the title of "Dear Joe," and his service has been so outstanding as to earn great praise from the readers of that paper which has a very large circulation throughout eastern Iowa.

The service rendered by Mr. O'Donnell is a very good illustration of what can be done on the home front to help the morale of our friends and neighbors who are serving in the armed forces far from home. I am including here a statement of Mr. O'Donnell's service by Mr. Hugh Harrison, managing editor of the Davenport (Iowa) Democrat:

MILLIONS OF WORDS GO OUT TO "DEAR JOE" THROUGH JOHN O'DONNELL'S NOVEL PLAN

(By Hugh Harrison, managing editor)

An idea has grown into a 2,000,000-word proposition encircling the globe and pronounced by many boys in far-distant lands as the greatest morale builder they have seen.

It is the weekly "Dear Joe" letter in the Davenport (Iowa) Democrat, a letter which has a weekly minimum of 7,000 words but which more often stretches to 14 solid columns of type and around 14,000 words.

The letter to a boy in service is a Sunday feature.

In August 1942 John O'Donnell, sports editor of the Democrat, mulled over the plan of giving the boys in uniform something extra, something that was not contained in the daily run of news, sports, or otherwise, something that would have the touch of home in it.

He started writing a weekly letter, a two-column affair, to a mythical boy in service he called "Dear Joe." In a short space of time he had the first proof that he had hit on something because the servicemen started to write back.

Before long the letters began to come not only from various parts of the United States but from many parts of the world. Then O'Donnell switched his original idea a bit. He not only printed these letters from the boys but he answered each one in the paper.

So "Dear Joe" grew and grew into quite a big boy. The weekly letter jumped from two columns to four columns, then to six columns and to eight columns, or one full page. It did not stop there. "Dear Joe" reached over to the second page, to 10 solid columns, to 12, to 14, and it has filled two full pages of 16 columns more than once.

Something like 2,000,000 words have flowed through O'Donnell's typewriter since August of 1942 to the boys all over the world. This is not part of his regular job on the Democrat. It occupies his extra hours, and it is gratis on his part for in addition to editing Dear Joe, he fills his regular roles as sports editor and theater editor of the paper, he is a Big Ten Conference, college, and high school referee in football and basketball and he is the third man in the ring at national collegiate boxing matches. In addition, his banquet tour on after-dinner speeches goes around the clock on the calendar. And there are two young sons in his family who come in for their share of attention.

The letters come from seamen, third class, to commanders of the Navy, from privates to colonels in the Army, from privates to majors in the Marines, from the Coast Guard and the Seabees.

The feminine angle of the service is included, too, for writing to O'Donnell, and getting answers in return, are the WAVES, WAC's, ladies of the MARINES, the SPARS, to say nothing of the nurses.

The letters come from Australia to the Aleutians on the Pacific side, from Italy to England on the European side, from north Africa to China—wherever the Americans are fighting, there you will find Dear Joe. In fact, one way to keep up with the advance of the American boys is to follow the weekly Dear Joe for the addresses tell the tale.

O'Donnell's idea is not strictly local in appeal. Boys in uniform who have never seen Davenport have written. The Dear Joe idea appeals to them because through it they get to know what other fellows in service all over the world are thinking and writing. The kid in Saipan reads a letter from a boy in China; a soldier in the Aleutians reads what a sailor who was in on D-day writes, and a flyer over in France gets to learn what establishing a beachhead on Leyte was like, right from a beachheader himself.

Then there is the Dear Joe Club, eligible for which are those in service who have written to O'Donnell or who have been interviewed by him while at home. The P. S. on the official card hits the members just right: "No dues, no officers, no meetings, no collections. Membership period: Forever."

And boys from all over the world have written in, asking to become members. The first 1,000 are now in the club.

That O'Donnell's Dear Joe is building morale among the servicemen is seen in just a few excerpts taken from letters at random:

Joseph A. McGrath, storekeeper, third class, U. S. S. *Nassau*, in the Pacific: "Johnnie, you are doing one of the grandest jobs possible on your 'Dear Joe' sheet, and I, like hundreds of other fellows, wish to add my small vote of thanks. I've seen servicemen's sheets from all over the country, but none of them are in a class with yours."

Corp. Cliff Peterson, the Aleutians: "I want to tell you how much your Dear Joe page does for a guy. It's like a breath of good Midwestern air when it arrives. I receive it from a cousin who works on a rival newspaper."

Lt. G. O. Patterson, France: "I have enjoyed reading the letters of the different fellows I used to know and chum around with but who are at present scattered all over the world. Your page is really the only way I have of knowing where these fellows who are doing such a splendid job are. Don't let up on your efforts."

Corp. Ed. Burlingame, Belgium: "As far as I know there are few men who are doing such a grand job for a bunch of grand guys. The Dear Joe page is really a morale builder. Keep up the good work for, after all, morale is the greatest thing in the Army."

Lt. Richard Corbin, Germany: "Our division has been fighting, dying, and winning in the Huertgen Forest and, perhaps that will be a better explanation for my lack of correspondence, but will you please make me a member of the Dear Joe Club?"

Pvt. (1st cl.) Lee Roy Hennings, England: "I was wounded in one of the big pushes and rushed back here. I'm just getting caught up with my Dear Joe reading. I didn't know what the Dear Joe Club was all about until my membership card arrived yesterday. Gee, Johnny, that's really swell and thanks a lot."

M. Sgt. Ralph L. Johnnston, Italy: "I ran into an old acquaintance of mine and was very pleasantly surprised to find that he had a collection of about 35 back issues of the Democrat. Among them were seven of your famous Sunday issue. I can't tell you, Johnny, just how much I enjoyed reading you Dear Joe page. It was almost like walking down Third Street again. After nearly 18 months overseas, it was just like money from home."

Maj. L. F. Paul, Pacific: "Your Dear Joe page has been coming to me these past 18 months via letters from my parents, and I await each week's patter with anticipation inasmuch as many of my old friends are mentioned."

How World Peace Can Succeed

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. HILL. Mr. Speaker, Tuesday evening, March 27, at 10:30 p. m., over Station WTOP, of the Columbia Broadcasting System, I delivered the following address on How World Peace Can Succeed.

It is indeed a great pleasure as well as a great privilege for me to be invited to speak on this program. I am the more deeply honored because I am asked to speak to you at a time when we are facing a dramatic climax in the history of our Republic.

It is true that we are on the threshold of a great decision. That decision may lead us either to an era of peace or to an epoch of suicidal strife and bloody conflict, occasional if not constant. If our decision is sound, our Nation and the world will enjoy a future of concord and prosperity. If our decision is faulty, then we will plunge forward to an uncertain destiny, mingled and perhaps saturated, with the periodic agonies of blood, sweat, toil, and tears.

The next time perhaps, it will be our own cities which will endure the ravages of bombs or the tormentous pain of the gas barrage. That's what our military men say. Failure to respond to the responsibility for the decision for peace means dire catastrophe and painful calamity in the relentless future.

It is therefore and indeed a time for decision. The courses and turns through which the United States was embroiled in this war have proved that we have got to take command of our destiny. That destiny is now only settled by our own will to take up the challenge of whether we shall again be assailed, or whether we will do all in our power to prevent an outbreak of war from ever occurring again. From the length and breadth of the country come the answers that our people are now ready to take up the task of avoiding any further world conflicts. We are ready to accept that undertaking with virile energy and firm determination.

Now to put that purpose to the stern reality of accomplishment, we are forced to adopt methods and plans and systems and schemes of organization. You and I remember that after the last war there was a cry very similar to the present one, that a league of all the powers be formed to guarantee the world against the recurrence of armed conflict again

on this earth. At that, it was not the first time that nations had formed leagues and compacts for the prevention of war. This idea of preventing war has had its beginning very far into the recesses of history.

But every time that one league for peace failed another one in later years was tried to take its place. It is not so long ago—in fact it is within the memory of most of us in these days—when President Wilson went to Paris to found a new world league. President Wilson was a profound student of history and a great scholar in the science of government. With other delegates from Great Britain and France and Italy, he evolved the last League of Nations. We have but to scan the documents of that time to discover how every method and safeguard was adopted to insure that with that organization for world peace, war could never again break out to despoil the races of mankind.

We can read from the records of that time that profound discussions took place to work out the very best means to stop war. No stone was left unturned, either in the military approach or in the idealistic goals. And then, too, as they are doing today, they were careful to make the representation of the small nations as equitable as possible with the big nations. All those questions of voting and deciding came up then just as they do now. They tried hard, just as is being done now, to satisfy all the requirements for all the nations of the world.

And what's more, they tried as best they could to punish and stifle any aggressor. We all know how in and out of Congress the argument is put up that this new world organization should have power to enforce its decisions, and the method now being talked about is the establishment of an international police force. Well, the idea of an international police force was proposed for the old league. It was considered as defeating the idea for which the League was organized, namely, to prevent war. They argued that an international police force in itself would cause war—or a little war, at least—by having to punish or isolate and defeat an aggressor. So what did they do? They gave up the idea of an international police force and decided that they could do much better by an economic quarantine thrown about the aggressor. They argued that if the state which went to war was deprived of the means of making war, then he could not carry on his warlike campaigns. He would be forced to quit. And thus, both the idea of refraining from war on the part of the League and the prevention of armed assault by an aggressor would be safeguarded. War by that procedure would forever be banished from the earth and the world would be on the road to enjoy a long era of peace and prosperity.

But what happened? With all the elaborate safeguards to make a peaceful world, at the very first test the whole structure was incapable of even enforcing these mild safeguards of quarantining an aggressor. The nations belonging to the League were utterly incapable of throwing about the wrongdoer even the slightest cordon of restraint and he went his way committing all the depredations of war.

The first break-down in the old League's efficacy occurred when Japan invaded Manchuria in 1931, just 12 years after she had put her signature to the Covenant of the League of Nations. Since them she has encroached upon Chinese territory until she has extended her dominion over a large part of the whole Continent of Asia. And yet, while all this was going on, the powers, even the signatories to the League, treated her with a deferent regard, while urging her in soft though ineffective tones to desist from her predatory conquests. We all know to our lamentable sorrow how the United States—just to keep Japan from warring on us—sold her the scrap iron she needed, needed in turn to make war on us.

That was the first break-down. Then there was the invasion of Ethiopia by Mussolini in 1935, the war in Spain fomented by members of the League, and finally the great catastrophe into which the whole world has been bathed in blood.

Now the new world organization, since the old had rejected the idea of an international police, the new world organization is going to adopt it. After all, if the members of the League could not unite on the enforcement of an economic blockade, how will they ever unite on the use of armed forces to put down an aggressor? I say that they won't.

Well, what then?

To make nations satisfied and peaceful we must remove the fundamental causes of war. Reading that masterful book, The Gentlemen Talk of Peace, by William B. Ziff, in my view, there we will find a solution. Ziff outlines the causes of war, arising as they do from economic and territorial aims as well as the need for everyone to make a living. The causes of war emanate from the need for markets, the demand for raw material, the desire for tillable land, the necessity of access to the sea, and the chance to live in the world with as much of the world's wealth as is sufficient for their legitimate aims. When these prime essentials in a nation's life are lacking then that nation will fight. The history of the United States has proved this beyond doubt at every turn in the course of our history. What we wanted we obtained; obtained for the realization of our own destiny. Great Britain has done so time and again. Russia is doing it today.

Ziff points out that treaties, pacts, and alliances mean nothing when the national welfare is at stake. I could enumerate a score of pacts in the last 20 years which were entered into in good faith and were broken when the needs of one of the signatories went counter to the provisions of its signed undertaking. These agreements on paper—no matter how well-intentioned—will not prevent a nation from going to war when its national interests are at stake.

Ziff divides the world into economic entities, where these entities are self-contained, where they have all that they need—and hence where all causes for war have been removed because they have what they need. This plan of world stabilization, to me, is well worth studying. I can see in it the answer to many of the questions we are all asking about the new world organization of the United Nations.

So far as I am personally concerned, I have the greatest respect for all the delegates of the United Nations who will meet in San Francisco. I have a very high regard for their efforts to reach the ideal of a peaceful world. As the program stands, however, they are missing the mark—they are not taking into consideration the fundamental bases which can insure the peace of the world.

Already we are hearing echoes from across the seas that with or without agreement, big powers are going to do just exactly what they wish done. Have you not noticed how Russia disliked the Prime Minister of Rumania, Nicolai Radescu, and replaced him with a man of its own choosing in Petru Groza? And even Winston Churchill, when the question of colonies was about to be discussed at Yalta, opposed bringing in colonies at all, even into the agenda at San Francisco, because, as he said, he did not want the fingers of 52 nations fumbling with the internal affairs of the British Empire.

And when Mr. Churchill was answering questions in the House of Commons, a member urged that Britain support a league which had authority to prevent aggression by a big power as well as a small power. Mr. Churchill replied that at Yalta it was decided to differentiate between great powers and between small powers. That reply really shows that he who is strongest will really have the most to say. That reply proves to us that either the big powers will make the pacts or they will interpret them in their own way. The fears and anxiety for a peace by means of pacts and alliances are clouding the horizon everywhere.

In a word—no charter, no treaty, no pledge—no mater how solemnly it is undertaken, can have the slightest real value, unless it encompasses and admits the physical facts—trade, economic necessities, territorial self-sufficiency, markets, raw materials, adequate outlets to the sea, military defense and the social adjustments of this age. These are the real bases for peace. When they are present and in harmony with a nation's own self-determined aspirations, then concord will prevail. When they are not—then war is the alternative. Our next international charter must encompass them all—of that I will have something to say at a later date.

Conservation of Food Products Used in Alcoholic Beverages

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

MARCH 27, 1945.

Mr. J. A. KRUG,
Chairman, War Production Board,
Washington, D. C.:

Members of W. C. T. U. throughout the Nation join me in respectfully urging that you exercise your food conservation powers to ban additional liquor making holidays and curb similar huge waste of grain and other food products including sugar in the brewing of beer for the duration of critical wartime food shortages.

Shortage of meats and other essential foods will obviously skyrocket the human consumption of grain products and tnese should be conserved for wartime necessities rather than diverted to nonessentials and hangovers which latter are major cause of absenteeism camouflaged as illnesses.

Your attention is called to the fact that the August and January hard liquor holidays cost the country at least 663,000 tons of grain and 29,000,000 pounds of molasses. Eighty-four million barrels of beer consumed last year in United States cost Nation's food stocks some 1,731,000 tons of grain and more than 102,000 tons of sugar and molasses.

Translated into terms of necessities the grain used in two liquor holidays alone were equivalent to food needs for 6 months of 1,265,126 soldiers or 2,319,397 civilians.

Figures quoted are compiled from Government's own and (as to food requirements for soldiers and civilians) from Major General Gregory before the Senate April 14, 1943.

As citizens of our country in its great emergency we ask that you assure us of the discontinuance of this enormous and dangerous food waste.

Mrs. D. LEIGH COLVIN,
President, National Woman's
Christian Temperance Union.

Before Us, the Puritans

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Before Us, the Puritans, a poem written by Mrs. Josephine Louise Byrne, the wife of our distinguished colleague from New York. It appeared in the March issue of Spirit, a magazine of poetry published by the Catholic Poetry Society of America:

BEFORE US, THE PURITANS

Immigrants, we came to this land,
Escaping from prince and kingdom,
From caste and protocol,
Asking no more than a door latched against hunger,
A window open to stars.
What legend was bright in our mind,
What hand beckoned across the global arena,
What voice cleaved the confusion of visa and passport?
Was it you, who traded with red warriors at the river bank,
Learning the way of the arrow,
Smoking the peace pipe,
Seeing tomahawk yield to plowshare?
Oh Puritan, Puritan,
Where are the Commandments?
Where are the Scriptures?
Immigrants, we came here,
Learned in husbandry,
To tread in the furrows of history,
To winnow gleanings the harvester left in a field,
But husks are stripped of corn.
And straw is ash on the prairie.
Has the wind risen? Is the tide at flood?
We must anchor by the rock before day fades.
Our Father, Who art in heaven—
There are those who have said,
And they are many,
This land is an oasis in the desert no longer,
The water-hole is fenced with barbed wire,
The fig tree shut behind thorned hedges,
And we have heard
Discourse among the exalted,
Among those whose forbears came here,
Even as we, immigrants,
Escaping from prince and kingdom,
From caste and protocol,
Asking no more than a door latched against hunger,
A window open to stars.

—*Josephine Louise Byrne.*

The Gripe of a Wounded Marine

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks, I am including a letter from Pvt. (1st cl.) William J. Madden, United States Marine Corps, to his father, Francis A. Madden, a personal friend of mine of long standing.

To fully appreciate this letter one should know that Private Madden was reported wounded in action on February 2, 1945, and is presently confined to a fleet hospital. I have no doubt that Private Madden actually expressed the thoughts of our fighting men, whether they be in Europe, the Philippines, or on their way to Tokyo. To my mind, if the people on the home front would meditate a few minutes a day on the sacrifices that our young men and women in the armed services of our country are making, there would be less friction at home.

The unselfishness of our fighting men, their sincere comradeship and unity should be an unforgettable lesson to us at home, but will we ever learn the lesson?

The letter follows:

AD MAJOREM DEI GLORIAM,
SOMEWHERE IN SOUTH PACIFIC,
Friday, February 16, 1945.

DEAR DAD: I don't know as to whether I should write this letter, because today I'm in a lousy humor. A marine is always happiest when he is griping, according to reports, so I should be happy instead of feeling the way I do. There isn't anything essentially wrong; my leg feels O. K., and I'm content down here, but it is something deeper, and I know I'll feel better getting it off my chest. You and I have always been, shall I say, pals instead of father and son, so I'd prefer to have you as my "fall guy" for the gripe. If I tried to speak to others about it, they'd say I was flag waving, but you know that I'm no more patriotic than the next guy. I never have been a great hero, but I never ducked a good fight, and now I feel like hell laying here in a hospital after 2 years of training for the big show, becoming somewhat of an expert in my line, taking all my combat training and reaching perfection physically, then to break my damn leg just as the game is ready to start. Uncle Mike, yourself, and many others have told me never to look for it, or I'd get it. Well, Dad, I hate to speak differently. It's not that I don't think it may be true, but I want to get in there and fight like hell. I have seen results of the Japs around here, and I've heard first-hand stories from these fellows. So can't you understand, Dad, I want to get in there and do my part? That's what I've trained for; not to lay around and pat these fellows on the back and say, "Swell going, fellow; you got the one that was probably meant for me." If I ever want to look into a mirror when I'm shaving and see a man, then I'll have to get out there and take my chances with the rest. I think that you'd want me to, and so would Mom, Ronnie, and Jeanne. Then if I get it, I get it, and there is nothing shameful about giving up our bodies for our country and going home with our souls to God. I'm not the least bit afraid to toss in the towel. I don't relish the idea, true, but I'm not afraid. Other fellows are killed for me just as much as for the people back home in the States. Maybe that's why I want to get in and do my share.

Some people back there should see some of the kids laying around me, and I say kids with the full knowledge that I am only 22 myself. There wouldn't be any strikes for an extra 10 cents an hour, nor a feeling of complacency when they buy a bond a week or so. Do you know what the fellow up the aisle who is maimed and scarred for life is griping about? Injustice? No. Sympathy? No. Lack of steaks? No. Receiving only $54 a month or the terrible working conditions at Peleliu? No. He's griping like the rest around here because the big game is nearly ready to begin and he's laying here. I know that Benny, Hope, Crosby and Dinah Shore have told about it and also many other qualified writers have used their skills to portray such happenings, but for some stupid reason unbeknown to us, they won't tell the American people the true, gruesome details nor show them the real newsreels before they're cut. It does something to a fellow, Dad. I believe that is the main factor in the "boys becoming men overnight." Out here you realize the futility of bigotry and racial hatred. Those bullets and shells didn't stop first and ask "Are you Semitic?" That fellow upon the starboard side, about five beds up, didn't ask the officer next to him if he were a Catholic before pushing him out of danger and catching a big piece of shrapnel in the back. We don't fight for wonderful ideals the way they do in a book or movie. We have our job and we try and do it. The "four freedoms"? No one ever thinks about them, they are just pretty words left to politicians and statesmen. We, out here, are fighting like hell for just one thing. And that is to get home again and live like human beings, not animals.

I didn't want to go on a long spiel, Dad, but I, like all the other fellows, am in a quandary. We're like blind men, groping around looking for an answer. Why are the people complaining? What are the reasons for the strikes? Why must they put on big shows with movie, radio, and athletic stars in order to get people to buy bonds! Why do they have to beg to get blood donations? If the people could see a fellow brought in who is on the verge of death, a sickly green from shock, and then see him after a few shots of plasma, sitting up in bed with a somewhat healthy look about him and smiling. Believe me they wouldn't have to be begged.

All in all, Dad, this letter may sound poetic or like a War-bond program, but it isn't. It is the way I feel and the way the other fellows feel, only we don't talk about it amongst ourselves. That is why I am writing to you. It was on my chest and I had to get it off. I feel like a football player who has trained all season and then at the last practice gets hurt and must watch the game from the side line. Believe me, Dad, it hurts.

Thanks for bearing with me, Dad.

Your son,

BILL.

Two Approaches

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Boston (Mass.) Traveler of March 26, 1945, entitled "Two Approaches":

TWO APPROACHES

It is an established fact that Canada is far better off for meat than the United States. There is much evidence that Canada, with full ice chests and no meat rationing, would like to sell us some of her surplus meat. She would profit financially and we gastronomically by the deal.

It can be done. The first possible approach is the indirect one. Britain is a great drain on the meat supply of the New World. She produces at home a little more than one-third of her meat, imports almost a third from Argentina, one-eighth from the Antip-

odes, another eighth from the United States, and one twenty-fourth from Canada.

If the Canadian proportion were increased, our proportion could be decreased equivalently. Since Canada gets cash on the line for what she sends Britain, Canada would get more money and we would have more meat.

The second possible approach is the direct one. We do not import meat in appreciable amounts from Canada because the 6-cent duty on dressed meat makes it impossible to sell meat under ceiling price regulations at a profit. As a matter of practical politics that tariff regulation probably cannot be changed quickly enough to relieve the present crisis. But with all the money being spent on subsidies, why can't we subsidize imported Canadian meat to the extent of that tariff charge and so make its importation economically practical?

To import meat from Canada is admittedly a very partial solution. We have made an unholy mess of our food program and we must change our basic policies. But until rational policies can restore the natural productivity of the United States, imports from Canada might help to tide us over, especially in these northern cities where the crisis is worst.

The Meat Shortage

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. MARTIN of Iowa. Mr. Speaker, under permission to extend my remarks, I am including resolutions adopted by a representative group of cattle feeders from eight eastern Iowa counties. These resolutions are worthy of the attention and consideration of every Member of Congress who is interested in solving the emergency that is developing in the meat supply of our Nation at this time:

We, the undersigned, cattle feeders of eastern Iowa, are deeply concerned about the current shortage of meat and its effect on the health and welfare of our people and the prosecution of the war to an early and victorious conclusion.

It is our considered opinion that a large share of the responsibility for this shortage must be charged to errors in judgment on the part of Government food agencies. American farmers are willing and able to produce even larger amounts of meat when price relationships established by these Government agencies allow them to do so.

From the standpoint of the beef producer, it is particularly unfortunate that the present situation should have been allowed to develop at a time when cattle numbers and potential beef supply are the highest in history. We believe the underlying cause of the tight beef situation is failure on the part of these Government agencies to properly evaluate the functions of the cattle feeder in the beef economy.

These functions are, briefly, to improve the quality of meat produced by the Nation's cattle supply, to increase the amount of meat by adding several hundred pounds to the weight of each animal before slaughter and to distribute the beef supply throughout the year.

The cattle feeder is unable to perform these functions without serious financial loss under current price ranges established by the Office of Price Administration for cattle of the various grades. When the feeder goes into the market for replacement cattle, he must not only pay all the cattle are worth for immediate slaughter, but he must also match a substantial slaughter subsidy received by the packer plus a willingness of the packer to pay, under certain conditions, a still higher price in order to obtain cattle to employ plant and labor at full capacity and to meet commitments for meat already entered into.

These statements are vertified by the small number of cattle in feed lots in spite of plentiful feed supplies and by the present unprecedented liquidation of fed cattle which threatens to completely empty feed lots by late spring. Cattle feeding potentialities of eastern Iowa, at least, are not being half utilized at the present time.

As patriotic Americans, we are anxious to make our maximum contribution to the Nation's food supply. Under present price relationships between feeder cattle and finished cattle we cannot do so without suffering financial ruin. High feed costs and high cost of scarce labor make it impossible to feed cattle at prevailing margins limited by the factors set forth above.

We, the undersigned cattle feeders of eastern Iowa, therefore urge the Office of Price Administration, the War Food Administration, the Defense Supplies Corporation and such other Government agencies having jurisdiction over cattle price policies, to immediately take the following action:

1. That in order to stop the present liquidation of half fat cattle and to increase the tonnage of beef available throughout the summer and fall, an immediate renunciation of the proposed July 2 cut-back of 50 cents per hundredweight in live cattle ceiling price is mandatory.

2. In figuring packers' subsidy, require that steer and heifer beef of each grade be figured within its own grade and the slaughterer not be allowed to average his entire kill in earning his subsidy.

3. Readjust price schedules as between grades of beef to insure that cattle that can economically be fed to raise the grade and increase the weight will go to feeders instead of to slaughterers.

Opinion of United States Circuit Court of Appeals, Second Circuit, in Case of United States Against Aluminum Co. of America et al.

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 28 (legislative day of Friday, March 16), 1945

Mr. HOEY. Mr. President, the United States Circuit Court of Appeals for the Second Circuit rendered a very important decision on March 12, 1945, relating to monopoly and discussing the case of the United States against the Aluminum Co. of America et al. Chief Justice Learned Hand wrote the opinion. It is a very clear analytical opinion. I think it ought to be read more extensively than merely by those who will see it in the law reports. I am sure that the lawyers of the country would like to read it and I am sure that the Congress would be benefited by it. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

I have an estimate from the Public Printer which indicates that the cost of printing the decision will be $572. It is so important that the opinion should be readily available that notwithstanding the cost of printing, I ask that it be printed in the RECORD.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

(United States Circuit Court of Appeals for the Second Circuit. No. 144, October Term, 1944. Argued January 2-3-4, 1945. Decided March 12, 1945. United States, appellant, *v.* Aluminum Co. of America, et al., appellees. Before L. Hand, Swan, and Augustus N. Hand, circuit judges. On appeal from a judgment for the defendants of the District Court for the Southern District of New York, in an action brought under section 4 of title 15, United States Code. Charles Fahy, Solicitor General, and Lawrence S. Apsey (with whom Norman A. Adler, Edward S. Stimson, Robert L. Stern, Aute L. Carr, Jesse R. O'Malley, Marcus A. Hollabaugh, Maurice Godin, and Irving Lipkowitz were on the brief), for the appellant. William Watson Smith (with whom Frank B. Ingersoll, Leon E. Hickman, Charles E. Hughes, Jr., and William T. Gossett were on the brief), for Aluminum Co. of America, and others, appellees. Timothy N. Pfeiffer (with whom Morris Hadley, Rebecca M. Cutler, and Rudolf B. Schlesinger were on the brief), for Aluminium Ltd., and others, appellees. A. L. Nash, Roger S. Baldwin, and E. Raymond Shephard, submitted a brief for Aluminum Goods Manufacturing Co.) L. Hand, Circuit Judge.

This appeal comes to us by virtue of a certificate of the Supreme Court, under the amendment of 1944 to section 29 of title 15, U. S. Code. The action was brought under section 4 of that title, praying the district court to adjudge that the defendant, Aluminum Co. of America was monopolizing interstate and foreign commerce, particularly in the manufacture and sale of "virgin" aluminum ingot, and that it be dissolved; and further to adjudge that that company and the defendant, Aluminium Ltd., had entered into a conspiracy in restraint of such commerce. It also asked incidental relief. The plaintiff filed its complaint on April 23, 1937, naming 63 defendants; 10 of these were not served and did not appear; 1 died, and 1 corporate defendant was dissolved before the action was brought; the complaint was dismissed against another. At the date of judgment there were 51 defendants who had been served and against whom the action was pending. We may divide these, as the district judge did, into 4 classes: Aluminum Co. of America, with its wholly owned subsidiaries, directors, officers, and shareholders. (For convenience we shall speak of these defendants collectively as "Alcoa," that being the name by which the company has become almost universally known.) Next, Aluminium Ltd., with its directors, officers, and shareholders. (For the same reason we shall speak of this group as "Limited.") Third: the defendant, Aluminum Manufacturers, Inc., which may be treated as a subsidiary of "Alcoa." Fourth: the defendant, Aluminum Goods Manufacturing Co., which is independent of "Alcoa," as will appear. The action came to trial on June 1, 1938, and proceeded without much interruption until August 14, 1940, when the case was closed after more than 40,000 pages of testimony had been taken. The judge took time to consider the evidence, and delivered an oral opinion which occupied him from September 30 to

October 9, 1941. Again he took time to prepare findings of fact and conclusions of law which he filed on July 14, 1942; and he entered final judgment dismissing the complaint on July 23, of that year. The petition for an appeal, and assignments of error, were filed on September 14, 1942, and the petition was allowed on the next day. On June 12, 1944, the Supreme Court, declaring that a quorum of 6 justices qualified to hear the case was wanting, referred the appeal to this court under section 29 of title 15, already mentioned. The district judge's opinion, reported in 44 Federal Supplement 97, discussed the evidence with the utmost particularity; it took up every phase and every issue with the arguments of both parties, and provided a reasoned basis for the subsequent findings of fact and conclusions of law. For the purposes of this appeal we need not repeat the greater part of the facts; so far as it is necessary, we do so, leaving acquaintance with the remainder to the opinion itself. Although the plaintiff challenged nearly all of the 407 findings of fact, with negligible exceptions these challenges were directed, not to misstatements of the evidence, but to the judge's inferences—alleged to be "clearly erroneoous." For convenience we have divided our discussion into four parts: (1) whether "Alcoa" monopolized the market in "virgin" aluminum ingot; (2) whether "Alcoa" was guilty of various unlawful practices, ancillary to the establishment of its monopoly; (3) whether "Limited" and "Alcoa" were in an unlawful conspiracy; and whether, if not, "Limited" was guilty of a conspiracy with foreign producers; (4) what remedies are appropriate in the case of each defendant who may be found to have violated the act.

"ALCOA'S" MONOPOLY OF "VIRGIN" INGOT

"Alcoa" is a corporation, organized under the laws of Pennsylvania on September 18, 1888; its original name, "Pittsburgh Reduction Co," was changed to its present one on January 1, 1907. It has always been engaged in the production and sale of ingot aluminum, and since 1895 also in the fabrication of the metal into many finished and semi-finished articles. It has proliferated into a great number of subsidiaries, created at various times between the years 1900 and 1929, as the business expanded. Aluminum is a chemical element; it is never found in a free state, being always in chemical combination with oxygen. One form of this combination is known as alumina; and for practical purposes the most available material from which alumina can be extracted is an ore called bauxite. Aluminum was isolated as a metal more than a century ago, but not until about 1886 did it become commercially practicable to eliminate the oxygen, so that it could be exploited industrially. One Hall discovered a process by which this could be done in that year and got a patent on April 2, 1889, which he assigned to "Alcoa," which thus secured a legal monopoly of the manufacture of the pure aluminum until on April 2, 1906, when this patent expired. Meanwhile Bradley had invented a process by which the smelting could be carried on without the use of external heat, as had theretofore been thought necessary; and for this improvement he too got a patent on February 2, 1892. Bradley's improvement resulted in great economy in manufacture, so that, although after April 2, 1906, anyone could manufacture aluminum by the Hall process, for practical purposes no one could compete with Bradley or with his licensees until February 2, 1909, when Bradley's patent also expired. On October 31, 1903, "Alcoa" and the assignee of the Bradley patent entered into a contract by which "Alcoa" was granted an exclusive license under that patent in exchange for "Alcoa's" promise to sell to the assignee a stated amount of aluminum at a discount of 10 percent below "Alcoa's" published list price, and always to sell at a discount of 5 percent greater than that which "Alcoa" gave to any other jobber. Thus until February 2, 1909, "Alcoa" had either a monopoly of the manufacture of virgin aluminum ingot or the monopoly of a process which eliminated all competition.

The extraction of aluminum from alumina requires a very large amount of electrical energy, which is ordinarily, though not always, most cheaply obtained from water power. Beginning at least as early as 1895, "Alcoa" secured such power from several companies by contacts, containing in at least three instances, covenants binding the power companies not to sell or let power to anyone else for the manufacture of aluminum. "Alcoa"—either itself or by a subsidiary—also entered into four successive "cartels" with foreign manufacturers of aluminum by which, in exchange for certain limitations upon its import into foreign countries, it secured convenants from the foreign producers, either not to import into the United States at all, or to do so under restrictions, which in some cases involved the fixing of prices. These "cartels" and restrictive covenants and certain other practices were the subject of a suit filed by the United States against "Alcoa" on May 16, 1912, in which a decree was entered by consent on June 7, 1912, declaring several of these covenants unlawful and enjoining their performance; and also declaring invalid other restrictive covenants obtained before 1903 relating to the sale of alumina. ("Alcoa" failed at this time to inform the United States of several restrictive covenants in water-power contracts; its justification—which the judge accepted—being that they had been forgotten.) "Alcoa" did not begin to manufacture alumina on its own behalf until the expiration of a dominant patent in 1903. In that year it built a very large alumina plant at East St. Louis, where all of its alumina was made until 1939, when it opened another plant in Mobile, Ala.

None of the foregoing facts are in dispute, and the most important question in the case is whether the monopoly in Alcoa's production of virgin ingot, secured by the two patents until 1909, and in part perpetuated between 1909 and 1912 by the unlawful practices, forbidden by the decree of 1912, continued for the ensuing 28 years; and whether if it did, it was unlawful under section 2 of the Sherman Act. It is undisputed that throughout this period Alcoa continued to be the single producer of virgin ingot in the United States; and the plaintiff argues that this without more was enough to make it an unlawful monopoly. It also takes an alternative position: that in any event during this period Alcoa consistently pursued unlawful exclusionary practices, which made its dominant position certainly unlawful, even though it would not have been, had it been retained only by natural growth. Finally, it asserts that many of these practices were of themselves unlawful, as contracts in restraint of trade under section 1 of the act. Alcoa's position is that the fact that it alone continued to make virgin ingot in this country did not, and does not, give it a monopoly of the market; that it was always subject to the competition of imported virgin ingot, and of what is called secondary ingot; and that even if it had not been, its monopoly would not have been retained by unlawful means, but would have been the result of a growth which the act does not forbid, even when it results in a monopoly. We shall first consider the amount and character of this competition; next, how far it established a monopoly; and finally, if it did, whether that monopoly was unlawful under section 2 of the act.

From 1902 onward until 1928 Alcoa was making ingot in Canada through a wholly owned subsidiary, so much of this as it imported into the United States it is proper to include with what it produced here. In the year 1912 the sum of these two items represented nearly 91 percent of the total amount of virgin ingot available for sale in this country. This percentage varied year by year up to and including 1938—in 1913 it was about 72 percent, in 1921 about 68 percent, in 1922 about 72—with these exceptions it was always over 80 percent of the total and for the last 5 years 1934–38 inclusive it averaged over 90 percent. The effect of such a proportion of the production upon the market we reserve for the time being, for it will be necessary first to consider the nature and uses of secondary ingot, the name of which the industry knows ingot made from aluminum scrap. This is of two sorts, though for our purposes it is not important to distinguish between them. One of these is the clippings and trimmings of sheet aluminum, when patterns are cut out of it, as a suit is cut from the bolt of cloth. The chemical composition of these is obviously the same as that of the sheet from which they come; and, although they are likely to accumulate dust or other dirt in the factory, this may be removed by well-known processes. If a record of the original composition of the sheet has been preserved, this scrap may be remelted into new ingot, and used again for the same purpose. It is true that some of the witnesses—Arthur V. Davis, the chairman of the board of Alcoa among them—testified that at each remelting aluminum takes up some new oxygen which progressively deteriorates its quality for those uses in which purity is important; but other witnesses thought that it had become commercially feasible to remove this impurity, and the judge made no finding on the subject. Since the plaintiff has the burden of proof, we shall assume that there is no such deterioration.

Nevertheless, there is an appreciable sales resistance even to this kind of scrap, and for some uses (airplanes and cables among them), fabricators absolutely insist upon virgin—just why is not altogether clear. The other source of scrap is aluminum which has once been fabricated and the article, after being used, is discarded and sent to the junk heap; as for example, cooking utensils, like kettles and pans, and the pistons or crank cases of motorcars. These are made with a substantial alloy, and to restore the metal to its original purity costs more than it is worth. However, if the alloy is known both in quality and amount, scrap, when remelted, can be used again for the same purpose as before. In spite of this, as in the case of clippings and trimmings, the industry will ordinarily not accept ingot so salvaged upon the same terms as virgin. There are some 17 companies which scavenge scrap of all sorts, clean it, remelt it, test it for its composition, make it into ingots and sell it regularly to the trade. There is in all these salvage operations some inevitable waste of actual material; not only does a certain amount of aluminum escape altogether, but in the salvaging process itself some is skimmed off as scum and thrown away. The judge found that the return of fabricated products to the market as secondary varied from 5 to 25 years, depending upon the article; but he did not, and no doubt could not, find how many times the cycle could be repeated before the metal was finally used up.

There are various ways of computing Alcoa's control of the aluminum market—as distinct from its production—depending upon what one regards as competing in that market. The judge figured its share—during the years 1929–38, inclusive—as only about 33 percent; to do so he included "secondary," and excluded that part of Alcoa's own production which it fabricated and did not therefore sell as ingot. If, on the other hand, Alcoa's total production, fabricated and sold, be included, and balanced against the sum of imported "virgin" and "secondary," its share of the market was in the neighborhood of 64 percent for that period. The percentage we have already mentioned—over 90—results only if we both include all Alcoa's production and exclude "secondary." That percentage is enough to constitute a monop-

oly; it is doubtful whether 60 or 64 percent would be enough; and certainly 63 percent is not. Hence it is necessary to settle what we shall treat as competing in the ingot market. That part of its production which Alcoa itself fabricates does not, of course, ever reach the market as ingot; and we recognize that it is only when a restriction of production; either inevitably affects prices, or is intended to do so, that it violates section 1 of the act. *Apex Hosiery Co.* v. *Leader* (310 U. S. 469, 501). However, even though we were to assume that a monopoly is unlawful under section 2 only in case it controls prices, the ingot fabricated by Alcoa, necessarily had a direct effect upon the ingot market. All ingot—with trifling exceptions—is used to fabricate intermediate, or end, products; and therefore all intermediate, or end, products which Alcoa fabricates and sells, pro tanto reduce the demand for ingot itself. The situation is the same, though reversed, as in *Standard Oil Co.* v. *United States* (221 U. S. 1, 77), where the court answered the defendants' argument that they had no control over the crude oil by saving that "as substantial power over the crude product was the inevitable result of the absolute control which existed over the refined product, the monopolization of the one carried with it the power to control the other." We cannot therefore agree that the computation of the percentage of Alcoa's control over the ingot market should not include the whole of its ingot production.

As to "secondary," as we have said, for certain purposes the industry will not accept it at all; but for those for which it will, the difference in price is ordinarily not very great; the judge found that it was between 1 and 2 cents a pound, hardly enough margin on which to base a monopoly. Indeed, there are times when all differential disappears, and "secondary" will actually sell at a higher price; i. e., when there is a supply available which contains just the alloy that a fabricator needs for the article which he proposes to make. Taking the industry as a whole, we can say nothing more definite than that, although "secondary" does not compete at all in some uses (whether because of "sales resistance" only, or because of actual metallurgical inferiority), for most purposes it competes upon a substantial equality with "virgin." On these facts the judge found that "every pound of secondary or scrap aluminum which is sold in commerce displaces a pound of virgin aluminum which otherwise would, or might have been, sold." We agree; so far as "secondary" supplies the demand of such fabricators as will accept it, it increases the amount of "virgin" which must seek sale elsewhere; and it therefore results that the supply of that part of the demand which will accept only "virgin" becomes greater in proportion as "secondary" drives away "virgin" from the demand which will accept "secondary." (This is indeed the same argument which we used a moment ago to include in the supply that part of "virgin" which "Alcoa" fabricates; it is not apparent to us why the judge did not think it applicable to that item as well.) At any given moment therefore "secondary" competes with "virgin" in the ingot market; further, it can, and probably does, set a limit or "ceiling" beyond which the price of "virgin" cannot go, for the cost of its production will in the end depend only upon the expense of scavenging and reconditioning. It might seem for this reason that in estimating "Alcoa's" control over the ingot market, we ought to include the supply of "secondary," as the judge did. Indeed, it may be thought a paradox to say that anyone has the monopoly of a market in which at all times he must meet a competition that limits his price. We shall show that it is not.

In the case of a monopoly of any commodity which does not disappear in use and which can be salvaged, the supply seeking sale at any moment will be made up of two components: (1) the part which the putative monopolist can immediately produce and sell; and (2) the part which has been, or can be, reclaimed out of what he has produced and sold in the past. By hypothesis he presently controls the first of these components; the second he has controlled in the past, although he no longer does. During the period when he did control the second, if he was aware of his interest, he was guided, not alone by its effect at that time upon the market, but by his knowledge that some part of it was likely to be reclaimed and seek the future market. That consideration will to some extent always affect his production until he decides to abandon the business, or for some other reason ceases to be concerned with the future market. Thus, in the case at bar "Alcoa" always knew that the future supply of ingot would be made up in part of what it produced at the time, and, if it was as far-sighted as it proclaims itself, that consideration must have had its share in determining how much to produce. How accurately it could forecast the effect of present production upon the future market is another matter. Experience, no doubt, would help, but it makes no difference that it had to guess; it is enough that it had an inducement to make the best guess it could and that it would regulate that part of the future supply, so far as it should turn out to have guessed right. The competition of "secondary" must therefore be disregarded as soon as we consider the position of "Alcoa" over a period of years; it was as much within "Alcoa's" control as was the production of the "virgin" from which it had been derived.

This can be well illustrated by the case of a lawful monopoly: e. g. a patent or a copyright. The monopolist cannot prevent those to whom he sells from reselling at whatever prices they please. *United States* v. *General Electric Co.* (272 U. S. 476, 484). Nor can he prevent their reconditioning articles worn by use, unless they in fact make a new article. *Wilson* v. *Simpson* (9 How. 109, 123). At any moment his control over the market will therefore be limited by that part of what he has formerly sold, which the price he now charges may bring upon the market, as second hand or reclaimed articles. Yet no one would think of saying that for this reason the patent or the copyright did not confer a monopoly. Again, consider the situation of the owner of the only supply of some raw material like iron ore. Scrap iron is a constant factor in the iron market; it is scavanged, remelted into pig, and sold in competition with newly smelted pig; an owner of the sole supply of ore must always face that competition and it will serve to put a ceiling upon his price, so far as there is enough of it. Nevertheless, no one would say that, even during the period while the pig which he has sold in the past can so return to the market, he does not have a natural monopoly. Finally, if "Alcoa" is right, precisely the same reasoning ought to lead us to include that part of clippings and trimmings which a fabricator himself saves and remelts—"process scrap"—for that too pro tanto reduces the market for "virgin." It can make no difference whether the original buyer reclaims, or a professional scavenger. Yet "Alcoa" itself does not assert that such "process scrap" competes; indeed it was at pains to prove that this scrap was not included in its computation of "secondary."

We conclude, therefore, that Alcoa's control over the ingot market must be reckoned at over 90 percent, that being the proportion which its production bears to imported virgin ingot. If the fraction which it did not supply were the produce of domestic manufacture there could be no doubt that this percentage gave it a monopoly—lawful or unlawful, as the case might be. The producer of so large a proportion of the supply has complete control within certain limits. It is true that, if by raising the price he reduces the amount which can be marketed—as always, or almost always, happens—he may invite the expansion of the small producers who will try to fill the place left open; nevertheless, not only is there an inevitable lag in this, but the large producer is in a strong position to check such competition; and, indeed, if he has retained his old plant and personnel, he can inevitably do so. There are indeed limits to his power; substitutes are available for almost all commodities, and to raise the price enough is to evoke them. *United States* v. *Corn Products Refining Company* (234 Fed. Rept. 964, 976); *United States* v. *Associated Press* (52 Fed. Supp. 362, 371); *Fashion Originators Guild* v. *Federal Trade Commission* (114 Fed. (2), 80, 85 (C. C. A. 2)). Moreover, it is difficult and expensive to keep idle any part of a plant or of personnel; and any drastic contraction of the market will offer increasing temptation to the small producers to expand. But these limitations also exist when a single producer occupies the whole market; even then, his hold will depend upon his moderation in exerting his immediate power.

The case at bar is however different, because for aught that appears, there may well have been a practically unlimited supply of imports as the price of ingot rose. Assuming that there was no agreement between Alcoa and foreign producers not to import, they sold what could bear the handicap of the tariff and the cost of transportation. For the period of 18 years—1920–37—they sold at times a little above Alcoa's prices, at times a little under; but there was substantially no gross difference between what they received and what they would have received, had they sold uniformly at Alcoa's prices. While the record is silent, we may therefore assume—the plaintiff having the burden—that, had Alcoa raised its prices, more ingot would have been imported. Thus there is a distinction between domestic and foreign competition—the first is limited in quantity, and can increase only by an increase in plant and personnel; the second is of producers who, we must assume, produce much more than they import, and whom a rise in price will presumably induce immediately to divert to the American market what they have been selling elsewhere. It is entirely consistent with the evidence that it was the threat of greater foreign imports which kept Alcoa's prices where they were, and prevented it from exploiting its advantage as sole domestic producer; indeed, it is hard to resist the conclusion that potential imports did put a ceiling upon those prices. Nevertheless, within the limits afforded by the tariff and the cost of transportation, Alcoa was free to raise its prices as it chose, since it was free from domestic competition, save as it drew other metals into the market as substitutes. Was this a monopoly within the meaning of section 2? The judge found that, over the whole half century of its existence, Alcoa's profits upon capital invested, after payment of income taxes, had been only about 10 percent, and although the plaintiff puts this figure a little higher, the difference is negligible.

The plaintiff does indeed challenge the propriety of computing profits upon a capital base which included past earnings that have been allowed to remain in the business; but as to that it is plainly wrong. An argument is indeed often made in the case of a public utility, that the "rate-base" should not include earnings reinvested which were greater than a fair profit upon the actual investment outstanding at the time. That argument depends, however, upon the premise that at common law—even in the absence of any commission or other authority empowered to enforce a "reasonable" rate—it is the duty of a public utility to charge

no more than such a rate, and that any excess is unlawfully collected. Perhaps one might properly use the same argument in the case of a monopolist; but it would be a condition that one should show what part of the past earnings were extortionate, for not all that even a monopolist may earn is caput lupinum. The plaintiff made no such attempt, and its distinction between capital "contributed by consumers" and capital "contributed by shareholders," has no basis in law. "Alcoa's" earnings belonged to its shareholders; they were free to withdraw them and spend them, or to leave them in the business. If they chose to leave them, it was no different from contributing new capital out of their pockets. This assumed, it would be hard to say that "Alcoa" had made exorbitant profits on ingot, if it is proper to allocate the profit upon the whole business proportionately among all its products—ingot, and fabrications from ingot. A profit of 10 percent in such an industry, dependent, in part at any rate, upon continued tariff protection, and subject to the vicissitudes of new demands, to the obsolescence of plant and process—which can never be accurately gauged in advance—to the chance that substitutes may at any moment be discovered which will reduce the demand, and to the other hazards which attend all industry: a profit of 10 percent, so conditioned, could hardly be considered extortionate.

There are however, two answers to any such excuse; and the first is that the profit on ingot was not necessarily the same as the profit of the business as a whole, and that we have no means of allocating its proper share to ingot. It is true that the mill cost appears; but obviously it would be unfair to "Alcoa" to take, as the measure of its profit on ingot, the difference between selling price and mill cost; and yet we have nothing else. It may be retorted that it was for the plaintiff to prove what was the profit upon ingot in accordance with the general burden of proof. We think not. Having proved that "Alcoa" had a monopoly of the domestic ingot market, the plaintiff had gone far enough; if it was an excuse, that "Alcoa" had not abused its power, it lay upon "Alcoa" to prove that it had not. But the whole issue is irrelevant anyway, for it is no excuse for "monopolizing" a market that the monopoly has not been used to extract from the consumer more than a "fair" profit. The act has wider purposes. Indeed, even though we disregarded all but economic considerations, it would by no means follow that such concentration of producing power is to be desired, when it has not been used extortionately. Many people believe that possession of unchallenged economic power deadens initiative, discourages thrift, and depresses energy; that immunity from competition is a narcotic, and rivalry is a stimulant, to industrial progress; that the spur of constant stress is necessary to counteract an inevitable disposition to let well enough alone. Such people believe that competitors, versed in the craft as no consumer can be, will be quick to detect opportunities for saving and new shifts in production, and be eager to profit by them. In any event the mere fact that a producer, having command of the domestic market, has not been able to make more than a "fair" profit, is no evidence that a "fair" profit could not have been made at lower prices. *United States* v. *Corn Products Refining Co., supra*, 1014, 1015 (234 Fed. Rep. 964). True, it might have been thought adequate to condemn only those monopolies which could not show that they had exercised the highest possible ingenuity, had adopted every possible economy, had anticipated every conceivable improvement, stimulated every possible demand. No doubt, that would be one way of dealing with the matter, although it would imply constant scrutiny and constant supervision, such as courts are unable to provide. Be that as it may, that was not the way that Congress chose; it did not condone "good trusts" and condemn "bad" it forbade all. Moreover, in so doing it was not necessarily actuated by economic motives alone. It is possible, because of its indirect social or moral effect, to prefer a system of small producers, each dependent for his success upon his own skill and character, to one in which the great mass of those engaged must accept the direction of a few. These considerations, which we have suggested only as possible purposes of the act, we think the decisions prove to have been in fact its purposes.

It is settled, at least as to section 1, that there are some contracts restricting competition which are unlawful, no matter how beneficent they may be; no industrial exigency will justify them; they are absolutely forbidden. Chief Justice Taft said as much of contracts dividing a territory among producers, in the often quoted passage of his opinion in the Circuit Court of Appeals in *United States* v. *Eddystone Pipe and Steel Co.*, (85 Fed. Rep. 271, 291). The Supreme Court unconditionally condemned all contracts fixing prices in *United States* v. *Trenton Potteries Co.* (273 U. S. 392, 397, 398), and whatever doubts may have arisen as to that decision from *Appalachian Coals, Inc.*, v. *United States* (288 U. S. 344), they were laid by *United States* v. *Socony-Vacuum Co.* (310 U. S. 150, 220–224). It will now scarcely be denied that the same notion originally extended to all contracts—reasonable, or unreasonable—which restrict competition. *United States* v. *Trans-Missouri Freight Association* (166 U. S. 290, 327, 328); *United States* v. *Joint Traffic Association* (171 U. S. 505, 575–577). The decisions in *Standard Oil Co.* v. *United States* (221 U. S. 1), and *American Tobacco Co.* v. *United States* (221 U. S. 106), certainly did change this, and since then it has been accepted law that not all contracts which in fact put an end to existing competition are unlawful. Starting, however, with the authoritative premise that all contracts fixing prices are unconditionally prohibited, the only possible difference between them and a monopoly is that while a monopoly necessarily involves an equal, or even greater, power to fix prices, its mere existence might be thought not to constitute an exercise of that power. That distinction is nevertheless purely formal; it would be valid only so long as the monopoly remained wholly inert; it would disappear as soon as the monopoly began to operate; for, when it did—that is, as soon as it began to sell at all—it must sell at some price and the only price at which it could sell is a price which it itself fixed. Thereafter the power and its exercise must needs coalesce. Indeed it would be absurd to condemn such contracts unconditionally, and not to extend the condemnation to monopolies; for the contracts are only steps toward that entire control which monopoly confers: they are really partial monopolies.

But we are not left to deductive reasoning. Although in many settings it may be proper to weigh the extent and effect of restrictions in a contract against its industrial or commercial advantages, this is never to be done when the contract is made with intent to set up a monopoly. As much was plainly implied in *Swift & Co.* v. *United States* (196 U. S. 375, 396), where the court spoke of monopoly as being the "result" which the law seeks to prevent; and, although the language on pages 60 and 61 of *Standard Oil Co.* v. *United States* (221 U. S. 1), is not altogether clear, it seems to presuppose as a premise that a monopoly is always an "unreasonable restraint of trade." Again, the opinion in *Sugar Institute* v. *United States* (297 U. S. 553, 598)—borrowing from *Appalachian Coals Inc.* v. *United States, supra* (288 U. S. 344, 374)—said: "Accordingly, we have held that a cooperative enterprise otherwise free from objection which carries with it no monopolistic menace" need not always be condemned. These were indeed only thrown out as steps in the argument; but *Fashion Originators Guild* v. *Federal Trade Commission* (312 U. S. 457), was a ruling. That concerned a combination of dressmakers who set up a boycott against all retailers who should deal in dresses copied—"pirated"—from the dressmakers' designs. Before the Commission the dressmakers had offered to prove that "the practices of F. O. G. A. were reasonable and necessary to protect the manufacturer, laborer, retailer, and consumer against devastating evils growing from the pirating of original designs and had in fact benefited all four" (p. 467). All such evidence the Commission refused to hear, raising as sharply as possible the issue whether the combination could excuse itself as "reasonable" because of the benefits it conferred upon the industry. The court sustained the Commission because "the purpose and object of this combination, its potential power, its tendency to monopoly, the coercion it could and did practice upon a rival method of competition, all brought it within the policy of the prohibition" (p. 467). Moreover, the Clayton Act itself (sections 14 and 18, title 15, U. S. C.) shows that practices harmless in themselves will not be tolerated when they "tend to create a monopoly." Perhaps, it has been idle to labor the point at length; there can be no doubt that the vice of restrictive contracts and of monopoly is really one, it is the denial to commerce of the supposed protection of competition. To repeat, if the earlier stages are proscribed, when they are parts of a plan, the mere projecting of which condemns them unconditionally, the realization of the plan itself must also be proscribed.

We have been speaking only of the economic reasons which forbid monopoly; but, as we have already implied, there are others, based upon the belief that great industrial consolidations are inherently undesirable, regardless of their economic results. In the debates in Congress Senator Sherman himself in the passage quoted in the margin showed that among the purposes of Congress in 1890 was a desire to put an end to great aggregations of capital because of the helplessness of the individual before them.[1] Another aspect of the same notion may be found in the language of Mr. Justice Peckham in *United States* v. *Trans-Missouri*

[1] "If the concerted powers of this combination are intrusted to a single man, it is a kingly prerogative, inconsistent with our form of government and should be subject to the strong resistance of the State and National authorities * * *" (21 CONGRESSIONAL RECORD, 2457).

"The popular mind is agitated with problems that may disturb social order, and among them all none is more threatening than the inequality of condition, of wealth, and opportunity that has grown within a single generation out of the concentration of capital into vast combinations to control production and trade and to break down competition. These combinations already defy or control powerful transportation corporations and reach State authorities. They reach out their Briarean arms to every part of our country. They are imported from abroad. Congress alone can deal with them, and if we are unwilling or unable, there will soon be a trust for every production and a master to fix the price for every necessity of life * * *" (21 CONGRESSIONAL RECORD, 2460. See also 21 CONGRESSIONAL RECORD, 2598).

Freight Association, supra, 323 (166 U. S. 290). That Congress is still of the same mind appears in the Surplus Property Act of 1944, and the Small Business Mobilization Act. Not only does section 2 (d) of the first declare it to be one aim of that statute "to preserve the competitive position of small business concerns," but section 18 is given over to directions designed to "preserve and strengthen" their position. In *United States* v. *Hutcheson* (312 U. S. 219) a later statute in pari materia was considered to throw a cross-light upon the antitrust acts, illuminating enough even to override an earlier ruling of the court. Throughout the history of these statutes it has been constantly assumed that one of their purposes was to perpetuate and preserve, for its own sake and in spite of possible cost, an organization of industry in small units which can effectively compete with each other. We hold that Alcoa's monopoly of ingot was of the kind covered by section 2.

It does not follow because Alcoa had such a monopoly, that it monopolized the ingot market—it may not have achieved monopoly—monopoly may have been thrust upon it. If it had been a combination of existing smelters which united the whole industry and controlled the production of all aluminum ingot, it would certainly have monopolized the market. In several decisions the Supreme Court has decreed the dissolution of such combinations, although they had engaged in no unlawful trade practices. Perhaps we should not count among these *Northern Securities Co.* v. *United States* (193 U. S. 197, 327), because it was decided under the old dispensation which ended with *Standard Oil Co.* v. *United States, supra* (221 U. S. 1); but the following cases were later. *United States* v. *Union Pacific R. R. Co.* (226 U. S. 61, 88), *International Harvester* v. *Missouri* (234 U. S. 199, 209), *United States* v. *Reading Company* (253 U. S. 26, 57–59), *United States* v. *Southern Pacific Company* (259 U. S. 214, 230, 231). We may start therefore with the premise that to have combined 90 percent of the producers of ingot would have been to monopolize the ingot market, and so far as concerns the public interest, it can make no difference whether an existing competition is put an end to, or whether prospective competition is prevented. The Clayton Act itself speaks in that alternative—"to injure, destroy, or prevent competition" (sec. 13 (a), title 15, U. S. C.). Nevertheless, it is unquestionably true that from the very outset the courts have at least kept in reserve the possibility that the origin of a monopoly may be critical in determining its legality; and for this they had warrant in some of the congressional debates which accompanied the passage of the act. *In re Greene* (52 Fed. Rep. 104 116, 117), *United States* v. *Trans-Missouri Freight Association* (58 Fed. Rep. 58, 82 (C. C. A. 8)). This notion has usually been expressed by saying that size does not determine guilt, that there must be some exclusion of competitors, that the growth must be something else than natural or normal, that there must be a wrongful intent, or some other specific intent, or that some unduly coercive means must be used.

At times there has been emphasis upon the use of the active verb "monopolize," as the judge noted in the case at bar. *United States* v. *Standard Oil Corporation* (173 Fed. Rep. 177, 196); *United States* v. *Whiting* (212 Fed. Rep. 466, 478); *Patterson* v. *United States* (222 Fed. Rep. 599, 619 (C. C. A. 6)); *National Biscuit Co.* v. *Federal Trade Commission* (299 Fed. Rep. 733, 738 (C. C. A. 2)). What engendered these compunctions is reasonably plain; persons may unwittingly find themselves in possession of a monopoly, automatically so to say, that is, without having intended either to put an end to existing competition, or to prevent competition from arising when none had existed; they may become monopolists by force of accident. Since the act makes monopolizing a crime, as well as a civil wrong, it would be not only unfair, but presumably contrary to the intent of Congress, to include such instances. A market may, for example, be so limited that it is impossible to produce at all and meet the cost of production except by a plant large enough to supply the whole demand. Or there may be changes in taste or in cost which drive out all but one purveyor. A single producer may be the survivor out of a group of active competitors, merely by virtue of his superior skill, foresight, and industry. In such cases a strong argument can be made that, although the result may expose the public to the evils of monopoly, the act does not mean to condemn the resultant of those very forces which it is its prime object to foster; finis opus coronat. The successful competitor, having been urged to compete, must not be turned upon when he wins. The most extreme expression of this view is in *United States* v. *United States Steel Corporation* (251 U. S. 417), from which we quote in the margin;[2] and which Sanford, Justice, in part repeated in *United States* v. *International Harvester Corp.* (274 U. S. 693, 708). It so chances that in both instances the corporation had less than two-thirds of the production in its hands, and the language quoted was not necessary to the decision; so that even if it had not later been modified, it has not the authority of an actual decision. But whatever authority it does have was modified by the gloss of Cardozo, Justice in *Swift & Company* v. *United States* (286 U. S. 106), when he said, page 116: "Mere size * * * *is not an offense against the Sherman Act unless magnified to the point at which it amounts to a monopoly * * * but size carries with it an opportunity for abuse that is not to be ignored when the opportunity is proved to have been utilized in the past." Alcoa's size was magnified to make it a monopoly; indeed, it has never been anything else; and its size not only offered it an opportunity for abuse, but it utilized its size for abuse, as can easily be shown.

It would completely misconstrue Alcoa's position in 1940 to hold that it was the passive beneficiary of a monopoly, following upon an involuntary elimination of competitors by automatically operative economic forces. Already in 1909, when its last lawful monopoly ended, it sought to strengthen its position by unlawful practices, and these concededly continued until 1912. In that year it had two plants in New York, at which it produced less than 42,000,000 pounds of ingot; in 1934 it had five plants (the original two, enlarged; one in Tennessee; one in North Carolina; one in Washington), and its production had risen to about 327,000,000 pounds, an increase of almost eight-fold. Meanwhile not a pound of ingot had been produced by anyone else in the United States. This increase and this continued and undisturbed control did not fall undesigned into Alcoa's lap; obviously it could not have done so. It could only have resulted, as it did result, from a persistent determination to maintain the control, with which it found itself vested in 1912. There were at least one or two abortive attempts to enter the industry, but Alcoa effectively anticipated and forestalled all competition, and succeeded in holding the field alone. True, it stimulated demand and opened new uses for the metal, but not without making sure that it could supply what it had evoked. There is no dispute as to this; Alcoa avows it as evidence of the skill, energy and initiative with which it has always conducted its business; as a reason why, having won its way by fair means, it should be commended, and not dismembered. We need charge it with no moral derelictions after 1912; we may assume that all it claims for itself is true. The only question is whether it falls within the exception established in favor of those who do not seek, but cannot avoid, the control of a market. It seems to us that that question scarcely survives its statement. It was not inevitable that it should always anticipate increases in the demand for ingot and be prepared to supply them. Nothing compelled it to keep doubling and redoubling its capacity before others entered the field. It insists that it never excluded competitors; but we can think of no more effective exclusion than progressively to embrace each new opportunity as it opened, and to face every newcomer with new capacity already geared into a great organization, having the advantage of experience, trade connections and the elite of personnel. Only in case we interpret exclusion as limited to maneuvers not honestly industrial, but actuated solely by a desire to prevent competition, can such a course, indefatigably pursued, be deemed not exclusionary. So to limit it would in our judgment emasculate the act; would permit just such consolidations as it was designed to prevent.

"Alcoa" answers that it positively assisted competitors, instead of discouraging them. That may be true as to fabricators of ingot; but what of that? They were its market for ingot, and it is charged only with a monopoly of ingot. We can find no instance of its helping prospective ingot manufacturers. We do not forget the Southern Aluminum Co. in whose origin it did have some part; though that was over before the end of 1914 and was in any event scarcely late enough to count. We are speaking, not of its purchase of the remains of the plant in 1915; we are not suggesting—as the plaintiff argues—that that was a move to keep the plant out of the ingot market; we are speaking of the original venture. In December 1911, Arthur V. Davis was in Europe, engaged in forming the "cartel" of 1912, which we will assume not to have been meant to affect the production of ingot in the United States; for so the judge found. The first form of the project was a corporation in which all the members of that "cartel" were to share—"Alcoa," through its Canadian subsidiary. That plan was abandoned; but the French interests, which had been parties to it, organized the Southern Aluminum Co. in its place; and the correspondence between those interests and "Alcoa" in 1913—especially the French letter of April 16 and "Alcoa's" answer of May 10—even though it may not justify the conclusion that the two were acting in conjunction, leaves no doubt that they were not to be competitors at arms

[2] Justice McKenna for the majority said, p. 451: "The Corporation is undoubtedly of impressive size, and it takes an effort of resolution not to be affected by it or to exaggerate its influence. But we must adhere to the law, and the law does not make mere size an offense or the existence of unexerted power an offense. It, we repeat, requires overt acts and trusts to its prohibition of them and its power to repress or punish them. It does not compel competition nor require all that is possible." The minority through Day, Justice, agreed, p. 460: "The act offers no objection to the mere size of a corporation nor to the continued exerting of its lawful power, when that size and power have been obtained by lawful means and developed by natural growth, although its resources, capital and strength may give to such corporation a dominating place in the business and industry with which it is concerned. It is entitled to maintain its size and the power that legitimately goes with it, provided no law has been transgressed in obtaining it."

length.[3] Perhaps, as the plaintiff argues, "Alcoa" did think that the new project might be useful in persuading the plaintiff, whose attack had just ended in the decree of 1912, that the company was to be a real competitor. Be that as it may, the expected competition was not to be of the ordinary kind.

We disregard any question of "intent." Relatively early in the history of the act—1935—Holmes, Justice, in *Swift & Co.* v. *United States, supra* (196 U. S. 375, 396), explained this aspect of the act in a passage often quoted. Although the primary evil was monopoly, the act also covered preliminary steps which, if continued, would lead to it. These may do no harm of themselves; but, if they are initial moves in a plan or scheme which carried out, will result in monopoly, they are dangerous and the law will nip them in the bud. For this reason conduct falling short of monopoly is not illegal unless it is part of a plan to monopolize, or to gain such other control of a market as is equally forbidden. To make it so, the plaintiff must prove what in the criminal law is known as a "specific intent"; an intent which goes beyond the mere intent to do the act. By far the greatest part of the fabulous record piled up in the case at bar was concerned with proving such an intent. The plaintiff was seeking to show that many transactions, neutral on their face, were not in fact necessary to the development of "Alcoa's" business, and had no motive except to exclude others and perpetuate its hold upon the ingot market. Upon that effort success depended in case the plaintiff failed to satisfy the Court that it was unnecessary under section 2 to convict "Alcoa" of practices unlawful of themselves. The plaintiff has so satisfied us, and the issue of intent ceases to have any importance; no intent is relevant except that which is relevant to any liability criminal or civil, i. e., an intent to bring about the forbidden act. Note 59 on page 226 of *United States* v. *Socony-Vacuum Oil Co., supra* (310 U. S. 150), on which "Alcoa" appears so much to rely, is in no sense to the contrary. Douglas, Justice, was answering the defendants' argument that, assuming that a combination had attempted to fix prices, it had never had the power to do so, for there was too much competing oil. His answer was that the plan was unlawful, even if the parties did not have the power to fix prices, provided that they intended to do so; and it was to drive home this that he contrasted the case then before the Court with monopoly, where power was a necessary element. In so doing he said: "An intent and a power * * * are then necessary," which he at once followed by quoting the passage we have just mentioned from *Swift & Co.* v. *United States supra* (196 U. S. 375)). In order to fall within section 2, the monopolist must have both the power to monopolize and the intent to monopolize. To read the passage as demanding any specific intent makes nonsense of it, for no monopolist monopolizes unconscious of what he is doing. So here, "Alcoa" meant to keep, and did keep that complete and exclusive hold upon the ingot market with which it started. That was to monopolize the market, however innocently it otherwise proceeded. So far as the judgment held that it was not within section 2, it must be reversed.

[3] For example, the first letter contained the following: "I do not believe that the political conditions existing in the United States make it advisable to associate our aluminum companies, even for the fabrication of alumina. Mr. Sternfeld, whom I talked with in Paris a few days ago, told me that in his conversations with you on the subject he was under the impression that you are of the same opinion as I, and that it would be preferable for your company, the Southern and the Northern each to work alone in all branches of fabrication and commerce." And again: "It would evidently be better for the equilibrium of the market if we would take a large portion of our supply of power with the view of producing nitrures" (nitrates?) "rather than to employ the whole to increase our production of metal." The answer in part read: "As to whether it is wiser to build at first one plant in the United States conjointly between the Southern Aluminum Co. and the Aluminum Co. of America is to my mind rather a detail, and, if you prefer to have the Southern company build its own plant at Whitney, while the Aluminum Co. builds another for itself, I see no objection to that procedure."

II

ALCOA'S UNLAWFUL PRACTICES

As we have said, the plaintiff also sought to convict Alcoa of practices in which it engaged, not because they were necessary to the development of its business, but only in order to suppress competitors. Since we are holding that Alcoa "monopolized" the ingot market in 1940, regardless of such practices, these issues might be moot, if it inevitably followed from our holding that Alcoa must be dissolved. It could be argued that the new companies which would then emerge, should not be charged in retrospect with their predecessor's illegal conduct; but should be entitled to start without the handicap of injunctions, based upon its past. Possibly that would be true, except that conditions have so changed since he case was closed, that, as will appear, it by no means follows, because Alcoa had a monopoly in 1940, that it will have one when final judgment is entered after the war. That judgment may leave it intact as a competing unit among other competing units, and the plaintiff might argue, and undoubtedly will, that, if it was in the past guilty of practices, aimed at "monopolizing" the ingot market, it would be proper and necessary to enjoin their resumption, even though it no longer will have a monopoly. For this reason it appears to us that the issues are not altogether moot. In spite of the prolixity of the evidence, the challenged practices can be divided into three classes: (a) The "preemption" of bauxite deposits and water power; (b) the suppression of several efforts by competitors to invade either the ingot market, or some of the markets for fabricated goods; (c) the "domination" of the markets for such goods, and particularly of the markets for "sheet" and "cable."

(a) "Preemption" of bauxite and water power

The plaintiff attempted to prove, and asserts that it did prove, that "Alcoa" bought up bauxite deposits, both in Arkansas—the chief source of the mineral in the United States—and in Dutch and British Guiana, in excess of its needs, and under circumstances which showed that the purchases were not for the purpose of securing an adequate future supply, but only in order to seize upon any available supply and so assure its monopoly. The very statement of this charge shows that it depends upon "Alcoa's" intent, for, if the purchases provided for the future needs of the business, or for what "Alcoa" honestly believed were its future needs, they were innocent. In its effort to show such an intent, here and elsewhere, the plaintiff made the whole history of the industry from its beginning the subject of inquiry, with a persistence which left no corner unsearched. The judge heard the evidence with unmatched patience, and punctilious care and minuteness; and with equal industry and detail considered it for almost a year before he gave his opinion, in which he overruled all the plaintiff's contentions. The plaintiff's brief before us seems to intimate that in doing so he was actuated by a bias in "Alcoa's" favor; and, if by that is meant that "Alcoa" completely satisfied him of its innocence throughout, bias he certainly showed. That, however, is precisely the bias which all evidence is intended to create, and which it should create, if a court does its duty. If, on the other hand, it is suggested that into his conclusions there entered motives, not derived from the evidence, the record is utterly devoid of any support for it.

We assume that Rule 52 (a) applies as well to appeals taken under Rule 72, as to those taken under Rule 75, although it makes very little difference whether or not it does, because Rule 52 (a) in substance merely carried over the earlier practice in equity to all trials before a judge. *State Farm Mutual Automobile Insurance Company* v. *Bonacci* (111 Fed. (2) 412, 415 (C. C. A. 8)); *Petterson Lighterage & Transportation Corp.* v. *New York Central R. R. Co.* (126 Fed. (2) 992, 995 (C. C. A. 2)); *Katz Underwear Company* v. *United States* (127 Fed (2) 965, 966 (C. C. A. 3)); 3 Moore's Federal Practice, section 52.01. It is idle to try to define the meaning of the phrase, "clearly erroneous"; all that can be profitably said is that an appellate court, though it will hesitate less to reverse the finding of a judge than that of an administrative tribunal or of a jury, will nevertheless reverse it most reluctantly and only when well persuaded. This is true to a considerable degree even when the judge has not seen the witnesses. His duty is to sift the evidence, to put it into logical sequence and to make the proper inferences from it; and in the case of a record of over 40,000 pages like that before us, it is physically impossible for an appellate court to function at all without ascribing some prima facie validity to his conclusions. *Consumers Import Company* v. *Kawasaki* (133 Fed. (2) 781, 787 (C. C. A. 2)). What the plaintiff is really asking is that we shall in effect reconsider the whole evidence de novo, as though it had come before us in the first instance. The impossibility of that at once appears, if we consider what it would have involved, had the appeal taken its usual course and been heard by the nine justices of the Supreme Court. However, whatever may be said in favor of reversing a trial judge's findings when he has not seen the witnesses, when he has, and insofar as his findings depend upon whether they spoke the truth, the accepted rule is that they "must be treated as unassailable." *Davis* v. *Schwartz* (155 U. S. 631, 636); *Adamson* v. *Gilliland* (242 U. S. 350, 353); *Alabama Power Company* v. *Ickes* (302 U. S. 464, 477). The reason for this is obvious and has been repeated over and over again; in such cases the appeal must be decided upon an incomplete record, for the printed word is only a part, and often by no means the most important part, of the sense impressions which we use to make up our minds. *Morris Plan Industrial Bank* v. *Henderson* (131 Fed. (2) 975, 977 (C. C. A. 2)). Since an appellate court must have some affirmative reason to reverse anything done below, to reverse a finding it must appear from what the record does preserve that the witnesses could not have been speaking the truth, no matter how transparently reliable and honest they could have appeared. Even upon an issue on which there is conflicting direct testimony, appellate courts ought to be chary before going so far; and upon an issue like the witness's own intent, as to which he alone can testify, the finding is indeed "unassailable," except in the most exceptional cases.

In the case at bar, the first issue was whether, when Alcoa bought up the bauxite deposits, it really supposed that they would be useful in the future. It would be hard to imagine an issue in which the credibility of the witnesses should more depend upon the impressions derived from their presence. Alcoa relied principally upon the testimony of three of its officers, though there were some issues (the purchase of bauxite was among

them), as to which not all three testified. These were the chairman of its board, Arthur V. Davis; its president, Roy A. Hunt; and Davis' brother, Edward K. Davis, a former vice president. Arthur V. Davis was on the stand for 7 weeks; his direct testimony occupies 844 printed pages on the direct and 1,445 on the cross; Edward K. Davis, called by the plaintiff, was on the stand 6 weeks; his direct occupies 1,727 pages and his cross, 146; Hunt was on the stand 2 weeks; in his case the corresponding figures are 266 and 346. Thus the judge had an unrivaled opportunity to observe how they bore themselves under a most prolonged and searching test; and he went out of his way to commend their candor and credibility. Nor could the issue turn upon the dependability of their memory; they knew why they had bought the bauxite; they were either speaking the truth, or perjuring themselves, not only upon this issue, but elsewhere throughout this amazing record. Evidence must be beyond measure convincing which leads to that conclusion in the face of the most positive assurance from the only impartial observer at the time, that they seemed to him men of honor and veracity. While it is, of course, true that they had an interest to excuse their past conduct and that the transactions admitted a sinister interpretation, neither of these facts was conclusive. Upon this, as upon all the issues, the plaintiff had the burden and must lose unless it succeeded in doing more than leaving the proof in balance. Taking all these considerations together, it seems plain to us that we should be unwarranted in declaring these findings "clearly erroneous."

Little need be added as to the similar charge that Alcoa bought up suitable water power which it did not need; and did so for the purpose of preventing competition. It did buy a number of such sites which it did not fully use; but, considering the extraordinary increase in ingot production which in fact took place even without the witnesses' explanations the inference which the plaintiff asks us to draw would be weak indeed; and certainly we should not be justified in holding that it overbore those explanations.

(b) *Suppression of competitors seeking to invade the ingot market*

The plaintiff relies upon two transactions as showing that "Alcoa" tried to suppress incipient competition by purchasing interests in two Norwegian aluminum companies; and a third, by purchasing interests in water power at the head of the Saguenay River, Canada. The Ford Motor Co., in the winter of 1920–21, wished to secure an independent source of aluminum; and one of its representatives met Haskell, the president of the Baush Co., and consulted him about getting one. Haskell in that winter saw Kloumann, the representative of a Norwegian company, which we may call "A. H. Norsk"; and Haskell got an option on the property. There was a sharp dispute as to whether Arthur V. Davis learned of these negotiations; but we shall assume that he did so shortly after May 18, 1921, in spite of the fact that the letter which conveyed that information was excluded. In the following July, "Alcoa" agreed with Kloumann to buy a half interest in "A. H. Norsk," and bought it in October 1922, after Davis had got permission from the Attorney General in accordance with the requirements of the decree of 1912. In the letter in which he stated the case to the Attorney General, Davis declared that he wished to have the property in order to compete with German producers abroad; and that is the reason which he gave on the stand, and which the judge accepted. This evidence also admits the interpretation that Davis wished to head off Haskell, and perhaps in fact he did; but we cannot see that the issue differs from that which arose over the purchases of bauxite and water power. It is impossible to say á priori what motive actuated Davis; even though he knew that his purchase would interrupt Haskell's negotiations on behalf of the Ford Co., it by no means follows that he did not wish the property for the reasons he gave to the Attorney General. Indeed, the plaintiff did not prove that there were no other sources of foreign aluminum open to the Ford Co.; or even that there were no plants which it could have bought. The purchase of the other Norwegian plant had no accompaniment of cutting out American competition; as to it "Alcoa's" good faith must certainly be accepted.

The last transaction was Alcoa's intervention in a large power development at the source of the Saguenay River in Lake St. John, Canada. This lake is of large area and capacity; and at some time before 1922 James B. Duke, a very rich financier, had secured two water powers close to the outlet, about 18 miles apart, called the upper and lower developments. The upper development was built by 1924, but the lower development was not completed till 1931. In 1922 a representative of Duke proposed to Davis that he should take some of the power from the upper development but nothing was done; but in 1924 Alcoa was planning to build a plant at Arvida, near the Saguenay River; and at some time after October 15 of that year Davis and Duke resumed negotiations, though this time for the purchase of the lower development. These resulted in its purchase in July 1925 by means of a merger into Alcoa of one of Duke's corporations, which owned the property. When Duke died in October 1925 his executors wished to dispose of the upper development also, and Alcoa obtained at 53½-percent interest in it during the spring of 1926. All the power used in Arvida has come from the upper development; and Alcoa, after finishing the lower development, sold the power to others, until Limited acquired the property in 1938.

In October 1924 the brothers, Uihlein, who had formerly been brewers in St. Louis, and had already bought a bauxite deposit in British Guiana, conferred with Duke about using the power of the upper development to make ingot; but nothing came of these negotiations. Davis said that the Uihleins told him that, when he and Duke began to deal with each other in the autumn of 1924, they had entirely abandoned the idea of going into the aluminum business, and so the judge found.

The Uihleins, having given up the bauxite business, sold out their deposits in British Guiana in December 1924 to three equal interests, of which Alcoa was one. (This was one of the purchases considered in the preceding heading.) Haskell on his own account also negotiated with Duke for an interest in the upper development, but these negotiations had ended before Duke's death. The plaintiff argues that Alcoa was aware of the negotiations between Duke and the Uihleins, and between Duke and Haskell; and knew that, once it had secured the lower development, Duke was sure to lose interest in any independent aluminum plant. It adds that the fact that Alcoa has never used the lower development to manufacture ingot, shows that it must have been bought for another purpose. Alcoa answers that its original purpose was to develop the lower development after the Arvida plant had been built, meanwhile taking power from the upper; that it was only after Duke's death that it bought a share in the upper; and that the Uihlein and Haskell projects had nothing to do with its purchase of the lower development. This answer is not so patently implausible an explanation that the judge was bound to reject it, and to find that the plaintiff had carried the burden of proof upon the issue.

(c) *"Alcoa's" domination of the fabricating fields*

The last of "Alcoa's" supposedly unlawful practices was its infiltration into, and manipulation of, some of the markets for fabricated goods. These were three kinds: (1) buying an interest in the Aluminum Castings Co. and Aluminum Manufactures, Inc.; (2) the "price squeeze"; (3) the "piston patent pool." (1) "Castings" were one of the earliest uses of aluminum; "Alcoa" began to make them about 1901, and by 1909 there were a number of companies engaged in the business. Five of these combined in that year to form the Aluminum Castings Co., of whose shares "Alcoa" received 50 percent in exchange for advances made at the time. It does not appear what proportion of the total output these five companies had been manufacturing; certainly the plaintiff did not prove that they controlled the castings market. Later they acquired a sixth foundry, and in 1919 the combination was reorganized as Aluminum Manufacturers, Inc. In 1922 it leased all its real estate and machinery to "Alcoa" for 25 years, and may be regarded as thereafter a subsidiary. We cannot see that in all this the plaintiff has proved anything relevant to the action. If it means that there was a monopoly of the castings market as such, there is no support whatever in the record for such an assertion. If it means that "Alcoa's" intervention in the castings business helps to support its claim that "Alcoa" monopolized the ingot market, the inference is extremely weak. Finally, there was nothing in the transactions themselves which indicated that they were independently unlawful, or that they served to make "Alcoa's" legal position as to the ingot industry less vulnerable than it would otherwise have been.

The Aluminum Goods Manufacturing Co. makes cooking and other utensils out of aluminum. It was formed in 1909 by the consolidation of three small companies all its plants are in Wisconsin, and its principal place of business is in that State. At the trial 31 percent of the shares were held by Alcoa and its officers, and this proportion had been 36 percent in 1918. The proportion of the shares held by the three families, which had originally owned the combining companies, was almost 36 percent, and if there were added the shares owned by employees and by residents of the town where the principal business is, the percentage was originally over 50 percent and has so remained. Four of the six directors have always represented the original interests; the other two have represented Alcoa's interest. The four have frequently shown entire independence of Alcoa, and on several occasions have overruled its two directors, although the two companies have, very naturally, usually acted in unison. Again, we are not clear whether the plaintiff means to argue that by its holdings in this company Alcoa monopolizes, or has attempted to monopolize, the utensil market; if so, there is no support for it. If, on the other hand, the charge is that Alcoa invested in the company as part of its monopoly of the ingot market, that may be true. It may have hoped in this way to secure at least a friendly market for its ingot, if ingot competition should increase. As part of its general conduct after the Bradley patent expired, this purchase may thus be relevant, just as its investment in the castings business may be; but, like its investment in that business, there is nothing to support the conclusion that here was a practice or maneuver merely to suppress or exclude competitors; and there was no justification for joining the Aluminum Goods Manufacturing Co. as a defendant.

(2) *The "price squeeze"*

The plaintiff describes as the "price squeeze" a practice by which, it says, Alcoa intended to put out of business the manufacturers of aluminum "sheet" who were its competitors; for Alcoa was itself a large—in fact, much the largest—maker of that product and had been the first to introduce it many years before the period in question. The challenged practice ended with the year 1932, shortly after the Department of Justice

took up the complaints of several "sheet" makers, and began to investigate. The plaintiff says that the "squeeze" had been in operation for a long time before the year 1925, and that by means of it Alcoa had succeeded in eliminating four out of eight companies which competed with it. However, it will not be necessary to go back of 1925, for the only question before us is whether an injunction shall go, and a test of that is whether the practice in the years 1925–32, inclusive, was unlawful. If it was, the time when it began is irrelevant; if it was not, it was equally lawful in the earlier years. We shall not describe the manufacture of "sheet"—"sheet rolling"—beyond saying that "rolling ingot," not "notched bar ingot," must be used, and that it is forced between two rollers until it gets to the desired thickness: "gauge." It is made as "coiled sheet" or "flat sheet"; also the metal may be hardened by various alloys to bring up its tensile strength. The "squeeze" is asserted to have been exercised upon five "gauges" of "coiled sheet," four "gauges" of "flat sheet" and five "gauges" of alloyed metal—called "Duralumin."

Between the years 1925 and 1937, inclusive, "Alcoa's" books show the price of all these kinds of "sheet" for the "gauges" in question, together with the cost of making it from ingot. They also show the price of ingot, which was of course the same for all "gauges" and for all kinds of "sheet," as it was the same for all uses of aluminum other than "sheet." We are accepting as a basis the tables appearing as section XVII of the appendix to the plaintiff's brief—which is more favorable to "Alcoa" than those which the judge used. Except for the years 1925–28, inclusive, these tables do not include as an item of cost, "Unabsorbed Burden"; an accounting allowance, computed to cover the expense and loss properly to be attributed to that part of "Alcoa's" plant which was not being used during each year. We cannot see why it was not a proper item to include in the cost of production, for it was to be expected that other "sheet rollers' 'also would be unable to keep their plants fully occupied; and, if so, over a term of years they would have to "absorb" the ensuing loss in the price of the product. Moreover, as we have said, "Alcoa" itself so kept its books for the first 4 years of the period in question. Those were prosperous years during which the item was not likely to have been large, but even though we were to deduct in those years the average for the years in which "Alcoa" deducted it, the difference this would make in the average cost of "sheet" for the years before 1933 is trifling. At the expense of logical consistency and in order not to complicate the computations unduly, we have used the tables as they stand.

The plaintiff's theory is that Alcoa consistently sold ingot at so high a price that the sheet rollers, who were forced to buy from it, could not pay the expenses of rolling the sheet and make a living profit out of the price at which Alcoa itself sold sheet. To establish this the plaintiff asks us to take Alcoa's costs of rolling as a fair measure of its competitor's costs, and to assume that they had to meet Alcoa's price for all grades of sheet, and could not buy ingot elsewhere. It seems to us altogether reasonable, in the absence of proof to the contrary, to suppose that Alcoa's rolling costs were not higher than those of other sheet rollers; and, although it is true that theoretically, imported virgin was always available, for the reasons we have already given when we were discussing the monopoly in ingot, we think it could at best be had at very little less than Alcoa's prices. As for secondary, there were a number of uses for sheet for which the trade would not accept such of it as was available in the years in question. Beside, the spread between suitable grades of secondary and virgin was also very small.

Compressing into reasonable compass what the tables show, the result is as follows. For all the five gages of coiled sheet for 8 years, 1925–32, the average profit open to competing rollers was .84 cents a pound, as against 4.7 cents for the 5 succeeding years, 1933–37. The corresponding figures for flat sheet were .59 cents and 4 cents; and for duralumin, 4.9 cents and 11.8 cents. Moreover, in 31 instances out of 112 there was no spread at all; that is, the cost of ingot plus the cost of rolling was greater than the price at which Alcoa was selling sheet. Obviously, there was in the 8 years little or no inducement to continue in the sheet business, and Baush, the only roller of duralumin, gave up in 1931, although Alcoa insists, and the judge found, that this was because of its inefficiency. There can be little doubt that Alcoa changed the price of ingot in 1933 because it feared some action by the Department. True, it dropped the cost of ingot only about 2½ cents, and that advantage did not all inure to the profit of sheet rollers, for the price of the majority of the gages in all three kinds of sheet fell as well. However, the cost of making sheet also fell for every gage, and that in some part offset the fall in the price of sheet.

There resulted an average net gain in 1933 in all gages of coiled sheet of 2.84 cents a pound; and the corresponding figure for flat sheet was 4.49 cents, and Duralumin, 3.14 cents. Moreover, although this advantage necessarily varied during the years 1934–37, the cost of ingot—the most important factor—continued to be lower than in 1933 for all the following years except 1937, and then it was higher by only a quarter of a cent. The judge held and we agree that the squeeze was eliminated by lowering the price of ingot; and to do so Alcoa had to reduce the price, not only to sheet rollers, but to all customers who bought ingot for any purpose. The drop of 2½ cents in 1933 went along with an actual—though it is true a very small—increase in mill cost, which left a margin of 4.62 cents for overhead expenses. Since 1925 that margin had never been less than 10 cents except in 1932, when it was 7½ cents. It is of course possible that the reduction in the price of ingot was accompanied by a corresponding drop in overhead; the record is silent; but it seems to us unreasonable to make that assumption; sudden changes of such magnitude are not be expected. Rather we think that the plaintiff made out a prima facie case that Alcoa had been holding ingot at a price higher than a fair price, and had reduced the price only because of pressure. If that was not so, it should have rebutted the inference.

In spite of this evidence the judge found that in these years "Alcoa" had not intended to monopolize the "sheet" market; or to exclude others; or to fix discriminatory prices, or prices of any kind; or to sell below the cost of production, measuring ingot price as part of the cost. The last of these findings presupposes that "Alcoa" could not have known the cost of "rolling sheet," for obviously it knew the prices at which "sheet" and ingot were selling. It says that it did not know, because the cost of "rolling sheet" varied from year to year, and could not be ascertained till the end of the year, so that it could never tell in advance what part of the gross "spread" between the "sheet" price and the ingot price would be left as profit. That is indeed hard to believe; but, assuming that it could not, since the judge so found, at least as early as 1930 the complaints charged it with notice of the effect of what it was doing; and yet it kept on until the Department began to move, when it at once found means to cure the situation. Since we have not the question whether competitors were in fact damaged, but only whether there was enough evidence on which to base an injunction for the future, the only doubts are two: First, whether, when "Alcoa" came to know the effect of the "squeeze," as it did, the "squeeze" became unlawful; and second, whether the issue has become moot, which we will reserve until we come to discuss remedies. That it was unlawful to set the price of 'sheet" so low and hold the price of ingot so high, seems to us unquestionable, provided, as we have held, that on this record the price of ingot must be regarded as higher than a "fair price." True, this was only a consequence of "Alcoa's" control over the price of ingot, and perhaps it ought not to be considered as a separate wrong; moreover, we do not use it as part of the reasoning by which we conclude that the monopoly was unlawful. But it was at least an unlawful exercise of "Alcoa's" power after it had been put on notice by the "sheet rollers' " complaints; and this is true, even though we assent to the judge's finding that it was not part of an attempt to monopolize the "sheet" market. We hold that at least in 1932 it had become a wrong.

The same considerations do not apply to cable, of which Alcoa is the only fabricator. The plaintiff charges that Alcoa secured a monopoly of this by setting the price so low that there was no adequate spread. That may be true, but aluminum cable must in any event compete with copper cable, and the plaintiff failed to show that, even though the price of ingot were reduced so as to realize only a fair profit, it would have been possible to compete with copper cable and leave an adequate spread for cable fabricators. Complaints still continued after the squeeze in sheet had ended in 1933. The evidence permitted the conclusion that Alcoa may have had another intent in selling at a loss than to monopolize the market, or to suppress competition; and the finding was that it did. Such relief as the plaintiff can have, if any, upon this feature of the case, must therefore be limited to that against the monopoly in ingot.

(3) *The piston patent situation*

The plaintiff charges Alcoa with three kinds of misuses of patents: (1) An unlawful limitation of the production of licensees of its own patents; (2) accepting a license agreement from another patentee that unlawfully limited its own production; (3) using its own patents to force the purchase of ingot upon licensees. The situation was somewhat complicated. In 1922 a number of persons owned 53 design patents for automobile pistons; and Alcoa owned 45 such patents; it also owned some process patents for making pistons. All the design patents were put into a pool, and Alcoa was made the exclusive licensee of all with power to sublicense. It then issued sublicenses to three companies of all the patents, limiting the number of pistons which each licensee could make. The plaintiff argues that, although this limitation was lawful as to the design patents, it was not lawful as to the process patents, because such a limitation is a way of extending the monopoly.

We need not pass upon that proposition, although the sixth circuit upheld it in *Barber-Colman Co.* v. *National Tool Co.* (136 Fed. (2) 339) refusing to follow our decision in *Straight Side Basket Corp.* v. *Webster Basket Co.* (82 Fed. (2) 245), which was to the contrary. The decisions of the Supreme Court plainly show an increasing tendency not to allow a patentee to make use of the sanctions which follow upon an unrestricted prohibition of the right to make, vend, and use. Although even at common law a patentee was not allowed to attach any condition upon the resale of a patented product, made, and sold by himself, he was free to limit the price at which a licensee might himself sell what the licensee made, and it is not apparent to us what difference there is between that, and setting a price upon, or limiting the quantities of, a process. However, the whole subject is plainly in flux, and we do not wish to pass upon it unless we have to do so. In the case at bar we do not, because, granting all that the plaintiff says, it did not prove, in the case of any of the sublicensees, that the pistons were not

covered by the design patents, as well as by the process patents; and if the limitation was valid upon the design patents, it made no difference whether or not it was invalid upon the process patents.

The next charge arises from a transaction between the Bohn Aluminum and Brass Corporation and Alcoa in 1927. The Bohn company had a product patent for a strut-type piston, which Alcoa wished to make; and the Bohn company agreed to give Alcoa a license under this patent in exchange for Alcoa's license under the design and process patents. Alcoa's liability for royalties were to be computed as follows: It was not to pay any royalties, unless it made more than 5,000,000 pistons of all sorts in any year; but, if it did, it was to pay a royalty upon the excess until it had paid upon all pistons made during that year under the Bohn patent.

The plaintiff argues that it was unlawful for the Bohn company to license Alcoa under an agreement which exempted it from any royalties so long as it kept its total production of pistons below the stint, and that, if so, it was equally unlawful for Alcoa to submit to such a limitation upon its production. It is, of course, true that a patentee may not use his patent as a sanction for extending his monopoly beyond its terms: the cases cited by the plaintiff support that proposition. *Standard Sanitary Manufacturing Co.* v. *United States* (226 U. S. 20). *National Harrow Co.* v. *Hench* (83 Fed. Rep. 36 (C. C. A. 3)), *Blount Manufacturing Co.* v. *Yale & Towne Manufacturing Co.* (166 Fed. Rept. 555), *United States* v. *New Departure Co.* (204 Fed. Rep. 107). Moreover, the agreement offered an inducement to Alcoa to limit its general production of pistons, since it would in this way avoid any royalties to Bohn. We will not say that that was not an unlawful extension of the Bohn company's monopoly, and conceivably if that company were a party to this action, we might enjoin further performance of the contract; though we could not do so in the absence of the patentee. However, the agreement was made in 1927, and any patent which it covered has now expired, and with it, of necessity, the contract. It might still be argued that Alcoa ought to be enjoined from entering into any other such arrangement; but the point has become trivial to the last degree and appears to be raised for the first time in this appeal. We refuse to consider it. *Helvering* v. *Wood* (309 U. S. 394).

Finally the plaintiff charges that in 1929 Alcoa and Aluminum Industries—one of the original three sublicensees of the pooled patents—agreed, as one of the considerations for its license, that the sublicensee should buy its ingot from Alcoa. The theory here is that this was part of Alcoa's effort to monopolize the ingot industry. This would be an unlawful practice, if proved; but the judge decided that no such agreement had been made, and the evidence certainly admitted that conclusion. We find nothing in Alcoa's dealing with the piston patents which demands any change in the judgment.

This concludes all that we think it necessary to say about Alcoa's supposed unlawful practices. We have omitted consideration of any supposed conspiracy with foreign producers to protect its domestic monopoly, because it will be more convenient to deal with this as part of the organization of Limited, and of Alcoa's use made of Limited both before and after 1931 when the Alliance was founded, as will appear. The plaintiff's position in general is that Alcoa was independently a party to such combinations until the advent of the Alliance. We do not understand, however, that it asserts that this continued thereafter, except insofar as Limited is to be understood as always acting as Alcoa's agent or affiliate.

III

"LIMITED"

"Limited" was incorporated in Canada on May 31, 1928, to take over those properties of "Alcoa" which were outside the United States. Only two were excepted: a Dutch company which owned bauxite deposits in Dutch Guiana, and a Canadian power transmission company which supplied "Alcoa's" Massena plant. "Alcoa" also retained until 1931 an Italian company which it was using for experiments, and apparently for a few months forgot a small Norwegian power plant, which was transferred in October 1928. For special reasons the Alcoa Power Co., which owned the Lower Development on the Saguenay, was not conveyed until 1938, although both parties meant from the first to include it, and indeed it would have been useless to any plant in the United States.

In exchange for all the properties conveyed, "Limited" issued all its common shares to "Alcoa's" common shareholders in the proportion of one for every three; and it thus resulted that the beneficial ownership remained what it had been, except for the interest of "Alcoa's" preferred shareholders, who were apparently considered amply protected by the properties in the United States. At first there remained some officers common to both companies; but by the middle of 1931 this had ceased and, formally at any rate, the separation between the two companies was complete. At the conclusion of the transfers a majority, though only a bare majority, of the common shares of "Alcoa" was in the hands of three persons: Andrew W. Mellon, Richard B. Mellon, his brother, and Arthur V. Davis. Richard Mellon died in 1933, and Andrew in 1937, and their shares passed to their families; but in January 1939 the Davises, the officers and directors of "Alcoa," and the Mellon families—11 individuals in all—collectively still held 48.9 percent of "Alcoa's" shares, and 48.5 percent of "Limited's"; and Arthur V. Davis was then the largest shareholder in both companies.

The companies had a number of transactions with each other, upon which the plaintiff relies to prove that they did not deal at arm's length, but that "Limited" was organized only as a creature of Alcoa. As one instance, Limited apparently would have been able at times to sell aluminum in the United States at a profit but did not do so, because—the plaintiff argues—they had agreed not to compete. The inference is not strong: to break into a new market protected by a tariff subject to change, particularly a market for long in the possession of a single powerful producer, is a step which an outsider might well hesitate to take. Another supposed instance of cooperation is the manufacture of some of Limited's ore into alumina at the East St. Louis plant of Alcoa during the years 1928–36. Limited had no alumina plant of its own—except one of an experimental nature—until the end of 1936; yet, although Alcoa did make all Limited's alumina until 1932, thereafter Limited bought a great deal from foreign manufacturers. Although Alcoa sold this alumina to Limited at a lower price than it billed alumina to its own aluminum plants, Alcoa's intramural accounts are without significance. Alcoa also did some fabrication for Limited from Limited's own aluminum, and did it at only mill cost without overhead. That substantially ended by 1931; but, while it lasted, it was confessedly a favor, and indeed for a short season Alcoa undoubtedly did cast a kindly eye upon its fledgling, as Arthur V. Davis called it. Alcoa also bought three parcels of Limited's aluminum: the first two in 1929, and the last in February 1938. The first were perhaps at a lower price than Limited would otherwise have obtained, (the judge however found the prices were "fairly representative"); but they are not important, for they were both at the beginning of Limited's business, while there had as yet probably been little, if any, separation of interest between the two groups of shareholders. The third purchase was of quite a different character; it was part of the consideration for the conveyance to Limited of the Alcoa Power Co.

In 1928 Limited was not able to pay for this property, although, as we have said, it always expected eventually to receive it. The price, as finally fixed in 1938, was $35,000,000, of which Limited was to pay $20,000,000 in mortgage bonds issued by the company itself and the remainder in payments of two kinds: Limited was to pay Alcoa for power at a fixed rate, which should amount to at least $330,000 a year and Alcoa was to have an option upon 75,000,000 pounds of aluminum, at 13 cents, which was less than the market rate.

There was also some evidence that Alcoa took part in the formation of the Alliance—a foreign cartel, which we shall describe later. This consists very largely of declarations of Arthur V. Davis, put in his mouth by other witnesses; of a cable of Edward K. Davis to one of Limited's other officers; and of the improbability that the Alliance should have been set up without the active cooperation of Arthur V. Davis, especially as he was concededly in Europe and in communication with some foreign producers at about the time that the Alliance was first bruited. Edward K. Davis was the originator of the Alliance; he gave as his reason for it that he feared that the other foreign producers who had already joined in a cartel would shut him out. When these producers came to Canada in 1931 to arrange for the Alliance, they visited Arthur V. Davis and made an extended visit to Alcoa's plants in the East. As anticipatory confirmation that the Alcoa had had a share in forming the Alliance, the plaintiff also introduced evidence to show that before 1928 Alcoa had already had an understanding with foreigners as to prices. This consisted largely of the statements of what others had said about an agreement to keep their prices the same as Alcoa's. The plaintiff rested particularly upon the testimony of Haskell, who testified not only upon this point but more generally, because, when Haskell testified, although he had been one of the important figures in the Baush Co., he had made his peace with Alcoa, which had employed him in some advisory capacity. It must be remembered, however, that he had already testified in the action of the Baush Co. against Alcoa and that he could scarcely have repudiated what he then said.

The Davises, in answer to all this evidence, swore that "Limited" had been organized for three reasons, quite different from controlling prices in the United States: First, there was at that time a growing nationalism in the British Empire—where "Alcoa" sold most of its foreign aluminum—which manifested itself in the slogan, "Buy British," and which would be better satisfied if the properties were owned by a Canadian corporation, even though its shareholders were American. Next, "Alcoa" had neglected its foreign properties—relatively—and they would better prosper under a management singly devoted to them. Finally, the time was coming when Arthur V. Davis wished to take a less active part in affairs, and there would be embarrassment in choosing between Hunt and Edward K. Davis as his successor. Both said that the separation between the companies had been actually as complete as it was in form. Arthur said that, although while in Europe shortly before the "Alliance" was formed, foreign producers had spoken to him, he had then and always referred all their inquiries to his brother. He had discussed little with Edward any questions of policy about "Limited"; they had talked for the most part only

about the history, development, and future of the properties. He had indeed seen a preliminary draft of the agreement forming the "Alliance," but not its final form until the time of the trial, and he had had nothing whatever to do with its formation. As for the trip of the foreign producers in the United States, it was purely social—a good-will excursion, so to say—in which the relations of "Alcoa" and foreign production was not discussed.

Upon the whole evidence the judge found that by 1935 Limited had become altogether free from any connection with Alcoa, and that Alcoa had had no part in forming the Alliance, or in any effort at any time to limit imports, to fix their price, or to intervene in price-fixing cartels in Europe—except the early ones. In short, he again felt persuaded by the testimony against any inferences to be drawn from the conceded facts, and from the declarations put in the mouths of the Davises. As before, to do otherwise he would have had to find that both these men had deliberately perjured themselves; and we cannot see that these findings present us with anything different in substance from those on which we have already passed. Considering the interests in Limited which Arthur V. Davis and both the Mellons had, it would perhaps have taxed our credulity to the breaking point to believe that they knew nothing about the formation of the Alliance. Arthur V. Davis did not go as far as that; and that he and the Mellons should have put into the hands of Edward K. Davis the whole management of Limited, does not appear to us to pass the bounds of reasonable entertainment. Alcoa had had collisions in plenty with the plaintiff and others before 1931; the first Baush action, which challenged the price squeeze, had been filed in April 1928, and the second in July 1931. It was not unreasonable to believe that Arthur V. Davis and the Mellons, seeing that some kind of cartel might be an inescapable incident to continuing business abroad, wished in 1931 to keep Alcoa as far removed from it as possible.

Even so, the question remains whether Alcoa should be charged with the Alliance because a majority of its shareholders were also a majority of Limited's shareholders; or whether that would be true, even though there were a group, common to both, less than a majority, but large enough for practical purposes to control each. It is quite true that in proportion as courts disregard the fictitious persona of a corporation—as perhaps they are increasingly disposed to do—they must substitute the concept of a group of persons acting in concert. Nevertheless, the group must not be committed legally except insofar as they have assented as a body, and that assent should be imputed to them only in harmony with the ordinary notions of delegated power. The plaintiff did not prove that in 1931, to say nothing of 1936, there was not a substantial minority in each company made up of those who held no shares in the other; and the existence of the same majority in the two corporations was not enough by itself to identify the two. Alcoa would not be bound, unless those who held the majority of its shares had been authorized by the group as a whole to enter into the Alliance; and considering the fact that, as we shall show, it was an illegal arrangement, such an authority ought convincingly to appear. It does not appear at all. For support of this proposition we need look no further than to the decisions of the Supreme Court under the Commodity Clause. *United States* v. *Delaware & Hudson Co.* (213 U. S. 366); *United States* v. *Lehigh Valley R. R. Co.* (220 U. S. 257); *United States* v. *Delaware, Lackawanna & Western R. R.* (238 U. S. 516); *United States* v. *Reading Co.* (253 U. S. 26); *United States* v. *Lehigh Valley R. R. Co.* (254 U. S. 255); *United States* v. *Elgin, Joliet & Eastern Railway Co.* (298 U. S. 492). There was in all these cases strong reason to hold that the railroads had an indirect interest in the coal moved, yet the decisions uniformly assumed that the ownership, not of a majority of the shares, but even of all the shares, did not make the corporations coalesce. Except when there was evidence that those in nominal control of one of the two corporations, exercised no independent decision, but followed the directions of the other, they were treated as juridically separate. Indeed, were it not so, a minority of shareholders would always be compelled to see to it that a majority—perhaps even a controlling fraction—of the shares did not pass to a confederated group who had a similar control over another corporation. For these reasons we conclude that Alcoa was not a party to the Alliance, and did not join in any violation of section 1 of the act, so far as concerned foreign commerce.

Whether "Limited" itself violated that section depends upon the character of the "Alliance." It was a Swiss corporation, created in pursuance of an agreement entered into on July 3, 1931, the signatories to which were a French corporation, two German, one Swiss, a British, and "Limited." The original agreement, or "cartel," provided for the formation of a corporation in Switzerland which should issue shares, to be taken up by the signatories. This corporation was from time to time to fix a quota of production for each share, and each shareholder was to be limited to the quality measured by the number of shares it held, but was free to sell at any price it chose. The corporation fixed a price every year at which it would take off any shareholder's hands any part of its quota which it did not sell. No shareholder was to "buy, borrow, fabricate, or sell" aluminum produced by anyone not a shareholder except with the consent of the board of governors, but that must not be "unreasonably withheld." Nothing was said as to whether the arrangement extended to sales in the United States; but article X, known as the "conversion clause," provided that any shareholder might exceed his quota to the extent that he converted into aluminum in the United States or Canada any ores delivered to him in either of those countries by persons situated in the United States. This was confessedly put in to allow "Limited" to receive bauxite or alumina from Alcoa, to smelt it into aluminum, and to deliver the aluminum to Alcoa. Edward K. Davis gave as an explanation of this that "Limited" needed some protection against Alcoa's possible refusal to convey Alcoa Power Co., which Alcoa had never actually bound itself to transfer.

Although in 1931 "Alcoa" had all the producing capacity which it seemed likely to need—and so the event proved, for the clause was never invoked—Davis said that he did not know whether in the future the demand might not outrun that capacity, and whether "Alcoa" might not therefore be tempted to hold onto the Lower Development, unless "Limited" would smelt its alumina. That does indeed seem a somewhat far-fetched reason, but on the other hand it is hard to suppose that "Alcoa" really feared that it could not meet its future needs and meant to lean upon "Limited." The incident may be thought to have a bearing on "Alcoa's" implication in the "Alliance," but its only substantial importance, so far as we can see, is as showing whether the 1931 agreement was intended to cover the United States. That question arose very shortly after the agreement was made, and Edward K. Davis took the position that the United States was included, relying upon absence of any exception in the general language. His interpretation would seem to have been plainly right, not only for the reason he gave, but because otherwise there would have been no occasion for the "conversion clause." However, the other shareholders overruled him, and until 1936, when the new arrangement was made, imports into the United States were not included in the quotas. The issue turned out to be unimportant anyway, for the annual average of imports during the 5 years was in the neighborhood of only 15,000,000 pounds.

The agreement of 1936 abandoned the system of unconditional quotas, and substituted a system of royalties. Each shareholder was to have a fixed free quota for every share it held, but as its production exceeded the sum of its quotas, it was to pay a royalty, graduated progressively in proportion to the excess; and these royalties the "Alliance" divided among the shareholders in proportion to their shares. This agreement—unlike the first—did not contain an express promise that the "Alliance" would buy any undisposed of stocks at a fixed price, although perhaps section 3 of subdivision A, of part X may have impliedly recognized such an obligation. Probably, during the 2 years in which the shareholders operated under this agreement, that question did not arise for the demand for aluminum was very active. Nevertheless, we understand from "Limited's" answer to an interrogatory that the last price fixed under the agreement of 1931 was understood to remain in force. Although this agreement, like its predecessor, was silent as to imports into the United States, when that question arose during its preparation, as it did, all the shareholders agreed that such imports should be included in the quotas. The German companies were exempted from royalties—for obvious reasons—and that, it would seem, for practical purposes put them out of the "cartel" for the future, for it was scarcely possible that a German producer would be unable to dispose of all its production, at least within any future period that would be provided for. The shareholders continued this agreement unchanged until the end of March 1938, by which time it had become plain that, at least for the time being, it was no longer of service to anyone. Nothing was, however, done to end it, although the German shareholders of course became enemies of the French, British, and Canadian shareholders in 1939. The "Alliance" itself has apparently never been dissolved; and indeed it appeared on the "Proclaimed List of Blocked Nationals" of September 13, 1944.

Did either the agreement of 1931 or that of 1936 violate section 1 of the act? The answer does not depend upon whether we shall recognize as a source of liability a liability imposed by another State. On the contrary we are concerned only with whether Congress chose to attach liability to the conduct outside the United States of persons not in allegiance to it. That being so, the only question open is whether Congress intended to impose the liability, and whether our own Constitution permitted it to do so: As a court of the United States, we cannot look beyond our own law. Nevertheless, it is quite true that we are not to read general words, such as those in this act, without regard to the limitations customarily observed by nations upon the exercise of their powers; limitations which generally correspond to those fixed by the "Conflict of Laws." We should not impute to Congress an intent to punish all whom its courts can catch, for conduct which has no consequences within the United States. *American Banana Co.* v. *United Fruit Co.* (213 U. S. 347, 357); *United States* v. *Bowman* (260 U. S. 94, 98); *Blackmer* v. *United States* (284 U. S. 421, 437). On the other hand, it is settled law—as "Limited" itself agrees—that any State may impose liabilities even upon persons not within its allegiance, for conduct outside its borders that has consequences within its borders which the State reprehends; and these liabilities other States will ordinarily recognize. *Strassheim* v. *Daily* (221 U. S. 280, 284, 285); *Lamar* v. *United States* (240 U. S. 60, 65, 66); *Ford* v. *United States* (273 U. S. 593, 620, 621); Restatement of Conflict of Laws, section 65.

It may be argued that this act extends further. Two situations are possible. There

may be agreements made beyond our borders not intended to affect imports, which do affect them or which affect exports. Almost any limitation of the supply of goods in Europe, for example, or in South America, may have repercussions in the United States if there is trade between the two. Yet when one considers the international complications likely to arise from an effort in this country to treat such agreements as unlawful, it is safe to assume that Congress certainly did not intend the act to cover them. Such agreements may on the other hand intend to include imports into the United States, and yet it may appear that they have had no effect upon them. That situation might be thought to fall within the doctrine that intent may be a substitute for performance in the case of a contract made within the United States; or it might be thought to fall within the doctrine that a statute should not be interpreted to cover acts abroad which have no consequence here. We shall not choose between these alternatives; but for argument we shall assume that the act does not cover agreements, even though intended to affect imports or exports, unless its performance is shown actually to have had some effect upon them. Where both conditions are satisfied, the situation certainly falls within such decisions as *United States* v. *Pacific & Arctic Railway & Navigation Co.* (228 U. S. 87); *Thomsen* v. *Cayser* (243 U. S. 66); and *United States* v. *Sisal Sales Co.* (274 U. S. 268). (*United States* v. *Nord Deutcher Lloyd* (223 U. S. 512) illustrates the same conception in another field.) It is true that in those cases the persons held liable had sent agents into the United States to perform part of the agreement; but an agent is merely an animate means of executing his principal's purposes, and, for the purposes of this case, he does not differ from an inanimate means; besides, only human agents can import and sell ingot.

Both agreements would clearly have been unlawful, had they been made within the United States; and it follows from what we have just said that both were unlawful, though made abroad, if they were intended to affect imports and did affect them. Since the shareholders almost at once agreed that the agreement of 1931 should not cover imports, we may ignore it and confine our discussion to that of 1936; indeed that we should have to do anyway, since it superseded the earlier agreement. The judge found that it was not the purpose of the agreement to suppress or restrain the exportation of aluminum to the United States for sale in competition with "Alcoa." By that we understand that he meant that the agreement was not specifically directed to "Alcoa," because it only applied generally to the production of the shareholders. If he meant that it was not expected that the general restriction upon production would have an effect upon imports, we cannot agree, for the change made in 1936 was deliberate and was expressly made to accomplish just that. It would have been an idle gesture, unless the shareholders had supposed that it would, or at least might, have that effect. The first of the conditions which we mentioned was therefore satisfied; the intent was to set up a quota system for imports.

The judge also found that the 1936 agreement did not materially affect the * * * foreign trade or commerce of the United States; apparently because the imported ingot was greater in 1936 and 1937 than in earlier years. We cannot accept this finding, based as it was upon the fact that, in 1936, 1937, and the first quarter of 1938, the gross imports of ingot increased. It by no means follows from such an increase that the agreement did not restrict imports; and incidentally it so happens that in those years such inference as is possible at all, leads to the opposite conclusion. It is true that the average imports—including Alcoa's—for the years 1932 to 1935 inclusive were about 150,000,000 pounds, and that for 1936, 1937, and one-fourth of 1938 they were about 33,000,000 pounds; but the average domestic ingot manufacture in the first period was about 96,000,000 and in the second about 262,000,000; so that the proportion of imports to domestic ingot was about 15.6 percent for the first period and about 12.6 percent for the second. We do not mean to infer from this that the quota system of 1936 did in fact restrain imports, as these figures might suggest; but we do mean that nothing is to be inferred from the gross increase of imports. We shall dispose of the matter therefore upon the assumption that, although the shareholders intended to restrict imports, it does not appear whether in fact they did so. Upon our hypothesis the plaintiff would therefore fail, if it carried the burden of proof upon this issue as upon others. We think, however, that, after the intent to affect imports was proved, the burden of proof shifted to Limited. In the first place a depressant upon production which applies generally may be assumed, ceteris paribus, to distribute its effect evenly upon all markets. Again, when the parties took the trouble specifically to make the depressant apply to a given market, there is reason to suppose that they expected that it would have some effect, which it could have only by lessening what would otherwise have been imported. If the motive they introduced was over-balanced in all instances by motives which induced the shareholders to import, if the United States market became so attractive that the royalties did not count at all and their expectations were in fact defeated, they to whom the facts were more accessible than to the plaintiff ought to prove it, for a prima facie case had been made. Moreover, there is an especial propriety in demanding this of Limited, because it was Limited which procured the inclusion in the agreement of 1936 of imports in the quotas.

There remains only the question whether this assumed restriction had any influence upon prices (*Apex Hosiery Company* v. *Leader, supra* (310 U. S. 469)). To that *Socony-Vacuum Oil Co.* v. *United States, supra* (310 U. S. 150) is an entire answer. It will be remembered that, when the defendants in that case protested that the prosecution had not proved that the distress gasoline had affected prices, the court answered that that was not necessary, because an agreement to withdraw any substantial part of the supply from a market would, if carried out, have some effect upon prices, and was as unlawful as an agreement expressly to fix prices. The underlying doctrine was that all factors which contribute to determine prices must be kept free to operate unhampered by agreements. For these reasons we think that the agreement of 1936 violated section 1 of the act.

IV

THE REMEDIES

Nearly 5 years have passed since the evidence was closed; during that time the aluminum industry, like most other industries, has been revolutionized by the Nation's efforts in a great crisis. That alone would make it impossible to dispose of the action upon the basis of the record as we have it; and so both sides agree; both appeal to us to take judicial notice of what has taken place meanwhile, though they differ as to what should be the result. The plaintiff wishes us to enter a judgment that Alcoa shall be dissolved, and that we shall direct it presently to submit a plan, whose execution, however, is to be deferred until after the war. It also asks a termination of all shareholding in common between Alcoa and Limited; and that injunctions shall go against any resumption of the putative unlawful practices. On the other hand, Alcoa argues that, when we look at the changes that have taken place—particularly the enormous capacity of plaintiff's aluminum plants—it appears that, even though we should conclude that it had monopolized the ingot industry up to 1941, the plaintiff now has in its hands the means to prevent any possible monopolization of the industry after the war, which it may use as it wills; and that the occasion has therefore passed forever which might call for, or justify, a dissolution—the litigation has become moot. Limited on its part argues that, so far as concerns the Alliance—the only practice which we are holding unlawful—the war has killed it forever; and, more particularly, that the decision in *United States* v. *Hamburgische-Amerikanische Packetfahrt* (239 U. S. 466) is on all fours. We do not agree with either side; but, before giving our reasons, we must determine for what purposes we may look outside the record.

Both sides agree that the judgment in this action should speak from the time of its entry, like a decree upon an old bill in equity (indeed, until the advent of the new rules, the action would have been a suit in equity, though the bill was until then more properly described as a petition and the plaintiff as a petitioner). There is no reason why an appellate court upon deciding an appeal from such a judgment should not direct the district court what judgment to enter, and so it often does. Nor is there any reason why in deciding what judgment to direct, it should not advise itself from outside the record of such facts as appear to admit of no genuine dispute, i. e., should take notice of whatever the district court itself might take notice. Indeed, it would otherwise be impossible for an appellate court ever to dismiss an action upon the ground that it had become moot. We may, and we do, accept the figures of aluminum production in the report of the so-called Truman committee as of March 1944, which showed that the annual production of Alcoa's plants was about 828,000,000 pounds, that the production of plants owned by the plaintiff which it had leased to Alcoa, was about 1,293,000,000 pounds and that the production of the Reynolds and Olin plants was together 202,000,000 pounds; a total of about 2,300,000,000 pounds. The case is otherwise as to any facts already existing in August 1940, such as the amount of bauxite in Arkansas, as to which the Truman report also contains figures. Even though we took notice of these, the report would not be conclusive, or more than evidence. We could not constitutionally substitute it for the findings of a court after a trial—facts which a court may judicially notice do not for that reason become indisputable. Wigmore, section 2567a. At most we could do no more than treat the report as newly discovered evidence, and send the issue back for another trial, which in the present case we should under no circumstances be willing to do. For these reasons we refuse to take notice of facts relevant to the correctness of the findings, but we do take notice of those relevant to remedies.

After doing so it is impossible to say what will be Alcoa's position in the industry after the war. The plaintiff has leased to it all its new plants and the leases do not expire until 1947 and 1948, though they may be surrendered earlier. No one can now forecast in the remotest way what will be the form of the industry after the plaintiff has disposed of these plants upon their surrender. It may be able to transfer all of them to persons who can effectively compete with Alcoa; it may be able to transfer some; conceivably it may be unable to dispose of any. The measure of its success will be at least one condition upon the propriety of dissolution, and upon the form which it should take, if there is to be any. It is as idle for the plaintiff to assume that dissolution will be proper as it is for Alcoa to assume that it will not be; and it would be particularly fatuous to prepare a plan now, even if we could be sure that eventually some form of dissolution will be proper. Dissolution is not a penalty but a remedy. If the industry will not need it for its protection, it will be a disservice to break up an

aggregation which has for so long demonstrated its efficiency. The need for such a remedy will be for the district court in the first instance, and there is a peculiar propriety in our saying nothing to control its decision, because the appeal from any judgment which it may enter, will perhaps be justiciable only by the Supreme Court if there are then six Justices qualified to sit.

But there is another, and even more persuasive, reason why we should not now adjudge a dissolution of any kind. The Surplus Property Act of 1944 provides the method by which the plaintiff's surplus properties shall be disposed of: aluminum plants, and facilities among the rest, section 19 (a) (1). The Surplus Property Board, section 5a, is to designate one or more Government agencies to act as disposal agencies, section 10 (a), and they are to have responsibility and authority for the disposition of such property, and for the care and handling of such property, pending its disposition, section 11 (d), subject to the Board's regulations. These agencies may dispose of the properties by sale, exchange, lease, or transfer, for cash, credit, or other property, with or without warranty, and upon such other terms and conditions as the agency deems proper, section 15 (a). The following, among other objectives, are to regulate the orderly disposal of surplus property; (b) to give maximum aid in the reestablishment of a peacetime economy of free independent private enterprise; (d) to discourage monopolistic practices and to strengthen and preserve the competitive position of small business concerns in an economy of free enterprise; (p) to foster the development of new independent enterprise; (r) to dispose of surplus property as promptly as feasible without fostering monopoly or restraint of trade * * *. So far as consistent with the usual and customary commercial practice preference is to be given to smaller purchasers, section 18 (b); to whom, when proper, money may be lent, section 18 (f). Finally, no disposal agency shall even begin negotiations to sell a plant which has cost over a million dollars without advising the Attorney General of the probable terms or conditions of the sale; and he in turn must tell the agency whether the proposed disposition will violate the antitrust laws. The act must not be read to impair, amend, or modify those laws, or to prevent their application to purchasers of surplus property.

In view of these declarations of the purpose of Congress, the "agency" which the Board "designates" to dispose of the plaintiff's "aluminum plants and facilities" may well believe that it cannot do so without some plan or design for the industry as a whole, some comprehensive model which shall, so far as practicable, reestablish free independent private enterprise," "discourage" monopoly, "strengthen" small competitors, foster independents and not foster "monopoly or restraint of trade." If it should find this method desirable, it would have to learn what purchasers were in the market, how strong they were, what units they could finance and operate, and in what position they would be to compete. In such a model or design the "agency" would have to assign a place to "Alcoa," and that place no one of course can now anticipate. Conceivably "Alcoa" might be left as it was; perhaps it might have to be dissolved; if dissolved, the dissolution would depend upon how the other plants were distributed. If the "agency" should find it wise to proceed in this way, it may succeed in inducing "Alcoa" to accept the place assigned to it, particularly if the plan has not been prepared ex parte. If it does not succeed, then, but then only, will it be appropriate for the district court to act. We do not of course mean that in deciding whether to dissovle "Alcoa," or how to do it, that court must be governed by any plan which the agency may have devised, if it does devise one. But, plan or no plan, it must wait until it learns what the "agency" has in fact done. Moreover, if the "agency" does form a plan, it will have been an attempt to realize the same "objectives" for which the court itself must strive; and the court may well feel that it should accord to the "agency's" plan that presumptive validity which courts are properly coming more and more to recognze in the decisions of specialized tribunals. Nothing which we now say ought in any measure to limit the discretion of the "agency" to proceed in this way. Therefore we shall merely reverse the judgment, so far as it held that Alcoa was not monopolizing the ingot market, and remand the case to the district court.

From what we have already said, we must deny the plaintiff's prayer that those shareholders who own shares in both Alcoa and Limited, shall dispose of one or the other. Since we have affirmed all the findings as to unlawful practices except the "price squeeze," again it follows that no injunction will go as to these. As to the "price squeeze" itself, "Alcoa" insists that, even if it was unlawful, it has been discontinued now for 12 years, and that there is no likelihood that it will ever be resumed. "Alcoa" might add that, since there can be no "squeeze" if "sheet rollers" can buy ingot at competitive prices, there can be no need of an injunction, if that privilege is assured to them; and that, since it will be assured to them when the final judgment is entered, an injunction would only bring coals to Newcastle. We defer for the moment any general discussion as to when abandonment of a practice ought to bar an injunction, for we shall have to consider it more specifically in the case of "Limited." It is enough here to say that, since "Alcoa" abandoned the "squeeze" only after it became aware that it was under investigation, it is in no position now to complain of whatever stigma there may be in an injunction; in such a setting there is no place for sensibilities; nor should lapse of time secure immunity. More can be said for the argument that "Alcoa" will be unable to "squeeze" at all, if it loses its monopoly; but no one can be sure how the industry may change, and it is impossible to say that the same practice may not in the future commend itself to those who may come into control; and at any rate there can be no injustice in making assurance doubly sure. An injunction will go against any resumption of the "price squeeze"; the terms to be decided by the district court.

Unless the issue has become moot, Limited also must be enjoined from entering into any cartel, or agreement like that of 1936, covering imports into the United States; and even though it had become moot we should have to reverse the judgment, though we should then dismiss the complaint without prejudice, as in *United States* v. *Hamburgische-Americanische Packetfahrt, supra* (239 U. S. 466). We think, however, that the issue has not become moot, and that there are vital distinctions between the situation before us and that then before the Supreme Court. A number of steamship lines had there agreed to apportion between them the carriage of steerage passengers upon a noncompetitive basis. Two or three of the lines were German, and the agreement was to end in any event on December 3, 1915. Moreover, it provided that "the withdrawal of any one of the lines from the contract should release all others from all future obligation unless the others agreed among themselves to continue," page 472. The decision was rendered on January 10, 1916, after the contract had come to an end, and after war had been waged for over a year between Germany and the Allies. The Court treated the last circumstance as putting an end to the contract which certainly it did, so far as concerned the German lines. As between the other parties the contract was also terminated, if the exclusion of the Germans because of the war was a "withdrawal from the contract," as it should have been regarded. Besides, the contract was of such a kind that the exclusion of the German lines probably made impossible the realization of its purposes in any part; for the traffic divided was only between European ports and the United States and Canada, and it would scarcely have value to any of the parties unless all the large lines joined.

The agreement of 1936, on the other hand, was to last for 99 years, though it could be terminated on 6 months' notice by any shareholder who held 200 shares, and all held as many as 200. As we have seen, the two German smelters had been exempted from royalties, and it is not altogether clear what future part remained for them in the enterprise, although some past obligations were compromised. It is true that some 18 months before war was declared the other shareholders ceased to perform the agreement, but no one ever gave the prescribed notice of dissolution and, formally at least, the agreement continued, and still continues. Indeed, it is possible that all but the German shareholders can start up the system again without renewal, if they please. The only doubt is whether the termination of the Germans' connection by the war automatically put an end to the agreement as between the others, and at least a strong argument can be made, in view of the provision for dissolution by notice, that it was not to be dissolved by the mere withdrawal of shareholders—certainly of shareholders who were not within the quota and did not share the royalties. Finally, the two situations differ in the fact that "Alliance" itself, as a corporation, still persists, and all the original shareholders presumably remain such. The mere cessation of an unlawful activity before suit does not deprive the court of jurisdiction to provide against its resumption; a "case or controversy" may remain to be disposed of. There are plentiful authorities so holding. *Southern Pacific Company* v. *Interstate Commerce Commission* (219 U. S. 498, 514–516); *Goshen Manufacturing Co.* v. *Myers Manufacturing Co.* (242 U. S. 202); *National Labor Relations Board* v. *Greyhound Lines* (303 U. S. 261, 271); *Federal Trade Commission* v. *Goodyear Company* (304 U. S. 257, 260); *Walling* v. *Haile Gold Mines* (136 Fed. (2) 102, 105 (C. C. A. 4). To disarm the court it must appear that there is no reasonable expectation that the wrong will be repeated. That is not true in the case at bar. Unless we are to grant an injunction, we ought not pass upon the issue; if we do not pass upon the issue, we are by no means persuaded that "Limited," when peace comes, will not enter into another cartel which again attempts to restrict imports. It has insistently argued that the act does not cover such an agreement, and it alleges that it was forced into the cartel if it was to do a European business at all. It may be forced to do so again unless a judgment forbids.

The judgment dismissing the complaint against the Goods Co. will stand. The injunctions granted will embrace the officers of those corporate defendants against which they run.

Judgment reversed and cause remanded for further proceedings not inconsistent with the foregoing.

Proposed Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. CARLSON. Mr. Speaker, the Kansas Legislature, now in session, has approved House Concurrent Resolution

No. 24 memorializing the Congress to not create a Missouri Valley Authority with practically unlimited powers. As one interested in an early development of all the resources I heartily approve the action taken by our State legislature. Hon. C. C. Green, of Courtland, Kans., the author of this resolution, has for many years been active in the promotion of a program for the full and beneficial use of our water run-off. Congress is fully aware of the need for a planned program of this type and has on several occasions enacted legislation and appropriated funds for this purpose. Outstanding in this regard was the approval of the Flood Control Act of 1944 and the river and harbor bill recently passed in this Congress. Both of these bills contain what is known as the O'Mahoney-Millikin amendments. Those who are advocating a Missouri Valley Authority either overlook the important features of these two amendments or are more concerned about a Federal bureaucratic control of the entire valley than the actual accomplishments. The O'Mahoney-Millikin amendments provide:

1. A congressional policy to recognize the interests and rights of States in determining the development of the watersheds within their borders, and likewise their interests and rights in water utilization and control to preserve and protect established and potential uses for all purposes, and to limit navigation works to those in which substantial benefit to navigation will be realized.

2. Investigations which form the basis of any such plans shall be conducted in such manner as to give the affected States, during the course of the investigations, information developed and opportunity for consultation and opportunity to cooperate in the investigations with the Federal agencies in charge. If there is disagreement on plans, as between the Federal and the State agencies, the Federal agencies must submit the State point of view to Congress along with their own recommendations.

3. The use of water in the arid half of the Nation for domestic municipal, stock water, irrigation, mining, and industrial purposes are given a prior claim over that for downstream navigation.

4. The Secretary of War is authorized to make contracts with States, municipalities, private concerns, or individuals for domestic and industrial uses for surplus waters in flood-control reservoirs.

5. The Secretary of the Interior can build reclamation works to utilize surplus water of flood-control reservoirs for irrigation under the Reclamation Act.

6. Congressional approval of a joint Army Engineer-Bureau of Reclamation plan for development of the entire Missouri River Basin, and the authorization of $200,000,000 to each agency to undertake the work.

7. An increase in the number of dams on the Snake River in Idaho and Washington from four to enough to provide slack water for navigation without a waste of water that could be used for irrigation.

In my opinion, no well-informed person in the West would permit these gains to be traded away for a federally controlled regional authority of any kind. The Army engineers, the Bureau of Reclamation, and Soil Conservation Service are established agencies that are cooperating and coordinating a program for the entire valley. Congress has complete confidence in these agencies and I am sure will be most cooperative with them in the post-war period. These agencies have plans that will be of great benefit for the entire area as soon as they can be carried into effect. Why waste our time quibbling over a Missouri Valley Authority?

Following is a copy of the House concurrent resolution approved by the Kansas Legislature:

House Concurrent Resolution 24

Concurrent resolution relating to flood control and improvements in the Missouri River Basin and memorializing the Congress to not create a Missouri Valley Authority with practically unlimited powers

Whereas the Congress of the United States has enacted legislation providing for additional flood control and also for a further development of navigation on the Missouri River; and

Whereas plans are being made for an even greater development of the Missouri River, including a great development of irrigation; and

Whereas said improvements should be made at the earliest possible time in view of the destruction of life and property and the loss to industry, agriculture, and commerce caused by recent floods and the continuous waste of valuable water resources within this basin; and

Whereas improvements of the type contemplated have been carried on in the past by the Corps of Engineers, United States Army, and the Bureau of Reclamation, department of the Interior; and

Whereas the said Government agencies have had charge of such developments for many years and have planned and are prepared to execute the said works of improvement with no delay at the concusion of the war; and

Whereas it has been suggested that in order to further the progress of this development a Missouri Valley Authority should be formed with broad powers similar to the Tennessee Valley Authority: Now, therefore be it

Resolved by the House of Representatives of the State of Kansas (the Senate concurring therein):

SECTION 1. That we endorse the aforementioned improvement program and recommend and urge upon the Congress of the United States of America that the coordinated plan for the control and use of the waters of the Missouri River Basin, as now authorized by law, be given immediate adequate appropriation so that the plan can be executed as expeditiously as is consistent with the public economy.

SEC. 2. That we commend the Corps of Engineers and the Bureau of Reclamation for their action in effecting coordination of their activities within the Missouri River Basin.

SEC. 3. That while it may be necessary to create some permanent administrative coordinating agency to regulate the use of the water resources when development has been further advanced along the Missouri River and there is no objection to calling it a Missouri Valley Authority, we object, however, to granting to such administrative agency unchecked authority to engage in private business, operate farms, remove hundreds of thousands of acres of land from the tax rolls, take over the administration of education and of local and State laws and, in general, to do the economic planning for the entire area.

SEC. 4. That a copy of this resolution, suitably engrossed, be transmitted by the secretary of state to the Vice President of the United States as Presiding Officer of the Senate of the United States, to the Speaker of the House of Representatives of the United States, to each Member from Kansas in the Senate of the United States and in the House of Representatives of the United States, and the legislature of each State bordering or through which the Missouri River flows.

States Sponsor Job Bills

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 28 (legislative day of Friday, March 16), 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column entitled "States Sponsor Job Bills," by Peter Edson, which appeared in the Washington Daily News March 27, 1945, together with copies of the California bills to which Mr. Edson makes reference.

There being no objection, the article and bills were ordered to be printed in the RECORD, as follows:

STATES SPONSOR JOB BILLS

(By Peter Edson)

Movements to introduce in State legislatures full employment bills patterned closely on the national full employment bill introduced in Congress by Senators MURRAY, of Montana; WAGNER, of New York; THOMAS, of Utah; and O'MAHONEY, of Wyoming, are being watched in Washington with closest interest.

California is leading off this procession, with a State full-employment bill sponsored by the 36 Democratic Members of the State legislature. Accompanying the California bill is a resolution memorializing Congress to pass a national full employment bill as a necessary companion piece of legislation.

A similar bill is expected to be introduced in the New York State Legislature soon, and from advices there may be other State lawmaking bodies considering such measures this year, when 44 of the 48 are in session.

The California bill follows closely on the pattern of the parent United States Senate full-employment bill introduced, with the one important exception that it makes the primary responsibility for supporting maximum employment a function of the State government, and calls on the Federal Government to supplement the State aid.

By incorporating this provision in the California bill, one of the major criticisms of the Federal bill has been removed. When Senator MURRAY transmitted to the Senate without recommendation the first draft of a full-employment bill late in 1944, one of the cries raised against it was that it was more Federal paternalism.

One of the big kicks against W. P. A. was that it bypassed local government. By having a State government assume the primary responsibility, the Federal Government's load would be materially lightened and the move to put more of the functions of government back on the State level would be considerably furthered.

Aside from this one change, the California bill picks up much of the language of the revised Murray-Wagner-Thomas-O'Mahoney bill as introduced in the United States Senate in January.

The Governor would be required to submit to the State legislature an annual budget estimate on the total State economy, public as well as private, for the following year. Included in the budget would be an estimate of the labor force, and the number of job opportunities. On that basis the State legislature would be called upon to develop new industries, develop its resources, and encourage through State action public works and nongovernmental expenditures which would take up the slack.

Assembly Joint Resolution 18

Joint resolution relative to memorializing Congress to enact the full employment bill of 1945

Whereas during the war the United States has expanded its economy to unprecedented levels, our total national production of goods and services at the end of 1944 reaching an annual level of $196,000,000,000; and

Whereas in California the impact of the war has resulted in similar expansion. Our civilian labor force has increased by over 1,000,000 and now numbers three and one-half million people despite selective-service withdrawals. The net income in California in 1944 amounted to some $14,000,000,000 as compared to $5,000,000,000 in 1939–40; and

Whereas, in considering the magnitude of the Nation's economic problems, we must remember that the present level of production has been reached through huge Government expenditures for war, and that, unless an economic substitute for war contracts is found, mass unemployment will become a serious threat; and

Whereas, in January 1944 the President of the United States in a message to Congress outlined the second bill of rights, one of its declarations being "the right of a useful and remunerative job in the industries, or shops, or farms or mines in the Nation." A few months later the President stated, "To assure the full realization of the right to a useful and remunerative employment, an adequate program must provide America with close to 60,000,000 jobs"; and

Whereas no thoughtful American—no matter what his creed or station in life—would deny that every man or woman in this country who is willing to work and capable of working has a right to a job; and

Whereas this right must be made meaningful by Government responsibility to insure continued employment; and

Whereas now pending in Congress is a bill introduced by Senators MURRAY, WAGNER, THOMAS of Utah, and O'MAHONEY, intended to maintain the post-war employment level at close to 60,000,000 jobs; and

Whereas this bill gives Government and private enterprise joint responsibility of preventing extreme fluctuation of business volume and insuring jobs for all, assigning to private enterprise the primary task of making the economy fruitful, with Government stepping in when private enterprise fails to balance the economy budget; and

Whereas said bill requires the President to submit to Congress an annual estimate of how much spending business can be expected to do and how many jobs this spending will support. If these figures are too low, the bill further requires the President to submit to Congress a program of Government spending and investment to raise the number of jobs to full employment; and

Whereas the welfare of California is intimately linked to the Nation's welfare; we cannot expect to have an island of joy and prosperity in California amid a national ocean of depression; and

Whereas the specialized nature of California's new productive capacities, both industrial and agricultural, can only find outlet in mass markets overreaching both State and national boundaries; and

Whereas it is essential for the economic security and stability of California that our plans form a part of a national over-all plan for full employment as provided in the Murray bill: Now, therefore, be it

Resolved by the Assembly and Senate of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the Congress of the United States to enact the Murray full-employment bill of 1945 and to do so as early as possible in order that national machinery for employment security may be set in motion immediately; and be it further

Resolved, That the chief clerk of the assembly is directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to the Senators and Representatives from California in the Congress of the United States.

Assembly Bill 2136

A bill to add article 19 comprising sections 700 to 705, inclusive, to chapter 3 of title 1 of part 3 of the Political Code, relating to cooperative action between the State and the Federal Government, local governments, industry, labor, and agriculture for the purpose of assuring continuing full employment in a free competitive economy, and to repeal chapted 631 of the Statutes of 1943 establishing the State Reconstruction and Reemployment Commission

The people of the State of California do enact as follows:

SECTION 1. Article 19 is added to chapter 3 of title 1 of part 3 of the Political Code, to read:

"ARTICLE 19. PRODUCTION AND EMPLOYMENT BUDGETS

"700. (a) The legislature declares that the maintenance of continuing full employment in the State of California and the Nation is essential to:

"(1) The fostering of free competitive enterprise and the investment of private capital in trade and commerce and in the development of the natural resources of the State of California and the Nation;

"(2) The assuring of the existence at all times of sufficient employment opportunities to enable all citizens of the State and of other States of the Nation who have finished their schooling and who do not have full-time housekeeping responsibilities freely to exercise their right to useful, remunerative, regular, and full-time employment;

"(3) The promotion of the general welfare of the State and the Nation;

"(4) The protection of the American home and the American family as the foundation of the American way of life;

"(5) The raising of the standard of living of the American people;

"(6) The provisions of adequate employment opportunities for returning veterans;

"(7) The full utilization of our national resources;

"(8) The development of trade and commerce among the several States and with foreign nations;

"(9) The strengthening of the national defense and security; and

"(10) The establishment and maintenance of lasting peace among nations.

"(b) It is hereby declared to be the responsibility of the State to cooperate with industry, agriculture, labor, local governments, and the Federal Government in achieving continuing full employment.

"(c) It is hereby declared to be the policy of the State to discharge such responsibility by

"(1) Cooperating with the Federal Government in determining

"(a) The estimated size of the labor force, including the selfemployed in industry and agriculture and elsewhere;

"(b) The estimated aggregate volume of investment and expenditure by private enterprises, consumers, State and local governments, and the Federal Government, required to produce such volume of the gross national product, at the expected level of prices, as will be necessary to provide employment opportunities for such labor force;

"(c) The estimated aggregate volume of prospective investment and expenditure by private enterprises, consumers, State and local governments, and the Federal Government.

"(2) Pursuing such consistent and openly arrived at economic policies and programs as will help stimulate and encourage the highest feasible level of employment opportunities through nongovernmental investment and expenditure;

"(3) Providing, to the extent that additional Government investment and expenditure are necessary, the largest feasible volume of such investment and expenditure through the State of California and the subdivisions thereof, thereby reducing the need for Federal investment and expenditure; and

"(4) Assuring that such investment and expenditure by the State of California and the subdivisions thereof are designed to contribute to the wealth and well-being of the State and the Nation and to stimulate increased employment opportunities by private enterprise.

"701. The governor shall transmit a State production and employment budget to the legislature on the first day of each regular session, and in the years in which no regular session of the legislature is held on the second day of January to the joint committee provided for in section 703 hereof. Such budget shall set forth in summary and detail, for the ensuing year or such other period as the governor may deem appropriate:

"(a) The estimated size of the labor force in the State of California, including the self-employed in industry and agriculture and elsewhere;

"(b) The extent to which the number of employment opportunities will be consistent with the estimated size of the labor force, together with an analysis of the various factors, both national and local, affecting the number of employment opportunities;

"(c) A general program for encouraging, through State action, such nongovernmental investment and expenditure in the State of California as may best contribute to the achieving or maintaining of sufficient employment opportunities; and

"(d) A general program for providing such investment and expenditure by the State of California and its subdivisions, as may be necessary to help achieve or maintain sufficient employment opportunities;

"(e) A presentation of the relationship between the program set forth in accordance with (c) and (d) hereof and any national program of national production and employment budgeting which might be established by the Federal Government.

"702. (a) The State production and employment budget shall be prepared under the general direction and supervision of the Governor in consultation with the several heads of the State departments and commissions and with the officials of local governments throughout the State.

"(b) The Governor shall transmit to the several State departments and commissions and to local governments throughout the State such preliminary estimates and other information as will enable them to prepare such plans and programs as may be needed during the ensuing or subsequent fiscal years in the preparation of the State production and employment budget.

"(c) The Governor may establish such unpaid advisory boards or committees composed of representatives of industry, agriculture, labor, and local governments, and others, as he may deem advisable for the purpose of advising and consulting on methods of achieving the objectives of this act, but the Governor may not delegate his ultimate responsibility for the presentation of the budget described in section 701.

"703. (a) There is hereby established a joint committee on the production and employment budget, to be composed of four members, two to be chosen from the membership of each house by the party caucus of each house of the legislature, one member from each house being representative of each of the major and minor political parties. This joint committee on the budget shall have the force and effect of a joint committee of the legislature and of an interim committee.

"(b) It shall be the function of the joint committee—

"(1) To make a study of the State production and employment budget transmitted to the legislature or to said committee by the Governor in accordance with section 701; and

"(2) To report to the senate and the assembly its findings and recommendations with respect to the State production and employment budget, together with a joint resolution setting forth for the ensuing fiscal year a general policy with respect to such budget to serve as a guide to the several committees of the legislature dealing with legislation relating to such budget.

"(3) To meet on call of the Governor at any time when the legislature is not in session to receive any report of the State employment budget.

"704. (a) The Governor shall review quarterly all State investment and expenditure for the purpose of ascertaining the extent to which changing economic conditions warrant any change in the volume of such State investment and expenditure.

"(b) Subject to such principles and standards as may be set forth in applicable appropriation acts and other statutes, the rate of State investment and expenditure may be varied to whatever extent and in whatever manner the Governor may determine necessary for the purpose of assisting in assuring continuing full employment.

"705. Chapter 631 of the Statutes of 1943 is hereby repealed and the functions therein assigned to the State reconstruction and reemployment commission and the director of reconstruction and reemployment are transferred to the Governor."

Florida's Centennial

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, March 29 (legislative day of Friday, March 16), 1945

Mr. PEPPER. Mr. President, the third day of March was the one-hundredth anniversary of the signing by the President of the United States of the resolution which authorized the admission of Florida and also the admission of Iowa as States of the Union. On that day the Library of Congress, in Washington, had very fitting ceremonies in commemoration of the one-hundredth anniversary of Florida's statehood. It was my privilege to deliver an address in Coolidge Auditorium, in the Library of Congress, on that occasion. I should like to have the RECORD bear permanent testimony of my gratitude and the gratitude of the government and the people of the State of Florida to the Library of Congress for the fitting exhibit, which now is in progress there, of things pertaining to Florida, and I also desire to have the RECORD show our gratitude for the celebration on the occasion to which I have referred.

In conclusion, Mr. President, I ask unanimous consent to have the address which I have mentioned printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My first pleasant duty is to express the profound thanks of all of Florida to the Library of Congress for this occasion and all that it means, for the magnificent exhibit which we shall all see and all that has been done to make this centennial significant, not only to the State but to the Nation.

And also to express our deep gratitude to the Post Office Department and to all those who have had a part in the issuance of the commemorative stamp which has given immeasurably more meaning to this Florida centennial and will preserve it in so distinctive a record.

And to all those who have thought of us on this occasion, we shall be ever grateful.

THE CONQUERORS OF IMMORTAL YOUTH

In 1893 the United States was surviving a business depression, and hearing the usual lament that opportunity had ceased because the frontier was gone, and there were no more fields to conquer. The still young State of Florida, less than 50 years old, could take these dismal stories lightly. For it was the country's last frontier about to enter an age of growth seldom equaled in history.

In that year the literary world was thrilled by the appearance of a small volume containing a series of exquisite sonnets, called the Trophies, written in French by a Cuban-born aristocrat, Jose-Maria de Heredia. His ancestor, Don Pedro de Heredia, founder of Cartagena in Colombia, had known the waters of Florida, for he had touched at Habana on his last voyage home to Spain. The romance of the Spanish conquests was familiar to the poet from childhood, and one of his finest sonnets was dedicated to Ponce de Leon. Heredia must have brooded intensely over that historic landfall, a little north of St. Augustine, on Sunday, March 27, 1513. It was the Easter season and perhaps the odor of flowers came out to sea from the woods:

"Through lonely seas his galleys bore
Until beyond Bermuda's misty shore
Rose Florida from skies no cloud obscured.
Blessing his madness, the Conquistador
Planted his pennon with a shaking hand
In the bright land so soon to be his grave.
Old Dreamer, happy was thy fortune for
Despite thee death made fair thy visioned land
And Glory to thee Youth immortal gave."

The poet used his sources freely: Ponce de Leon, wounded in Florida, died in Cuba.

Floridians agree not with his contemporaries who said that his search for the mysterious island of Bimini and the fountain of youth was a temptation from the devil. A long line of illustrious explorers laughed that opinion to scorn. It didn't frighten Diego Miruelo, who skirted the west coast only 3 years later, discovered Pensacola Bay, and started all Cuba to talking of Florida's wealth. After him came many others, including Lucas Vasquez de Ayllon, and Panfilo de Narvaez (1529), whose men launched the first ships built by Europeans in the United States, at Apalache Bay. Only four survivors, after ghastly hardships, returned to civilization. One of them was Cabeza de Vaca, whose narrative is the source of this story.

Then came the incredible Hernando De Soto, who landed at Tampa Bay on June 25, 1539, and soon plunged into the wilderness to explore Florida, which meant one of those vast, vague regions claimed by European nations, with magnificent gestures. Heredia dedicated another sonnet to the dark romance of his burial in the Mississippi:

"With Florida his conquests were not staid.
For such a death shall no mean tomb be made:
Let the great river keep him in its ward."

Florida was a beachhead for the early explorers, on their amazing marches into the continent in search of the fabulous golden cities and magic springs, which always lay farther and farther on. Death and disaster often were their portion: they were not seeking the right things.

As the vast, sprawling Spanish Empire expanded, and its wealth of mine and ranch began to pour across the ocean, its masters saw the need of guarding its gates. One of them, the Strait of Florida, then as now was a point of departure for shipping lanes. Through it, for generations, went the fleets that bore to Spain the luxuries of the Indies, and the bullion that provided the means of war and diplomacy. From that need sprang the Spanish plantation of Florida, leaving traces still visible in the romance, monuments, and culture of the State.

King Philip II, brooding over the problem, found the right leader in a hard-bitten soldier, Pedro Menendez de Aviles. He was a perfect model of the conquistadors, those sunburnt, bearded men in steel corslets, who left their indelible mark on this hemisphere from Florida to Patagonia:

"Glory has grooved the furrows on thy brow
And seamed thy cheek, illustrious cavalier;
The scars of wars and scorching suns appear
On that bold front that none could force to bow."

Appointed Governor and Captain-General of Florida, he established St. Augustine in 1565, after driving the French from Fort Caroline on the St. Johns River, by the simple expedient of the sword.

The French, led by Jean Ribaut, landed there in 1562. There were devout Huguenots among them, and on May 1, at Batten Island, they celebrated (probably) the first Protestant service in North America. And at Fort Caroline were born the first white children born in North America outside of Mexico.

Historians have disputed the morality of Menendez ever since; but historians do not found empires. He was not a pleasant foe; empire builders often are not. Neither was that tough seadog from the Zuider Zee, Jan Pieterszoon Coen, an early governor of the Dutch East Indies. One can imagine the fate of Menendez, had he fallen into the hands of Sir Francis Drake.

The coming of a practical city builder marked the end of wandering in search of Eldorado, and the beginning of settlements, garrisons, missions, and trade. Florida was no longer a dream or a poetic ornament, and became an outpost of empire, part of the "Rim of Christendom." The fortifications that rose at St. Augustine, under his orders, prophesied Florida's role for two centuries. He founded the city so solidly that it survived a raid by Sir Francis Drake in 1586 and one by the buccaneer John Davis in 1665. The better qualities of Menendez appear in stiff letters to his royal master. He was the real founder of Florida—a stern fighter whose gentler side inspired his wish to be buried in the habit of the Franciscans.

FOR CROSS AND CROWN

We often consider the Spanish empire as a caravan of miners, gauchos, and adventurers, and forget its solid and permanent everyday life, generation after generation. The quick blooming of modern Florida has obscured the old plantation that flourished much longer than the time since our government took over in 1821. From Menendez to Andrew Jackson—men who might have appreciated each other—was a stretch of over two centuries. St. Augustine had flourished over 50 years when the *Mayflower* anchored inside Cape Cod. It is our oldest city, the oldest to be made the see of a Catholic bishop. The parish of St. Augustine has a full record of parochial acts from 1594. That long period dotted the map of Florida with names suggesting Spain's veneration of the saints, and established the traditional architecture. In a distant and incredible future, a successor of Philip II, perhaps a trifle wistfully, would decorate the founder of Coral Gables, for adopting Spanish architecture for his dream city, hewn from the same coral rock that went into the ramparts of St. Augustine.

Volumes have been written about the old cities, soldiers, and missions. And the work of uncovering that past is still in progress under the auspices of the Florida Historical Society, one of our oldest, organized in 1857. The society's publications, edited by Dr. James A. Robertson, comprise one of our richest mines of source material from original records. A company of brilliant historians and archivists, for many years, has been revealing to Americans the heroic story of Spanish Florida.

From these researches has emerged the portrait of a conservative society of soldiers, planters, and priests, founded upon loyalty to the altar and the throne. It was not devoted to mere adventure, for there is excellent evidence of its stability in the fact that Spanish colonists and missionaries are credited with introducing nearly 200 cultivated plants into America. In Florida, that society was an outpost of empire, after 1700, confined by French Louisiana and the British colonies. Small garrisons held its borders, and its remotest reach was to Pensacola, founded in 1696.

Meanwhile, no terrors of wilderness or martyrdom halted the Catholic missionaries—first the Jesuits and then the Franciscans—who roamed from the Everglades to the sea islands of Carolina and Georgia. They went where no soldier ever trod, and many paid with their lives. The Franciscans stayed about 2 centuries, and at one time had about 70 priests and brothers directing 44 missions with 30,000 Indian converts. A Quaker, Jonathan Dickenson, cast away on the Florida coast about 1696, noted the civilizing influence of those friars. In deserted places of Georgia and Florida, one still finds traces of their buildings.

New Englanders glory in the translation of the Bible for the Indians, by John Eliot, in the seventeenth century. A lay brother of the Jesuits, Augustin, compiled a catechism and grammar in the Yamasee language about 1568, on the island of Guale (St. Catherines). And on Fort George Island, sometime after 1597, Father Francis Pareja composed catechisms, treatises, a grammar and a vocabulary, in the Timuquan tongue of Florida. The missions bore such names as St. Rose, St. Joseph, Holy Cross, Ascension, St. Vincent, St. Michael, Holy Faith, St. Mary, and Name of God. One, planted in 1567 and called Tegesta, was in the region of Miami.

All this became nearly forgotten, when Florida felt the onset of a more aggressive and commercial society. Although it had a governor, the province was thinly peopled, for immigration was a mere trickle beside the stream to Mexico and Peru, and the flood that poured into the English colonies. The English won because they brought their wives and hacked farms from the forest. Florida could boast of agriculture; orange trees grew at St. Augustine before 1575, and there were coffee plantations on the lower coast. But the Spanish Floridians were mostly soldiers and traders who liked towns, and left the soil to the Indian and the friar. When the United States took it in 1821, the peninsula was still mostly wild.

The English invasion was only a matter of time and population. After the founding of South Carolina and Georgia, in 1670 and 1732, clashes between Spain and the northern neighbors became frequent and sometimes bloody. Florida had become a pawn on the international chessboard, where great powers maneuvered for prestige, colonies, and trade, in the unmoral game of power politics. St. Augustine changed hands repeatedly, and now enjoys the fame of having been under five national flags—Spanish, French, English, United States, and Confederate. When Spain sided with France in the world-wide Seven Years War, one of the penalties she paid was to yield Florida to England in 1763.

BETWEEN TWO WORLDS

The commercial wand of the Anglo-Saxon made its first pass over Florida in the period 1763 to 1783, when the two civil governments of East and West Florida were established. From that rather casual gesture sprang the endless question of the West Florida boundary, whose intracacies make good training in historical research.

The field was wide open to the speculators and planters, whose grandiose plans brought Florida's earliest land "booms," which occur on an average of once a generation. The first of the "paper towns" was on Amelia Island, where in 1769 William Fuller laid out New Town on the site of Old Fernandina. By 1784 the dream city had mushroomed into two or three huts. About the same time, 1769, the fascinating Andrew Turnbull planted his colonists from Greece, Italy, and Minorca, at New Smyrna, named for the home town of his Greek wife. The idea was to cultivate indigo on a grand scale. Englishmen snapped up large tracts in East Florida, the Government tried to lure colonists from Louisiana and build up seaports, and Pensacola became a prosperous trading center. More than 25,000 whites poured in, including thousands of American loyalists, and roads began to supplant the age-old waterways.

Reading the brief history of British rule, one catches the modern tempo of Florida, and hears familiar themes in the hurried composition. In the 1760's Jesse Fish planted his internationally famous orange grove on the west side of Anastasia Island, near St. Augustine. By the seventies he was shipping to England, not only in bulk, but also the juice, sweetened with sugar and preserved with spirit. The famous Bartrams, father and son, came down from Philadelphia to botanize, and marvel at the rare new flowers and gentle climate. They were among the earliest of a long succession of scientists, including James Audubon, who roamed Florida to study its birds. The publicists were not idle, and we see the father of a familiar breed in Bernard Romans, whose Natural History of East and West Florida appeared at New York in 1775. He praised the mild climate and "prodigious vegetative power" of Florida, and noted how the Spaniards of Habana visited there for health. There was even a short-lived newspaper, the East Florida Gazette, issued at St. Augustine in 1783–84.

But the struggle between two worlds was not over, for although Spain was declining, she was too proud to give up without a flash of the conquistador spirit. The embarrassment of Britain in the Revolution was a chance to recapture a lost jewel. In 1779–81, West Florida succumbed to a force led by Bernardo de Galvez, a name suggesting the glorious days of De Leon and Heredia. The treaty of peace in 1783 restored both Floridas to the Spanish Bourbons.

Their grasp was relaxing, the missions were gone, the Indians were restless. Loose characters and fugitive slaves abounded, and involved worried Governors in growing troubles. And what were the boundary treaty of 1795, and the small garrisons, against the turbulent intruders from Georgia and the Carolinas? Typical of the new element, although more respectable than some, was the vigorous and irrepressible John Houston McIntosh, a former revolutionary officer from Georgia. The annals of Florida, after 1800, abound in the escapades of this stormy petrel, whose presence foretold the inevitable Americanizing of the peninsula. Many squatters flocked over the border and calmly took lands, without the form of a grant from the helpless Spanish officials.

After Thomas Jefferson squelched his constitutional scruples and purchased Louisiana in 1803, the interminable haggling about the west Florida question irritated American and Spanish diplomats. Long and tortuous negotiations, spun out through three administrations, finally meshed into the treaty of February 22, 1819, which recognized the inevitable by ceding the Floridas to the United States. It was not a purchase, as Spain never got any money at all. The Government of this country merely assumed about $5,000,000 in claims of our citizens against Spain. There was some grumbling, but generally the Nation agreed with Niles' Register that we had made an excellent bargain. The mystery behind that tangled skein of diplomacy, is still unfolding its riches.

For Spain, there was sadness in the transaction. The old outpost was a freak, as the empire south of the Gulf was dissolving in revolutions, and the treasure fleets were only gorgeous memories, buried like sovereigns in their robes of state. There was also some humor. As a result of the Georgians' invasion of east Florida in 1812, the Spanish Governor Kindelan prepared a challenge to a duel to send to President Madison. The very idea of "Little Jemmie" Madison, and pistols for two, is irresistibly funny.

FLORIDA, THE TERRITORY

The challenge might better have gone to General Andrew Jackson, but perhaps the Governor knew that man too well. For "Old Hickory" really was the stern nurse, under whose rough ministrations Florida moved toward the status of a Territory of the United States. The short-lived republics of West and East Florida, in 1810 and 1812, and his invasions of 1814 and 1818, were simply preludes to Spanish acceptance of the inevitable. Jackson's irruptions into Florida affairs were meteoric, and his brief quasi-military government in the transition period (1821–22) was in character. He soon departed for Tennessee, with his usual frankness admitting the impossibility of applying to restless Americans the practically absolute powers, inherited from the Spanish authorities. "I am clothed," he said, "with powers that no one under a republic ought to possess." This is interesting coming from one whose determined spirit often subjected him to the charge of being a dictator.

His insight was confirmed by the early political trend of the Territory, which did not favor paternalism. The President appointed the Governor, but the civil administration organized in 1822 did not long remain without a democratic element. Due to popular insistence, in 1826 the legislative council became elective.

The change was not too soon, as the publicists were busy again. William Darby lost no time in getting out his Memoir on the Geography, and Natural and Civil History of Florida, a fascinating volume which appeared in 1821, extolling this "invaluable acquisition." Two years later, appeared a similar publication for prospective settlers, by Charles Vignole, a world-famous civil engineer. Probably most effective of all these early "puffs" was James Grant Forbe's Sketches, Historical and Topographical, of the Floridas (1821). These writings—some of them treasures for a rare book collection—sound the note of modern Florida, stressing the potential wealth in the kindness of the climate to orchards, gardens, and health, and the favorable position of the peninsula near strategic routes of ocean commerce and naval action.

Naturally, a boom was soon in full blast. The outbreak of the Seminole War and the panic of 1837 took the hot air out of it, but left the territory firmly grounded upon the essentials of Florida's prosperity from that day until now. It is refreshing to test the popular notion of Florida, as a purely modern boom State, by the colorful material patiently collected by her scholars from the yellowing newspapers and magazines of the long-neglected territorial period. Florida's economy rests upon the produce of its forests, fields, and gardens, moved over a net-

work of railroads, which bring the seekers for health and pleasure, and many students to the growing schools.

Before the peninsula attained statehood, the economic and social pattern of today was emerging clearly. Sugarcane held favor with the planters for 10 years after American occupation. But King Cotton soon ruled west of the Suwannee, and in 1822, 226 bales arrived at New York from Apalachicola. The forest wealth of Florida amazed the pioneers, and in 1829 the naval station at Pensacola started the conservation and nursery of live oak timber for shipbuilding. In 1838–40 Dr. Henry Perrine, encouraged by the United States Government, became the pioneer horticulturist of south Florida. His nurseries of tropical and semitropical fruits, at Indian Key, were the forerunners of a mighty industry. The editor of a Tallahassee paper looked into the future, when he published this little item in 1829: "The planters wear smiling faces, especially those that are raising sugarcane." Cultivation of tobacco, dating back to the British occupation, was a mainstay of middle Florida by the forties, and in the preceding decade a brief enthusiasm for silk culture brought fabulous prices for mulberry groves about St. Augustine. In the winter of 1847 the editor of the Jacksonville News enjoyed a gift from the plantation of Henry Floyd, near Micanopy. It was a surprise to him—but Florida "segars" are not longer a novelty.

As plantations cut into the woods, and bales piled on the wharves, the first short railroads appeared—precursors of the mighty systems built by Plant and Flagler half a century later. Construction of the Tallahassee-St. Marks began in January 1835, but the locomotives were "hay burners"—horses and mules. The first completed service, from Bayou Columbus to St. Josephs, was opened on April 14, 1836, with a big celebration in Florida style.

Even before the rails, came the health seekers, who began to reach St. Augustine on sailing vessels in the 1820's. They were called invalids, and apparently didn't mind. Regular steamboat service in the forties swelled the stream, the railroads of the seventies and eighties broadened it, and the auto made it a flood. The attitude of the natives also broadened, as travelers became winter visitors and then tourists.

All that remains to round out the modern scene is brushed in by the educational movement, which brought Florida into the contemporary crusade for the lyceum and the free public school. In 1821 a public meeting, in the courtroom at St. Augustine, started the public library, which soon received well-known periodicals and newspapers. Twelve years later a city ordinance established a free public school, supported by taxation. The final touch of modernity was a petition in 1845, for a post office at the village of Miami.

By that time the society of Florida had "jelled" into the mold it retained for generations, as plantations spread over the northern counties, and politics revolved around the leisurely little capital at Tallahassee. For a frontier, Florida boasted a cultured and highly sociable people, charmingly described in a chapter of Sidney Walter Martin's recent scholarly book, Florida During the Territorial Days (1944). At Tallahassee there was a group of planting and political families, whose hospitable houses were the scenes of capital dinners and conversations. The people high and low, liked religious celebrations, oratory, banquets with toasts, racing, and politics. Public life was very personal, and blew the fires of journalism to the point where no blast was too hot. Editors went the limit, undeterred by the recognized right of appeal to the duel.

The early Baptist and Methodist preachers, who lost no time in crossing the border, were rather shocked by the occasional levities of that gay society and undertook to tone it down somewhat. They have had their reward, although the going was rough then, for today some three-fourths of the church members in Florida belong to their faiths.

That frontier territory produced a surprising number of eminent persons who left traces in American life. The Dictionary of American Biography, up to 1936, includes 13 native Floridians, of whom 11 were born in the British and territorial periods.

Long before 1845 the eyes of the country turned toward Florida. There was fought the devastating Seminole War, which dragged on from 1835 until 1843. Pressed from their hunting preserves by the tide of planters, the Indians took to their fastnesses and fought. At a cost of 1,500 soldiers and some $40,000,000, most of them were removed to a western reservation. The remnant withdrew still deeper into the wilds, where they remain. Not until 1926 did they petition to swear allegiance and become citizens. Theirs was the stubborn spirit of Osceola, the head war chief, who was seized at a parley under a flag of truce. Clapped into Fort Marion and finally Fort Moultrie at Charleston, he died in a few months, January 30, 1838. His name, meaning "Rising Sun" (from the hour of his birth), became world-wide, on post offices, trade-marks, and ships. One would like to hear Osceola's comments, if from the Indians' Happy Hunting Ground he knows.

The Seminole War killed many a fine soldier, and for others was a testing and a chance for distinction. Several young officers who served in it, gained high rank in the Union and Confederate armies. Among the naval officers was young Lt. Raphael Semmes, who commanded the Confederate raider *Alabama* and became one of the most famous seamen in our history.

FLORIDA THE STATE

At a banquet given in 1830 to do honor to Joseph M. White, Florida's Delegate to Congress, this toast was drunk: "Florida, as impatient to break into the Union as South Carolina is to break out."

Florida's ambition was realized when she was authorized to become a State of the American Union March 3, 1845. The resolution of admission authorized the entry of Florida and Iowa at the same time.

On June 25, 1845, 2 days after the general assembly received with great sorrow the news of the death of Andrew Jackson, Hon. William D. Moseley before a large, a joyful and noisy crowd, was inaugurated as Florida's first Governor. The inaugural ceremony was concluded by the raising of the two flags—the flag of Florida and the flag of the United States, attended by the firing of cannons and the singing of the stirring strains of Yankee Doodle. A little sidelight on the occasion appears in the Florida Sentinel of July 1, 1845:

"The capitol was thronged with belles and beaux—the crowd of the masculine gender without was unprecedented—the day was terribly warm and the arrangements, by and large, were not half so good as they ought to have been. Nevertheless, when at the conclusion of the Governor's speech the editor of the Floridian, standing immediately behind His Excellency, called out, 'Three cheers for Governor Mosely,' the delicate request was complied with to the extent of some 20 voices, which, indeed, forms a respectable basis for the exulting remarks of the editor aforesaid: 'The shouts and cheers of the immense concourse of citizens testified their pride and joy and their young State was organized.'"

It may have been an ominous suggestion of said future events that the first flag of Florida consisted of five horizontal stripes, white, blue, orange, red, and green, with the words "Let us alone" printed on its folds. It might be added that Governor Moseley triumphed over a Whig candidate when he became Governor. No doubt there are still some who think the Democratic Party is what some called the then Democratic Party of Florida (no doubt the Whig enemies) Locofoco.

Until the Civil War Florida rapidly grew and prospered, the State being spared much of the severity of the depression of 1857. On January 10, 1861, by a vote of 62 to 7, the Florida Secession Convention passed the Ordnance of Secession and the local militia took over Federal property and forts. Rockets and roman candles spurted over the live oaks of Tallahassee on the evening following the vote.

Florida gave generously to the Confederacy and suffered cruelly from the war. Although Tallabasseee, the capital, was never captured, Federal forces blockaded the ports and raided the State to destroy supplies of cattle and sugar. In 4 years the assessed value of real and personal property sank by one-half and by the spring of 1865, 5,000 Florida soldiers were dead, martyrs to that cause for which they, too, "gave the last full measure of devotion."

After the war came the tragic era. Florida had to wait until 1868 to regain her statehood. It might be interesting to note that by the Constitution of 1868 Florida's boundary on her west coast extends three leagues, nearly 10 miles, out into the Gulf of Mexico. It was 8 years before the State regained self-government and reconstruction has passed as much as possible into history.

After 1876 northern capital began to flow into Florida. The two great builders of the new Florida were Henry B. Plant and Henry M. Flagler. Plant, who first saw Florida when he arrived, rather primitively, by water on a trip for his wife's health, lived to traverse the State in a private car over the rails of his own company, the Atlantic Coast Line. With his railroads, hotels, and other private enterprises, he was the great builder of the west coast of the peninsula.

Henry M. Flagler built his railroad from St. Augustine, finally to Key West, and dotted the east coast with his magnificent and magnetic hotels.

These dynamic men not only opened the State to tourists but to agriculture and to growing industry. Two great Governors of Florida were contemporaries of Plant and Flagler—Gov. William D. Bloxham coming right after Reconstruction, and Gov. Napoleon B. Broward a little later. It was Governor Broward who started the fulfillment of his dream to drain the Everglades of Florida for agriculture. This area embraces some 5,000,000 acres of some of the most productive land in the world.

When yellow fever was conquered about 1900, Florida bounded ahead. When DDT becomes available for general use after the war, I am sure we can promise you that not even a harmless mosquito will mar the paradise of any part of Florida.

When Florida appeared in the United States Census of 1830, settlement was a narrow, irregular band along the northern border from St. Augustine to Pensacola, and there were only about 35,000 souls in this great territory. It took 30 years for the figure to reach 140,000, and then the wavering line had advanced down the west coast about to Tampa Bay. On the Atlantic side the march was even slower, and the census maps of 1890 and 1900 leave the whole Southeast looking empty and forlorn. When Bishop William Crane Gray, of the Episcopal Church, came from Tennessee to take charge of his vast missionary district of South Florida in 1892, he found himself on the frontier, with primitive means of travel.

By 1912 Mr. Flagler saw his causeway extend the Florida East Coast Railway to Key West. By 1930 Florida had gained a population of 1,468,211 people, had had a roaring real-estate boom, and its own colossal depression closing hundreds of its banks. It had experienced two disastrous hurricanes;

it had even gone for Hoover—literally been through the wringer—and yet it survived them all and was still strong and unafraid; still possessed of a determined and dynamic spirit.

In the decade following 1930, after all of its catastrophic twenties, Florida led the Nation with a 29-percent gain in population. Our population of 66,500 of 1845 has today grown into over 2,000,000. We have 45,000 miles of paved road, 7,500 miles of railroad, 153 airfields, and through our port of Miami passes the largest volume of air commerce in the Nation. Over 2,000,000 tourists a year, in normal times, enjoy Florida's climate and hospitality—and, I may add, leave some $300,000,000 very happily behind.

We produce almost 70 percent of the Nation's phosphate. Florida produces a greater variety of products of the soil than any other State—2,000,000 acres in farms and groves, citrus, tropical fruits, vegetables, cotton, corn, oats, hay, tobacco, potatoes, pecans, truck vegetables, sugarcane—totaling in value a hundred and fifty million dollars a year.

Florida, with 328 species, leads all Southern States in the variety of native trees. Our total production of lumber, naval stores, and pulpwood is valued at $50,000,000. Some 30 percent of the world's supply of naval stores, now critical war materials, come out of Florida's forests. Thanks to a great American, Dr. Charles W. Herty, Savannah, and modern methods of forestry conservation, we should have a perpetual supply of quick growing soft pine, producing pulp and pulp paper.

Those accustomed to think of Florida only in terms of palm trees and bathing beauties should know that we have many fine looking cows in Florida too. We have something like one and a half million head of cattle valued at $45,000,000, and we are now the twenty-eighth cattle State in the Nation and the largest producer of the South Atlantic States. In fact, the Lykes Bros. Ranch near Lake Okeechobee, has over 400,000 acres in a contiguous tract and many thousand head of cattle.

Today we are turning out $200,000,000 worth of manufactured products—ships, small boats, aircraft, machinery, trucks and trailers, amphibious tanks, lumber, canned foods, processed foods, fertilizers, phosphates, wood products, pulp and paper, brick and tile, clothing, cigars, and beverages. From the longest coast line of any State we derive marine products of more than $25,000,000 annual value. We believe that we produce principally through the most Hellenic city in the United States, Tarpon Springs, the finest sponges in the world.

The sugar industry, which was of considerable importance in the 1820's has had a real new birth and today is a great and growing industry in the Everglades, which we call the "sugar bowl" of the world. This great industry has but to be let loose by restrictive legislation to furnish from a million or more acres of the fallow Everglades a considerable part of the Nation's sugar supply at low cost.

New products, ramie, a fiber five or six times stronger than cotton, which entered into the garments of Egypt's ancient mummies, is having a new birth in Florida and, besides the great war use which it serves, will in the future be a great source of materials ranging from delicate window curtains to wearing apparel, rugs, and heavy cordage.

Industries are now making from palmetto roots of which we have, as you recall, an abundance, not only a material more resilient than cork, but a peacetime source of wall board and building materials. From ramie leaves, from bagasse, the product left when the juice is squeezed out of sugar cane, and from citrus peel, are being made some of the best cattle feed. Thousands of acres of tung oil groves now produce tung oil, the fourth most important chemical we import. Modern science and increasing research applied to Florida's large natural resources, offer an inviting contribution to the Nation and the world.

Good harbors around our long coast on the Atlantic and on the Gulf have made possible great ports and in wartime mighty ship yards. The State is uniquely served by inland water ways and by a large canal system which when completed will provide a 12-foot deep intra-coastal canal from Jacksonville to Key West and down the entire west coast from Pensacola to Miami and with the St. Johns River, a canal bisecting the peninsula from Jacksonville to Lake Okeechobee; also, two canals of the same depth, one across south Florida and one across north Florida, connecting the Atlantic and the Gulf. The north Florida canal is a realization of another dream—the recommendation of John Quincy Adams in 1826, that there be across north Florida an Atlantic-Gulf canal.

It is easy to say that Florida, to the surprise of the casual observer, is rapidly becoming a great industrial State, following the example of its esteemed rival, a State of which you have no doubt heard, California. With the mean average temperature being between 69 and 72 degrees, with many local resources to be processed, with water transportation available to almost every part of the State, and eventually access to the great northern markets through non-discriminatory freight rates, with a labor supply of steady and skilled people and a favorable citizenry and government, a government which has no State income tax or inheritance tax, one can well anticipate that Florida will be a great industrial State, especially small nonsmokestack industry, whose workers will live in comfortable homes, exempt to the value of $5,000 of any property tax, till fruitful gardens and beautiful flowers, and will still have hours a day to spend where their former bosses languished in luxury in the surf or eventually at the races.

I have not spoken, because it is not a unique contribution among the States, of Florida's more than 200,000 sons and daughters in the armed forces, nor of Colin Kelly, nor Lieutenant Ninninger, nor of all the others who are winning back the right of men and women and little children to live happily in lovely and inviting lands under God's good sun and his providence, all over the earth. May God make us ever worthy of those who do not come back.

We are proud too, of those who shall come back, back to the land which some say the Vikings visited; the sands, the coral reefs and the luxurious foliage which John Cabot may have glimpsed; the fair land Ponce de Leon viewed and called Pascua Florida; back to the land of the conquistadors and the missionary and the Indians and the sturdy English, and the ever-pressing Americans; the land of Andrew Jackson and of his wife, Rachel; the land of Governor Eaton and Peggy Eaton of Washington; the land where Napoleon's nephew, the son of the King of Naples, rests beside a Prince of the Soul, a boy who gave his life to save another; the land of five flags and four successive civilizations; the land of color and the sunshine of life; the land of the faithful farmer and worker; the land of Osceola and Bloxham and Broward and William Jennings Bryan and Thomas A. Edison, of Plant and Flagler; the land where St. Augustine still keeps her stately vigil of nearly 4 centuries over a continent which has truly become what the conquistadors held it to be "the hope of the old world."

Florida in America—America's Florida.
May God continue to bless and to keep us is our prayer.

Our Accidental Presidents

EXTENSION OF REMARKS
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. NORRELL. Mr. Speaker, Dr. Frederick Taylor Wilson, noted author and lecturer and friend of many Members of Congress, has recently delivered an address of historic value on Our Accidental Presidents. He said in part as follows:

It is a surprise to many Americans to know that only 19 of the men who have served the Nation as President were active candidates for a party nomination and became President because a majority of the American people voted in their behalf. Twelve of the 31 Presidents may be called accidental Presidents, this for the reason that three of them, John Quincy Adams, Rutherford B. Hayes, and Benjamin Harrison became President despite the fact that there were other men who received more votes than they, at the time of their election. Three others, James K. Polk, Franklin Pierce, and James A. Garfield were not seekers for a Presidential nomination, but were taken up by their respective parties in nomination in an eleventh hour deadlock, nominated for the Presidency and later elected by a majority of the American people. Six others became President because they were serving as Vice President when the President under whom they served died in office. That six were Tyler, Fillmore, Johnson, Arthur, Theodore Roosevelt, and Calvin Coolidge. Of this number, only Roosevelt and Coolidge were able later to win the Presidency in their own name.

Let us look at this fortunate 12. John Quincy Adams, son of John Adams, our second President and, like his father, a Harvard graduate, scholar, diplomat, and statesman, was chosen by the House of Representatives as President, though Andrew Jackson had received both more popular and more electoral votes than Adams in the previous November election. The homes of the two Adamses, both their birthplaces and homes as ex-Presidents, were near each other in a small village near Boston, and their bodies now rest near each other in an old church in their native village of Quincy.

Rutherford B. Hayes received 250,000 fewer popular votes in the entire country than did Tilden, his Democratic opponent in the campaign of 1876. When a contest was entered, a strange commission was chosen by Congress, called an Electoral Commission, which voted in favor of Hayes by one electoral vote majority only Hayes, himself, was never sure of his own title to the high office which he held for 4 years only.

Benjamin Harrison of Indiana, grandson of William Henry Harrison, a former President, received 100,000 fewer popular votes than did Grover Cleveland, Harrison's opponent, who, like Andrew Jackson many years before, was three times the choice of more people for President, though he only held that office for two terms. Cleveland even carried Indiana, the adopted State of Harrison.

James K. Polk, our first dark-horse President and the only former Speaker of the House and graduate of a State University to be President, was a protégé of Jackson and was born near the birthplace of Jackson, not far from Charlotte, N. C. He was an

honor graduate of the University of North Carolina and was also the only ex-President who had his mother at his bedside at the time of his death.

Franklin Pierce of New Hampshire was put forward by Virginia delegates in a Democratic convention at Baltimore in 1852, the same city in which Polk won his dark-horse nomination, after a long-drawn-out effort to nominate other candidates. Polk had gone to the Mexican War a private soldier and had returned home a general. His opponent for the Presidency when he won was General Winfield Scott, who had been the head of all the armies in the Mexican War, when Pierce had first entered it as a private soldier. Pierce lived farther north than any other President.

James A. Garfield, our third dark-horse nominee for President, was the only President who went directly to that office from the office of Congressman. He went to Chicago as the champion of John Sherman, of Ohio, who actively sought the Presidential nomination which was thrust upon Garfield as the result of a brilliant address which Garfield made in nominating Sherman. Garfield had had an unusually brilliant career, having become a college president, a State senator, a Member of Congress, and a general in the Civil War, all in less than 7 years from the time he graduated from Williams College. His death at the hands of an assassin less than 1 year after he became President was one of the tragedies of American history.

John Tyler, who succeeded William Henry Harrison 30 days after Harrison had taken his oath of office as President and died, had been an obscure candidate for Vice President in 1836, 4 years before he was put on a ticket with Harrison, for the reason that other men had refused such a place. Among that number was Daniel Webster, who also spurned the Vice Presidential nomination 8 years later, accepted by Fillmore, who, like Tyler, became an accidental President. Tyler and Harrison were natives of the same county in Virginia, Charles City County, and each was the son of a former Governor of Virginia. Harrison went to Congress from the northwestern territory when 26 years of age, and Tyler was a Virginia Congressman at only 25 years of age. Tyler's career as President was a stormy one, since he was a Democrat with a Whig Congress on his hands. He had the largest family of any President, 14 children in all, the youngest of whom, Mrs. William Ellis, now lives on a farm near Shawsville, Va.

Millard Fillmore, of New York, became President after the death of Zachary Taylor, of Louisiana, the last southerner to go to Washington as President, 96 years ago. Fillmore had been defeated both for a Vice Presidential nomination and also for Governor of New York prior to winning the Vice Presidential nomination which later put him in the White House. Eight years after his election as Vice President he tried in his own name to be President and carried only the State of Maryland in the November election.

Andrew Johnson, a native of North Carolina, who succeeded Lincoln as President, won eternal fame as the one lone southern Senator who opposed secession. At Lincoln's request, he was Lincoln's running mate in the campaign of 1864, when the war was on, and fell heir to the Presidency when Lincoln died so tragically at the hands of Booth, his assassin. Johnson, by one vote only, escaped losing the Presidency in the impeachment trial which took place in the Senate Chamber, where he had won fame as the defender of the Union. Ben Wade, of Ohio, Speaker pro tempore of the Senate, would have been President had Johnson been removed from office.

Chester A. Arthur, a native of Vermont and adopted son of New York, was put on the Presidential ticket with Garfield to appease the forces of Grant, who had tried to win for Grant a third-term nomination for President. Arthur had held only one political position before—that of collector of the Port of New York, from which position he was removed by President Hayes for pernicious political activity. Despite his efforts to win a place as a great President, his name is obscure.

Theodore Roosevelt was put on the ticket with William McKinley in the campaign of 1900, primarily to shelve him as a political figure. He had already been successful as a historical writer, as a soldier in the Spanish-American War, and as Governor of New York, and was only 42 years of age. When McKinley fell at the hands of an assassin at Buffalo after, making a historic address Theodore Roosevelt, only 42 years of age, became then and now our youngest President. He was the first of our accidental Presidents who won that high office later in his own name. Theodore Roosevelt's body rests in a rural cemetery near his home at Oyster Bay, N. Y. Like the tombs of Jefferson, Cleveland, and Coolidge, there is nothing upon the tomb of Theodore Roosevelt to tell you that he was once an American President.

Calvin Coolidge, the last of our accidental Presidents, was a native of a small Vermont village where he was born in the rear of a small store, in which village he took the oath of office at an early morning hour by the light of an oil lamp, at the hands of his justice-of-the-peace father when President Harding died in 1923. Coolidge had lived his life as a public man largely in Massachusetts and it was in that State that he won the fame as Governor, which made him first Vice President and, later, President. He has been correctly called a Puritan in Babylon. He was President during an era of our history which has probably not yet been correctly defined by historians. He won distinction primarily as a man of silence, and like Theodore Roosevelt, was able to win in his own name the high office which had first come to him purely by accident.

Of the 31 men who have been President of the United States, 29 of that number now sleep the sleep of the dead. We have only one living ex-President, Herbert Hoover. When Lincoln first became President, there were 5 other living ex-Presidents, Van Buren, Tyler, Fillmore, Pierce, and Buchanan, the immediate predecessor of the unfortunate Lincoln.

Our present President, Franklin D. Roosevelt, though he has been elected four different times by the American people, is only one of three of our Presidents who has been three times or more the choice of the voting public. Jackson and Cleveland were the other two.

Woll Opposes Bill To Permit President To Cut Tariffs Anew

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, that the leaders of organized labor are fully alive to the implications of the most recent Roosevelt demand that the so-called Reciprocal Trade Agreement Act be continued, and that another 50 percent cut in tariff rates be permitted, is indicated by a statement issued by Matthew Woll, vice president of the American Federation of Labor, who is known throughout this country as one of the sanest, soundest, and most patriotic men we have. I submit the following newspaper article incorporating Mr. Woll's statement for the information of the House:

WOLL OPPOSES BILL TO PERMIT PRESIDENT TO CUT TARIFFS ANEW

Unalterable opposition to President Roosevelt's request for authority to negotiate reciprocal trade agreements lowering further this country's tariff rates was registered yesterday by Matthew Woll, a senior vice president of the American Federation of Labor, speaking as head of the American Wage Earners' Protective Conference.

Woll, in a statement to the Post, acknowledged that he favored extension of the power to negotiate reciprocal trade treaties on the existing basis for only 1 year, instead of the 3 requested, with the proviso that the authority be restricted to prevent the importation of goods below American cost of production when American goods are once again commercially available.

Other officials of the A. F. of L., which has thus far remained silent on the tariff issue, are believed to favor the administration's program, along with large elements of the Congress of Industrial Organizations.

Republican opponents of the administration's plan which calls for authority to lower tariffs a total of 75 percent below original levels or 50 percent below present levels have stressed the importance of a high tariff policy to both farmers and wage earners.

Woll's statement said:

"The chaotic world conditions which will continue at least until the end of the present war do not warrant an extension for the authority to enter into trade treaties for more than 1 year. * * *

"We are unalterably opposed to the request for authority to reduce present tariff rates an additional 50 percent. Tariff rates have already been reduced to less than the difference in costs of production as found by studies of the United States Tariff Commission.

"We favor an amendment to the authority to enter into trade treaties which would provide that no competitive foreign-made goods be permitted entry at total landed costs, tariff duties paid, which costs are less than American costs of production when American goods are commercially available."

Another Rebuff for the Would-Be Tax-Dodge Advocates—Illinois Joins Rescinding States—Score Down to 13 Endorsing Resolutions

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. PATMAN. Mr. Speaker, I have submitted for the RECORD on several occasions charts which showed the status of endorsing or rescinding resolutions passed or being considered by the various State legislatures relative to the limitation of the power of the Federal Government to levy taxes on incomes, estates, and inheritances.

These status charts have shown that April 13, 1943, House Joint Resolution 32 was introduced in the Illinois Legislature memorializing Congress to call a convention for the purpose of proposing the tax-limitation amendment to the Constitution.

House Joint Resolution 32 passed the house on May 15, 1943, and the senate concurred in the House action on May 26, 1943, placing the State of Illinois on record as favoring this vicious amendment. I do not know what representations were made to the legislators by the proponents, but I am sure that if the facts had been known to the members of that legislative body, they would never have endorsed this insidious plot. I know that many of the citizens of that State were incensed to discover that this had been put over without their even having seen any publicity about its being considered.

For instance, a member of the clergy from Illinois addressed a letter to me early this year and had this to say:

It seems that this issue has gone pretty far already in some States, and it is about time we start a little opposition. I note that Illinois is among the States which have already adopted a resolution to put through such legislation. They certainly have kept this matter very quiet, for I have not heard of it. I'll be interested in knowing who was responsible for its inception at Springfield.

On January 8, 1945, a rescinding resolution, House Joint Resolution 7, was introduced in the Illinois Legislature. This rescinding resolution would undo the damage done by passage of House Joint Resolution 32 back in 1943.

I was very much pleased to receive, on March 13, a telegram from one of the Illinois House members, as follows:

Illinois House of Representatives repealed Committee for Constitutional Government resolution.

And yesterday I received the following wire from two members of the Illinois House:

Our senate today voted to rescind constitutional amendment.

That is another expression by a group of legislators who have been given the facts. That expression also reflects the opinion of an informed and aroused constituency that has passed on to the legislators its feelings after it has had an opportunity to receive and study the facts. This is another group of legislators who are to be commended for prompt corrective action—the same commendatory remedial action which was taken by the legislators of Iowa, Wisconsin, and Arkansas.

From all the information I have been able to find the proponents are still clamoring that they have the endorsement of 17—one advocating organization goes so far as to say 18—States—they say nothing of the rescissions. However, they are cautious enough and clever enough to phrase their remarks so that they say that many States have passed the resolution—this is another example of the deceit and misrepresentation with which the group's activities and propaganda have been characterized.

As long as the Committee for Constitutional Government and the other proponents continue to hand out their falsehoods, I shall have to continue to periodically bring out the true score. Of the 17 States which have endorsed the principle of the twenty-second amendment, we now have 4 which have rescinded, and, regardless of the proficiency and convenience with which plain arithmetic problems are juggled by our friends, Mr. Pettengill, Mr. Gannett, Mr. Rumely, and Mr. McClure, the score is down to 13 endorsing States. What is of particular disturbance to the above four gentlemen is the fact that other States are considering similar rescinding resolutions.

As I have mentioned, once a State has endorsed, the only way to get that endorsement off the scoreboard is to have the legislature of that State pass such a rescinding resolution. An endorsing resolution remains good year after year unless rescinded, and it is upon this fact that the proponents have so relied. The game which they are playing is a big one—naturally, they would very much like to have had this thing put over quickly, but in the absence of that possibility they could well afford to work year after year, slowly adding one State after another to their list until their goal was reached.

Little did they dream that anything could interfere with their past successes—that any State would reverse its position was something that they had not taken into consideration. Well, unfortunately for the sponsoring group, I, for one, along with others, had the nerve to expose them and cause just such reversals—with full knowledge that I and the others who have dared raise our voices against their activities would be subject to every despicable tactic which could be conceived by the fertile brain of the four horsemen mentioned above—tactics devised expressly for the purpose of getting us out of their way so that their little plot would roll along to success. The group must be wondering what hit them to find their score rolling backward instead of forward. The light has been turned on.

I am including herewith an editorial which has come to my attention relative to the proposed amendment—the editorial is titled "An Unwise Tax Limit," and appeared in the Jackson, Miss., News of March 15. I wish that all of the citizens and legislators of that State would read it carefully and then delve into the motives and the motivating forces behind the proposed tax-limitation amendment. I am sure that if they would do this, they, too, would be as anxious as the people of Arkansas, Wisconsin, Iowa, and Illinois to correct their former mistake. As you know, Mississippi passed an endorsing resolution back in 1940. It is still effective. It has not been rescinded.

The editorial follows:

AN UNWISE TAX LIMIT

Spreading like a malignant disease, a creeping paralysis, through the State legislatures, is a proposal to make 25 percent the maximum tax that may be levied by Congress on any income, inheritance, or gift. This would be achieved by constitutional amendment. Already 17 State legislatures have adopted resolutions asking Congress to call a convention to move for such an amendment. If 32 States should adopt the resolution, the constitutional convention must be called to draft and submit such an amendment. If 36 States should then ratify it, the proposed ceiling on those particular taxes would go into effect.

This plan to protect the recipients of large incomes, inheritances, or gifts, against taxation based on their ability to pay, is not a natural growth. It is something that has been developed and quietly maneuvered through one legislature after another by an organization which calls itself the committee for constitutional government, or, sometimes, the committee to uphold the Constitution. Names with it are those of Frank Gannett, New York newspaper publisher; Sam B. Pettengill, an ex-Congressman; and Edward A. Rumely, convicted of being a German agent during World War No. 1 and now under indictment, awaiting trial, for contempt of Congress—refusal to reveal the names of contributors to the committee for constitutional government.

The success of this group thus far has mystified Washington. More than that, it seems to have mystified some of the States. Members of some of the legislatures, now on record as having voted for the resolution, say they were unaware of what was happening at the time.

The attention of Congress having been called to the matter by Congressman WRIGHT PATMAN, of Texas, members of the House Ways and Means Committee are becoming disturbed. Some of them, at least, do not like the prospect of writing post-war tax bills with their hands shackled by such a constitutional restriction. The proposed amendment would apply only to peacetime taxes, but Congressmen point out that the Government's need for revenues will not cease the day the war ends. They have in mind heavy expenses of the transition period, the care of veterans and so forth. They agree that lower taxation on large incomes would mean higher taxation on small incomes; that the 25 percent, in effect, would become the minimum, as well as maximum, for many taxpayers now required to pay less. Those opposed to sales taxes and excessive excise taxes believe that such taxes would become inevitable if the proposal to relieve the big taxpayers should be carried out.

Marriner S. Eccles, Federal Reserve Board Chairman, sees another threat in the Gannett-Pettengill-Rumely plan. "I can't imagine any action that would be more inflationary," he told the House Banking Committee.

Under ordinary times and conditions it may seem that a 25 percent take by Government from large incomes, estates, and inheritances is quite liberal, and the take should not go beyond that figure, but it must be borne in mind that these are not ordinary times and conditions under which we are living. They are extraordinary times and they may develop such unusual conditions during the post-war period that a levy heavier than that named will be imperative. Certainly, in this topsy-turvy and highly uncertain period restrictive legislation of any kind is unwise.

The State legislatures that have fallen for the plan apparently have been persuaded that relieving big incomes from heavy taxation would release a great flood of risk capital. This capital, it is asserted, would flow into all kinds of active enterprises and vast numbers of jobs would be created.

Maybe so, but there is much room for doubt. The builders of America's great industries, and of America's small industries for that matter, have not been the kind of men who band together to protect their constitutional right to hold on to everything that comes into their hands.

The industry builders have been men ready to take a risk, men with the courage to compete with established concerns, men driven

by desire—or necessity—to produce something, some article or service, better than has been produced before.

The promoters of the proposed amendment, on the other hand, seem to be asking the Government to guarantee their riches for the rest of their lives and the lives of their children and grandchildren. They are asking to be freed from the need to hustle. They want a sure thing.

Tax experts in Congress and out are seeking a formula of incentive taxation that will lead to widespread investment in productive job-making enterprises. They cannot see in this proposed constitutional amendment anything remotely resembling the formula they seek.

Post-war Chemical Planning

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. PLOESER. Mr. Speaker, in the extension which follows, I find much food for thought. Mr. Gaston du Bois is one of America's leading chemists and an executive of Monsanto Chemical Co. in St. Louis, Mo.:

[From Chemical and Engineering News of January 25, 1945]

POST-WAR CHEMICAL PLANNING

(By Gaston Du Bois)

In and out of favor during 1944 as the tide of war ebbed and flowed, post-war planning still remains of vital importance. Such planning should go deeper than just reconversion. We are dealing with the future of America—with the creation of new jobs through new industries and new activities. This process involves research, trials, delays—an incubation period, when expenditure of materials and labor is relatively small. Baruch put it aptly in a report to the President: "Victory is our first and only duty, but just as we prepare for war in time of peace, so should we prepare for peace in time of war."

Last November the Nation suddenly awoke and found that America was short of many essentials for warfare. Since then post-war planners have been about as popular as were interventionists before Pearl Harbor when they advocated America's preparation for and entrance into the European war. We entered the war unprepared and it took us 1½ years, or until June 1943, before we were able to attack effectively on the western front.

It has been very convenient to have allies holding the line between us and the enemy while we were getting ready, as England, France, and Russia were doing in the last war and are again in this war. We shall not always be so fortunate, nor can we hope to be so favored when we face domestic post-war problems.

We are now asked to soft-pedal post-war planning. In reviewing this request we in turn ask: Is it not more healthy and desirable to go counter to conventional thinking because the situation is serious enough to justify thorough examination from every angle? Why not wake up to realities and face our problems unemotionally and without partisanship?

We all agree with Mr. Baruch's statement in a letter to the President: "Victory is our first and only duty, but just as we prepare for war in time of peace, so should we prepare for peace in time of war."

The one thing which strikes me very forcibly is the fact that practically all of our post-war planners—and there are many—talk of reconversion only. Business and labor think in terms of reconversion; our administration in terms of reconversion in America and rehabilitation of foreign countries. Why are we so blind as to think that the economic development of our Nation is mainly a problem of reconversion? We chemists who have had experience in the development of new job-creating projects should know better. We know that a large part of our present manufacturing operations is the result of research of the last few years and we agree with a spokesman for one of our large chemical companies who recently said:

"The great research laboratories which have been established in America since the last war represent a national asset of extreme importance in the solution of future problems, particularly the problem of providing adequate employment at our high American standards. In 1942, 46 percent of my company's gross sales consisted of products that either did not exist in 1928 or were not then manufactured in large commercial quantities."

Bradley Dewey, who was so closely connected with the administration of our synthetic rubber program, recognizes that our success was due not merely to good administration and production, but to a far greater extent to developments which preceded our actual entrance into the synthetic rubber field. Mr. Dewey's recent statement recognizes the fact that notwithstanding the knowledge brought to this country by foreign contacts of one of our leading oil companies, our synthetic rubber plants "could not have been built without utilization of the great technological developments of the last two decades."

We had at hand fully developed the arts of high-temperature cracking and high-alloy steels, the art of welding these metals, also the marvelous and intricate control of continuous operations by means of instruments. These developments were necessary to and preceded our synthetic rubber production. Despite these prior developments, our synthetic rubber manufacture was purely a war project where cost was not of prime importance. We had to have rubber, and we went ahead, regardless of cost.

In peacetime such procedure would not be practical. An expensive plant would not be competitive with a plant built at a much lower cost, and we must realize that post-war planning is far more difficult than planning for war, because we cannot now afford to spend another $200,000,000,000 for jobs. This time we must invest—not spend—and investing requires more careful planning than does mere spending.

Our future economy and jobs will depend, among other factors, on reconversion, which is generally understood, but perhaps even more so on creation of new activities, a fact which is not well understood.

Reconversion, as generally understood, means simply the restoration of pre-war manufacturing status. We are determined to deal with the reconversion problem promptly after V-day, and on the whole, both Government and industry are cooperating in the solution of this problem. When I say "cooperating" I mean just that, because industry and Government should not overlap; they each have clear-cut tasks.

The Government has its particular tasks in connection with post-war problems which are important and should be done efficiently. The Government should conscientiously dispose of $100,000,000,000 worth of surplus property. It should take care of our foreign relations, and in particular, create the proper atmosphere for the development of foreign commerce. It should clean its own house, discharge unnecessary help, discontinue unnecessary jobs, and, needless to say, in so doing eliminate as far as possible all partisanship.

A TASK FOR FREE ENTERPRISE

The creation of new jobs through new industries and activities under our system of Government is primarily a task for free enterprise—that is, for anyone who has the will to take risks and do things. It is up to industry, to farmers, to transportation systems, to business in general—to all those who pay their employees directly out of earnings and not through taxation.

It should be emphasized that our problem is not merely one of reconversion, but also, and quite as important, it consists in the creation of entirely new things, new demands, and new activities, which alone can give jobs to an increased number of workers working shorter hours and at higher rates than before the war. That is truly a major problem and one which cannot be solved by reconversion alone.

The creation of new industries is a slow process extending frequently over a period of many years, during which time and capital are expended without certainty of return. This creative process involves research, trials, delays, or, in a nutshell, a certain incubation period, during which time the expenditure of materials and labor is relatively small. Nevertheless, this incubation period is an essential part of any new development and cannot be bypassed nor materially shortened, and it therefore follows that any hindrance to this incubation period will mean a delay in the development of the project.

But here is a blind spot in our vision, because in the face of these conditions we are told that nothing can be done now to prepare for the future until the critical war period is over, meaning probably until Germany has been defeated. War work comes first—that is well understood—and I see no objection to the attitude of the War Production Board which precludes for the time being any so-called reconversion activities. Reconversion will require much labor and material. For instance, if we start now to make automobiles for civilian consumption, that would be reconversion, but because of the heavy consumption of materials and mass utilization of labor, such a project would certainly affect our war program.

When we first started making automobiles at the turn of the century, we created a new industry, which is something quite different from reconversion. The development of this industry required, in its initial stages, a relatively small amount of labor and material. Jobs do not spring out of the ground. Our free enterprise system creates these jobs, which are very important to our future economy. Therefore, we should not be satisfied to let a Government bureau tell us to what extent it will be necessary to restrict the development of new projects.

We are dealing here with the future of America and the proper handling of a problem of this kind should involve consultation between Government and industry so as to determine how and when a start should be made. It is not up to the Government to command; it is up to both partners to consult with each other, particularly in a case where one of the partners knows very little about creation of new industries, and when there is a distinct possibility that these creative efforts can take place, to some extent at least, without interfering with the war effort. If any controls are necessary, industry will gladly yield, but it is just as necessary that the Government control its own preparations for post-war, just as industry does.

Is it true that 40 Diesel electric generating plants are being built in this country for Russia, to be used for rehabilitation of devastated Russian territory? How much help is

the Government giving to aid in the long-range hemisphere development for the industrial expansion of Latin American countries? Many of these Government projects were started primarily to secure important raw materials, but we may well inquire whether such activities which have to do with post-war planning for the benefit of Latin American countries are subject to the same limitations and restrictions as apply to our own internal developments. These are important questions which should be considered by both partners, Government and free enterprise.

We technologists should look beyond reconversion because we realize that full employment can only be attained through the creation of new enterprises. We realize that such developments require a certain incubation period which, if delayed, will delay the creation of new jobs. It should be possible for industry to pilot plant these new developments now, even though we delay reconversion work, and to do so we must sell this idea to our partner in Washington, so Government, in turn, can cooperate with us.

Tax Exemptions

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1945

Mr. JOHNSON of Illinois. Mr. Speaker, the growth of a true cooperative organization is most commendable, provided it is on its own capital, but the growth and expansion today in the very large so-called cooperatives, at the expense of Government money, provided by all taxpayers, is another subject entirely. Easy credit money to these cooperatives, supplied by the bank for cooperatives, derived from taxpayers' money, is becoming a most serious question. As I understand it, their money comes from the United States Treasury, at a low cost of 1 percent. Some of this money is then invested in debentures or Government bonds, and a profit is shown, all of which is a bookkeeping transaction and profit derived at the expense of the American taxpayer. This question is one that must be met soon. Under leave to extend my remarks I insert an analysis of a manufacturer on this tax question, which will prove most interesting:

I have read the twenty-first annual report of the Southern States Cooperative. It is dated November 1, 1944. Of its 14 pages of comment, two and a half are devoted to an attack on the National Tax Equality Association. The cooperative does not believe that it should pay any Federal tax. I submit that no line of logical reasoning can fail to conclude that it should.

The cooperative as of June 30, 1944, shows a capital structure as follows:

Total capital stock	$3,670,760.53
Total capital reserves (surplus)	3,244,473.85
Total stockholders' and patrons' equities	6,915,234.38

This is the concern which insists that no matter who pays for the war, it will not. It did a total business of $57,850,787 last year. It did not pay any Federal income tax and has not paid any even though its surplus totals over three million. In 1944, our company incurred an income tax of $875,000 and was allowed to transfer only $221,024 to surplus.

What are the reasons offered by this cooperative for its right to operate free of this crushing impost. As a matter of fact, the cooperative, which has as its ultimate goal the superseding of present competition, is operating on benefits and funds provided by those very competitors in part. Here are its reasons, as stated in the twenty-first annual report, and my comments thereupon:

1. Only farmers may be members.

Answer. Note the use of the word "members" in place of the more correct "stockholders," for if the members didn't get stock or its equivalent, there probably would be no Cooperative. Because its stockholders are farmers this corporation should be exempt. The absurdity of this as a valid reason needs no further comment.

2. The vesting of control in membership rather than in money. Cooperatives are organizations of individuals, not of money. In a true cooperative, it is the individual who counts and votes, each individual having only one vote. Private business corporations are organizations of money and it is the invested money which counts and votes.

Answer. We gather from all the above that if our corporation so amends its bylaws that each stockholder is entitled to one vote only, we, too, may be Federal tax-free. Reason No. 2 is simply a play on words, because the Co-op members certainly have money invested to the tune of nearly seven million for 154,831 members. To intimate that a mass of 154,831 members can actually of individual free not piloted decision control by their annual votes the operation of this giant enterprise is ridiculous. Some inner circle runs it just as such a circle runs most other organizations whether cooperative, corporation, or country club.

3. The limitation of the interest or dividends which may be paid on invested capital. The Federal Statutes impose a maximum of 8 percent. The Virginia statutes under which Southern States operate impose a maximum of 6 percent per annum.

Answer. Here is another play on words, because 6 or 8 percent is a mighty good and acceptable corporate dividend in any language, and no restrictions are laid upon the accumulation of undistributed earnings as surplus.

4. The treatment of all users alike, whether members or nonmembers.

Answer. I see no essential point of difference here with our own company. We do not give stockholders any special price nor do any other corporations in which I hold stock.

5. The requirement that cooperatives shall do business at cost—shall be nonprofit organizations.

Answer. The cooperatives violate this provision by the accumulation of surplus: they retain profit; therefore, they do not do business at cost. If they did, there would be no profit nor would there be the growth and expansion of which they brag.

5 (continued). Any overcharges for services performed must be returned to the patrons in proportion to the use they made of its services.

Answer. I doubt that the cooperative actually makes a refund to every customer. I doubt that they have the necessary records covering any and all sales. I say they cannot refund overcharges "in proportion to use" because the man who spends $100 for lubricating oil contributes far more to the cooperative profit than the man who spends $100 for cattle feed, yet he does not get more refund. Therefore, we again have a play on words, a policy which is not actually translated in equitable action. Furthermore, the cooperative should report all such refunds to patrons to the Income Tax Department. They are just as surely an increase in the recipient's income as any dividend ever declared.

5 (continued). A cooperative can have no profit for its own account.

Answer. This would seem to be the premise on which the cooperative claims tax exemption. But what is the item of $3,244,473.85 which appears on its balance sheet as capital reserves? If it isn't profit transferred to surplus as ordinarily thought of, what is it? It can only be retained profit; therefore, this cooperative is violating its own rules, and we are offered another play on words. In the cooperative language, surplus is reserve.

5 (continued). No stockholder can, in the event of liquidation or under any other circumstances, receive in his capacity as a stockholder more than the par value of the securities he owns plus interest not to exceed the minimum fixed by law.

Answer. But what becomes of his interest in the total capital reserves of $3,244,473.85? Who gets his share of these profits held back for one reason or another? If he gets his share, then he is participating in what can only be profits despite the fact that the cooperative is not allowed to have any. If he does not get a share, then someone later on will. I do not see any so-called "margins" in the capital reserves of their balance sheet which could not properly be termed "surplus." Profit is the margin between the sales and the cost thereof of our corporation. We could call it "margin" but that wouldn't fool the Income Tax Division.

SUMMARY

Cooperatives have unlimited ambition. They intend to do an ever-increasing share of the Nation's business. They are, I believe, financed by Federal funds when first organized. If successful, such loans may be repaid in full. Thus, we, the taxpayers, finance an organization whose ultimate victory means our collapse.

Following affairs to a logical conclusion, the so-called "private" corporation will have the choice of so reorganizing that it too can escape Federal taxes, or laboring under steadily heavier handicap. Presumably, if our dealers were our stockholders, and we dealt only with them, we would qualify provided each had only one vote no matter what his stock holdings.

There is one fundamental fault in present income-tax laws which tax only profit. The concern which fails to make profit escapes, yet has had all the rights, privileges, and protection afforded by the Government to whose support we contribute heavily. By claiming to make no profit, the cooperative and the unsuccessful private firm both avoid taxes. This fundamentally unsound, illogical plan or method of taxation which penalizes hard work and superior ability must be abandoned. All who benefit from the expenditures of government must share in its support. The only equitable tax is one based upon a certain percentage of net sales. Food and fuel should carry a rate just one-half that applied to all other commodities, and there should be no exemptions. The sooner Federal taxes are recognized as a definite part of the cost of doing business, yes, of even existing here, the sooner we will get out of the present morass of complicity and confusion.

There would be no just complaint by taxpaying corporations if it were not for the present double taxation imposed upon corporative profits. The cooperative has as its avowed purpose the increasing of its stockholders' annual earnings by the reduction of their costs. The taxpaying corporation also is dedicated to increasing its stockholders' earnings, but before such earnings can be

passed on they are heavily taxed to the corporation, then taxed again as dividends. All profits disbursed as dividends should be tax free to the corporation. I am a stockholder in Pure Oil, and I'll resist all men who say that it is wrong for Pure Oil to increase my earnings and right for any co-op to increase those of John Farmer.

DON B. TOLLEY.

FEBRUARY 9, 1945.

The Jewish Legions in World War No. 1

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, March 29 (legislative day of Friday, March 16), 1945

Mr. JOHNSON of Colorado. Mr. President, on March 18, in the Hotel Astor, New York City, at a meeting held under the auspices of the New Zionist Organization of America, I delivered an address on the Jewish Legions in World War No. 1. I ask unanimous consent to have the address published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are met here tonight to commemorate the creation of the Jewish legions in the First World War. We cannot add to the glorious exploits of the heroic Jews who, shoulder to shoulder with other patriots, in World War No. 1, struck such telling blows for God and humanity. That is not our purpose on this particular anniversary. Rather we are met here to interpret in present-day realism that significant event of history.

The creation of the Jewish legions might well be pictured as the awakening of a sleeping giant, ready once again to assume his responsibilities in the family of nations. After centuries of dispersal throughout the world, after centuries of cruel persecution, Jewish patriots, on the 17th day of March 1915, rallied once again, organized the Jewish legions, and fought the forces of evil and tyranny which would enslave both Jew and gentile. While it marked the first time in centuries that an organized Jewish military unit had fought for righteousness and justice as Jews, it was no mere accident. The Jewish legions sprang to life and action in 1915 with a full realization of their own obligation to mankind and the crisis that faced civilization. Theirs was the natural response of an aroused people to the clarion call of humanity for help and assistance.

It would be a mistake to insinuate that Jewish participation in man's fight for a better world is something new. It is nothing of the sort. Whenever and wherever permitted, in peace and in war, with the weapons of the spirit or the weapons of physical combat, Jews of all countries and in all centuries have taken part in the never-ending struggle for a better world. But Jews, as Jews, have not had the credit. Always that has gone to the countries in which they lived.

How many know that in the First World War, 1,055,000 Jews fought in the ranks of the Allies? That figure places the Jewish contribution to our cause in World War No. 1 as next to that of the so-called Great Powers and far ahead of the contribution of the smaller nations. In that war 116,825 Jews were killed in the ranks of the Allies—almost double the number of our own dead.

In the present war enough Jews are fighting under the banners of the United Nations to constitute one of the greatest armies of all time. Five hundred thousand Jews are fighting in the ranks of the Soviet Union and 600,000 under the Stars and Stripes; 80,000 Jews fought for France; 53,000 are fighting for Britain; 8,000 under Canadian colors; 16,000 accepted certain death as guerrillas; 250,000 Jews fought in the defense of Poland and 32,000 of them paid the supreme price of their devotion.

One hundred and thirty-five thousand Jews in Palestine voluntarily registered for war service. Thirty thousand of them finally succeeded in begging their way into the British ranks. They had to beg for the privilege of defending their own soil and one out of every four of them were finally allowed to fight the common enemy. We have heard much of the three and one-half million helpless, defenseless Jewish martyrs massacred in the slaughter pens of central Europe by the unspeakable Hitler, but very little indeed of the one and one-half million Jewish fighters who are taking an active part in the armies of the United Nations. That has been a military secret.

American Jews do have a flag and a country, and as Americans they should fight as they are fighting for that flag and that country. I am not contending otherwise. But there are in this world Jews not accepted as nationals by any country. As such they constitute an international problem; and while it is far more than a Jewish problem, and while its solution will affect all mankind, the Jew himself should have a voice in its solution. To assert himself, to assert his right to live as a member of a free people, is a matter of first and vital importance to him and to us all. True equality the world over is a freeman's most dependable security. The creation of a Jewish state in which unwanted and persecuted Jews might voluntarily repair to live in dignity would not only transform them from pariahs to acknowledged members of responsible society but would raise the stature of mankind everywhere.

It has been obvious to me all along that there is no more eloquent, no more elementary way of proclaiming this status, no clearer way of gaining recognition and deserving to be recognized than for unattached Jewish soldiers, under a Jewish banner, to join the United Nations in the titanic and common struggle against tyranny and injustice. Nothing could proclaim more convincingly the indomitable will of the Jews to constitute a nation once more—then their claim to the dignity of nationhood would not longer be overlooked and sidestepped. Had young Jews been permitted to mobilize an army and to demonstrate their devotion and purposes side by side with other peace-loving nations, they would not now be ignored, as they are being ignored, in the conclaves assembling to prepare peace terms for the world.

We, who all during this war have proclaimed the right of the Jews to form a Jewish army and join the United Nations, have comprehended the complicated situation all too well. It is because of our understanding of the real issues involved that we have kept nagging bureaucratic-minded governments and have kept arousing an uninformed public opinion in this matter of a Jewish army. We have no apologies to make for our efforts, and only regret that in this fight for a fundamental principle we have not been more successful.

We do not agree that the Jewish brigade created a few months ago by the British Government is even an incomplete answer to our prayers. It is merely a feeble and utterly insufficient step in the right direction, and any significance with which it might have been clothed has been nullified by the very belatedness and by the reluctance with which it was finally undertaken. It is another case of "too little and too late."

Nor was this accidental. The very reasons which prompted us to persist in our demands for a Jewish army inspired the British refusals of its formation. Now, when the war in Europe is approaching its final stages and our minds are diverted to the numerous world-wide problems of peace, British objectives become obvious. It was not an army alone that was denied to the Jews; nationhood was denied them.

Nations who have made no contribution whatsoever to mankind's fight against the Axis—indeed, nations who have sympathized with the Nazis and actively sabotaged our war effort—these nations, now that Germany has lost the war, are gaining admission into the bosom of the United Nations at the cheap price of hypocritical lip service.

On the other hand, the Jewish people, despite the oceans of Jewish blood spilled on all the battle fronts and in all the torture chambers of central Europe, find that door closed to them.

It is discouraging to note what small progress for national life has been made since that great day in history, March 17, 1915, when "Zion's mule corps" raised Zion's flag at Gallipoli. How far from success we really are on this thirtieth anniversary of that great day has been vividly demonstrated to us by an incident in connection with the recent trip of the President and the Prime Minister to the Near East. There is little doubt that Palestine was a subject vital to some of the diplomatic and secret conversations. I listened with sorrow when the President said in his report to Congress that he had learned more about the Jewish question in a 5-minute talk with Ibn Saud than he could learn from a dozen letters. This unfortunate aside remark dramatizes the spirit in which the whole subject of Palestine has been approached by those who would shape the world of tomorrow.

With all due respect to the President and King Ibn Saud, I must say that the choice of the desert king as an expert on the Jewish question is nothing short of amazing. With respect to the Jewish question outside of his kingdom, I imagine that even Fala would be more of an expert; and as for Jews within his kingdom, I understand there are none.

Senator BREWSTER and I are members of the Senate Committee of Nine on Middle East Petroleum. We possess first-hand knowledge of the magnitude of the huge oil reserves there, and of the pottential vital strategic and trade positions incident thereto. Indeed, if the United States is to carry her share of responsibility for world peace and world affairs, it is prudent that we should take cognizance now of all of the factors involved in the stability of that region.

As I see it, a strong, free, dependable, and friendly Palestine should be the cornerstone of our inescapable participation in the affairs of the Middle East. The fabulous billions of barrels of black gold in that general area may well become the casus belli of World War No. 3. Therefore, one cannot but agree and welcome the formation of an American sphere of influence in the Near East. That much we grant. But I deny that an American sphere of influence must result in a betrayal of the aspirations and the hopes of the Jewish people. I reject, as baseless and unfounded, the theory that to protect the world's interest in Arabian oil the United States must assume a pro-Arab and anti-Jewish position. Arabian oil does not weigh more than Jewish blood.

I deny, too, that we went to war, strained our credit to the breaking point, dispatched 12,000,000 of the flower of our youth to all the battlefields on the earth for colonial empires for anyone, or for that matter for the betrayal of our real friends. I contend that we can effect the proper utilization of the petroleum resources of the Middle East in the promotion of world peace and stability, and at the same time preserve our devotion to democratic principles, and discharge our

obligation to the Jewish people should we assist them to realize their aspirations for nationhood in their ancient homeland. I deny that a better world and a better life for Americans can be had by betraying the one people in the Middle East who will remain loyal and devoted to us, come what may. If we are to fulfill the role that destiny has shaped for us in that region we need an independent and free Jewish Palestine as an anchor and a bulwark.

Insofar as Zionism is concerned we have failed miserably on the political front in Washington and in London, but the Jewish repatriates in Palestine have not failed. They have measured up to their opportunities magnificently. They have caused the desert to bloom as of old and they have converted a dreary stultification into a beehive of activity and prosperity. Their constructive accomplishments in the Holy Land have earned for them the plaudits of the world and what is more important—the right to nationbood.

Let me take advantage of this opportunity, therefore, to warn our British and American political leaders that we shall not rest until the first victims of Nazi brutality have been given a fair chance for national renaissance in the Holy Land. The American people, once they understand the issues involved, will support us wholeheartedly in this endeavor.

In spite of discouragements, we are inspired in our difficult task tonight by the example of the intrepid patriots who, in the days of the First World War, with powerful opposition facing them, without precedent to guide them, succeeded in bringing to life the first Jewish legion since the destruction of the Jewish Kingdom of Palestine 2,000 years ago.

Gone are Jabotinsky, Trumpeldor, and Rutenberg; gone are Sidebotham, Wedgewood, and Balfour. But others of that little gallant band of crusaders are with us still. One of them is here tonight. The officer who commanded the Jewish legions in 1915 and who in the years that followed has spearheaded the movement to create a Jewish army and a Jewish state; the man who personifies the noble and sacred cause to which we dedicate our efforts; that great and fearless soldier, John Henry Patterson is here.

Colonel Patterson, I salute you and through you the Jewish legions which you led. Colonel Patterson, we honor you tonight and always for the great cause with which you have identified your life and which we are pledged to uphold—the cause of righting an ancient wrong, the cause of supporting a race of martyrs on their road to honor, and to freedom and to peace.

Stern Justice, Not Vengeance, Urged By Hoover for Treaties

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. GRANT of Indiana. Mr. Speaker, following are the third and final articles which former President Herbert Hoover has written on the coming San Francisco Conference. Again I recommend them for the reading and rereading of every American:

HOOVER OPPOSES "STRAIT JACKET" FOR WORLD IN SECURITY PLANNING

(By Herbert Hoover)

The second proposal I have made for the San Francisco Conference is that there be provision for revision of onerous or inapplicable treaties or of the wrongs of imposed settlements. There is no such suggestion in the Dumbarton Oaks plan.

The future of nations cannot be frozen. The forces which will arise out of this war cannot be foreseen.

If we are going to accomplish anything in our time, we must approach our problem in the knowledge that there is nothing rigid or immutable in human affairs. History is a story of growth, decay, and change. If no provision, no allowance is made for change by peaceful means, it will come anyway— and with violence.

LEAGUE PROVISION CITED

There was an indefinite provision for change of onerous or inapplicable treaties in the Covenant of the League of Nations, but it was never allowed to function. This failure to recognize inevitability of change became one of the definite causes leading to World War No. 2.

There is one over-all effect of both the Covenant of the League and Dumbarton Oaks proposals which the American people should understand.

Once we settled down to peace again there will be treaties defining boundaries and other relations or imposed relation of nations. The yardstick of who is an aggressor then becomes one of determining who violates the then existing situation or law. Thus the world organization automatically becomes the guarantor of the existing situation—that is the status quo.

Experience demonstrates that there are unpredictable areas of most dangerous controversies which rise from the pressure for change in the relations between nations. Among them are provisions imposed during the heat of war emotions, shift in economic pressures and population, the growth of ideas and inventions. There are shifting rights of minorities and the development of backward nations which become conscious and capable of self-government.

CHANGES CALLED CERTAIN

Oppressed peoples will agitate and even rebel against oppression. They are hardly likely to go on considering themselves bound by a bargain entered into unwillingly by their fathers. As a rule they would be willing to readjust matters without going to war.

Boundary and peace treaties are not inspired documents. Certainly the whole experience after the last war shows that peace can be preserved, not by preventing change and putting the future in a strait jacket, but by seeking to control change and direct it. Any attempt to maintain the status quo indefinitely is a direct cause of war—for peaceful means being denied, the change can come only through force. War becomes the only available solvent.

Each and every plan for preserving peace, whether it be the Pax Romana, the balance of power, the legitimist theory at the Congress of Vienna, or collective security of the league, however divergent they may appear outwardly, have this one thing in common. They set up a new order, and knowing it to be good, they provide that the new boundaries and other conditions shall be kept and anyone who violates it is evil. Never yet, however, have settlements been made after firing ceases that held against growing and changing forces after the war.

After the last war whenever there was an appeal for revision, the world was flooded with speeches on the "sanctity of treaties," and it was represented that any attempt to reconsider a single article of the Versailles Treaty was nothing less than a sinister attempt to undermine the whole fabric of peace which must be resisted as such by all law-loving peoples.

"STATUS QUO" CRITICIZED

Many people were led to believe that all change was to be resisted on high moral grounds. We can agree as to the sanctity of the pledged word—but most of this talk meant something quite different. What was really meant was not the "sanctity of treaties" but the "sanctity of the status quo."

And this question becomes far more important to Americans today than ever before. The peace settlements, the form of governments, and the boundaries of many nations have not yet been determined. Unless there be provision for revision of treaties, we will at San Francisco become the blind guarantors of the peace settlements of which we, as yet, know nothing.

To meet this problem, Mr. Gibson and I made a suggestion 3 years ago and I again propose that there be a definite provision in the United Nations charter that the application of any nation for revision of treaty provisions, not sooner than 10 years after its conclusion, should be considered and, if advisable, negotiated by the committee on political rights, which I have suggested.

There will be continuing gigantic wrongs in the world. Americans for all time will sorrow for the fate of Finland, of Estonia, of Latvia, of Lithuania, the partition of Poland, and other states that will be partly or wholly submerged by this war. We cannot even think of another war to secure their freedoms, but we do not need to sacrifice our ideals by acquiescing in their plight.

We could at least leave a hope open for their long future.

REGIONAL ORGANIZATION

My third proposal for the San Francisco Conference is that there should be a much more definite regional organization of the whole machinery of the charter at San Francisco than that suggested at Dumbarton Oaks.

Three years ago Mr. Gibson and I proposed that regional organization should be the foundation of the whole machinery and that the three regional groups should be established—the Western Hemisphere, Europe, and Asia. A year later Mr. Churchill publicly supported this idea.

In the Western Hemisphere the long development of the Pan American Union pointed in that direction, and the recent agreement at Mexico City advances it one step further. The success of the nebulous "concert of Europe" in preventing world war for nearly a century pointed in that direction for Europe, and the practical problems which developed in the League of Nations abundantly confirmed the need for that form of organization.

Such regional councils should embrace all United Nations' areas and should deal in the first instance with all controversies that might lead to war. If they fail to secure settlement by pacific methods, then, and only then, should the world security council intervene.

SIX BENEFITS LISTED

If regional organization were established at once it would bring six powerful benefits:

1. It would give the smaller nations a greater voice, for they should be more largely represented in the regional councils and could well be given equal standing;

2. Policies which would prevent conflict are different in the three great areas and need separate organization;

3. These regional organizations would relieve the security council of many problems and controversies before they reached it;

4. Such an organization would relieve the whole mechanism of much of its present color of a military alliance of a few great powers;

5. Regional organization at once lessens the pressure for military alliances; and

6. Such a regional organization would greatly relieve the anxieties of the American people and probably most nations lest they be constantly involved in secondary problems all over the earth.

There is no reason why the proposed economic, social, and political rights councils

should not also be recognized for the better handling of problems peculiar to those regions. Their top world councils would be the more free for coordination of the three great areas. It might also be worth consideration that the World Court be organized with three regional courts which would act as courts of first instance in questions involving nations in that region alone.

Some objection has been raised that there would be some implied rivalry of interest between regions which would be thus emphasized. The contrary is the truth, for such decentralization would make cooperation the more easy.

STERN JUSTICE, NOT VENGEANCE, URGED BY HOOVER FOR TREATIES

(By Herbert Hoover)

My fourth proposal for the San Francisco Conference is that agreement upon continued and total disarmament of the enemy nations must be entered into either as part of the United Nations charter or a separate agreement. In any event it will have to be enforced by the security council. And it profoundly affects the whole question of peace.

Three years ago Mr. Gibson and I proposed that the enemy States must be completely disarmed and kept disarmed for an entire generation. We pointed out one of the great errors of the Treaty of Versailles in which Germany was permitted to retain a professional army of 100,000 men, supposedly for purposes of maintaining internal order. She was permitted to have a navy limited only in tonnage and types of ships.

We stated that this leeway perpetuated her professional armies and navies. It perpetuated the warrior caste and all its traditions. It afforded a skeleton army and navy of skilled men ready for quick expansion. It insured the continuity of the general staff with its military skill, brains, and ambitions. It perpetuated their know-how to make war.

EXPERIENCE CITED

Repeated experience with the warrior caste of these nations in their intimidations, aggressions, blitzes, and attacks without even declaration of war should be enough for the world in this particular. We must make a better job of it this time.

We should require total dissolution of the military establishments of all enemy nations and the substitution for purposes of civic order, of a constabulary of the police type, excluding the whole officer and military caste from such organization. And we should prohibit the manufacture of arms of any kind. We could thus assure the disappearance of them and their know-how from the world.

And if this were done an occupying force of men of the United Nations of a hundred thousand men in Germany and a hundred thousand in Japan would suffice. But it will need be kept there for a generation.

REDUCTION OF ARMAMENT

My fifth proposal for the San Francisco Conference is that disarmament of the United Nations be more definitely dealt with. The Dumbarton Oaks proposals appear to contemplate a reduction of arms of the United Nations. But having regard to the fate of the same proposals in the League of Nations, a more positive program should be introduced.

Obviously our present war establishments will need be reduced. But they should be reduced relatively to each other and systematically. And, obviously, huge military establishments are themselves a threat of aggression which it should be the purpose of any world peace organization to reduce—and quickly.

In 1932 I proposed to the then World Disarmament Conference that these aggressive weapons be suppressed in order to throw the military advantage into the hands of the defense and thus into the peace-loving nations. That proposal was accepted by over 40 nations. It was renewed by Mr. Roosevelt in 1933. At least it is worth reconsideration.

But of more importance is agreement now upon the maximum size of armies, navies, and air power for the principal United Nations. We should remember that after the disarmament of the enemy the only dangerous armaments are those in the hands of our allies, and it is imperative that we arrive at a method by which we do not start competition with our friends with all the dangers to good will which would flow from that.

The Covenant of the League of Nations provided for limitation of armaments at some future time, and the time never came so far as the efforts of the League were concerned. Therefore there should be incorporated in the new charter of United Nations a much more definite program for limitation of the size of military establishments in the United Nations than that provided in Dumbarton Oaks if we are not to repeat this failure of the League of Nations.

POWERS OF COUNCIL DELEGATE

My sixth proposal refers to that most thorny question for the American people of whether the American delegate on the security council will be given the authority to make war. This is no doubt outside the provisions of the charter, but it will face the Senate when that treaty comes up for adoption.

I cannot bring myself to the delegation of such power to any one human being. That is what happens if he votes to apply either economic sanctions or military force against an aggressor. The most vital determination that can be made under the democratic process is war. It means thousands of our people are sent to death in foreign lands.

To give that power to some one man who represents us is the negation of the democratic process. The other side of the question, however, is that to delay decision against an aggressor presents dangers that the whole world security may break down at some critical moment.

Extremists are perhaps exaggerating both positions. A study of a hundred years of conflicts which have led to world-wide dangers indicates very few instances, if any, where there was not time for ample consideration by the Congress.

Upon this I offer the tentative suggestion that this power should not be given to our delegate on the security council but to the President, and the President should be required to secure the majority vote of the joint Foreign Relations Committees of the Senate and the House on whether the issues should be submitted to the full Congress.

Thus, Congress would have a voice in determining both the urgency and the dimensions of responsibility. In minor and urgent undertakings there would need to be no full congressional action. If action means war with a great power, the approval of the whole Congress is essential.

My seventh proposal for action at San Francisco does not as much concern that text as the procedure of the governments in this crisis.

I have time and again urged that we should not attempt to determine a final organization for lasting peace until we have laid secure its foundations in the post-war settlements between nations.

We should take time to cool off from the hot emotions of war. Our indignation may lead us away from stern justice into vengeance. Victory with vengeance means ultimate disaster to the victor. We cannot have both peace and revenge.

The men who led the world into this war should be hanged for murder and those guilty of other crimes must also be punished, but the masses of great races must be given a chance to enter the paths of peace where fear, hate, and revenge may be turned aside and die. Our purpose must be to create a regime of law and justice in the world, not regencies of hate.

We do not know the shape of things in the immediate settlements of this war. And we should take time better to understand the now unknown forces that will come out of this gigantic explosion. No human being can foresee them today. No one foresaw them at Versailles. Such forces will be more powerful than any signed documents.

I suggest, therefore, it would be great wisdom if the peoples of the world should have time in which to consider and perhaps perfect any agreement at San Francisco.

Every thinking man and woman prays for a successful issue of the conference. The destruction of war is now so terrible and the animosities among nations have become so deep that failure to assure a lasting peace now means the end of all hopes of humanity. America has fought this war for the greatest purpose of all time. That is to secure a lasting peace.

Bretton Woods Agreement

EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1945

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from economists of Duke University and the University of North Carolina on the Bretton Woods agreement:

CHAPEL HILL, N. C.,
DURHAM, N. C.,
March 5, 1945.

Hon. WILLIAM O. BURGIN,
House of Representatives,
Washington, D. C.

DEAR MR. BURGIN: We, the undersigned economists from Duke University and the University of North Carolina, respectfully urge your careful consideration and support of the Bretton Woods agreement providing for the establishment of an International Monetary Fund and the International Bank for Reconstruction and Development.

In our judgment the proposed international financial institutions will provide the facilities for orderly international payments, aid in the sound expansion of international investment, and increase the total volume of international trade. There is ample room to believe that, in time as these processes unfold, employment in the several member countries will be increased, income raised, and standards of living enriched.

We recognize the fact that the proposed institutions are not perfect, but they provide a mechanism of international finance capable of modification in the light of subsequent experience. Inauguration of the two institutions will go far in meeting the problems brought about by the changed circumstances of modern international trade. They are designed to facilitate the maximum practicable freedom of international trade, but at the same time provide adequate latitude to each member nation in the control of its own domestic economy. The fund may be expected to curb such undesirable financial practices as unrestricted unilateral changes in exchange rates, bilateral bartering, and multiple currency devices which breed and accentuate economic warfare and prepare the soil for world catastrophe. Similarly, the Bank will facilitate increased international investment without inducing a

repetition of the reckless lending of the period prior to 1929. Without such international investment economic progress will be retarded and the conflicts between alleged "have" and "have not" nations will be intensified.

It is our considered judgment that the proposed international financial institutions provide the facilities by and through which international financial problems can be worked out in concert and to the mutual advantage of all parties. Hence, we respectfully urge you, as our Representative in Congress, to give them your full support.

Respectfully yours,

D. D. Carroll, H. D. Wolf, Clarence Hur, D. Cowden, Milton J. Heath, John B. Woosley, Paul S. Brown, J. M. Lear, F. Gutmann, R. J. M. Hobbs, Frank C. Delyer, Joseph J. Spangler, Wilford J. Eteman, Richard A. Lester, John H. Shields, Robert S. Smith, B. U. Ratchford, M. L. Black, Jr., F. Bulitz, Ben F. Lemert, C. B. Hoover.

Address by Anthony A. Olis at American-Lithuanian Mission Dinner

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, March 29 (legislative day of Friday, March 16), 1945

Mr. TOBEY. Mr. President, on March 23 it was my privilege to attend a dinner of the American-Lithuanian Mission at the Hotel Statler. There I heard an address delivered by Anthony A. Olis, an attorney, of Chicago, which made a great appeal to me. I ask unanimous consent to have the address printed in the Appendix of the RECORD, in the belief that it will command the sympathetic interest of the American people in the plight of this small nation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The American Lithuanian Mission is strictly an American organization. We are here as Americans who are proud of our Government—proud of our representatives in that Government and we are particularly proud and grateful to the many United States Senators and Congressmen who honor us this evening by their presence. We also wish to thank the many members of the press and radio who are here tonight representing newspapers and broadcasting outlets from many part of the United States.

These are critical days because of the war and we would not have imposed on your valuable time were not the purpose of this gathering related to the war effort and the winning of a permanent peace. We are concerned about the rights of small nations to self determination after the war is won. We are concerned because it is our conviction that there cannot be a permanent peace unless people in both small and large nations are free from political as well as economic bondage.

Now, we understand that there are many problems to be solved and that the length of the war has increased the complexity of these problems. We understand also and we fully subscribe to America's foremost purpose that we must first win a military victory, but under the heavy pressure of the many burdens of war little time has been available for a restatement of the principles which guide us in this conflict. We say we want a permanent peace but at the same time there has been a tendency to avoid discussion of the principles that should guide to prevent aggression against small nations and to prevent the very causes which led us into the present war. There has been much talk in Washington that we will have to make concessions, that we will have to sacrifice certain principles, that some small nations and their innocent people are bound to get hurt in the setting up of our post-war world.

It is the view of the American Lithuanian Mission that there is not only no need for making concessions or sacrifices of our principles but that it would be fatal to a permanent peace to do so and it is with a sincere desire that we as American citizens, as constituents, have called this gathering this evening to voice our views to our representatives in our Government upon this vital war issue.

The Atlantic Charter, proclaimed by President Roosevelt and Prime Minister Churchill on August 14, 1941, sets forth that one of the principles for which we are fighting the enemy is the right of small nations to self-determination and independence. The Charter states:

"Second. They desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned;

"Third. They respect the right of all peoples to choose the form of government under which they will live, and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

In a speech on September 12, 1943, Secretary of State Cordell Hull reaffirmed these principles in declaring:

"All peoples who, with a decent respect for the opinions of mankind, have qualified themselves to assume and to discharge the responsibilities of liberty are entitled to its enjoyment.

"Each sovereign nation, large or small, is in law and under law the equal of every other nation.

"All nations, large and small, which respect the rights of others, are entitled to freedom from outside interference in their internal affairs."

No people have a stronger claim to the right of self-government and independence than do the 3,000,000 people of Lithuania. The Republic of Lithuania was established on February 16, 1918, as a modern nation under a constitutional government. However, from the earliest times the Lithuanian people had developed their own language similar to the ancient Sanskrit, their own culture and traditions. They are not related to the Russians or to any of the other Slavic peoples, but descended from an ancient people of a distinct nationality. It is therefore not surprising that they desire independence and self-government as a means by which to preserve the ideals near and dear to them, their culture, language—in short, their way of life.

During its days of independence since the last war, Lithuania demonstrated that it had a decent respect for the opinions of mankind. By its progress in its economical and cultural life it demonstrated that its people were qualified to assume and discharge the responsibilities of independence. In light of the above it is apparent that on the basis of justice and right—on the basis of principles announced in the Atlantic Charter and by former Secretary of State Cordell Hull, no one should question Lithuania's right to independence. And yet—though everyone agrees that the rights of small nations must be protected in the post-war world—still there is hesitation on the part of some of our representatives in government to openly voice their support of these principles as to the Republic of Lithuania. They say that Russia intends to incorporate Lithuania into the Soviet Union; therefore it is anti-Russian to maintain that Lithuania should be independent. Russia is our ally. We must not offend our ally. Furthermore, they say, Lithuania was a part of Russia before the year 1918. Lithuania, they say, was torn away from Russia in the closing days of the last war when Russia was helpless because of internal revolution and should therefore be returned to Russia.

Well, as to the proposition that Lithuania was part of Russia before the year 1918, one might answer that this is somewhat like the question as to which came first, the chicken or the egg. Because if we go back far enough in history to the fifteenth century in the days when Lithuania was a nation with borders from the Baltic Sea to the Black Sea, Russia was part of Lithuania. It should not be a question of which was part of what, the important consideration is that the Lithuanian people are a distinct people with a history, culture, language, and ideals, not related to that of other nations. Furthermore, it is not anti-Russian to maintain that Lithuania deserves to be an independent nation because Russia has itself said so, at a time when Russia was strong and completely free from internal or external pressure; Russia has heretofore solemnly agreed and covenanted that it would respect the sovereignty of the Republic of Lithuania.

These agreements and treaties, I repeat, were made not at the time when Russia was helpless because of internal revolution but in the years when the Soviet Union had a strong government. On September 28, 1926, a non-aggression treaty, which is still in effect, was entered into between the Republic of Lithuania and Soviet Russia. The language of the following articles of said pact is as follows:

"Article 2. The Republic of Lithuania and the Union of Soviet Socialist Republics mutually undertake to respect in all circumstances the sovereignty and territorial integrity and indivisibility of each other.

"Article 3. Each of the two contracting parties undertake to refrain from any aggressive action whatsoever against the other party.

"Article 5. Should a conflict arise, and if impossible to liquidate it in a diplomatic way, both contracting parties agree in such case to nominate conciliatory commissions."

This treaty was by its terms to be in effect until December 31, 1945, and is therefore still in effect today.

On October 10, 1939, Lithuania and Russia entered into a mutual assistance pact. Article 7 reads:

"The realization of this treaty must not infringe the sovereign rights of the contracting parties, especially the structure of their State, their economic and social systems, military instruments, and altogether the principles of nonintervention of one State in the internal affairs of another State."

Soviet Russia is our ally. We must have confidence in our allies. We must assume that our ally will keep its promises and its treaties. Therefore it is not anti-Russian to take the position that there should be a restoration of the independent Lithuania which Russia solemnly agrees to respect in all circumstances by its treaty which by its terms is still in effect to December 31, 1945. After all, the independence of Lithuania is not the only problem which the post-war world will have to solve. As the years roll by questions concerning the rights of small nations will recur again and again. Certainly we do not intend to permit aggression against these small nations to repeat itself in the future as it did in the days of Munich. No matter who the aggresor may be in the future we have learned the hard way that appeasement in the past did not pay. Certainly, therefore, we should bend

every effort to treat with our allies to the end that they too should embrace the high principles which we so solemnly announced at the time of our entry into this conflict. It cannot properly be said that this position has any anti-Russian character.

The State Department of the United States has continued to recognize and still recognizes the Lithuanian Minister to the United States. Its position in this matter is that the Republic of Lithuania is an independent nation. Under Secretary of State Joseph Grew recently announced to the press that Lithuania, Latvia, and Estonia were still recognized as independent countries, even though Russia had occupied their territories in the drive against the Nazis. Americans of Lithuanian descent know from personal correspondence with their friends and relatives in Lithuania that the people of this little country do not want partial autonomy under the domination of any power whatsoever, but rather do they want the restoration of an independent Lithuania.

The Yalta Conference has suggested the manner and method of which small nations may elect a free and democratic government. Lithuania is one of the small nations which should have the same opportunity extended to other small nations to hold a free and democratic election, after armies of other nations have left and Lithuanian refugees have been repatriated, an election wherein candidates of all democratic parties in Lithuania have the right to submit their candidacies to the electorate. The election should be under the supervision of an Allied commission with representatives of all of the Big Three Allied powers to assure an election free of outside pressure. These views are held by a large portion of the citizens of the United States and should be supported by delegates to the San Francisco Conference. If this is done and the principles heretofore stated in the Atlantic Charter are maintained in the San Francisco Conference and in the peace conference to come after the war, the rights of small nations to self-determination will be protected and in this way aggression against the small nations will be prevented and a sound program for a permanent peace will be assured.

Official Statements on Foreign Policy by National Organizations

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, March 29 (legislative day of Friday, March 16), 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the RECORD a copy of a letter dated March 9, 1945, addressed to the President of the United States by Ulric Bell, executive vice president of Americans United for World Organization, Inc., together with an enclosure entitled "Official Statements on Foreign Policy by National Organizations."

The Public Printer has estimated that the cost of printing this material will be $260. I believe that the importance of the declaration warrants the expenditure.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

AMERICANS UNITED FOR WORLD ORGANIZATION, INC.,
New York, N. Y., March 9, 1945.

The Honorable FRANKLIN D. ROOSEVELT,
President of the United States,
White House, Washington, D. C.

DEAR MR. PRESIDENT: As a group somewhat unique because of our nonpartisan and widely representative make-up, as the roster of our board of directors will attest, we believe we can make a contribution to the climate pervading the momentous negotiations you and the other chiefs of state have initiated toward fashioning a world organization for preventing war.

We, therefore, present for your consideration a hitherto unpublicized compilation showing the state of public sentiment in the United States in favor of a strong and democratic world organization based on the Dumbarton Oaks proposal.

The statement attached is by no means a complete record, but it covers a remarkable representative cross section of American life, showing action on the part of 34 of the very largest national organizations prior to the Yalta Conference in favor of American cooperation in a world agency to discourage and prevent aggression. It reflects the views of business, large and small; labor, including both its main branches; the war veterans, the largest and most comprehensive women's groups; the main religious groups and many denominations; the bar; all the organized farmer, youth, educational, and other groups in a continuing procession. Action by these organizations alone constitutes without doubt an overwhelming majority of the articulate opinion of the United States.

It was the recent privilege of Americans United to invite various national organizations to Washington to be enlightened by the Secretary of State and the other Dumbarton delegates respecting the proposals. Ninety-six major associations responded, as they have also done in many regional meetings we since have arranged in cooperation with the State Department. One hundred and five such organizations responded more recently to a similar invitation by us to learn about the collateral Bretton Woods proposals from the Treasury and State departments.

It is needless to remind you and your confreres of the significant formal steps taken through the Fulbright and Connally resolutions in the House and Senate, the Ball-Burton-Hatch-Hill undertakings, the Mackinac declaration, and the recent manifests of freshly elected Senators and Representatives. Nor is it necessary to dwell on the stands taken by the national political parties and their major candidates or upon the outcome of the last elections in their effect upon candidates opposing international cooperation.

In the incomplete summary we submit, it is manifest that the desires of the American people go beyond the establishment of a world organization that would preserve the peace by persuasion, sanctions, or force. They want a world organization democratically constituted and promising the goal you have set of a people's peace following a people's victory. They hope that the Dumbarton basis can be built upon at San Francisco so that the outcome there will be in the spirit of "we, the people"—the people everywhere—more than in the spirit of the "high contracting parties." They call for revitalization of the principles of the Atlantic Charter in such strong terms that men everywhere can progress toward a world free of the social and economic as well as the political and military fears and frictions making for insecurity.

On our part, we commend to you and the delegates to San Francisco the most earnest consideration of adequate provisions in the charter of the world organization for future amendment and improvement of this charter in its democratic and humane aspects.

We likewise urge the incorporation of a declaration respecting the essential human rights and provision for the establishment of a Commission on Human Rights and Fundamental Freedoms.

"We believe that the prime requisite of the world agency will be its power to act without delay in security matters under authority constitutionally granted in advance by the nations concerned."

An impressively understanding attitude respecting the difficulties of international agreement in a world still at war has been shown by the American people. This, we believe, is due to their resolve that world criminals hereafter must be stopped in their tracks whenever they threaten the peace; that there must be a rule of law backed by force; and that the United States cannot escape involvement in wars unless it becomes involved in the world enforcement of peace.

For them, too, many gold stars now mark the tragic mistake of isolationism in the past; too many shudders derive from the thought of another war in a world already half-shattered in this one by cruelly modern bombs and rockets. Manifestly, our people will not be denied this time the chance to count on a secure and tranquil life, even though San Francisco produces no perfect plan—even though the Golden Gate is less than the portal of a Golden Age.

Once the maximum best of the United Nations Conference is before their representatives in the form of an agreement, they will tolerate no unreasonable dallying with the peace. Those who stand in the way will do so at their own terrible risk.

Trusting that the enclosed summary will be useful, we remain, Mr. President, with the deepest respect,

Yours sincerely,
AMERICANS UNITED FOR WORLD ORGANIZATION, INC.,
By ULRIC BELL,
Executive Vice President.

OFFICIAL STATEMENTS ON FOREIGN POLICY BY NATIONAL ORGANIZATIONS

THE AMERICAN LEGION

(Edward N. Scheiberling, national commander, national headquarters, Indianapolis, Ind.)

From summary of proceedings, twenty-sixth annual national convention, Chicago, September 18–20, 1944:

"Resolved, As the war progresses toward total victory, the American Legion again insists upon unconditional surrender by Germany and Japan. Only by complete and devastating defeat of these militaristic aggressor nations can any peace be worth its untold cost in blood and treasure.

"After hostilities have ceased, Germany and Japan must be permanently disarmed and rendered utterly unable again to wreck the peace of the world. After subjugation, Germany and Japan must thereafter be occupied and controlled in such manner and to such extent as to bring home to the German and Japanese peoples—and to the fanatical, despotic leaders whom they have followed with such blind enthusiasm—a full realization of the folly and disastrous consequences of their ways.

"When peace has been restored to the world, we must be ever vigilant to protect it. Bitter experience of the past proves that peace cannot be preserved unless aggressor nations are promptly and sternly suppressed at the very beginning of any movement inimical to general peace and welfare.

"The cost of maintenance of peace is insignificant compared to the cost of war. Every thinking person now realizes that neither the United States of America nor any other single nation, however great and

strong, can maintain peace by its own independent efforts.

"We adhere to the following declarations of the 1943 national convention:

" 'We repeat our declaration of 1942 that "no peace, however welcome, however promising, can long endure unless it be made secure by the nations which have won it; nations which must ever be prepared in every sense to fight for the rights of freemen and of freedom-loving peoples." That "we cannot escape, we will not evade, our own responsibility for the maintenance of that peace. We must not forget our stake in it. Every consideration of national interest dictates that we prevent recurrence of the conditions which led to this war."

" 'Our own national interests must ever be our first concern, and we believe that our Nation can best serve and protect its national interests, commensurate with its power and responsibilities, by participation in the establishment and maintenance of an association of free and sovereign nations, implemented with whatever force may be necessary to maintain world peace and prevent a recurrence of war. It must be obvious now to all the world that no peace can be lasting and secure for nations that are not fully prepared to maintain peace.

" 'We affirm our faith in the foreign policy of our Government.

" 'The consummation of the policies and principles declared at the Moscow, Cairo, and Teheran Conferences should command the united support of all Americans.'

"We respectfully urge upon our Government that, as often and as fully as our national interests permit, our people be advised of developments in the field of foreign relations."

THE VETERANS OF FOREIGN WARS

Statement included in the 10-point program submitted by Foreign Wars Commander Jean A. Brunner to the House Committee on World War Veterans' Legislation, January 22, 1945:

"Policies permitting the United States to participate in a world association to maintain peace, using force if necessary, and with full publicity as to all preliminary negotiations between the United States and its Allies."

THE NATIONAL GRANGE

From speech by Albert S. Goss, master (president), November 1944:

"The National Grange has a long-standing record in favor of a world court. Collaboration with other nations is not without its dangers, but the world faces no danger so great as that of another world war.

"For some years substantial policing must be done by someone. It would seem safer as a joint venture. We should not lose sight of two most important features. First, the overwhelming majority of all peoples on earth want permanent peace. They live in peace among themselves and have developed for themselves forms of government to assure peace which they respect and cherish. They have no basic cause of conflict among themselves or with peoples of other nations. It is the few who seek power or an undue advantage who contrive war. If the great majority of peoples of all nations earnestly strive for peace, it must be possible to control those who contrive war. Second, while certain sacrifices may be necessary, the overwhelming advantage of a stable peace so far overshadows any possible handicaps and sacrifices as to render them negligible, and make some real practical effort worth while. The most flagrant cause of war lies in aggression. Let us insist that we start with clean hands. Both Germany and Japan, through centralized control of education, have raised a generation which believes that the destiny of their countries is to rule the world. It is altogether probable that no defeat could be administered so crushing as to rid them of this ambition, but peace will never be lasting until this thirst for conquest is wiped out. Peace must be based on mutual agreements not to resort to war, but the governments of neither Germany nor Japan can be trusted to keep their agreements. They not only must be forced to keep them, but it may also be necessary to direct the education and the internal economy of those nations until it becomes clear beyond the shadow of a doubt that they, too, truly want peace.

"If either of these cancerous spots is allowed to frame their educational processes or their national policies with an aim to resort to war at some future time, war will probably come. We believe in freedom for others as well as for ourselves, but we must face the fact that those who fail to abide by law cannot be permitted to run at large, and somebody must exercise restraining control until the world is fully assured that the complete control of these nations lies in the hands of those of their people who truly want peace."

From action taken by the Grange at annual session, November 1944:

"The endorsement of an effective international organization to insure world peace; establishment of a world court with adequate enforcement powers.

"The Grange recognizes that permanent world peace is of paramount importance. Steps to achieve this should include:

"(a) An effectively implemented organization of sovereign states including a world court, but with the right to declare war retained solely by Congress.

"(b) Development of international trade on an equitable basis.

"(c) Rehabilitation of productive industry in devastated lands."

AMERICAN FARM BUREAU FEDERATION

From resolutions adopted at the annual convention, December 1944:

"We specifically recommend cooperation with other nations along the following lines:

"1. A general international organization for maintaining world peace. The American Farm Bureau Federation favors the participation of the United States in a general international organization for maintaining world peace, in accordance with the broad principles contained in the plans developed at the Dumbarton Oaks Conference. The United States should accept its rightful share of the responsibility with the proper executive authority for the enforcement of the decisions of the Security Council, by military force, if necessary.

"2. International cooperation on monetary programs: The American Farm Bureau Federation favors the participation of the United States in the proposed international monetary Fund and the proposed International Bank for Reconstruction and Development as outlined in the Bretton Woods Monetary Conference."

NATIONAL FARMERS UNION

From program adopted by annual convention for 1945:

"Full participation by the United States in a world organization based on political and economic justice, governed by law and with power to enforce its decisions, and in which all peace-loving nations, great and small, cooperate.

"Full adherence to world trade policies that will give all peoples everywhere real opportunity to make a decent living. Trade barriers contributed to World War No. 2 and, if permitted to continue, will bring on World War No. 3. When peace comes we must freely exchange substantial parts of our farm and industrial production with other nations, receiving from them products which we need."

YOUNG MEN'S CHRISTIAN ASSOCIATION

(President: Howard A. Coffin, Detroit)

Plan outlined at national council, October 1944:

"The national council of the Y. M. C. A. went on record today as favoring an international organization for peace consisting of a judiciary body and a police force. A resolution adopted at the closing session of the 3-day meeting called for:

"1. An international organization composed of representatives of all people whose nations accept the rule of law.

"2. An international judiciary devoted to attainment of political and social justice; and

"3. An international police force to prevent aggression and insure enforcement of law and order."

YOUNG WOMEN'S CHRISTIAN ASSOCIATION

(Mrs. James Irwin, chairman, international relations)

From the proposed public affairs program of the national board of Y. W. C. A.:

"World organization: The United States must assume its full responsibility in the great task of building a world order based on law which will promote the common welfare, secure justice and freedom for all peoples, and banish war from the earth.

"We will: Uphold as an immediate necessity, acceptance by the United States of membership in the United Nations Organization, and full support of its principles as a step toward the greater development of international organization. We urge that the United States work in the United Nations Organization for peaceful change of conditions which become unjust and which might otherwise lead to war."

AMERICAN BAR ASSOCIATION

(Mrs. Olive G. Ricker, executive secretary, Chicago, Ill.)

From the report of the special committee (headed by William L. Ransom) to study and report as to proposals for the organization of the nations for peace and law:

"Recommendations:

"1. We recommend that we commit ourselves to the establishment of a general organization of the nations, a general security organization of the nations, of which the United States shall be a member.

"2. * * * commit ourselves to the support of a proposal to maintain an international judiciary as an integral part of the international organization.

"3. * * * commit ourselves to the support of the establishment of an assembly representative of the nations.

"4. * * * of a council for the use of the nations."

NATIONAL LAWYERS GUILD

(Hon. Robert Kenney, president)

"Endorsing the Dumbarton Oaks proposals for a world-security organization, the National Lawyers Guild expressed today the opinion that 'there is no constitutional barrier to vesting in the American representative on the Security Council authority to use our armed forces in restraining aggression.' The statement was sent to President Roosevelt and all Members of the United States Senate.

"Guild members scouted statements that such an authorization would violate the Constitution in the absence of a declaration of war by Congress.

" 'It is true,' says the statement, 'that the Constitution vests in Congress the power to declare war. But the power to commit a specified number of armed forces for the prevention of aggression is wholly distinct from the power to declare war. Law enforcement is not war. This is a basic concept of our constitutional law and of international law.' "

CHAMBER OF COMMERCE OF THE UNITED STATES

(Eric Johnston, president)

From Measures to Promote International Law and Order, April 1944

"Declaration 3:

"1. An international political organization is necessary for the purpose of maintain-

ing peace and security among nations. Such an organization should be based upon the principle of reciprocal collaboration among nations and should not take the form of a superstate. The principles upon which are based the joint Four Nation Declaration at Moscow of October 30, 1943, and the November 5, 1943, resolution of the United States Senate, as well as the House resolution of September 21, 1943, are therefore approved. The Moscow Declaration and the Senate resolution recognize the necessity of there being established at the earliest practicable date a general international organization, based on the principle of the sovereign equality of all peace-loving states, and open to membership by all such states, large and small, for the maintenance of international peace and security.

"2. This peace and security may best be safeguarded through the use of the armed forces of peace-loving nations acting through the combined Chiefs of Staff organization, developed to meet further conditions."

THE AMERICAN BANKERS ASSOCIATION

(W. Randolph Burgess, president, New York, N. Y.)

From report of economic policy commission, September 1, 1943:

"Today there is general agreement in this country that there must be, at the conclusion of the war, mechanisms and guaranties to prevent war. As yet this sentiment has not crystallized in specific forms. The principal move in this direction beyond the Atlantic Charter and the United Nations declaration of January 1942 has been the mutual-aid agreements which have been concluded by the United States with the United Kingdom, China, Russia, Belgium, Poland, the Netherlands, Czechoslovakia, Greece, Norway, and Jugoslavia. While these agreements lay down the principles applying to mutual aid in the prosecution of peace as well as war, they provide no specific commitments or mechanisms.

"Two things seem clear. First, that there must be an international organization or organizations of some sort for the consideration of international problems; and second, that the United Nations must commit themselves to placing their force back of the essential decisions for peace.

"It is not proposed here to make a detailed recommendation on this point, but simply to emphasize that such a guaranty of peace in our time is a necessary basis for full economic recovery. The risks of war block long-term economic planning and enterprise. Peace is even more essential for prosperity than prosperity is for peace."

NATIONAL FOREIGN TRADE COUNCIL, INC.

Final declaration of the thirty-first convention, October 9, 10, 11, 1944:

"We hail the accomplishment of the discussions at Dumbarton Oaks Conference as an epic step in the direction of the establishment of an international organization that will insure this and all peace-loving nations against a resurgence of aggression and disaster."

RESOLUTIONS ADOPTED BY THE TWENTY-SECOND NATIONAL CONVENTION, OCTOBER 21–25, 1944, NATIONAL COUNCIL OF CATHOLIC WOMEN

"The world needs international organization to attain justice, peace, and prosperity for all nations and for all peoples. We believe it to be the duty of all citizens to work urgently for this purpose. The tentative proposal for an international security organization released by the Great Powers as a result of the Dumbarton Oaks Conference is a good beginning, although it is incomplete and has defects which, lacking a right spirit, can be most serious; while the actual structure of an international organization is important, the spirit in which it is operated is more important.

"We urge full and immediate discussion of the Dumbarton Oaks proposal in the light of the papal peace program. We urge, furthermore, that wide publicity be given to these discussions in the Catholic and secular press. Only in this way can the weight of Catholic opinion, expressing both fundamental moral principles and willingness to cooperate through organization for a better world, make itself felt in the final proposal and in its acceptance by the nations."

AMERICAN ASSOCIATION OF UNIVERSITY WOMEN

(Kathryn McHale, general director, Washington, D. C.)

"The A. A. U. W. has consistently supported development of a closer international collaboration to be begun now among the peoples resisting the Axis Powers, and expanded as rapidly as possible into suitable international institutions. The Dumbarton Oaks proposals clearly constitute an important step toward the establishment of such international institutions, and the A. A. U. W. therefore urges their prompt adoption by the United Nations, recommending the further strengthening of interntaional machinery so that it may be truly adequate for the maintenance of peace."

THE GENERAL FEDERATION OF WOMENS CLUBS

(Mrs. LaFell Dickinson, president, Washington, D. C.)

Resolution adopted April 1944:

"*Resolved*, That the General Federation of Womens Clubs in convention assembled, April 1944, urges the Government of the United States:

"To take definite steps to accomplish the codification of international law;

"To further necessary procedure to obtain international commitments to include collective force to prevent or stop aggression;

"To cooperate immediately with other United Nations in setting up a United Nations Council now to proceed with the formation of the general international organization in accordance with the principles of the Moscow Declaration and the Connally resolution—to the end that important decisions affecting world security and international policies, many of which now seem to be made independently, shall be concerted decisions of the United Nations."

NATIONAL CONGRESS OF PARENTS AND TEACHERS

(Mrs. Wm. A. Hastings, president, Chicago, Ill.)

Program for planning adopted by this organization November 1944:

"The National Congress of Parents and Teachers endorses the following program for planning on an international basis:

"1. The creation of an appropriate international organization with power to enforce a just and lasting peace, of which the United States shall be a member.

"2. The establishment of an international organization for education to develop educational reconstruction and to promote cultural understanding among the nations.

"3. The development of an international program for the care and protection of children and youth throughout the world."

NATIONAL COUNCIL OF JEWISH WOMEN, INC.

(Flora R. Rothenberg, executive director, New York, N. Y.)

Adopted the following resolutions:

"*Long-range program for world organization*

"World Organization

"Resolved, That the National Council of Jewish Women endorses the principle of world organization, and urges the United States Government to continue collaborating with the United Nations to formulate and execute plans for its realization.

"International Police Force

"Resolved, That the National Council of Jewish Women favors the creation of an international police force to be used by a world organization for collective action against aggression, to obviate the need of competitive armaments by individual nations, and to make possible a system of collective security."

NATIONAL WOMEN'S TRADE UNION LEAGUE

(Elizabeth Chrisman, executive secretary, Washington, D. C.)

Adopted the resolution as follows: "Support of United States participation in a general international organization along the lines of the Dumbarton Oaks proposals; meanwhile support of international bodies already created, or about to be created, in the social and economic fields, such as United Nations Relief and Rehabilitation Administration, the Food and Agriculture Organization, the Bretton Woods Conference, and so forth.

"Support of the change from a two-thirds majority to a simple majority in ratification of treaties by the Senate."

NATIONAL FEDERATION OF BUSINESS AND PROFESSIONAL WOMEN'S CLUBS

(Margaret A. Hickey, president, New York City.)

Adopted the following resolution:

"Support of participation by the United States of America in international organization with adequate enforcement machinery for the maintenance of peace and security; and support of a foreign policy embracing international social development, economic and financial stability, and the peaceful settlement of international disputes."

THE NATIONAL LEAGUE OF WOMEN VOTERS

(Anna Lord Strauss, president, Washington, D. C.)

Program supported January 1945:

"The League of Women Voters favors the immediate establishment of a strong democratic international organization for the purpose of maintaining peace and creating the conditions in which peace is most likely to exist. To this end it endorses the Dumbarton Oaks proposals as a working basis for such an organization. It anticipates that the final charter, drawn up by representatives of all peace-loving nations, will expand and strengthen the initial machinery suggested in the Dumbarton Oaks Conference.

"The League of Women Voters recommends that the State Department indicate the confidence of the people of this country in the international process by urging that there be no requirement of unanimous vote in the security council, and that no nation be given a veto power. It favors empowering our delegate on the security council to vote for the use of military force without reference in each instance to Congress.

"The inevitable differences between nations must not divert the American people from the solution of our international problems, which demands a United Nations organization."

NATIONAL COUNCIL OF NEGRO WOMEN

(Mrs. Jeanetta Brown, executive secretary, Washington, D. C.)

From resolutions taken at annual workshop of National Council of Negro Women, October 1944:

"World peace can be secured only through a universal recognition and application of the democratic principles of liberty, equality, justice, and the essential dignity of man. No lasting peace is possible without a complete and unequivocal acceptance of these principles by all nations and with respect to all peoples, irrespective of race, color, creed, or national origin.

"The world powers, now preparing the blueprint of the post-war world, must recognize that no lasting peace can be possible until the world is purged of its traditional concepts and practices of racial superiority, imperialist domination, and economic exploitation. The non-white populations of the

world, the oppressed and underprivileged of every complexion, who have contributed unstintingly to the inevitable victory, must be liberated and given full opportunity for development. The character of the new world organization must include provision for the ultimate self-government of the dependent peoples, and for the full political, economic, and social emancipation of racial and cultural minorities. The benefits of the peace must accrue to all of the peoples of the world.

"The Dumbarton Oaks proposals do not give assurance to the nonwhite peoples, the dependent peoples, and the minority groups of the world that a new page of history affecting their welfare is about to be written. It is recognized that Dumbarton Oaks was only a beginning, and that the outline devised there is yet to be filled in. The world powers should realize, however, that there is growing doubt and skepticism about their intentions in the minds of the hundreds of millions of nonwhite peoples who make up the preponderance of the world population.

"Realizing that the problems of world organization are complex, the Council is not prepared at this time to submit a comprehensive program or proposals for the protection of repressed groups. It pledges itself, however, to the task of working toward this objective, and supports the following broad principles:

"1. An unequivocal statement on the equality of races and nations must be inserted in the charter of the general international organization.

"2. The general international organization must insure a liberalized and enlightened administration for all colonial areas and subject nations in the interest of all the people, with self-government as the ultimate objective. Specific plans to this end must be outlined, and the responsible powers committed in advance to faithful execution of these plans.

"3. As a major power, the United States of America must exert a strong leadership toward the realization of the foregoing objectives both at home and abroad."

CONGRESS OF INDUSTRIAL ORGANIZATIONS

(Philip Murray, president, Washington, D. C.)

The seventh constitutional convention, November 1944:

"The Dumbarton Oaks Conference of representatives of the United States, Great Britain, the Soviet Union, and China has already laid a firm basis for the formation of an international organization to secure an enduring peace. The wide area of agreement reached by these great powers is the strongest assurance of success since a lasting peace must be based upon their continued and firm determination to act together and united. We pledge our unswerving effort to this endeavor. The people of this Nation have given a mandate to our President and Commander in Chief that the formation of this organization should not await complete cessation of hostilities. American participation in such international organization must not be rendered ineffective through reservations or the hamstringing of the authority of our representative. The members of this permanent organization, including the United States, shall supply to it contingents of armed forces and other facilities for the purpose of preventing or defeating any acts of aggression. The American representatives must be authorized to act on bshalf of the American people and to vote for the use of force by the international organization under those conditions."

AMERICAN FEDERATION OF LABOR

(William Green, president, Washington, D. C.)

Report of proceedings, convention resolution, November 28, 1944:

"Resolved, That our foreign policy be directed towards support of the principles of the 'four freedoms' and the Atlantic Charter, and the promotion of commercial relations between the nations of the earth as a means of advancing their respective economic stability and well being."

BROTHERHOOD OF RAILROAD TRAINMEN

(A. F. Whitney, president, Cleveland, Ohio)

February 2, 1945:

"The brotherhood holds that the groundwork laid at Dumbarton Oaks constitutes a real step forward in cementing cooperation between all nations interested in maintaining world peace. It is heartening to note that the United States, Great Britain, the Soviet Union, and China—as different as they are from each other in economic, political, and social structures—have nevertheless determined to act together in behalf of the world community of nations.

"The outstanding characteristic of the proposed international organization is the authority given the major powers to move quickly to curb aggression or threats of aggression. Provision is also made to investigate international disputes and settle them, if necessary, through a Permanent Court of International Justice.

"While certain details are yet to be worked out, it is already clear that some such organization as envisaged at Dumbarton Oaks must be established if Germany and Japan are to be prevented from once again threatening the peace of the world. At the same time, aggressive movements by any other countries would likewise be checked."

WORLD GOVERNMENT ASSOCIATION

(Mrs. Stanley P. Woodard, president, New York, N. Y.)

Resolution passed October 5, 1944:

"Whereas our State Department offers the assurance that the Dumbarton Oaks proposals are a remarkable basis of agreement reached among nations so divergent in their traditions and government structures; and

"Whereas a more democratic form of world government will naturally be evolved as the other nations, large and small, join the assembly of the world organization and assume their various responsibilities; and

"Whereas international functional organizations, coordinated with World Government but not under its dominance, will help in solving the world problems which cause war, thus gradually reducing the necessity for the use of force.

"*Resolved*, That the World Government Association urge the Congress of the United States of America to ratify the Dumbarton Oaks proposals.

"Resolution passed that world police, properly organized, could prevent aggressive war."

THE AMERICAN JEWISH COMMITTEE

(Joseph M. Proskauer, president, New York, N. Y.)

Annual meeting of the American Jewish Committee, January 1943:

"At this time when our country is engaged in an epoch-making war, we who are united with our brethren of all faiths in the common bond of American citizenship, we pledge every effort and every sacrifice to the winning of the war, the achievement for the whole world of the 'four freedoms' and the blessings of the Atlantic Charter and the establishment of a just and enduring peace."

WORLD JEWISH CONGRESS

Declaration by the War Emergency Conference of the World Jewish Congress:

"The Jewish people look to the United Nations for the establishment of a new international democratic order based on the 'four freedoms' and the Atlantic Charter, embodying inter alia:

"(a) The promulgation of an international bill of rights securing full protection of life and liberty for the inhabitants of all countries without distinction of origin, nationality, race, faith, or language, and the enforcement of such a bill of rights by an adequate international machinery."

NATIONAL EDUCATION ASSOCIATION

(Frank W. Hubbard, director, research division, office of public relations, Washington, D. C.)

Resolutions adopted by representative assembly July 6, 1944:

"Maintenance of peace: The National Education Association believes that enduring peace must be supported by a permanent organization of peace-loving nations. The association, therefore, urges the President of the United States and the Congress to take immediate steps toward the calling of a council of all the United Nations for the purpose of working out plans to establish and maintain world peace; such council to be called at the earliest possible date.

"Education and the World Peace: The National Education Association is convinced that history demonstrates the power of education to shape young minds into nationalistic war patterns, and proves the necessity of an enlightened world as a basis for enduring peace. The asscciation, therefore, urges the immediate establishment of a United Nations Council on Educational Policy, and recommends that the Government of the United States, when the peace is made, use its influence in the creation of a permanent international agency for education as a means of promoting good will among all nations."

KIWANIS CLUB

From address by Hon. Ben Dean, Grand Rapids, Mich., president of the Kiwanis International, at a meeting of the Kiwanis Club of Washington, D. C., in celebration of the thirtieth anniversary of the establishment of Kiwanis, January 25, 1945:

"The Kiwanians must throw the weight of their influence in their 2,250 communities against a let-down of the war effort—against the inevitable war weariness which will follow victory in Europe—against those vicious subversive influences on the home front which seek to divide and sow doubt and distrust.

"The second objective of Kiwanis is: Use our influence to establish and maintain world peace.

"It was just 25 years ago next March 19, in the United States Senate that the votes of 35 Senators—7 more than necessary—barred this Nation from joining the League of Nations, and changed the course of history. These 35 Senators believed they had public opinion behind them. People were disillusioned, embittered. They wanted to isolate themselves from European quarrels. They welcomed President Harding's normalcy.

"There can be no effective international force for peace unless America plays a leading role.

"This, then, is the task of all Kiwanians and like service groups, to build a strong and vocal public opinion that demands a lasting peace. We must use our Kiwanis Clubs as forums and platforms to mold in each community a public opinion that will be powerful and insistent. In a democracy it is the people on whom the peace depends. Let the people speak with a common voice from the towns and the country, from the hills and the plains, and Congress will hear. Across this broad land must be built a public opinion that cannot be ignored in Washington, that will be clear and unmistakable to our allies, that will be a sharp and insistent directive at the peace table. To this task Kiwanians and all like-minded Americans must dedicate their energies in this fateful year."

BISHOPS' STATEMENT ON INTERNATIONAL ORDER

By the Catholic bishops of the United States and signed in their names by the ad-

ministrative board of the National Catholic Welfare Conference, November 16, 1944:

"The international institution must be universal. It must seek to include, with due regard to basic equality of rights, all the nations, large and small, strong and weak. Its constitution must be democratic. While it is reasonable to set up a Security Council with limited membership, this council must not be an instrument for imperialistic domination by a few powerful nations. Before it every nation must stand on its rights and not on its power. It must not allow any nation to sit in judgment in its own case. Frankly, it must recognize that for nations as well as individuals life is not static. It must, therefore, provide in its charter for the revision of treaties in the interest of justice and the common good of the international community, as well as for the recognition of a people's coming of age in the family of nations.

"The function of the international organization must be the maintenance of international peace and security, the promotion of international cooperation and the adoption of common policies for the solution of common economic, social, and other humanitarian problems. In the maintenance of peace it is reasonable that the organization have at its disposal resources for coercing outlaw nations even my military measures."

SYNAGOGUE COUNCIL OF AMERICA

New York, N. Y., January 19, 1945:

"The Synagogue Council of America greets with profound gratitude the labors of the leaders and the representatives of the United Kingdom, the Soviet Union, China, and our own country as set forth in the Dumbarton Oaks proposals for an international organization to achieve the maintenance of international peace and security. Although these proposals are admittedly tentative, and constitute only a preliminary and incomplete statement of a hope yet to be fulfilled, the Synagogue Council acclaims the temper in which they are drawn. The statesmen of the four Allied Nations testified to the faith that resides in the human spirit and bespeak our own conviction that men and nations can and will cooperate to free the world of the curse of war.

"The Synagogue Council of America is in full accord with the recommendation in the Dumbarton Oaks proposals to establish a security council, an international court of justice, and to develop such measures as shall advance the possibilities of universal peace.

"The security council would be empowered to employ force to maintain or restore international peace. Use of force to suppress the persecutor and to vanquish the oppressor is a recognized principle of Judaism."

SOUTHERN BAPTISTS COMMITTEE ON WORLD PEACE

(J. M. Dawson, chairman)

Speech before Southern Baptist Historical Society, August 29, 1944:

"1. No isolation: We believe that the command of Jesus 'Thou shalt love thy neighbor as thyself' is a condemnation of the policy of isolation on the part of any nation. No nation is justified in seeking to separate itself from the rest of the world—its needs, its problems, or its life. We are inevitably members one of another.

"2. A democratic world: Believing that God has created all men free and equal and has given to them certain inalienable rights which must ever be respected, we assert the right of all nations, both great and small, to self-government, and the obligation of the strong to protect the weak, whether small nations, racial minorities, or underprivileged people in the exercise of their God-given freedom.

"3. Organized for peace: In order to guarantee security for all nations against aggression, invasion, or attempted domination by any other nation, we believe an international organization should be set up which by economic sanctions, or if necessary by police power, shall restrain any such attempt at aggression, invasion, or attempted domination.

"4. Economic opportunity for all nations: Many nations are retarded in their development because of poverty and lack of economic opportunity. The erection of tariff barriers for the protection and enrichment of stronger nations may be as serious a hurt to weaker nations as military invasion."

FEDERAL COUNCIL OF CHURCHES OF CHRIST IN AMERICA

Proposed in a report by Bishop G. Bromley Oxnam of the Methodist area of New York to a session of the National Study Conference on the Churches and a Just and Durable Peace, at Cleveland, Ohio, January 18, 1945:

"We recommend that the churches support the Dumbarton Oaks proposals as an important step in the direction of world cooperation while at the same time we urge the following measures for their improvement:

"1. Development of international law: Operation of the organization under international law should be clearly anticipated in the charter and provision for the development and codification of international law should be specifically incorporated.

"2. Voting power: A nation while having the right to discuss its own case should not be permitted to vote when its case is being judged by a predetermined body of international law.

"3. Amendment: In order to permit such changes in the charter of the organization as may from time to time be necessary, the provision for amendments should be liberalized so as not to require concurrence by all the permanent members of the Security Council.

"4. Colonial and dependent areas: A special agency or commission should be established wherein the progress of colonial and dependent areas to autonomy, and the interim problems related thereto, may become an international responsibility.

"5. Human rights and fundamental freedoms: A special commission on human rights and fundamental freedoms should be established in addition to the economic and social agencies proposed under the economic and social council.

"6. Eventual universal membership: The charter should clearly specify that all nations willing to accept the obligations of membership shall thereupon be made members of the organization.

"7. Limitation of armaments: More specific provisions should be made for promptly initiating the limitation and reduction of national armaments.

"8. Preamble: A preamble should reaffirm long-range purposes of justice and human welfare which are set forth in the Atlantic Charter and which reflect the aspirations of peoples everywhere.

"The proposals are the only plan which governments have thus far evolved and therefore are the only available index to the extent of agreement which is now possible.

"They set forth certain purposes and principles essential to world order and peace.

"They provide for continuing collaboration of the United Nations, and in due course of other nations.

"They provide through the assembly for the periodic consultation of all member nations and for promoting cooperation in the interest of the general welfare.

"They provide an economic and social council for facilitating solutions of international econmic, social, and other humanitarian problems and for coordinating international policies and agencies in this field.

"They provide, through the Security Council, for continuing consultation of representatives of the greater powers and of selected lesser powers with a view to a peaceful settlement of disputes and the restraint of aggression."

The three discussion groups of the conference, including all the delegates, voted unconditional endorsement of Dumbarton Oaks but reserved the right of the conference and of churchmen in general to continue their efforts at improvement.

One Hundredth Anniversary of the United States Naval Academy

EXTENSION OF REMARKS

OF

HON. LANSDALE G. SASSCER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1945

Mr. SASSCER. Mr. Speaker, under unanimous consent to extend my remarks, I include a joint resolution by the Maryland General Assembly congratulating the United States Naval Academy on the approaching one hundredth anniversary of its founding, and expressing the hope that the present Naval Academy will be expanded to meet any further need by the Navy for officer personnel.

House Joint Resolution 3

Joint resolution by the Maryland General Assembly congratulating the United States Naval Academy on the approaching one-hundredth anniversary of its founding and expressing the hope that the present Naval Academy will be expanded to meet any further need by the Navy for officer personnel

Whereas the United States Naval Academy, the home of naval officers, will on October 10, 1945, attain the one hundredth anniversary of its founding at Fort Severn, in Annapolis, Md.; and

Whereas the State of Maryland shares the Nation's deep appreciation of the achievements and accomplishments of the United States Navy, and is warmly sensible to the essential part played in such achievements and accomplishments by the Naval Academy in its century's service of training the officers of the United States Navy; and

Whereas the State of Maryland esteems the decision of the many Naval Academy men electing to become legal residents of Maryland, some commencing as midshipmen and continuing as officers with their families when in duty residence, and frequently consummated by their adoption of the State for permanent residence at the time of retirement from the United States Navy, with the result that the State has gained in these citizens valuable leadership, experience, and cosmopolitan views and knowledge, all in keeping with the highest standards and traditions of Maryland; and

Whereas the State of Maryland enjoys the most cordial and cooperative relations with the administration of the United States Naval Academy and with the regiment of midshipmen; and

Whereas it is the sense of the General Assembly of the State of Maryland that to establish supplemental institutions apart from the century-old home of the Naval Academy in order to provide increased needs for naval officers, as has been proposed, would, by competitive and extraneous influences, rend the common heritage of naval officers, the tradition of Annapolis brotherhood; and

Whereas it is the conviction of the General Assembly of the State of Maryland that there is available in Annapolis, Md., contiguous to

the present reservation adequate areas to accommodate expansion of the United States Naval Academy to a dimension that will permit the training of sufficient officers for the post-war Navy: Now, therefore, be it

Resolved by the Senate and the House of Delegates of the General Assembly of the State of Maryland, That the most sincere congratulations be extended by the State of Maryland to the United States Naval Academy on this the occasion of its centennial, together with an expression of the convictions that the accomplishments of the future will equal those of the Naval Academy's glorious history, and that the cordial spirit characterizing the State relations with the Naval Academy will continue through the years; and be it further

Resolved, That it is the conviction of the General Assembly of the State of Maryland that facilities for the training and education of such additional officers as the United States Navy may need can, and should, be established, with obvious spiritual and economic advantages, by expansion of the United States Naval Academy at Annapolis, Md., where it was founded and where, in the century being rounded, it already has expanded many times; and be it further

Resolved, That this resolution be spread upon the journals of the senate and house of delegates, that copies be presented the Superintendent of the Naval Academy, the Secretary of the Navy, and the Senators and Representatives of the State of Maryland in the Congress of the United States, and that by this resolution the State of Maryland delegations in the Senate and the House of Representatives of the Congress are petitioned to lend every aid to the retention of the Nation's one Naval Academy in Annapolis, Md.

Proposal for Joint Executive-Legislative Cabinet

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 29 (legislative day of Friday, March 16), 1945

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Gould Lincoln's column entitled "The Political Mill," from the Washington Star of March 27, 1945.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

THE POLITICAL MILL

(By Gould Lincoln)

Senator FULBRIGHT of Arkansas, Democrat, has proposed a drastic—and novel for America—change in our governmental set-up. Appearing before the Joint Committee on the Organization of Congress, the Arkansas Senator suggested a joint executive-legislative cabinet to be composed of the President's Cabinet and the chairmen of the proposed new streamlined joint standing committees of Congress. He argued that such a cabinet would make possible much closer collaboration between the executive and legislative branches of the Government.

One power proposed for this joint cabinet, if granted in the future, would make the Government much more responsive to the popular will. That is the power to dissolve Congress, in case of a deadlock between the two branches of Government over some issue of major importance, and force a general election. This veers toward the British system of parliamentary government, although it would retain the executive as a separate and strong branch of the Government. Senator FULBRIGHT's plan, if a general election were forced, would call for the election of all Members of the Senate and House, and a President and Vice President. He maintains that no such action would be taken unless the issue involved in a dispute between the President and Congress were of vital importance.

The country has had two examples in the last quarter century when an impasse existed between the Chief Executive and Congress at times of stress—and, Mr. FULBRIGHT believes, there may be another coming up. The first was when the late President Wilson split violently with the Senate over the Versailles Treaty and the League of Nations, and second was when former President Hoover, faced with a disastrous depression, had a recalcitrant Congress on his hands when he undertook to get through measures he believed would help. In both instances the President faced a Congress in which the opposite political party held control of one House, as a result of a prior election. This split in party control has occurred many times in the history of the United States—indeed, in nearly 30 different Congresses out of a total of 79. When it occurs, the Government is more or less hamstrung.

This country is on the threshold of important events, particularly in the field of foreign affairs, but by no means exclusively so. Suppose, as might happen, either the House or Senate, or both, should fall under Republican control in the elections next year. The situation for the American people, with their Government thus divided, would be pathetic, with Mr. Roosevelt and the Republican leaders in Congress working at cross purposes. Should the issue become grave enough, and a general election could be forced, the situation might be cured.

Members of Congress have been more and more aroused—and this goes for Democrats as well as Republicans—over the fact that the executive with its present vast powers, is either disregarding the intent of Congress in administering the laws or is actually assuming to write the law through Executive orders and myriad regulations. They resent this bitterly. They point out that when the Constitution was written it was with a clear intent that the executive should not have kingly powers, and the legislative should be strong. Development over the years, however, has finally brought to the Chief Executive greater powers than monarchs have held in other countries, certainly far greater than the King of England holds today.

The Fulbright plan to give a joint cabinet the authority to dissolve Congress and force a general election would require a constitutional amendment. Senator BALL of Minnesota, Republican, who has sympathy for the proposal, is of the opinion it would be well to hold another Constitutional Convention generally to bring the Constitution up to date.

Commendatory Communications

EXTENSION OF REMARKS

OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1945

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article and letters:

[From the Noblesville (Ind.) Daily Ledger of March 26, 1945]

Those Hoosier boys seem to think they want to be in the House when great, or even the smaller, matters are before the body, and they even go so far as to think a quorum should be present.

One of these scrappin' Members got into the limelight, but he was right and stood the light very well, even when he was called names.

That was that young fellow EARL WILSON, a former school teacher and one, no doubt, who wishes he were back in the schoolroom where, at least, he could keep order and have a quorum present when study was needed, and when it was well for each pupil to be able to answer the roll call in person.

It is difficult for a former school teacher to reconcile himself to the discussion of a topic when only two or three Members of the House are present, and so he calls for a quorum, now and then, and those who have been there for years do not want to be forced to pay any real attention to what is being discussed—they let a few leaders think for all and say what shall be voted through, and just peep in for a roll call.

Congressman WILSON also has trouble reconciling himself to the fact that so little attention is paid to the passage of bills which means an addition to that debt of $7,000 a family for all the people of the country, and the Congress has already agreed that it can go on until the whole debt reaches the untold sum, in all history, of three hundred billions, and, as Professor WILSON says when the Government has asked even little children to save their pennies and purchase War bonds.

This matter of the billion debt was being discussed and when only a few of the Members of the House were present, Dr. WILSON asked for a quorum and the majority leader called Professor WILSON a "d——n fool," and the EARL did not like that. But Mr. WILSON did not fight back and, of course, being a school teacher, he does not know all those names which are sometimes used in a disrespectful way, but he did get the quorum in the House.

And he did get a discussion of the matter, and he also may go so far as to teach the Congressmen that the people back at home wish that they shall know what is going on at Washington and that they shall understand that the people back at home do not hold the Congress in as high an estimate as they would if they really knew that each and every Member was earning his salary by really being in the Congress and not merely getting the news from the newspapers, whose Representatives there are on the job all the time.

ATKINSON, N. H., *March 25, 1945.*

The Hon. EARL WILSON,
House of Representatives,
Washington, D. C.

DEAR MR. WILSON: Since listening last evening to the People's Platform I have hoped and prayed that you would not regret your stand.

I live in a small country village to be sure, but friends from cities have told me of loss of efficiency, absenteeism, and accidents due to drink. Of course, not all frequent night clubs, but twice since the "midnight curfew" I have heard reports of fewer arrests, less crime, fewer auto accidents, apparently because in many cases midnight ended indulgence in worse than foolish "fun."

May you be always on the side of right, however loud the protestations from the wrong. I always rejoice to know of Congressmen who are seeking to answer the prayer "Thy kingdom come." May God give you wisdom and courage.

Sincerely,

CLARA M. RIDGEWAY.

From Dr. Frank Laubach:

"The glad news I want to shout from the housetops is that America can work a world miracle, if we care enough and serve selflessly enough.

"You don't have to be powerful; you don't have to be bright; you don't have to see the whole way ahead. All you need is to be sure of what He wants done, trust enough to venture, and obey every minute."

PUTNAM, CONN., *March 24, 1945.*

DEAR MR. WILSON: You done well, Mr. WILSON, the other two speakers made me mad. You told the truth. We don't have to read or hear about it. We see it night and day, and this is not New York or Detroit.

Yours truly,

DAVID FAHLSTROM.

THE CORPS OF ROYAL CANADIAN ENGINEERS,
CAMP ENGINEER'S OFFICE,
Barriefield, Ontario, Canada, March 25, 1945.

Mr. EARL WILSON,
Congressman, House of Representatives, Washington, D. C., United States of America.

DEAR SIR: I listened to the broadcast in which you took part, and curiously enough, had just read an article by one of our columnists, anent the 12 o'clock midnight curfew, which I am enclosing.

It might be interesting to you to get the views of one of your Canadian neighbors.

Sincerely yours,

Corp. D. D. WILSON.

KALAMAZOO, MICH., *March 24, 1945.*

Congressman EARL WILSON,
Washington, D. C.

SIR: I just have heard your broadcast over the Columbia network and I must compliment you upon your dignity, sense, idealism, fairness, and strength. Hayes was everything you weren't. He stands for a group of people who want to do what they want to do, when and how they want to do it. He's a disturbing example of a group of people who can get pleasure only in one way—in satisfying himself and let the rest of the world go to the devil. His idea of a good time means drinking, heavy drinking probably, and going to night clubs. He never would understand your having fun and relaxation in a fine, wholesome way. He doesn't even sense you hard working Congressmen can get fun out of serving people of the United States as a whole.

Hayes made a plain fool of himself. He lacked control and any idea of altruism. He's interested in making money and furthering his own personal ideas.

Congratulations for your work on the radio and your work to bring about better support of our boys who are giving their all for us.

I think all our boys aren't interested in getting home so they can get dead drunk and get some girl dead drunk in some "den of vice." I know several who aren't cut on those lines, but who want to come back to the kind of United States you would like to have and are willing to work for.

Truly yours,

LOUISE S. STEINWAY.

CLEVELAND, OHIO, *March 24, 1945.*

Hon. EARL WILSON,

DEAR SIR: Thank you for your stand on the curfew question as given over WGAR on the People's Platform. Your remarks were inspiring and splendid and all for our great war effort.

The United States is proud of your endeavors.

Gratefully yours,

JULIA M. SMALE.

Soil Conservation Service

EXTENSION OF REMARKS

OF

HON. PAUL BROWN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1945

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial entitled "An Invaluable Service" published in the March 8, 1945, issue of the Oglethorpe Echo, of Lexington, Ga.

This article relates to the Soil Conservation Service, one of the outstanding agencies of the Government benefiting the farmers and costing the Government very little money:

AN INVALUABLE SERVICE

Since the advent of the New Deal many services have been inaugurated designed to be of benefit to the masses of people.

All of them, however, have not worked out that way. Many of them proved unwise and have since been discarded.

But there is one that is proving of vast benefit to the people, and its benefits increase with time. We are speaking of the soil-conservation service.

This service is fundamental and basic. There can be no revival of agriculture without it. The years of neglect and wrong tillage methods on the vast majority of our lands has rendered them incapable of producing a living and a profit to the husbandman.

The soil-conservation program was designed to correct this situation, and is doing so. Of course, it will take years to bring the land back to a high state of fertility, and as time passes more and more improvement will be noted in the economic condition of our people. One can readily see that 50 bushels of oats per acre will be more profitable than 25. This is true of all other crops. This program is doing just this.

This article was inspired by the series of weekly news stories being run by John T. Conger, Jr., and Edge Thomas, the gentlemen who have this program in charge in Oglethorpe County. We were impressed with the news that Mr. So-and-So has had a soil-conservation plan made out for his farm; that so many acres were being planted to kudzu this spring; that terraces were being laid out; lespedeza was being planted; and perennial cover crops were being planted in water-disposal areas. In the years to come great benefits will be noted from these efforts.

A ride through Oglethorpe County will convince one of the vast changes in the rural scene within the past 10 years and the next decade will effect a change just as radical. Remember the old brown cotton fields being washed away by winter rains? Now you see acres upon acres of green growing crops; oats, wheat, rye, barley, and clover, producing the very finest of feed and at the same time conserving and enriching the soil for more and heavier yields as the years pass.

We know of one farmer in the county who, last fall, planted 100 acres of bale-to-the-acre cotton land to crimson clover and other pasture grasses, fenced this area, and will use it for pasture land. It is our purpose to tell you more about this later on. When the warm days of spring come this field, or pasture, will be a thing of beauty, and will become more and more profitable with the passing years.

Economic gain is by no means the only benefit to be derived from this program. As more and more minerals are added to the soil a great improvement in the public health will take place. Relief from economic stress and disease and sickness will have its beneficial effect upon the public morals of the masses of people. These benefits are cumulative and one improvement leads to another. After the war more machinery will be used upon our farms as this type of farming is adapted to its use. Fewer and fewer row crops will be planted, livestock will be more and more stressed, relieving our farm men, women, and children of back-breaking drudgery in the fields and at the same time producing a higher standard of living.

Of all the agencies created by the Government designed to benefit the people we believe the soil-conservation program to be, by far, the greatest of them all.

Address by Hon. James A. Farley Before Foreign Commerce Club

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 29 (legislative day of Friday, March 16), 1945

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of foreign commerce, delivered by Hon. James A. Farley before the Foreign Commerce Club at their annual Port of New York Night banquet, at New York City, on March 20, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is highly fitting that this discussion of foreign trade and shipping is being held in the city of New York. Occasionally the great role of the port of New York is obscured by more glamorous aspects of the city as a center of finance, of art, and of entertainment. And yet, this great mountain, made by the hands of man, rests essentially upon its trade, its foreign and coastwise shipping and all the attendant services and industries which are dependent on trade.

Half the volume of our national exports and imports move to and from the world through the gateway of the port of New York. Back in the peacetime year of 1937 it was estimated that nearly 2,500 ocean-going departures or arrivals on the Manhattan side of the river alone carried more than $1,300,000,000 worth of merchandise in a single year. In coast-wise trade in that year there were 5,300 departures or arrivals, carrying more than 4,000,000 tons valued in excess of $1,000,000,000.

It will be upon the margin represented by the trade passing through here after the war that national prosperity or depression will depend. And considering the vast necessities that will be present in this country for employment, for goods and for the use of a great industrial plant, our margin of foreign trade, while relatively small, will be the critical balance on which our well being may well depend.

It is good that leaders in the shipping industry are looking ahead toward the improvement of this great port. Basil Harris,

president of the United States Lines, speaking for the Propeller Clubs of New York last year forcibly called attention to a number of basic facts. He pointed out that while the speed of ocean-going ships prior to the war averaged 10½ knots, the average speed in the post-war era will be in the neighborhood of 15 knots.

Mr. Harris made another vitally important point. The awful destruction visited upon such European ports as London, Cherbourg, Bremen, Rotterdam, and other ports promises them at least one post-war advantage. The rebuilding of a city or a port under modern conditions is a comparatively rapid process. When these ports are reconstructed they will be built according to the latest designs. Their facilities for loading and unloading will be unparalleled. Our port of New York, untouched by the ravages of war, will, on the other hand, carry the marks of antiquity. That ironical fate we must avoid by a program of modernization. Mr. Harris proposed $2,000,000,000 for the modernization of this port. It is a suitable purpose for any major public works program. It is essentially a responsibility of the Nation as a whole, and it would be the most prudent of public works, since it would be abundantly self-liquidating, it would provide jobs and industrial activity, and best of all, would keep the United States in line with the maritime industry of the world.

I am not going to indulge in prophecies about the amount of our foreign trade after the war. There are many such estimates—some modest, some utterly too hopeful. But what we know is that in the business that will follow this war foreign trade is certain to play a very large part. The important thing is not to indulge ourselves in estimates, but to set to work now to develop the changed national viewpoint which will make a large increase in foreign trade possible. That is a task to which business, labor, and Government can well devote their united strength.

It is a hopeful sign that in both political parties there is developing an increasing interest in foreign trade, and in consequence a recognition that the modern position of the United States in the world makes it necessary that we reconsider many of the tariff policies of the past. Under the great leadership of Secretary Cordell Hull, this change of attitude has taken form in our reciprocal trade policy. That policy was sound, but in its beginnings it was experimental, tentative, and modest. But now that American prejudices in favor of higher tariffs are subsiding before the great facts of American efficiency and necessities, we may more resolutely proceed in the direction of enlarging our imports. A test of opinion on this subject will come later this spring when the Reciprocal Trade Agreement Act comes up for renewal. If the vote is close, it may mean that the administration will hesitate to move resolutely toward a larger exchange of goods. If the vote is by a wide margin, we may expect sentiment in both parties to move progressively toward a real reconsideration of our tariff policies.

We hear a good deal about increasing our exports, but not so much about the necessity of imports. It is time for a considerable change in this emphasis, if we are to take steps in the direction of making it possible to liquidate our prospective post-war loans.

But in our preparations for post-war responsibilities we must break off the habit of delay. Too much of our financial machinery consists of an apparatus for putting things off. A great part of our credit system consists of means of postponing payments through notes, mortgages, and the like. The financing of foreign trade seems to be arranged in the same spirit of delay. And in that trade the parties are farther apart. Decisions are postponed, procrastination governs our actions and all too often we postpone settlements until they can no longer be made without defaults. These delays in the past, which were largely due to the complicated machinery of international finance, resulted in some very serious international problems. The weight of our trade balances became so heavy that collapse finally resulted. Depression swept the world, and war came in its wake. There is nothing new in this deadly cycle. Philip II, of Spain, long ago decided to have done with all of the financial machinery involved in his foreign borrowings and he simply repudiated, throwing weaker countries into chaos and ruin.

The danger of postponing settlements in foreign trade is similar to the old habit of long-delayed reparations after a war. The fact is that the longer actual payments of reparations are deferred, the greater the danger is that no reparation will be paid.

We must, as Americans, resolve to walk squarely up to these questions of how we are going to be paid for our exports and face them honestly. Republican Senator WHERRY, of Nebraska, gave some sound advice to his party in a speech in January. He said, "If we are going to sell abroad, we must buy abroad." And I would add to this statement of Senator WHERRY that if we are going to lend abroad, we must accept goods from abroad.

We are going to need more from the rest of the world than we have ever needed before. We have scraped to the bottom of the barrel in many of our resources. Some of our resources of which we still have considerable quantities, such as ur forests, might well be given a rest in order that they may grow again. We shall have to import more zinc and lead, more iron, petroleum, and timber. The development of our new industries which will follow the war will require much more of materials that we have in the past imported in small quanti ies, such as manganese, nickel. wool, vegetable oils, and oil seeds, pulp, and and paper. The list is extensive and impressive.

There are a few items, such as rubber, of course, in which the process will be reversed, but the trend will be toward large imports of raw materials.

We will have to do some importing of things that we shall need for essential defense, such as the elements necessary for steel alloys. Our stock piles should be here and not in Arabia or central Africa.

There are other offsets to trade, things which have traditionally helped us to balance our accounts. There is foreign travel, for example. There will be more of that. There will be foreign investments which leave money abroad. All these factors will still leave room for greater imports of luxuries and goods of general utility, and our tariffs always must be adjusted to take account of them.

But the greatest necessary adjustment must be in our thinking. The great argument for high tariffs in the past has rested on the fallacious belief that there is just so much work to go around. Our thinking on this subject has looked upon work as a constant and sterile substance which, having been measured and weighed, need not be measured and weighed again. But the amount of work in the world is not a sterile and unchangeable commodity; it is a vital organism capable of growth. We shall have to revise the thinking on the basis of which we have sought short cuts to limited employment, such as shorter workweeks and other share-the-work plans. We shall have to revise the belief, so widely prevalent in this country that if somebody else makes any kind of goods which can be made here, then somebody here loses his job.

It is time that we realize that there is no limit to the quantity of the many things we could import and consume in this country and, on the other hand, that there is no limit to the amount of goods in the production of which we unquestionably excel—goods that are made in accordance with the highest standards of efficiency the world has ever seen.

If we are going to bring about this readjustment of trade, of our laws governing trade, and of our past and obsolete thinking which lies behind those laws, the time to do it is when European production is being slowly and gradually resumed. If we take time by the forelock and prepare now for this new era in our economic policies and thought, the amount that we will have to accept will be small at first and increase only gradually. That is because European production must, of necessity, be slow in moving back to its normal capacity. In dealing with our tariff laws we might well learn a lesson from the philosophy of Secretary Hull, which viewed tariff adjustments as a matter for progressive action. The Tariff Act of 1933, provided for five biennial reductions. Such a progressive plan make it possible for business to anticipate changes, plan ahead, and meet slowly increasing imports with new programs of essential production.

Our adjustments to reductions in tariffs may not be as great as we think. Our merchandise imports came pretty close to balancing our merchandise exports from 1922–29. Indeed, if the growth of our foreign trade had continued from 1929 at a steady rate, we would not now be viewing the trebling of our peacetime trade as a distant goal. We would already have attained something like that proportion.

A good deal has been said for the view that a prosperous America is the best single guaranty of a prosperous world But this statement, however true, needs to be spelled out in terms of what it takes to make a prosperous America. A prosperous America is an America going forward, with investment at home and investment abroad, with confidence in the essential friendliness of its Government, with confidence that there may be profit in trade and in international finance, with confidence that obligations, public and private, will be honored.

We talk of how a prosperous America can carry the benefits of its prosperity to other countries. How can we do this best? Should we merely tell them that they ought to raise their wages, or should we enable them to engage in a trade so profitable, through buying their goods, that their wages will increase as a natural consequence?

The grim handwriting is on the wall for everyone to see. Unless we do arrange in some way to obtain payment for our goods—and now is the time to start arranging for that—then we risk having to go through the experience of another great series of defaults. Once more, we may have the bitter experience of unpaid debts, of hard feelings between nations, of a paralyzed trade and of the unpredictable results beyond. I have spoken of the danger of another series of defaults. Three of these have already come within the memory of most of us.

The first consisted of those debts to American private investors contracted abroad in the 1920's. Not all of these failed, by any means, but a lot of good American money went down the drain.

The second series of defaults took place in the early 1930's. They were the debts to our Government by other governments, contracted during and after the First World War. This series of defaults led to the passage of the Johnson Act, which was the expression of a country which was sick and tired of all dealings with foreign nations. It was a gesture of isolationism, but to be perfectly frank, it was a gesture which rose out of despair, anger, and disillusionment.

The third series consists of lend-lease obligations which we are probably going to forgive in large part, as a portion of the cost of winning the war.

Let us not go beyond this and permit defaults to occur in a fourth series of loans—loans which are proposed in such institu-

tions as those suggested by Bretton Woods. Let me make it clear that I am not objecting to these loans. I am trying to make the point that when we make them, we must adjust our economic thinking to a proper means of permitting those loans to be repaid.

Let us face these problems squarely. Let us admit that if we are going to lend abroad, we must buy abroad. Let us put our tariffs in such order that we can accept payment in the only way in which payment can be made. Let us make loans to Europe, not necessarily out of our generosity, but out of our business sense, because Europe will need loans for her reconstruction. The impoverished countries over there will need, on the physical side, industrial and transportation equipment, building materials and tools of every kind. A Europe rising from her ruins will be a good customer, and a good supplier of valuable products to us; if we are willing to accept them in payment for what we sell.

In our attitude toward countries which, in the past, have been in the main merely suppliers of raw materials, let us encourage them in their efforts to develop an industrial system. Always remember that our greatest volume of trade has always been with nations industrially developed—not with poor and backward countries. The great economic paradox in international affairs is that our greatest benefits come from countries which are our natural competitors.

Once our thinking is adjusted to these principles, we need not spend our time and energy talking of employment first. Employment is a result and not a cause. Employment will come from increased confidence among nations, from a sound maintenance of international credit and, above all, from the promises of a lasting peace.

That, of course, is the theme to which all thoughts return—a lasting peace. And it is the thought of lasting peace that brings my mind back again to the fact that this important and delightful occasion is taking place in the port of New York, which has been changed so much by war, and which has so much at stake in the establishment of a just and lasting peace and in the world-wide prosperity which can be made to follow.

There are thousands of New Yorkers like myself who have more than the American's normal interest and pride in the fame and fortune of this, the world's greatest seaport. We have a sentimental attachment to this harbor and its metropolis because it was to the port of New York that our forebears a century or more ago came to seek, and to find, spiritual and political freedom and economic substance for themselves and their descendants. I think it can truthfully be said that more people from all sections of Europe entered the land of opportunity through this magnificent and thrilling gateway than through all the other American ports put together.

Yet twice within living memory we have seen the unmatched facilities of this ocean terminal turned aside from their proper purposes devoted to the agony and destruction of war. Twenty-five years ago there left this port thousands upon thousands of young Americans bound for Europe or the open seas in defense of their country. And in the past 4 years not thousands, but millions, of the finest of our youth and many thousands of our young women have left this port to fight in every theater of war, be it land or water. This is sad to relate. Even sadder is the fact that many of them will not come back. I pray, as we all do, that never again will the port of New York be used to send either men or supplies to wars in other lands, but that for centuries to come it will be a port of entry for unnumbered thousands bound for a better life in our wonderful land.

I know that in this will also be the prayer of our young warriors as their returning transports steam up the harbor past the Statue of Liberty. God grant they may have that welcome sight before many months have passed.

Bureaucratic Bungling

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. LEMKE. Mr. Speaker, in spite of the fact that this House, by an overwhelming vote, has twice gone on record redefining the Tydings admendment, in language so plain that even an eighth-grade schoolboy can understand it, yet General Hershey and his staff does not seem to be able to interpret the wish and the will of Congress when it passed the Tydings amendment. They are still continuing to reclassify essential, irreplaceable farmers and farm workers as I–A and inducting them into the armed forces.

Congress can pass laws but it is the duty of the Executive and the executive departments to enforce them. When the executive, the law enforcement branch, not only ignores the law, but knowingly violates it, there is danger to our form of government. We are at war and Congress, for that reason, may not have taken more drastic steps, but if this provocation continues, Congress may be forced to take further steps. It may be forced to take the steps that will let the Nation know who is responsible for this wholesale interference with our war effort—who is interfering with the Nation's food supply.

One bureau of the executive tells us of a food scarcity. Another of the danger of a famine. Then comes the Chief Executive and tells us that we must pull in our belts, that we must feed the starving of other nations. Then along comes General Hershey and denudes the farms of the Nation of essential farm workers. This in violation not only of the spirit, but of the plain letter of the Tydings amendment. I get letters every day "Why does not Congress do this and why does not Congress stop this madness?" My answer is that Congress passes the laws and the executive's duty is to enforce them and not to violate them.

May I suggest that if the Federal Government fails to enforce the laws, then it is up to the governors of the various States. I want to take my hat off to a few of these governors. These few have accepted the responsibility. They have directed the State director to obey the Tydings amendment. These directed the local draft boards to obey it. To my knowledge, one of them used the radio and informed the local boards that the Tydings amendment must be observed. Unfortunately, some of the governors have not given this matter due consideration.

To show that the pressure upon the State directors and the local draft boards comes from the Director of Selective Service here in Washington, I am inserting a paragraph of a letter written to James E. McDonald, Martinsburg, W. Va., by the State director:

It might be stated, however, that our general understanding is that this case is no different from that of many others in that section and with the pressure now being put on Selective Service for the induction of men in the lower age groups, we believe it would be well for all employers to make preparations to release men under 26 who are otherwise eligible.

Under these conditions, it seems to me that the Senate should take prompt action and pass House Concurrent Resolution 29 which was passed over a week ago by an everwhelming majority in the House. When the committee provided for in that resolution is set up, it can call in the State directors and some of the local draft boards that have resigned, or have been asked to resign, because they refuse to ignore the Tydings amendment and we will fix the responsibility where it belongs. It may be that Congress will feel inclined to take the proper steps to see that the laws of this Nation are not only obeyed but enforced.

I further wish to call the attention of the Congress to the fact that not only are the farms being denuded of farm help but they are compelled to work with insufficient farm implements. I have been informed that this year 16 percent of the production of farm implements is going to foreign countries as against about 7 percent last year.

This being the case, the surplus property suitable for agriculture should be sold by the Government direct to the farmers. But that is not being done. Some of it has been sold to speculators. Recently I listened to the testimony given before the Committee on Agriculture by Capt. John H. Stanbaugh, who stated that he knew instances where the Treasury Department sold trucks suitable for agriculture for as low as $150, and which were in turn sold by the purchasers to farmers for $750.

This kind of performance should be halted. It is better to put a few in jail now than to wait until after the war. Then, I am afraid, there will not be jails enough to hold them. Here again is a letter I have just received from a person who works for the Reconstruction Finance Corporation. This letter speaks for itself. I, too, hope that this party will not be dismissed because he is letting us know what is going on.

Dear Representative LEMKE: I am with the Reconstruction Finance Corporation and feel deeply concerned over the disposal of certain materials which are so badly needed by our farms. To mention a few, we have 10,000 home-lighting units, gas or Diesel driven, highly suitable to farm work. Then there are the following: electric motors, power pumps, metal piping and fittings, bare copper suitable for lightning rods, electrical supplies, tractors, Diesel and gas engines.

I feel that this surplus material should be sold direct to the farmers on suitable terms where necessary, and give them all of the direct benefits.

Your comments would be greatly appreciated.

Cordially,

FREDERICK A. BERLIN.

P. S.—You are privileged to read this letter into the CONGRESSIONAL RECORD, and I hope that it does not result in my dismissal.

These are strenuous times. While our boys are about finishing their work on foreign battlefields, and while their names have been used without authorization in putting over the slave bill in this House, nothing has been done to stop this alleged graft or to find out just what the facts are. While the farms are being denuded, House Concurrent Resolution 29 is sleeping in the Senate. The time has come for action. Let us stop wasting time on the slave bill and pass House Concurrent Resolution 29. Let us not put a stain upon the remarkable performance of labor and the American people in this war by insulting them with an unconstitutional slave bill.

Shall We Choose Insanity?

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. LUDLOW. Mr. Speaker, a challenging and thought-provoking address on the subject now uppermost in men's minds—the future peace of the world—was delivered over radio station WFBM at Indianapolis on March 22 under auspices of the Indiana Committee for Victory by my distinguished constituent, Booth Tarkington.

I think that this address, so pregnant with meaning and sound philosophy, so illuminating and inspirational that it may be said to be wholly unique, should be read by every person in the United States, and I have secured the unanimous consent of the House to insert its full text in the CONGRESSIONAL RECORD.

Shall We Choose Insanity? was the subject chosen by Mr. Tarkington, and his address was as follows:

We learn from Stephen Bonsal's book on the French who came to help us win our Revolutionary War that George Washington's best friend among the French officers was the Chevalier de Chastellux. This Chastellux, a professional soldier, and a member of the French Academy, fought upon more battlefields than that of Yorktown, and he thought hard about war. His conclusion was that there ought to be a league of nations to prevent war. History and his own experience proved to him that mankind stupidly inflicts terrible injuries upon itself; but he thought that sometime, when warring nations got their eyes open enough to notice a certain thing, they would form an international league for permanent peace.

This "certain thing" that Chastellux thought people would sometime surely notice was that in any way, the victor is almost as horribly damaged as is the vanquished. So when the people of this world became wide awake enough to notice the price paid by the winners of any war, Chastellux believed they would have at least sense enough to settle disputes without using a method that always ended by leaving both parties in a miserable condition. Chastellux, in the eighteenth century, believed that the time would come when most people would understand this and a league of nations to enforce permanent peace would be formed.

Was Chastellux right, and now at last, in 1945, have enough people got enough common sense to understand that merely because of the price paid by the victorious, if for no other reason, wars between nations must be prevented and prevented permanently?

We could not evade this war. Heroism, skill, and energy make us the winners; but what price are we paying for our just and righteous victory? And what price shall we continue to pay for it in the future? Years and years from now the tears of mothers, widows, and orphans will still sometimes fall because we had to have this victory. Fifty years hence blinded men will still live in the dark, crippled men will still hobble and old wounds reopen. Fifty years hence, because of this war's back-burdening taxes, every family and every individual in the country will have to give up buying things that could make life more comfortable.

There are people who believe that we are paying for this war as we go. We are not doing so and could not. We are just beginning to owe for it. We had not finished paying for the last war when we began to owe for this one, and that war was ended 25 years ago. In good young lives, in family tragedies, and in the wealth of our Nation, that war cost us far less than half of what this war has cost us, is costing us, and will continue to cost us. If we do not prevent a third World War, what will it inevitably cost us, even if we are victorious?

We were lately astonished by the 22,000-pound bomb the R. A. F. was dropping on Germany. We were also horrified by the equally terrible rocket the Germans were dropping upon England. In the next war such bombs and rockets will be obsolete, too small, too slow, and too feeble.

Militant science now foresees an object, which we may call the atomic energy bomb, to be projected in quantity to anywhere in the world by the pressing of a button and capable of destroying a city like Chicago so horribly that a human being couldn't safely approach that locality for some months afterward. That is, we deal now in such explosives as the 11-ton bomb and the V-2 rocket; but in the next war opponents will eliminate one another with earthquake and cyclone. Victor and vanquished alike will have all their cities laid flat at the outset. That is, if mankind goes on producing war, the end—not far off—will find a few broken tribes living in the deepest recesses of such shelters as Mammoth Cave, clad in rags and fighting for bones. Some of these remnants may take a little pride in hailing themselves as the victors; but that pride would be all they possess. Man will have exterminated himself, and the long slow civilization that rose from the stone age will have been in vain. Man will have lived to no purpose, perishing from this planet because his intellect enabled him to make deadly machines that he hadn't common sense enough not to use for his own suicide.

We had to fight this war because, in a world trying to be civilized and sane, there were two tribes, Germany and Japan, inwardly eaten by the old, old moral and mental disease of egomaniacal jingoism. We didn't comprehend their insanity in time and so did not take their weapons from them and force them to deal with the rest of us in a sane and civilized manner. At terrible cost, that is now our hard task. Only fools would trust a madman with any weapon at all, and, till the murderous lunacy of Germany and Japan shall have utterly passed out of them, we have to provide them with strong attendants who will see that they harm no one.

All of us know that this has to be done, and thoroughly done; but a far, far more important undertaking is now before us, for upon it depends not only the permanence of civilization but the actual survival of man himself—except as a lonely savage—upon this globe.

I know there are people who believe that wars between nations cannot be eliminated. Such people feel that war is so profoundly established in the very nature of man that only well-meaning and futile dreamers hope to abolish it. There have always been people who have honestly believed in the nonsense that long and historically established customs and institutions cannot be changed, so it's wasted energy to try. The answer is that we have changed almost all of the worst of them. Human sacrifice in religious ceremonies was once so virtually universal that anybody who thought that God didn't need to be cajoled by the offering of men's blood would have been called a dreamer, possibly a well-meaning one but wholly unrealistic. We emerged from a time, not completely at an end even in the seventeenth century, when the burning of witches was both legal and meritorious. We have ceased to hang the pilferers of sixpence, and as late as during the Presidency of Thomas Jefferson, a great ex-Secretary of the Treasury had to let himself be shot to death by the Vice President of the United States because the institution of dueling was too ironclad to be denied and people who thought it could be done away with were not held to be quite practical-minded—yet we have so thoroughly abolished dueling that we wonder how so crazy an inhumanity could ever have existed.

The most deadly and cruel of all man's relics of barbarism is war, and we have not yet done away with it. Washington's friend, Chastellux, did not think that mankind would abolish war merely because war is deadly and cruel. He did not give human nature that much credit. But he did believe that some day men would wake up to the fact that their own self-interest demands permanent peace between nations. Not good will, not universal brotherhood, not even natural-born love of peace could be depended upon, he knew; but mere practical selfish self-interest could.

Well, in 1945, now, only the village idiot does not know that it is to the self-interest of every living man, woman, and child on earth that wars between nations shall be forced to belong to the horrors of man's past. What is to the self-interest of all these millions of individuals is, of course, to the self-interest of the nations of which they are citizens, and the leaders of 44 of those nations are entering into counsel with one another, praise be to God, to determine how best this great act of common sense can and shall be done.

The State of Indiana in the United States of America has decreed through its Governor and the representatives of its citizens that this present week shall be a period for its people's thinking and speaking upon this, the most important matter to be thought about and spoken of by them in the whole of their lives. The future of mankind is on the scales of this present every moment. What was done at Dumbarton Oaks was only the beginning of the beginning. What shall be done at San Francisco is only the continuance of the beginning. Beginnings and their continuances are always imperfect. Rome was not built in a day nor will the final constitution of permanent peace be built in a year; but we must see that it is builded.

It is a hundred and sixty years since Chastellux said that the day would come when there would be enough common sense in the world to organize permanent peace between nations. Has not our common sense—our mere sanity—yet learned that the day he foresaw must be now?

Let us put our faith where our hope is; but better than either having faith, or merely hoping, let us use our common sense for

our own self-interests and at last, every soul of us, help to establish the peace, the peace that thousands of years of agonized history and millions of young men's deaths should long ago have taught us how to make and to enforce.

The Dumbarton Oaks and Bretton Woods Conference Formulas

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and thoughtful address delivered last Saturday night over the Columbia Broadcasting System, by Hon William L. Clayton, Assistant Secretary of State, on the Dumbarton Oaks and Bretton Woods Conference formulas, which are now in the public mind.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Someone has said that it is easier to make war than it is to make peace; he might have added that it is easier to make peace than it is to keep the peace.

But the San Francisco Conference has the responsibility of setting up an international organization to do just that—to keep the peace.

Any organization designed to accomplish this purpose must deal with the economic as well as the political aspects of war and peace.

I wish to speak to you this evening about some of the economic conditions which are essential to the preservation of peace.

It so happens that these conditions are also highly desirable for their own sake.

Expanding world trade, increased production, free and equal access for all nations to the raw materials and trade of the world, and higher levels of living for all peoples everywhere are essential conditions to the maintenance of world peace. We know that our own security and economic well-being are closely linked to that of other countries. If other countries are suffering from depression and unable to buy our goods, our factories must reduce their output and lay off workers; our farms will have food and fiber that cannot be sold. The seeds of war find fertile ground when economic conditions throughout the world are unsatisfactory.

A solid foundation for peace means that there must be a high degree of international cooperation in the world, not only in the political field, but in solving the difficult economic problems that are so important to all peoples. We must not return to the unhappy conditions of the 1930's when nations engaged in vicious economic warfare. This period was marked by rising tariffs and other barriers to trade, by restrictions on the purchase and sale of foreign currencies, and by competition to depreciate currencies so as to gain a temporary trade advantage. The results were stagnant trade, unemployment and, in some countries, the growth of Nazi and Fascist philosophies, leading to war.

The Dumbarton Oaks proposals, which are to be considered further at San Francisco, include provision for an economic and social council wherein the member nations can agree upon policies to promote economic health throughout the world.

In addition to this economic and social council, plans for cooperation include several specialized international institutions, two of which are the financial institutions proposed at the conference held at Bretton Woods last July. These are the international monetary fund and the bank for reconstruction and development.

Let us suppose for the moment that each State in this country had its own currency. The United States would then have 48 different currencies with fluctuating and uncertain relations between them. A person in Massachusetts selling goods in Ohio would receive Ohio money which could not be spent outside of Ohio. If a merchant in Philadelphia desired to purchase goods in New York, he would first need to acquire some New York money with which to pay for the goods. The rate for New York money would be frequently changing. Let us assume, furthermore, that in order to purchase or sell the currency of another State a license were required, and that applications for licenses were frequently denied. A person who had sold goods in another State would thus be unable to bring home the proceeds from his sale.

It is clear that such conditions in the United States would be intolerable, and would reduce trade to a fraction of its present volume. Yet, these are the conditions which have existed for 10 to 12 years throughout much of the world. The purpose of the Bretton Woods proposals is to eliminate these conditions, and thereby to quicken and expand the exchange of goods and services between countries.

According to the provisions of the International Monetary Fund, all member countries would agree to maintain their exchange rates at a stipulated relationship to gold. A change in rates could be made only in the case of some fundamental maladjustment, and then only by consultation with the fund. If the change were more than a limited amount it could not be made except with the approval of the fund. These provisions for exchange stability would mean the end of competitive currency depreciation which was the source of so much economic trouble before the war.

Another important provision is that countries would agree to abandon restrictions on the making of payments and the transfer of funds between countries for current transactions. This is a significant provision and would free foreign traders from their past difficulties of not being able to bring home the proceeds of their foreign sales, or not being able to buy the currency of a country in which they desired to make purchases. It would mean, for example, that an American exporter would get paid in money that he could convert into American dollars and at known rates. He would not end up with some blocked foreign currency.

The agreement provides that each member pay into the fund a certain amount of its own currency and a less amount of gold. The amounts to be paid are determined according to quotas assigned the different countries. The United States quota is about 28 percent of the total. This common pool of resources would be available, under certain safeguards, so that a member could buy from the fund with its own currency the currency of another member. Member countries would, therefore, be able to obtain foreign currencies to tide them over temporary periods of difficulty.

For example, if an agricultural country that was a heavy exporter of its products suffered a crop failure, it could go to the fund, and if everything were in order, it could acquire from the fund needed foreign currency so that it could continue to import necessary goods. This pool of resources would thus provide a supply of currencies to help make currencies interchangeable one for the other, and also to equalize fluctuations in the demand and supply of a member for foreign currencies. It would give a country that was short of foreign currencies time in which to adjust its affairs without being compelled to alter its exchange rates or impose exchange restrictions. Access to this pool of resources is carefully protected by provisions to prevent its abuse and to provide for its automatic replenishment by countries using it.

One of the significant things about the fund is that the experts of 44 nations, after many months of discussion and study, have agreed upon the basic elements of currency stability, and on what have been called the rules of the game. Any country which joins the fund undertakes to abide by these rules and to cooperate with other countries for the good of all.

The fund is to be managed by a board of governors consisting of one governor appointed by each member country. Voting power is in proportion to a country's contribution, as determined by its quota. The United States would thus have 28 percent of the total votes.

A companion institution to the monetary fund is the International Bank for Reconstruction and Development. This bank is designed to assist in the investment of funds in productive enterprises wherever they are needed. It would help to finance the reconstruction of devastated countries, enabling them again to become productive. It is highly important to the United States, that the industries of such countries be rebuilt and that their cities, ports, and transportation systems be reconstructed so that they can again buy our goods and have the means with which to pay for them.

The bank would also help finance the development of other countries where this could be done on a sound basis. Its loans would be made only after a thorough investigation.

The bank would not take the place of private lending institutions, but on the contrary would assist such institutions by guaranteeing such of their loans as had been approved by the bank. Most of the capital of the bank, in fact 80 percent, would be available only for the purpose of such guaranties. Where private money, however, was not available on any reasonable terms, the bank would be permitted to make loans itself. All loans made or guaranteed by the bank would first be guaranteed by the national government of the borrower.

If there should be a default in a loan made or guaranteed by the bank the loss would be spread throughout the entire world since such loss would be shared by all member countries.

It is important for the United States, as well as for other countries, that the flow of investment capital be restored. Foreign countries will need many products which the United States can supply, but these countries are not in a position under present conditions to make immediate payment for these goods. They need initial credits if they are to buy. The United States has at the same time enormously increased its productive capacity, especially in heavy capital goods such as machinery, equipment, and tools. Its production of such goods will be far in excess of its own requirements. If we are to attain a satisfactory level of employment after the war, we must find markets abroad for our surplus production.

Such markets certainly exist in almost unlimited volume. In order for the United States to take advantage of these potential markets, it is necessary to assist foreign buyers in acquiring dollars with which to pay us until they can restore their own productive capacity.

In the end we must import if we wish to export. Trade is a two-way street, and we cannot continue to sell abroad unless we are willing to buy abroad. We must, therefore, eliminate trade discriminations and reduce

our own tariff barriers if we wish to facilitate the expansion of world trade and to increase our real incomes here at home.

The Bretton Woods institutions are designed to assist in the development of this expansion in world economy, with greater production and consumption and rising levels of living for all peoples everywhere.

If democracy and private enterprise are to survive in the world they can only do so by measures which will prevent a resumption of the type of international economic warfare which was indulged in by practically all nations between the two World Wars.

The part which the United States is to play in this program depends in the end upon the decision of 135,000,000 American citizens.

That decision is certain to be right if the issues involved and the measures proposed are fully understood.

Maryland and Tolerance

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. RADCLIFFE. Mr. President, on March 27, 1945, Vice President TRUMAN delivered at Baltimore, Md., before the Maryland Historical Society, of which I am president, a very eloquent and highly appreciated address on Maryland's precedent-making doctrine of tolerance, which has played such a momentous role in history. I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a special pleasure to be here in Baltimore tonight with the Maryland Historical Society. It is an extra privilege to be here with my good friend and colleague, Senator GEORGE L. RADCLIFFE, president of your distinguished society. Your society has already completed a century of service and education.

The Free State of Maryland has a glorious history, which must be carefully preserved to inspire other Americans to revere the past and to face boldly the future. Of all the Thirteen Original States, Maryland stood out as a real champion of tolerance and freedom. While many other States began as a haven for religious freedom for one faith, Maryland extended that freedom, not merely to those of the faith of Lord Baltimore but also to those of all other religions as well. Truly, Maryland became, and has remained, the Free State—the progressive and liberal link between the North and the South.

Fully 100 years before the Father of our Country, George Washington, was born, King Charles I granted to another George called Calvert, the first Lord Baltimore, a charter to all land between the Potomac River and the fortieth parallel. After much dispute, this boundary finally moved slightly north to become our famous Mason-Dixon line, which post bellum good will has gradually transformed into a bridge of friendship instead of a border between intolerant opposition.

It is difficult to realize that Maryland is one of the smaller States of the Union, with only seven being smaller in size. This is merely another classic example of the importance of a State far beyond its physical size; for Maryland, the great champion of real democracy, has made its historical influence felt a tremendous distance beyond its borders, just as great ideals cannot be confined to physical limits.

You members of the Maryland Historical Society also are rendering a lasting service far beyond the borders of Maryland. All America can well be inspired by the annals of your historic State, by the deeds of your inspiring leaders, who had the courage and the fortitude to stand boldly for tolerance, when it required real character to withstand the passion of religious bigotry.

At the Nation's Capital, in front of the Archives Building, on Pennsylvania Avenue, there stands a monument under which is inscribed the statement, "What is past is prologue." Those five words describe, as well as I know how, what you members of the Maryland Historical Society realized years ago. Truly, all history is but an introduction to the future. The greatest tragedies in history have been made by people who did not read and analyze history.

History, of course, does not actually repeat itself. Unfortunately, certain people do, however, repeat history in its less happy chapters. The pages of history remain open for all to read. They stand as an eternal warning against the tragic disasters of the past. Before the world, even greater disasters may be waiting for those who will not read the record of time.

Happily, however, thoughtful people, who appreciate the real importance of history, have worked long and hard to preserve the precious heritages of the past. These act as living milestones to guide us and help avoid the mistakes of the former generations. Of course, every generation must meet new problems in light of new developments, but surely they must profit by the experience of the past.

Science informs us that the preservation of experience is one of the basic differences between rational human beings and animals. The former should profit by the history of their race, tragic though it may be, while the latter must learn anew, the hard way, with each new generation.

As rational human beings there surely can be little of more importance than that of preserving the precious heritage of the past. This is the one secure record which will help us find our way into the difficult future. All available records seem to indicate that the future will be what we Americans make it.

America is confronted today with the greatest problem in its long history. In colonial days we struggled for survival. At the present we are charged with the grave responsibility of leading the entire world to a sound order, an order which will guide suffering humanity to the haven long sought, the haven which the colonials of Calvert's day thought they would find along the shores of the Chesapeake.

At no time in the entire history of the world is there a greater call for tolerance. The fires of bigotry and hatred have been fanned for years by the enemies of democracy. The poison of intolerance has again been injected into the social blood stream of America. There is no lasting cure except that found in the impartial records of history. Only dispassionate and accurate information can lead mankind back to the road to reason.

When enemy agents are working overtime to confuse the issues and to deny the facts of democratic vitality the important service of historical societies can hardly be overestimated. For decades millions of people have been misled by the propaganda of our enemies. They hate tolerant people. There remains only one cure for the deadly disease suffered by these people. It is the cold light of sound reason. The diatribe of demagogs cannot withstand the impartial scrutiny of students of history.

Your contributions of the past century to help Americans retain a proper perspective are of lasting value. We as a nation have made many mistakes which could have been avoided if we had the adult wisdom obtained only by hard experience, a common synonym for history.

It is obvious that we should not expect all Americans to profit from the experience of the past. It is the rare individual indeed who has the intellectual fortitude to rise above personal experiences. That is where the historical societies of the entire world may make contributions, which cannot be measured by material standards. Ultimately, if we do not profit by the past, we are doomed to repeat mistakes in the future.

The future may be far more complicated than any historical society would dare to predict. Your real contribution consists in presenting the facts of the past. The past is the potent key to the future. There is frequently fundamental difference of opinion as to historical events, and the proper evaluation of these events is possible only in the clear light of truth. For sound progress we must face the facts.

We of the democratic world have many disagreeable facts to face. Our enemies cannot be conquered by force alone. We must help to reeducate them to the ideals of truth. Truth is a virtue which scientists and historians always seek. However, for years our opponents have conditioned their people against acceptance of this most simple of all virtues.

Throughout history, truth has suffered under the prolonged attack of partisan propaganda. When the history of this tragic era has been written it will reveal that many liberal souls have died to advance the ideals of truth and justice.

At no time in the annals of mankind has there been a greater need for the spirit of tolerance. The tragic failure to realize the essential necessity for practical tolerance is one of the basic failures of our time. Only the records of history will help all of us to keep our perspective, and achieve harmony and brotherhood among men.

While intolerance is running rampant throughout the world, we need more friendly people, like those who first pioneered the Free State of Maryland. American requires the aid of such people to guide the world to basic ideals.

In the years to come our world will have many hard problems to solve. I feel confident that Americans fully intend to have their say as to the future destiny of mankind on this shrinking planet. Americans never were prone to follow others meekly. On the contrary, history records our people usually among the leaders, especially when the public welfare is involved.

No matter how grave the post-war problems may be, I am sure that our American sense of proportion and our regard for our glorious past, will see us through to victory. Like the brave pioneers of Maryland, we shall continue to do our task with characteristic American energy and enthusiasm.

The most pressing problem before us remains the winning of the war at the earliest possible moment to save precious human lives. That requires a mighty national effort and united harmony on the home front.

Surely, this is no time for petty, partisan politics. This is a time for greater national unity—for greater sacrifice for our national interests. Both winning the war and winning the peace are not partisan objectives. They are the all essential American objectives. They must be attained if our country is to continue to exist and prosper. Let us, therefore, all close ranks and remain strongly united until these vital ends have been accomplished.

When the last gun is fired on some remote enemy stronghold, we must still continue the ceaseless crusade for a just and durable

peace. When we recall the heartache and suffering caused by this world-wide conflict, we must dedicate our lives, our fortunes, and our sacred honor to the cause of lasting peace. This requires patience and persistence—tolerance and time. When the people of the world fully realize that the public welfare is really the supreme law, we may at last have real peace on earth—and lasting good will toward all mankind.

Meaning of Easter to This Day

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Meaning of Easter to This Day," prepared by myself. Next Sunday is Easter Sunday. In my 6 years in Washington I have never seen a more beautiful springtime. Life seems to be expressing itself through every channel. I prepared this statement at the request of another.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Two thousand years ago this coming Easter Sunday, the Man of Galilee walked forth from the tomb, thus showing to tired, fearful humanity the assuring fact that life has continuity.

Easter commemorates that fact. It is not a day of sorrow. It is not a day when we think of the Cross. But it is a day of victory—a day of victory of the spirit over the flesh.

If we translate the lesson of Easter into our lives today, our individual Golgothas and the world's Golgotha now being experienced will have their Easter morning.

Springtime this year in Washington, with its budding flowers, singing birds, and evidences of newness of life, is one of hope, fearlessness, and great expectation. We are beginning to loose the heavy weights. We are beginning to sense that no matter how weighty the problems, how long the journey is still ahead, the world can, if it takes the lesson of the first Easter to heart, find its Easter morning of world peace.

There are many factors present which argue for man's inability to find the way out of man's imposed limitations. Simply looking at the factors which will be present at San Francisco, one might well say the case is hopeless. That is just what many said after Golgotha. They believed that the Cross was the end, that Rome was all-powerful, that the centurion's sword wrote the last word. They saw that hate, malice, force, and evil ruled the world.

Then came Easter with its message: "He is not here; He is risen." The significance of that assurance is that it exploded man's ancient concept of life, and death no longer was the victor. The statement, "I am the way, the truth, and the life," took on to mortal minds added vitality. Not only was the stone rolled away from the tomb, but the impediments of hate, fear, and doubt were rolled away from men's minds. The other statement, "I am the light of the world," took on added significance and power.

Yes; in this period of the world's history, this Easter brings a vital promise to mankind. The message of Easter is one of triumph, of victory—of triumph of life over death, of the resurrection over the grave, of the spirit over the body. We know that as Jesus rose from the tomb, so can we individually and as a Nation, break through the shackles which bind us, and rise from the debris of limited human concepts.

It is this thought which makes us say—while the world in the past has failed in its congresses for peace—that is no reason why we should fail now if the nations of the earth have learned the inner message of Easter. They can rise from the graves of their failures. Important as the mechanism will be upon which the nations may agree, it dwindles in significance compared with the importance of whether or not there is the will among the nations to keep faith: there is the understanding among the nations of the significance of the Easter message.

You will remember Jesus taught that, "This is life eternal to know Thee, the only true God and Jesus Christ whom Thou hast sent"—this was putting life eternal in the present tense; is a thing of spiritual or divine awakening; it is a matter of man constantly working for the renewal and the strength which comes from labor in the Father's vineyard.

Yes; 2,000 years ago, because of the Resurrection, there broke through the darkness of mortal thinking a gleam of light which has brought to countless millions the reassurance that God lives and He is looking after His own; that our lives are as indestructible and eternal as the Potter who made them.

Tomorrow—The Veterans' World

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1945

Mr. GILLIE. Mr. Speaker, a couple of weeks ago I noticed in the public press several statements quoted from the valedictory address made by Patrick E. Carroll, of West De Pere, Wis., during the graduation exercises held in the Rose Room of the Washington Hotel on Monday, March 12, 1945, of the first of two groups of handicapped veterans of World War No. 2, who had finished a specialized 10-week semester course of academic training at the American University, here in Washington, D. C., after which they are to receive on-the-job placement training for a period of up to 18 months under three different experienced national service officers of the Disabled American Veterans; thereupon they would be rehabilitated and employed by the Disabled American Veterans as full-time national-service officers.

It is my understanding that this is the first time that any veterans' organization has requested the Veterans' Administration to grant vocational training to handicapped veterans to become employees of the sponsoring organization. The Veterans' Administration, under Public Law 16, Seventy-eighth Congress, is authorized to provide vocational training, and on-the-job placement training for handicapped disabled veterans of World War No. 2, designed to lead to their suitable gainful employment. Industrial organizations have heretofore, following the precedent established after World War No. 1, provided on-the-job placement training for handicapped veterans on an apprenticeship basis.

It is my understanding that the D. A. V. has gone into this program in a big way, starting out with the first group on October 16, 1944, and sponsoring the enrollment, each 10 weeks, of successive groups of up to 50 handicapped veterans, at the American University, for the preliminary academic training of 20 weeks, followed by their assignment to the supervision of former national service officers who learned the job by doing the job. The D. A. V. has in mind to train up to 400 or more of these national service officers who will become specialists in helping other disabled veterans.

Having noted a few of the statements made by Mr. Carroll, I requested my friend, Millard W. Rice, National Service Director for the Disabled American Veterans, to furnish me with a complete copy thereof. Many of the statements therein are significant as representative of the viewpoint of at least a segment of returned veterans of this war and I desire to make his remarks available to all Members of Congress. Mr. Carroll, incidentally, was brought up in Wisconsin, and is now 31 years of age; he was graduated from the St. John's Military Academy at Delafield, Wis., and subsequently from the St. Norbert College, with a B. A. degree, specializing in economics, and with considerable pre-war experience as a salesman. He served in Tunisia, Sicily, and Italy, and was discharged with a front-line-incurred disability on July 25, 1944, with the rank of sergeant. Mr. Carroll, as valedictorian of the first graduating class from the American University of D. A. V. national service officer candidates, has had such a background of education and experience as to cause his observations and recommendations to be of real importance as indicative of the feelings of returned veterans of World War No. 2. Mr. Carroll's valedictory address follows:

On this day of graduation, I wish to extend on behalf of the graduation class our sincere appreciation for the help and encouragement, that has been given us by the persons who were responsible for the first class of national service officers who are to be graduated from American University today. To the American University, to the disabled American veterans, and to the Veterans' Administration, we feel deeply grateful for the opportunity that we have received.

Today we hear a great deal of talk about the veteran and the veteran problem. You hear it everywhere: in the papers, in magazines, in books, and from the radio and from platforms. I expect to go to the movies some evening and hear Donald Duck give his interpretation of the G. I. bill. Today is the era of planners; everybody has a plan, from those who advocate plans for the veteran to those who plan to supply a quart of milk daily for the Hottentots. The consensus of all this talk, and it is just talk, is that this country faces a grave veteran problem. It is a paradox, that the men who do all of the talking about the veteran problem have never done

any of the fighting, and those who have done the fighting never do any of the talking.

I don't admit that there is a veteran problem, that the public has any problem with the veteran, but I am willing to admit that the veteran has a problem with the public. That problem is the attitude towards the discharged veteran today.

For example, one case, which illustrates the point, happened to a member of our class, a boy who had lost a leg at Guadalcanal, was called a faker. Another, a disabled veteran who had lost a brother in the Southwest Pacific, who himself had serious gunshot wounds in the abdomen, which had necessitated the removal of a large part of his digestive tract, had this experience: Walking down the street one day a lady called to him from across the street and said "You're a nice healthy looking young man, why aren't you in the Army?" A third case, a young sailor who had served in the Pacific for 30 months, who had taken part in nine major naval engagements, who had had a ship shot out from under him was being discharged from the Navy. A woman, a member of a national organization, who was supposed to help the young veteran prepare his application for pension, put in the following personal observation in writing on his claim, "I don't believe this man's injuries are service connected."

Now, I don't want to convey the impression that this attitude is general among the public, although it would be possible to multiply these incidents by the thousands—yes; by the hundreds of thousands. In themselves these events are not important, but what is important is the fact that they are signposts and guides which point the way the wind is blowing. If these things can happen in time of war, when the spirit of patriotism is flaming, what kind of treatment can the veteran expect when the war is over and the fires of patriotism have burned low? Let us take a look at history and see just what has been the history of the treatment of veterans.

After the Revolutionary War, the veterans were not only not paid any pension but were cheated and swindled out of the miserably small wages which they had earned in the Army. Then, in the year 1792, recognizing the fact that the veteran had not been treated justly, the Government granted a pension ranging from $6 a year to $51 a year for total disability. Imagine—$51 a year for total disability.

From this meager beginning the pensions were gradually raised until after the Civil War a veteran who had both legs amputated drew a pension of $24 a month. These conditions prevailed until the veterans of the Civil War got together and organized the Grand Army of the Republic. The G. A. R. became very powerful politically—so powerful, in fact, that they caused President Harrison in 1888 to appoint one Corporal Tanner as Commissioner of Pensions. Tanner had boasted that he would "drive a six-mule team through the Treasury." He did, in fact, disburse pensions so freely that he had to be relieved from office after a few months.

The Spanish War veterans were in general accorded the same pensions as the Civil War veterans. The World War No. 1 veterans received a little more than previous veterans. For men who were totally disabled the allowance was $30 a month. However, there was one new innovation—World War No. 1 veterans were given a bonus on discharge—the magnificent sum of $60. So that, if a veteran had spent 18 months overseas in combat duty he received a gratuity of 10 cents a day, not even the price of a good cigar a day, for risking his life in deadly combat.

That brings us down to the present and World War No. 2. What are the conditions at present? It is true that the scale of pension rates has risen somewhat. Today if a veteran is totally disabled, he receives a pension large enough to provide the necessities of life ($115 a month).

However, we see the same mistakes being made today as were made in the past. Our traditional policy has been to neglect our veterans for a period of years after the end of a major war. During this period of neglect uninjured veterans take up the broken threads of their lives as best they can, struggle against discouragements to compete successfully, force their way into economic, social, and political life, while the injured, maimed, gassed, tubercular, and mentally unbalanced contrive to live by such little jobs as their conditions permit; learn to beg, steal; become paupers or just starve and are forgotten, together with their widows and dependents. Then some years after the veterans suddenly emerge as a powerful political force. Still burning with resentment over their own wrongs, they see to it that ample provision is made for unfortunate veterans. But it is too late then to do justice, too late to help many who have died or been ruined beyond hope of reclamation.

We waste the golden years in which rehabilitation is possible, then spend billions in fruitless penance for wrongs which can never be righted. Our policy is to pay too much too late and to the wrong people. We have spent many billions on veterans' claims, and most of it has been wasted. We have never spent enough at the right time or on the right persons.

What is needed in this country is a new spirit of approach in the treatment of the veteran. The attitude of both the Government and the public is that pensions are a gratuity, that they are not something which the veteran has earned, at a cost of blood, sweat, and maimed bodies but a favor extended by a generous government and public. Until such time as this attitude is wiped out, until the concept that the veteran deserves better treatment than he has ever received is thoroughly ingrained into the public then and then only can any program for the veteran succeed. If this country has the right to send 10 percent of its population to fight its wars, then the remaining 90 percent has the moral duty to see that the veteran is adequately compensated for the services he has rendered.

It is not solely a question of monetary benefits, for how can you repay a veteran for the wasted years of his youth, the pain, the suffering, the lost limbs and the loss of mental health? No, I believe that there is necessity for a new approach to the treatment of veterans and that approach is justice for the veteran—something that he has never received.

In order to do this, what is needed is a program to put the veteran back into civilian life just as quickly and efficiently as possible. Some points to be considered in any such program are:

1. A realization on the part of the public that every veteran is in need of rehabilitation. To realize that it is not possible to take a peace loving youth, turn him into a killing machine, and then turn him back into society without repercussions. I know it is not possible for the general public to understand the veteran. For, how can the people whose only problems were how to get an extra gallon of gasoline or an extra pack of cigarettes, appreciate the veteran who has had tremendous emotional conflicts, who has had a rendezvous with death and lived through it? Veterans will have ingrained into the very fiber of their being the emotions of love, hate, fear, life, and death. Just one example:

The other day, a member of my class, a veteran of Tunisia, Sicily, and Italy was walking along Pennsylvania Avenue, when a passing car backfired loudly. His next conscious action was to pick himself up sheepishly out of the gutter where he had thrown himself at the sound of the backfire. His action was wholly instinctive, the result of his training and experience. How can the civilian understand such an action? So, let me repeat, the veteran will become a normal citizen again if given time and if given the proper treatment and understanding by the public.

2. A program of education is perhaps one of the quickest and best means of bringing the veteran back into his place in society. But the real goal of an educational program must emphasize the fact that it is for the purpose of training the veteran for a job in a highly competitive business and industrial world. The veteran will have certain definite objectives and the schools and colleges must streamline their courses if the veteran is to gain any real benefit from education. It is a mistake to suppose that the veteran will conform to the standards of the academic world. Dr. Robert Hutchins, president of the University of Chicago, in a magazine article in the Post, said that the G. I. bill would make hobo jungles out of the colleges. I heartily agree with President Hutchins. Colleges can and will become hobo jungles if the colleges do not adapt their curriculums to the veteran. Unless college professors attempt to give the veteran a sound, practical course of study instead of the sophistry and "tombstone-dusting" type which is now prevalent, education will harm the veteran more than it could possibly help him.

3. Perhaps the most beneficial aid to the rehabilitation of the veteran will be his employment at the highest level of his abilities. A job, which will make the most of the veteran's capabilities, is vitally necessary to the adjustment of the veteran into society. The disabled veteran especially needs the therapy of knowing that he can take his place as a useful and self-supporting member of society. There should be a course of instruction made available to all employers to show them that disabled veterans can perform a useful job, not on the basis of charity, but on a basis of real merit.

4. Finally, in any program, one must come to a consideration of the legislation which has and should be passed. There have been laws which have raised the pension rates; such laws are all right insofar as they go, but they don't entirely solve the problem. An attempt was made to do this with the passage of Public Law No. 16 and Public Law No. 346, Seventy-eighth Congress. Public Law 16 is, as a great many of you know, the vocational-training program for disabled veterans. In most respects Public, 16, is a fine thing, although the training allowance for the most part is quite inadequate. Now, we come to the consideration of Public, 346, the so-called G. I. bill of rights. A great many people with whom I have talked seem to think that the G. I. bill solves all of the veterans' problems. What a sad awakening those people have in store for themselves. The G. I. bill is one of the greatest hidden ball of tricks of all time. It has two main provisions—the educational benefits and the loan provisions. A veteran who goes to school under the regulations of the G. I. bill receives $50 per month if single, $75 a month if married or with minor children. How any veteran will be able to go to school on $50 a month with the present high cost of living is beyond my comprehension. The sum of $75 a month for a married man with a family of children is so ridiculous as to be laughable. I doubt if 10 percent of the men eligible to educational benefits will be financially able to afford to go to school under the G. I. bill. In regard to the loan provisions of the bill, a prominent New York banker referred to them not as a bill of rights, but as a bill of lading. In order to obtain a loan, a veteran must have such qualifications as would enable him to borrow from a private banker, four or five times the amount which is guaranteed by the Government. What should have been the most important part of the G. I. bill is only hinted at—I refer to the mention of an adjusted compensation, more

commonly known as a bonus. The bonus is the only just and fair means of adequately compensating the veteran. Such a bonus could be used to gain an education, to start a business, or as a nest egg for the future. But, it should be given now when it will be of the maximum amount of help in rehabilitation of the veteran, not 15 or 20 years from now, when the need for rehabilitation will have passed. The passage of a bonus is inevitable—are we going to once again have a policy of "too much, too late, and to the wrong people."

Today it is possible to start a rehabilitation program for the veteran that will be impossible later. The period from the end of the war and for 5 years thereafter is the crucial time. Whatever is left undone then can never be accomplished.

I have been speaking of the veteran individually, for the need of justice for the veteran as an individual, but it seems to me there is a broader and deeper significance to the picture than that—the influence that the veteran will exert on the Nation in the future.

Tomorrow will be a veterans' world; it will be a world run by veterans for veterans. Whether you like it or not, it appears to me to be inevitable that the veterans will be our future leaders. There will arise after the war, either from one of the existing veteran organizations or from a new organization, the most powerful political veteran group this country has ever known. This group will make the G. A. R. seem trivial by comparison. If each of the veterans, some fifteen million strong, can influence four people, just in his immediate family, then they will have a potential vote of sixty million; truly a tremendous political force. Such a group could become the greatest single pressure group in this country—a constructive or a destructive force.

The veterans will be the husbands and fathers of a coming generation. As the heads of the future families they can exert a terrific influence on their children, yes, on their children's children. Let no one suppose that the effects of this present war will pass away when the last shot has been fired. One hundred years from now sociologists will be able to trace the social changes back to World War No. 2.

The veterans will gradually, and I believe inevitably, become the leaders in business, in industry, in labor, in politics and in government. They will become our doctors, our lawyers, our teachers, our professional men, and our elected Government officials. It is from the veteran group that we will derive the mayors of our cities, our State governors, our Congressmen, and, if we follow the precedent of history, the veteran group will even furnish this country with a President of the United States.

Truly the picture is full of potentialities; for the constructive good of this country or as a destructive force. Let us take a look at the worst side of the picture first. If the 15,000,000 veterans of World War No. 2 receive the same treatment as the veterans of other wars; if they carry over into civilian life, the bitterness and hates of their army experience; if they are not assimilated into the social and economic life as quickly as possible and on as high a level as possible; if they fail to take their place as leaders of the family, of industry, of labor, and of government, then this country will be a "howling mess" in 25 years.

And, what kind of a heritage of leadership can the veteran look back upon? In the last 25 years, this country has had two major world wars and the greatest and most prolonged depression this country has ever known. Do we want the same kind of a future? Today, this country faces a need for leaders as never before, and it is from the veteran group that the leaders of tomorrow must come.

Let us quickly run over some of the problems it will be necessary to solve in the post-war era:

1. One problem will be to enforce a lasting peace. Even today, it is possible to see the seeds of a source of probable discord. After the men who will write the peace terms will have passed from the picture, other leaders, veteran leaders will be faced with the problem of enforcing the peace and policing the world.

2. It has been estimated that this country will need 60,000,000 jobs in the post-war era. This is a vital question; who is going to provide those 60,000,000 jobs. Will private industry? Will the Government have to do it? A very grave problem seems to me to be—whether the capitalistic system as we know it can survive or whether it will fail and its functions will have to be taken over by some system of state socialism? That is a problem for the veteran.

3. What part is labor going to play in the years following the war? Are the obvious abuses of labor and its leaders going to be checked or are they going on their way unrestrained by any regulations.

4. In the political sphere there has been some great changes in the past few decades. There has been a growing tendency on the part of the National Government to perform duties and functions that were formerly the prerogative of the State governments, of private industry, and of individuals. More and more by regulation and restriction the National Government has taken a trend toward socialism, in its best sense.

During the present war this tendency has been tremendously speeded up. One notable example is the current work-or-fight bill. Such legislation would have been unthought of a few years ago. Do we want this trend to continue? This is another problem for the veteran.

These are some of the problems that the leaders of the future will encounter. They are going to be faced by veteran leaders. Now is the time that the public has an opportunity to shape and mold the course of future events. Any program for the veteran must be organized now. After the war will be too late.

I am reminded of the story of St. Peter. During the early days of the Christian Church in Rome, the early Christians were being persecuted and killed by the Romans. St. Peter, as Bishop of Rome, became so discouraged that he fled from the city. And, as he was leaving the city, he heard a voice coming to him from out of the clouds saying "Quo vadis?" St. Peter stopped and began to reconsider his flight, and turned back to the city to resume his former position.

Today the public is faced with a choice. They are at the fork in the road so far as the treatment of veterans is concerned. One road leads to destruction and chaos; the other to the traditional way of American life.

I would like to ask the public this one question—"Quo vadis?"—"Whither art thou going?"

Compulsory Military Training

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. THOMAS of Utah. Mr. President, I ask to have inserted in the Appendix of the RECORD an article prepared by myself, which appears in the April number of Reader's Scope on the subject What Shall We Do About Compulsory Military Training?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT SHALL WE DO ABOUT COMPULSORY MILITARY TRAINING?

(By ELBERT D. THOMAS, United States Senator from Utah)

At this moment, we Americans are discussing proposals for the training of our youth in the post-war period. The President, the War Department, the American Legion, private citizens and many Members of Congress have expressed varied opinions as to the need for an over-all program which will prepare the young men and women of the Nation to serve as a powerful shield against aggression. The War Department offered a concrete and detailed plan for universal military training, as the basis for a citizen army and as a guarantee of national security and future world peace.

I am, of course, in favor of all measures necessary for maintaining the national security. The logic of our recent history points inescapably to the urgent necessity for youth training. Twice within the past 3 decades, the United States has been forced into a war. In 1917 and again in 1941, precious time was lost while an adequate armed force was trained for defense and ultimate victory.

We must not again be caught virtually unprepared.

Under the Selective Service Act of 1940, approximately 12,000,000 young men and women have been mentally and physically fitted for war. This process has been slow. In its early stages, volunteer enlistments diluted the universal and therefore the completely democratic character of selection. Even now, age and health standards vary among various branches of the armed services.

Moreover, examination of draftees has resulted in the rejection for physical unfitness of 50 percent of our youth in some sections of the country; even in States with the highest health standards, at least 22 percent of men called have been rejected because of disabilities.

Furthermore, many millions of those accepted have spent long months learning everything from reading and writing to radar.

Inadequate health and educational standards have therefore reduced the quality and quantity of our Army, Navy, and Air Force, and have added to the war's cost in time, money, and human lives.

I believe that the immediate establishment of a national civilian health and education program is an essential element in maintaining national security, both now and in the future.

This war has exposed serious defects in the physical condition of our young men and women. It has made us realize the necessity of establishing and maintaining higher health standards, both as a factor in individual happiness and in national security. The time to correct faulty vision, to save sound teeth, to eliminate defects, and to arrest tendencies toward disease, is in earliest childhood. A comprehensive national health program, conducted with special thoroughness during childhood and adolescence, and available to all, will provide the Nation with stronger sinews for security.

The war has brought into sharp focus the necessity for a broadened educational program with emphasis on civic, cultural, and vocational fields. It is a shameful blot upon our educational system that young men have been rejected by the armed forces because they could not read the simplest orders. Today educators are confronted with 48 policies in the 48 States. There

is no reason why the States should not remain in control of education, but we must fight illiteracy by giving aid to those States which are unable to provide adequate schools and teachers.

I advocate a program of education for all American youth as an indispensable element in national security.

Will such a program be too expensive? I have been accused of wanting to spend money solely for the sake of spending money. The soldiers' education bill, which I offered to Congress, has been incorporated into the G. I. bill of rights. If returned veterans of this war are entitled to educational benefits, then the youth of the future, who may also be the guardians of the Nation's security, should also receive such aid. As for the cost—if 1,000,000 ex-soldiers, each with a wife and one child, should apply for educational rights under the present law and express the intention of attending the most expensive university in the country, the total cost would be less than that of 2 days of the present war. A similar educational program, available to all, would shorten the length of time required for training for any future war, and consequently reduce its cost.

It is my opinion that no purely military training program could supply these essential health and educational services. From the health standpoint I do not believe that purely military training, concentrated in a single year, could accomplish what health experts would achieve by building the physical fitness of all our youth from earliest childhood to manhood. On educational grounds I do not believe that a purely military training program could render services comparable to that which would be provided by trained educators in schools and colleges.

The administration of any program of national security should be entrusted to those who are professionally competent. The health program should be carried out by health experts. The educational program should be carried cut by educational experts. If we adopt a military program, it should be carried cut by military experts.

Military education as such is an essential part of civic, cultural, and vocational training. People think in a groove. War is complex. War moves too fast for groove thinking. The way to national security is to build healthy, skilled men and women—and to train them not only in traditional and contemporary military techniques but also for all the infinite demands of modern warfare.

Our present Army is not only a fighting unit. It is the world's greatest industrial organization, the finest merchandising outfit in history, an army not only of soldiers but of buyers and sellers. Nothing in the business world equals it. It was not evolved by Army men, but by our citizenry as a whole. In addition to soldiers, the Army of the future will need scientists, merchandising men, transportation experts, mathematicians, meteorologists, electrical engineers, and all the thousands of other kinds of specialists required in the complex modern world.

An army conscripted for no other purpose than for purely military training would be as ineffective as the French Army was in 1940. If we had had such an army in 1939, it would undoubtedly have been equipped with .75-millimeter guns and Springfield rifles of the 1918 type. In our minds would have been embedded the Maginot line psychology which helped drag France to her downfall.

Any long-range security system worthy of faith will have elements of weakness or strength. But an army drawn from the ranks of conscripts with a brief period of purely military training would lack the knowledge and use of techniques upon which the security of a wartime army rests.

In other words, I believe that the problem of national security is not a matter for the Army and Navy alone. I am not convinced as yet that our national security requires the enactment of a peacetime military conscription law. Nor do I believe that any such method would be, as it has been described, universal. No system of conscription can be applied universally—exemptions have been made in the Selective Service Act in time of war and would undoubtedly be made during a period of peace.

At the same time, I shall continue to study the question of compulsory post-war military training with an open mind. If I become convinced that such a program is necessary to the best interests of national security over a long period, I shall support such a program.

In the meantime, I advocate a continuance of the Selective Service Act after the present war to maintain the strength of whatever peacetime army and navy the Nation requires. To this law should be added a national health and educational program such as I have outlined. I visualize such a program as placing the responsibility for choosing candidates for military training in the hands of civilian draft boards, as at present.

In this way the health program would not be interrupted by the necessity for a full year of military training. Instead, military trainees could attend camps to study and master the purely military aspects of the general security program during vacations. While in school, they would acquire that invaluable esprit de corps which is vital to military morale.

Their military training, in other words, would not lie apart from the general area of their interests and activities, but would be an integral part of their lives.

As for the operation of such a military program, it should, of course, be conducted by military men. It should also envisage the strengthening of the National Guard of the several States, with increased opportunities for the advancement to officership of National Guards men. This policy would make the National Guard more popular.

Backing up the central corps of trained military men would be organized reserves of veterans of the present war and the healthy, educated, basically trained youth of the Nation, who would be called upon in emergencies to swell the armed forces of the Nation.

Against such a force no aggressor would dare move to attack our national security. It would be a people's army, in fact as well as in name.

Service Center for Veterans and War Workers

EXTENSION OF REMARKS

OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. BUSHFIELD. Mr. President, to the huge number of servicemen returning to this country every month the problem of community service is an increasingly important one. Dr. Harry J. Carman, of New York, has made a survey of that situation, and presents a very enlightening proposal for community service, advocating a purely voluntary set-up in the various communities of our land.

I ask unanimous consent that the survey be printed in the Appendix of the RECORD.

There being no objection, the survey was ordered to be printed in the RECORD, as follows:

REPORT OF DR. HARRY J. CARMAN, CHAIRMAN OF THE SPECIAL COMMITTEE APPOINTED BY THE HONORABLE FIORELLO H. LAGUARDIA, SUBMITTING THE DAVIS PROPOSAL FOR A SERVICE CENTER FOR VETERANS AND WAR WORKERS

1. The proposal designs to bring together in the local community, as a community-sponsored function, forces intending to provide special services for relocation, readjustment, and rehabilitation.

2. It is an attempt to utilize existing facilities primarily; to avoid duplication; to provide appropriate supplementary services only.

3. It calls for grouping and coordinating existing services under an administrator for more economic and effective service.

4. It makes no attempt to provide services which supersede private enterprise. On the other hand, the activity is the essence of cooperation between public service and private enterprise so as to speed up and maximize the individual's opportunities for rehabilitation in the transition period.

5. The services are designed for both veterans and war workers. The impact at the war's end will fall directly upon both groups. If rehabilitation facilities are extended to one group only, the probable unemployment and loss of income in the second group spreads and is reflected throughout the entire community, tending to reduce instead of stimulate employment in those areas not directly affected at the outset. Furthermore, those who have retained their employment and income must face the responsibility of taking care of the less fortunate unemployed, either directly or by making heavier tax contributions to a government acting in their behalf. In other words, taxes may have to be increased while income is diminishing. Conversely, as full employment is approached, aggregate income is higher and the relative tax is smaller. Thus the promotion of full employment not only carries with it direct benefit to taxpayers and all of New York's citizens but it is basic to the welfare of the veteran himself.

6. Finally, experience has indicated that within a wide range, the needs of both veterans and war workers are identical. It is, therefore, both economically and administratively feasible to set up one organization to serve both functions.

For the committee:

HARRY J. CARMAN,
Chairman.

Committee members: Dr. Thomas E. Coulton, Dr. J. Edmund Woods, Mr. Edward Mayman, Mr. George F. Piggott, Jr., Dr. Walter A. Knittle, Mr. Louis Bennet, Mr. William C. Davis Mr. William Finkle, Miss Winifred Fisher, Dr. John A. P. Millet.

PROPOSAL FOR THE ESTABLISHMENT AND OPERATION OF A COMMUNITY-SPONSORED CENTER OF INFORMATION, REFERRAL, AND SERVICE TO VETERANS AND WAR WORKERS

(By William C. Davis, assistant to the president, the City College of New York)

In accordance with the mayor's request, a study has been made for the purpose of assisting the mayor in his provision of timely and suitable means of aiding veterans and others displaced by the war to be restored to normal civilian life. The results of this study, the recommendations based thereon, and their adaptation to the site of 500 Park Avenue follow:

The results of the study reveal:

1. The direct impact of the war's conclusion will fall principally upon two groups, veterans of the armed forces and war workers.

2. The general welfare justifies provision of facilities for both groups.

3. There is a need for community-sponsored efforts to alleviate dislocation arising out of conclusion of the war.

4. Existing public and private agencies cover the principal field of need, but can improve their services by coordination and some complementary facilities provided by the city of New York.

With these considerations in mind, your committee recommends the establishment at 500 Park Avenue of a veterans-war workers center. Such a center will have three objectives:

1. To afford the city's veterans information, assistance, and advice with respect to their rights under the law, educational and employment opportunities, and special social services available to assist them and their families in finding progressive restoration to a normal civilian life in the community; and

2. To provide similar benefits to the thousands of war workers who gave up civilian pursuits to enter war production and who are in equal need of assistance in securing a permanent foothold in peacetime production to secure the future for themselves and their families in the community; and

3. To facilitate these objectives by grouping and coordinating key services and benefits provided by public and private service agencies and to provide such supplementary services as appear to be necessary and appropriate according to the aims of the program in the face of developing and changing needs so as to minimize the detail and time of rehabilitation.

The center shall be charged with:

1. Collection of data and information as to the facilities, services, and employment opportunities available to veterans and others displaced through contribution to the war effort.

2. Provision of a central contact between 500 Park Avenue and Federal, State, and local agencies responsible for special services to veterans and displaced war workers.

3. Providing a central location appropriately staffed to furnish aid to veterans and war workers in obtaining benefits under Federal and State laws and readjustment to civil life.

4. Providing such supplementary services to veterans and war workers as are not provided by Federal, State, or private agencies but which arise out of the set of conditions peculiar to New York City.

5. Setting up and maintaining a reference library of all laws, regulations, and information pertaining to veterans.

6. Providing the mayor with such reports on the activities of the center and recommendations thereon as the mayor shall request.

The key agencies to be grouped and coordinated at the center and their services are as follows: [1]

Federal agencies:

1. Veterans' Administration:
(a) Pensions, claims, insurance, appeals, etc.

2. U. S. Employment Service:
(a) Job counseling and placement.
(b) Selective placement for the disabled.

3. Selective Service:
(a) Reemployment aid.

4. Veterans' Service Center:
(a) Diagnostic and consultation service—
(1) Medical and psychiatric problems.
(2) Personal, financial, and family problems.
(3) Vocational rehabilitation.
(4) Loans, businesses, priorities, etc.
(b) Miscellaneous information.
(c) Referral to community agencies.

5. United States Department of Agriculture:
(a) Farm counselling.

6. United States Civil Service Commission (on staff of Veterans' Service Center):
(a) Counselling and placing in Federal Civil Service.
(b) Establishing veterans' preference for Federal Civil Service.

State agencies:

1. Division of placement and unemployment insurance.
(a) Readjustment allowance (Federal benefits).
(b) Unemployment insurance (State benefits).

2. Division of vocational rehabilitation (on staff of Veterans' Service Center).
(a) Vocational rehabilitation.

3. Industrial, commercial, and labor organizations.
(a) Business opportunities and counseling.

4. Civil service.
(a) Counseling and placement in State civil service.
(b) Establishing veterans' preference for State civil service.

New York City agencies:

1. Department of public welfare, veterans' division.
(a) Temporary financial aid.
(b) Case work services to individual and family.

2. Municipal civil service commission.
(a) Counseling and placement in New York City civil service.
(b) Establishing veterans' preference in New York City civil service.

3. Board of education; board of higher education.
(a) Educational consultation and aid in admission and matriculation.
(b) Aptitude tests and vocational consultation.

4. Board of health.
(a) Bureau of tropical diseases.
(b) First aid services.
(c) Clinics (information).

5. Housing vacancy bureau.
(a) Housing service.

6. New York City department of commerce.

Private agencies:

1. Veterans' and other organizations.
(a) Power of attorney—pension claims, appeals.
(b) Aid in appealing types of discharge.
(c) Certification of veterans' relief.

2. Mayor LaGuardia's business advisory committee.
(a) Business counseling.

3. Cultural and art organizations.

These agency services, summarized with respect to function, would cover the following areas:

1. Retraining and rehabilitation.
2. Employment and reemployment.
3. Education.
4. Personal and family problems, including medical and financial.
5. Legal rights and benefits.
6. Business and loans.
7. Housing.

Activation of these recommendations will require an organized over-all administrative department and a policy-making committee.

1. Committee.
2. Director and staff.
(a) Administrative departments: (1) Liaison service; (2) research; (3) public relations and information.

The following are general recommendations as to policy:

1. Policy committee of seven to determine over-all policy of operation of center and, among other things, to aid in the selection of.

2. Advisory committee, to be appointed by mayor.

3. Clear definition of authority of director and his staff.[2]

4. Administrative agreements to be worked out between center and agencies represented in center.[3]

5. Integration of all services in center under leadership and over-all direction of director. This is to be a cardinal principle in the operation of the center.

6. Over-all administrative set-up to be financed by city of New York.

7. Agencies at center to finance their own operations, except for light, heat, and custodial services. Telephone expenses to be apportioned on basis of ration of outgoing calls to total cost of telephone service, including telephone rental charges and telephone operators' salaries.

8. Services to be provided at the center shall not duplicate existing services already functioning well in the community.

9. The center itself shall not be permitted to act as an agent for any individual in filing claims for benefits under Federal, State, or local law.

10. Any food dispensed on premises shall be paid for, on a low cost basis. There should be no free meal handouts. The mayor suggests that this should be checked with the Red Cross to see if it agrees.

11. The general reception room on main floor to be handled by veterans' service center staff.

12. In view of the nature of the job to be done, its uncertain duration, its changing scope and direction, etc., the over-all administrative staff should be selected, at least at the outset, without regard to municipal civil service requirements.

A proposed budget for the over-all administrative staff is set forth below. The salary schedules are set at a level that will justify both professional and highly competent nonprofessional personnel undertaking the work. Great credit to the community will arise out of proper coordination of this program and outstanding service to the public. But this can only be accomplished by superior personnel. While it may be suggested that this same principle will apply normally to any field, it is particularly significant for this activity not merely because the undertaking is a public service but also because it deals with strained and perplexed personalities. There is thus a dual responsibility in dealing with this particular segment of our society which demands that the staff be qualified to render service with both a sympathetic understanding of human need and the analytical expertness of professional grade.

Annual budget

	Salary range	Salaries (computed at total average)
(1) PERSONAL SERVICE		
A. Professional and administrative:		
1. Director (1)	$10,000–$15,000	$12,000
2. Assistant director (1)	7,500– 10,000	8,750
3. Assistant directors (3)	6,000– 7,500	6,750
4. Chief of Research (1)	3,600– 5,000	4,300
5. Chief of Information Service (1)	3,600– 5,000	4,300
6. Chief of Liaison Services (1)	3,600– 5,000	4,300
7. Assistant business manager (1)	3,600– 5,000	4,300
8. Librarians (2)	3,000– 3,600	3,300
9. Recreation supervisors (2)	3,000– 3,600	3,300
10. Research assistants (5)	3,000– 3,600	3,300
11. Liaison assistants (5)	3,000– 3,600	3,300
12. Information assistants (5)	3,000– 3,600	3,300

[1] See appendix I.

[2] See appendix II.

[3] See appendix II.

Annual budget—Continued

	Salary range	Salaries (computed at total average)
(1) PERSONAL SERVICE—con.		
A. Professional and administrative—Continued.		
13. Accountant (1)	$3,000-$3,600	$3,300
14. Procurement and supply clerk (1)	1,800- 2,400	2,100
Total		126,300
B. Secretarial and clerical:		
15. Secretaries—assigned (10)	2,400-3,000	2,700
16. Supervisor of stenographic pool (1)	2,400-3,000	2,700
17. Stenographer-clerks (15)	1,800-2,400	2,100
18. Typists (12)	1,560-1,920	1,740
19. File clerks (2)	1,560-1,920	1,740
20. Mail clerks (4)	1,560-1,920	1,740
21. Messenger (3)	1,560-1,920	1,740
22. Supervising telephone operator (1)	1,800-2,400	2,100
23. Telephone operators (5)	1,620-1,920	1,770
Total		108,690
C. Maintenance and custodial:		
24. Head janitor (1)		2,400
25. Elevator operators (6)		1,320
26. Foreman cleaner (1)		1,620
27. Male cleaners (7)		1,440
28. Female cleaners (15)		1,040
Total		37,620
(2) MATERIALS, SUPPLIES, AND SERVICES		
A. Operational		27,650
B. Building maintenance and operation		13,100
Total		40,750
Grand total		313,360

The following is the suggested allocation of space:

Floors:

1. Reception; lounge; canteen.

2. Veterans' library, reading rooms, music rooms, photostat services; art and cultural organizations; office of one assistant director.

3. Civil service commission, State and municipal New York City board of health, bureau of tropical diseases, first-aid station, and clinics (information); conference rooms, staff library, staff rest rooms; telephone operators.

4. United States Employment Service selective service; State division of placement and unemployment insurance.

5. New York City board of education.

6. New York City board of higher education; other educational representatives; veterans' service center.

7. Veterans' service center (business and loans); War Production Board; Office of Price Administration; Smaller War Plants Corporation; Mayor LaGuardia's business advisory committee; New York City department of commerce.

8. New York City department of welfare, veterans' division; veterans' organizations.

9. Over-all administrative staff.

This proposal is both sound and conservative. It does not represent any effort on the part of government to supersede the functions of any private agencies. On the other hand, it is the essence of cooperation between private and public enterprise to maximize the individual's opportunities for rehabilitation in the difficult transition period following cessation of hostilities. It offers a method whereby productve work may be done now instead of waiting until conditions become critical. Furthermore, it will bring to the very door of New York City's people a direct understanding of the service its community provides as a normal part of the community life.

Appendix I

Owing to rules restricting the reproduction of pictorial matter in the CONGRESSIONAL RECORD, the following charts are omitted: (1) Referral and information center organization chart; and (2) Referral center flow sheet. The flow sheet is of prime importance to an understanding of the plan because it indicates the manner of coordinating all participating agencies and shows the operating procedure. All comers (veterans and war workers) enter a central receiving center, staffed by expert interviewers, who make a general analysis of the individual case. From the receiving center, the applicants are directed to a general "waiting and day room" where they await appointments arranged for them with a series of skilled consultants on employment, rights, and benefits, physical and mental health, education, and training, personal and social problems, and housing. These consultants then direct the applicants to the specific agencies—Federal, State, local, and private—capable of rendering immediate aid in the solution of applicants' problems. The coordination of community services is therefore simplified to three steps or levels: (1) General interview and analysis; (2) Expert consultation; (3) Immediate aid by the agencies best qualified and equipped to assist the veteran and war worker. The Davis proposal provides the administrative organization by which these ends are most efficiently achieved.

Appendix II

Subsidiary to sections 3 and 4 of the general section on policy recommendations, the following three principles are fundamental to the success of operation.

1. All applicants for service shall be routed through intake interviewers and primary consultants, except as specified otherwise by the director.

2. All applicants for service, except as specified otherwise by the director, shall consult with primary consultants for original diagnosis.

3. All applicants for service, except as specified otherwise by the director, shall be referred by the primary consultant to such service organizations as his diagnosis shall indicate appropriate.

Medical-Care Provisions of the Wagner-Murray-Dingell Social-Security Bill

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. MURRAY. Mr. President, on June 3, 1943, during the last Congress, I joined with the distinguished senior Senator from New York [Mr. WAGNER] in introducing a bill (S. 1161) to amend the Social Security Act. Our bill was intended to strengthen and broaden social security for the people of our country.

Our bill received much attention throughout the country. It is supported by the principal labor organizations and by many important civic groups. It has been widely discussed at public meetings, on the radio, and in millions of homes.

It did not, however, receive a hearing before the committee to which it was referred. The Senator from New York and I are preparing a revised bill, which we hope to introduce in this Congress before long.

During the past year and a half our bill has been the object of widespread attack from certain propaganda organizations. Fortunately, the friends of social security for the American people have also had a say, and many millions of people have come to the conclusion that our bill has been misinterpreted, that it is sound, and that it should be enacted.
